488. Do you think that that failure was due to the natural conditions of the place that is called Port Canning, and the relations of the trade of Calcutta to that desert place?—No; the Mutla no doubt is a noble river, very superior to the Hooghly; the particular locality upon which the town was proposed to be erected was a very disadvantageous one, and the entire surface of the town must have been raised to have protected it from the floods, the overflow of the tides; and there was great difficulty about obtaining fresh water also, because the soil was so sodden with salt-water, that as fast as they opened tanks or wells they got nothing but salt water; there were great difficulties of that sort, but, nevertheless, if there had been a real necessity for a second port at Port Canning, all that would have been got over by English capital and English enterprise. The real reason why Port Canning failed is that it is a simple absurdity to have two entrepôts of commerce with all their apparatus of docks and warehouses, and brokers and bankers, and shops, and all the thousand and one subsidiary appliances such as we have at Liverpool, Calcutta, Bombay, and so forth, only 40 miles from each other; it could not be, and if Port Canning had succeeded it would have absorbed Calcutta; the two could not have gone on together.

489. Mr. *Hermon.*] Liverpool and Birkenhead go on together, do they not?—If it had been as near Calcutta as Birkenhead is to Liverpool it would have been different; if it had been on the other side of the Hooghly, where Howra is, the conditions would have been totally different.

490. *Chairman.*] What do you say to the conduct of the Indian Government with this place before its eyes, and all the conditions known, in not taking any energetic steps to prevent this expenditure of money; do you consider that the Indian Government entirely left themselves in the hands of the English Government; or that they were completely overborne?—The truth is that the Home Government, or rather the Home Government, backed by the Home public, has a giant's strength which no Indian Government can stand against; and when the Government of India, powerful as it is in India, sees that the people of England are bent on a thing, and have their heads full of it and their imagination excited, and are determined to have it, the Indian Government cannot resist it; and that was just the case here.

490*. Then instead of the two Governments acting in concert, from a consciousness of duty, to resist improper demands, they seem, in your view of the case, rather to urge on one another in meeting them?—Scarcely that. The Home Government, under the pressure brought upon it by home interests, as they are called, sent out instructions to the Government of India, including the instructions for the making of the railway, and the Government of India felt altogether too weak to resist them.

491. Sir *J. Elphinstone.*] Was it ever suggested that a canal should be brought to Calcutta, admitting that the mouth of the Mutlah is much easier of access and safer than the mouth of the Hooghly; was it an alternative proposition that a canal should be brought up to Calcutta?—Yes, there was such a proposal, but I do not think it was ever seriously entertained.

492. *Chairman.*] Will you give another illustration of this subject?—The next I will give is the Orissa Irrigation Company; not the original formation of the company, because it was formed on perfectly sound principles of private enterprise. They were to provide the whole of the expenditure, and to get the whole of the profits. There was nothing to be said against that; but they soon got into difficulties, and when they got into difficulties, first of all the Government of India had to subsidise them, and then it took over the concern at an exorbitant rate. In fact, this is an instance of an unsuccessful speculation turned over to the Government of India, that is, to the people of India, at a rate which converted it into a highly successful speculation.

493. You do not mean that the operation was a highly successful one that they were engaged in, but that it was a successful speculation to the shareholders?—Yes; the operation itself was a dead failure.

494. Mr. *J. B. Smith.*] Did not the company get back the whole of their money at a premium?—Yes.

495. *Chairman.*] The Government got the speculative undertaking and the loss?—Yes.

496. Then is it your view that this transaction was one that resulted from the pressure of the monied people in this country, upon the Secretary of State for India in Council?—Entirely so. The Government of India would not have done it as a transaction beneficial to Indian interests.

497. Have you any reason to know whether their voice was heard at all in this arrangement?—I cannot enter into detail; I have full i
tion which justifies me in saying wha
said, but how far the Indian Gover
monstrated, or how far their remonstr
attended to, I cannot say.

498. Have you any further ill
give the Committee upon this head?—
which is the Elphinstone Land Compan
that was a great concern at Bombay for re
land from the sea connected with the har
Bombay. I do not go the length of saying
it was an unsuccessful speculation, but it
very doubtful and hazardous speculation
that also was transferred to the people of Ind
a cost of nearly two millions of money; there
an exactly similar transaction, which was extre
pressed upon us by the Government of Bom
backed up by the mercantile and monied interest
of Bombay, that is, the English mercantile an
monied interest of Bombay; and it was with grea
difficulty successfully resisted. During the hea
of the cotton mania, there was a wonderful proje
formed for reclaiming Back Bay, a bay at t
back of the Island of Bombay, and a compan
was formed, and the Government of Bomba
under great pressure from these mercantile a
monied interests, pressed upon the Governme
of India with great vehemence, that they shou
take 500 shares in this concern. Well, it led
a great discussion in the Council of India, an
happily the proposal was rejected. What too
place in reference to the Bombay Bank is anoth
example; in order to favour this mercanti
and monied interest, the Government of Bomba
passed through the official machinery, witho
the knowledge of the Government of India, a
Bill authorising the Bank of Bombay, in which
the Government had shares, and in the direction
of which they participated, to cash the bills of

joint

oint stock companies, which previously had been prohibited by the terms of their charter.

499. But in these cases of Bombay, were these all local institutions in which natives and Europeans were indiscriminately interested?—Natives Europeans were both interested in these utions, but Europeans were chiefly interested, he pressure was entirely from the Euro- I mean to say that the Government of ertainly, and possibly the Government of y, would have felt under no embarrass- the pressure had merely come from

As regards that Back Bay question, the ment of India would appear to have acted ghtly in having nothing to do with any of that kind?—Precisely so, and the com- on collapsed and ended in disgraceful ; I mention that as illustrative of what ing on at through that period.

As regards the bank, although the par- language of the charter may not have ed attention, was the general policy on that language was founded, considered, and stood by the Government, namely, that should break down the restrictions upon ng which had been established under the of the mercantile government of the Court ectors?—I never heard of it; a great deal ussion was going on about the Government nks and the paper currency, but it was not at all contemplated to relax the restrictions upon sound banking.

502. Do you think that that was not brought forward as the principle, apart from the application of the principle in this particular case; that the old system that had been established under the Court of Directors of limited powers of banking should give way to a more expansive and elastic system?—Not to my knowledge; certainly no discussion of that principle took place in reference to this particular case; it was done without anybody knowing anything about it, except those who framed the Bill and passed it through the Bombay Council.

503. Are there any other influences that you think have been prejudicial to the financial condition of India?—Yes; one more, which is, that the new *régime* under the Queen's Government has shown itself unequal to checking financial recklessness on the part of local governments when they choose to take the bit between their teeth. I allude especially to the Government of Bombay; this course of conduct was characteristic of the Government of Bombay during the whole time of my last residence in India. I may perhaps give one or two slight illustrations. In my first Budget I announced, with the sanction of Lord Elgin and my colleagues, that besides the ample provision made for public works in the Budget, if, in the course of the year, any local governments brought forward any well-considered scheme of cotton roads, or irrigation, or any improvement of that sort, we would favourably entertain the proposal and provide the necessary funds; upon which the Governor of Bombay assembled a congress of collectors and officers of the Department of Public Works at Poonah, and gathered up all the projects for public works of all sorts that had ever been proposed, and sent the greater portion of them, as was alleged, for our sanction at Calcutta. Well, we declined altogether to sanction them as a whole, and answered in a reasoned Despatch, saying how far we thought that this might be done, or that ought not to be done, or that further information was required about this, that, or the other. The reply to that was, that a very large proportion of them, to the amount of considerably upwards of half a million, had been ordered for execution, and had been actually commenced, without any sanction at all from the Government of India. Well, that was an unheard-of proceeding, and it was impossible that the finances of India could be conducted to anything except bankruptcy on such conditions as that. We commented upon it very severely, but, however, that went on. Then, I may mention the Indian Navy: one of the resources which I was told before I left England I might chiefly rely upon, was the absorption of the Indian Navy costing about a million a year: and I began working at it in communication with the Government of Bombay. But, as time went on, to my utter dismay, I found that although the Indian Navy under that name was abolished, yet an extremely expensive establishment continued to be maintained under different names; under the name of transports for the local conveyance of troops and stores, of steamers for the use of the Government of Bombay, for keeping up the communication with Guzarat, for the use of the political agents in the Persian Gulf. Under the name of "Gunboats," that was a very large item indeed. Until these magnificent floating batteries could be completed, it was said to be necessary to keep up a provisional establishment of gunboats, utterly worthless, because a single American steamer with her Dalgreen gun could have destroyed them all. However, one way or another, an establishment, under different names, including the dockyards and other shore establishments necessary for refitting them, was kept up equal, or nearly equal, in expense to the Indian Navy. Then the case of the Government House at Poonah is familiar to everybody. Now such things as these never could have occurred under the government of the East India Company; it was simply impossible.

504. Do you ascribe its impossibility to the fact that the Government of Bombay in former times was more under the direct control of the Home Government, and not so much under the indirect control of the Governor General?—Partly to that. No doubt the Government of Bombay relied upon home popular interests. No doubt it looked a great deal more to the Indian Council (I mean the Indian Council in London) and to English interests, than the Government of Bombay would have done under the East India Company. It was under no control from the Governor General. We might have written, in fact we did write, our fingers off; we objected, and reprimanded, and pointed out all the considerations that I have adverted to, and a great many more, but all was of no avail, and it went on in spite of it all. All I mean is, that this could not have taken place under the *régime* of the East India Company. The Government of India under the old *régime* had the Government of Bombay well in hand. Far slighter things than these were checked and controlled, and then there was a general difference. I have said that the Government of the East India Company was frugal, and that the Queen's Government has been profuse in its general character, so that this could not have taken place under the old state of things, while it has taken place under the new.

505. What

Sir *C. E. Trevelyan*, K.C.B.

21 February 1873.

505. What I wish to obtain from you is, whether you ascribe this to the fact that in former times the Court of Directors exercised a direct and very energetic supervision over the Government of Bombay, whilst in latter times the Secretary of State for India in Council has rather looked to the Governor General than to direct supervision over the Bombay Government?—No doubt the correspondence of the Court of Directors with the Governments of Madras and Bombay was closer and more influential. Under the Government of the Crown they both correspond with England still, but under the Company the Governments of Madras and Bombay looked more to the approbation and authority of the Home Government than they do now; but not only was the Government of Bombay in those days more entirely under the control of the East India Company in London, but it was far more under the control of the Government of India.

506. It is rather important to see exactly how it is that the Government of Bombay appear to have broken loose; is it that it plays off the Government of India, and the Secretary of State in England, and does what it likes, or in what way has it emancipated itself from control?—The Government of Bombay, during the period that I speak of, acted as if it was supported by a reserve force, because it seemed to care nothing for the exhortations and reprimands that it got from the Government of India; from that I infer, indeed from my general knowledge of the state of things then, I infer that they supposed that they were backed up from home.

507. Then the real source would seem to be the weakness of the Government at home in not properly checking and controlling the Government of Bombay, and making it amenable to the orders of the Governor General?—I think that was the root of the matter.

508. But the Home Government still have the same absolute power of withdrawing the Governor that the Court of Directors had?—Yes.

509. Mr. *Eastwick.*] Am I right in saying that the substance of the evidence that you have just given is that India has financially suffered by the transfer to the Crown?—Yes, it has suffered in the way I have described.

510. Then I would like to ask whether you consider that sufficient compensation has been made to India by the immense additional progress that has been made in public works, in the reconstitution of the army, and in various other ways?—That is another question quite; if I am asked whether, on the whole, India has gained by the transfer, I should say, yes; because these adverse influences to which I have been alluding are capable of remedy, and I understand that the object of the Committee is to show how we may retain the advantages of the transfer to the Crown without buying them dearer than we can help.

511. In point of fact, I suppose you would say, that these great disadvantages to a great extent need not have occurred had proper precautions been taken?—Certainly, they are all remediable; they are all artificial, and might have been prevented.

512. But with reference to the manner of keeping accounts with which you began, do you, or do you not, think that the old system of the East India Company, that very minute inform[illegible]n which was forwarded to the Home Government with respect to every particular, was advantageous, rather than the summary way in which the new system of accounts sends home matters to the Secretary of State?—Well, it was adv[illegible] tageous in its day; it was suited to the [illegible] when the servants of the company were [illegible] or three factors, with a number of clerks [illegible] different factories, Calcutta, Madras, and Bo[illegible] Then the whole detailed expenditure of t[illegible] tories might be sent home down to the n[illegible] item, and it might be dealt with, but it [illegible] obsolete long before it was abolished, and [illegible] impossible to be carried out in that deta[illegible] the factories grew into an empire. In fac[illegible] that system of accounts was abolished [illegible] sequence of this commission of Mr. Fo[illegible] *Mr. Whiffin, and of the action of the G[illegible] ment of India upon it, that old system of a[illegible] had become virtually obsolete; the ac[illegible]* were many years in arrear, they were [illegible] never closed, and certainly never audite[illegible] never looked at. It was mere r[illegible]d tape an[illegible] cumlocution and rubbish; it was [illegible]uite tim[illegible] it should be abolished.

513. But I would ask whether in the ne[illegible] tem of accounts to some extent parts of t[illegible] system might not have been retained; whet[illegible] fact, the new system has not gone too far i[illegible] marising matters; for instance, is it not a [illegible] in the new system that we are unable here to t[illegible] what a charge represents; the last witness in his evidence stated that under the head of repairs of barracks there was a very large sum for thermantidotes, and we know that that system obtains throughout the whole accounts; how is it possible then for persons here to know what really is going on in the way of expenditure in India?—I believe that the new system of accounts has been framed on sound principles, and with a very careful adaptation of those principles to actual circumstances; of course, they may be defective in some points, but on the whole they are a practical efficient system of accounts, though capable of amendment; you refer particularly to the accounts of the Board of Works; when I come to that I shall express the opinion that the Board of Works has become such a monstrous system of centralisation that neither their accounts, nor anything else, can be right.

514. There is one other point in regard to the old system which I should like to ask you about, and that is with regard to taking stock: you said that under the East India Company the Home Government knew the exact value of its assets with regard to forts and everything else?—Once upon a time that was a reality; but before that old system of mercantile account came to an end it had become mere make-believe; Fort William was put down as a standard sum; that was carried on from year to year as the value of Fort William, and so was the original cost of Government House; but it was not extended throughout; that shows how completely the matter had become obsolete.

515. I should like to ask whether it would not be advantageous to keep some sort of stock account?—I think not; I considered the matter very carefully at the time, and I do not think that it would be attended with any practical benefit; when you have once erected barracks, and forts, and public buildings, and canals, and so forth, what you have to look to, is to keep down the repairs, and to keep up the income of those

those which produce income, as much as possible.

516. Would you be prepared to state now, or do you intend to state afterwards, what remedies you would recommend?—I have a separate head and remedies. When I have gone through causes, I will go to remedies.

and t. You said that if anything could be called peans job of the directors, the Indian Navy was. India at job?—Yes.

Bomba But was it not the fact that in the old ment when the Indian Navy was first established, natives ered most important services which were

500. rther required after a certain time; for Governe, in the way of surveys and exploration quite rious seas, and so on?—Indeed, it did; it scheme ellent service at the time; it originated pany s extreme pressure upon our navy in the failure war, when our ships of war were hurried was gone, there, and everywhere, leaving India

501 tected from pirates and privateers. Then ticular dian Navy did excellent service, and in the engag of surveys it did admirable service; but which stitution had become obsolete and unfitted under new conditions. The ships of the Indian they was unsuited either to war or peace. The bankit of the guns together would not have made advice good frigate; and for transports, which they of Dir principally used for, they were very unof disced.

be 519. It paid for the stated *quid pro quo* in its time?—In its time it did.

520. Were not the men and officers acclimatised, and therefore able to perform more regular work than is the case now with the office and men who are sent out?—No, I do not believe in acclimatisation in that sense; I believe that the British Navy, with a very slight adaptation indeed, is capable of doing everything that the coasts of India require. In fact, there is no more adaptation required in the Persian Gulf than on the coast of China, or 50 other places, where the navy keeps the police of the seas. As to acclimatisation, just at first you require to tone down your blood; you either have a crop of boils, or a pucka fever, or something or other, and that brings you down to standard; except that, I do not believe in acclimatisation; the longer you stay the worse you are.

521. With reference to native princes, and the pensions and donations that have been given to the different families, I suppose that you would make a distinction, would you not, between the different princes; where the princes are the descendants of an old established allied and friendly family, you would be more inclined to make allowances than of the cases you have mentioned of Tippoo and others?—Unquestionably; Tippoo's decendants, on the whole, have behaved extremely well except their connection with the Vellore Mutiny only eight years after their father was killed. With that exception, their conduct has been exemplary, and there could not be a more respectable gentleman than Prince Golam Mahomed, and it is not from any feeling of hostility to them that I say what I do, but merely that, as a fact, they had for two generations settled down as denizens of Calcutta, and no more expected a large increase of fortune than I do.

522 Have you ever considered the fact, that we are making allowances to the native chiefs and their families, which are, to a great extent, spent out of India; is it not the fact that some of the family of the Nawaub of the Carnatic are living at this moment at Kerbela, and many others are living in other parts of the East?—Yes.

523. Has the Government ever looked at that fact, and considered whether it is right, that money which comes from the pockets of the ryots should be spent in foreign countries?—No, I never remember that point being considered; the real question seems to me to be, whether the payments made to them are proper payments; if they are proper payments I would let them spend them where they like.

524. You think that fair to the people of India?—I think so; I think if a pension is earned in any country, England, India, or anywhere, the pensioner should be at liberty to spend it where he likes.

525. You do not think that it might be made a condition that it should be spent in the country?—No, I think not; I think it would be unnecessary, and unworthy of us.

526. You have said that Mysore has been exceedingly well governed, and has prospered very much under English administration; but is it not the fact, that Purneah saved a very large sum of money for the state under his administration, more than has been saved under ours even?—Very large indeed. Probably he spent l[illegible]s in roads and public works of various kinds [illegible]n we do. He also kept his young Rajah [illegible]onomically; whereas we had the Rajah in his [illegible]ter years, when he had become extremely profuse. Also Purneah had no charge for agency.

527. I think you attached some value to the advantage of having native states with native administration as an example, and also as improving the character of the natives?—Yes, a native state with good native administration, no doubt, is very advantageous, especially if that state is a national state. But those conditions did not exist here. In the first place it was not a national state, because the old family had been shut up in a hill fort for two generations, and they had been forgotten by the people, who did not care a bit for them, and it was entirely an artificial thing putting them upon the throne, and we gave them a much larger extent of country than their ancestors had; in fact it was a different *régime*, and a different country altogether. It was a purely artificial creation of our own for political purposes, first of all to set off a Hindoo dynasty against the Hyder and Tippoo dynasty, and then as a sort of safeguard against the Mahrattas, and also it arose out of a difficulty with the Nizam. The truth is there was a tri-partite treaty between us, the Nizam, and the Mahrattas. The success was much greater than was expected, much more complete, and when it came to the division of the spoil according to the treaty, it was found that if the terms of the treaty had been acted upon, the Nizam and the Mahrattas would have got a great deal more than was convenient to us in our then comparatively weak state, and so Lord Wellesley hit upon the expedient of reconstructing t[illegible] Hindoo State and greatly enlarging it; it b[illegible] greatly larger than it had ever been in its [illegible] native state.

528. To go to another subje[illegible] Orissa scheme a good idea and [illegible] itself, although perhaps no[illegible]

Sir *C. E. Trevelyan*, K.C.B.

11 February 1873.

That raises the topic of irrigation, which is really a separate subject of itself. I should save the time of the Committee by dealing with it separately.

529. Was it not desirable that the Government should deal very liberally with this company in order not to discourage the introduction of English capital?—That applies generally; I think it is exceedingly desirable for the interests of India, that English enterprise and the application of English capital to India should be encouraged, and I would always deal liberally, not munificently. We have no right to be munificent at the expense of the people of India.

530. You said that you aided the first step of amalgamation?—I was then head permanent officer of the Treasury, I had never ceased to take a warm interest in Indian affairs, and I took part in the private discussions with the members of the Government, and was examined before the Committee about the amalgamation of the armies, and so forth.

531. Do you think that the amalgamation might have taken place without the immense expenditure?—Yes.

532. Mr. *C. Dalrymple.*] If, as you say, the proposal for the new barracks in India, which you say were a failure, came from England, were the plans also manufactured in England?—Yes. We got from England what were called model plans; they were the standard. They were supposed to have been wrought out, according to the perfect idea then prevailing of sanitation, representing the most advanced principles of the new science of sanitation; and those model plans formed the standard to which the Government of India had to conform, and what remained to be done in India was merely adaptation, seeing where the barracks were to be, and for how many men and officers, and whether they should be defensible, and so on.

533. And if it was a mistake that they, being several stories high, should present a wide front to the Indian sun, was there no remonstrance from India?—I am afraid not. The sanitary fever extended more or less to India.

534. I suppose there is no pretence for saying that India does not profit largely by the telegraph?—Certainly it does, very largely.

535. And you say that the failure in regard to the Indo-European Telegraph was not from the nature of the transaction, but from the way in which they carried out the contract?—Yes, I believe that to be the case.

536. Therefore India would fairly share the loss, would she not?—Yes; I do not deny that it is fair; all I say is, that if, instead of the Queen's Government only (for whether it is the India Department or any other department, it is all the Queen's Government) having had to make the arrangements, it had been the Queen's Government *plus* the old East India Company, and the matter had been worked out in the way I used to work out the Indian accounts with the two Melvilles, the result would have been different.

537. May I ask what you mean when you say that the East India Company were so independent?—Well, originally they were entirely independent. It was only after the Government of Parliament of England had been consolidated by India Bill and Pitt's Regulation Act that it was resolved it, that any control over the company was established; and to the last they preserved a very large measure of independence. They had the entire patronage, including the appointment of the Governor General; that particular appointment was, perhaps, only nominal, but they had, with very limited exceptions, the entire patronage of India; and they had, by law, the entire disposal of the revenues of India, which they maintained, and they were a body quite capable of maintaining their position, for they had deep roots in English society; and a great deal of the influence of which I have been speaking, which now bears hardly upon India, and in an interested manner, was then concentrated in the East India Company. The East India Company was a mercantile interest, and represented the mercantile interest of England of that day.

538. Would you apply the same language which you have used about the Port Canning Works and the Orissa Irrigation Company to another work, of which we have heard a great deal, the Madras Irrigation?—No; I can speak from personal knowledge of the original inception of that company, and nothing could have been more honest and public spirited than the manner in which it originated. It was intended to be an application to irrigation of the guarantee principle, which was considered to have answered so well in reference to the Indian railways. I am afraid it will not turn out the profitable speculation that was expected, but that is chiefly owing to general causes applicable to all large irrigation works; that is a separate subject.

539. But would you consider that the Government of India took the speculation and the loss, and that individuals derived the profit?—Yes; so far as the original guaranteed million is concerned, entirely so, but when that was spent, the Madras Irrigation Company came upon the Government for advances, and the works have since been carried on by loan.

540. Mr. *J. B. Smith.*] You stated that the Bombay Government set at defiance the orders of the Government of India; how do you account for it that the Government of India did not take proceedings against the Government of Bombay to make them respect their orders?—Although the Government of India stands in the relation of official superior to the Government of Bombay, yet both Governments are subordinate to the Home Government; so that when the Supreme Government of India had reported the conduct of the Government of Bombay to the Home Government, it had done all it could do; I do not see what more it could have done.

541. In what way would the East India Company have acted under similar circumstances?—Well, in the first place, those circumstances could not have arisen. In the next place they would certainly have recalled the Governor of Bombay.

542. They would have done in that case as they did in recalling Lord Ellenborough?—Yes.

543. Mr. *Bourke.*] I think I understood you to say, that under the present constitution of the Government of India, there is nobody of sufficient independence in this country to protect the taxpayers of India?—Yes.

544. Amongst the remedies that you are going to mention to the Committee hereafter, do you propose to mention any remedy for that?—I am afraid

afraid that the only remedy for that is, an improved knowledge on the part of English society, and a consequent improved sense of duty; I have no idea of proposing the reconstruction of a body like the East India Company.

545. You do not propose any modification of the Council or any change which would have the effect of giving what you think desirable, that is, some body or person who will take under their protection the interests of the taxpayers of India?—No, I do not see how we could modify the Council to meet the case. All was done to erect the Council into a body such as we are speaking of, and it has all failed. The utmost limits of *quasi*-independence were given to the Council; we could not have gone further without making them masters. They were given a life tenure like the judges, and an exclusive power of directing payments out of the revenue. I do not see what more could have been done, and all that has failed, and, therefore, I do not look to any improvement of the Council for a remedy. What I look to is that these facts should be known to the people of England, who are actuated, as a body, by a sense of justice and fair play, and when the facts are known I feel sure that they will take care that our future proceedings shall be an improvement upon our past proceedings.

546. But do not you think that the Government of India itself, represented by the Governor General and his Council, are a body of sufficient importance really to look after the taxpayers of India, if they have a mind to do so?—No, not when they are overborne by the Home Government, backed by the prevailing feeling of English society. The true remedy for this is to put the raising and spending of the money into the hands of the people of India themselves.

547. But do you propose any change in that direction?—Yes, or rather a more full development of a change which has been in progress for some time, decentralization.

548. I think you said that you consider a gunboat or two in the Persian Gulf quite sufficient for the requirements of the Indian navy?—Yes.

549. You do not consider that there is any necessity to burden the finances of India with any charge for other vessels that may be sent there from England?—Of course, when I say a gunboat or two, I speak of what is immediately necessary for preserving the police of the Gulf, for if the native powers on the Gulf knew that this was all, and that the gunboat or two would not be backed up by the whole power of England, it would not do at all; but all that is immediately necessary for the purpose, is a gunboat or two, supported by the knowledge that if any opposition was made to these gunboats, they would have any amount of force down upon them.

550. Then, under those circumstances, you do not think it unfair, I suppose, to charge the finances of India with a larger amount of the expense than one or two gunboats would cost?—I think it unfair to charge the Government of India with anything whatever for naval protection, because it would make an invidious unjust exception from a general rule; what possible difference is there, in the point of view we are speaking of, between the case of India, Canada, Australia, the Cape of Good Hope, and the whole round of the British Colonies? We charge them nothing, why should we charge India anything? The only real difference is, that Canada or Australia would not hear of it. We know that it would be waste of breath and waste of paper to propose it to them; whereas, India is at our mercy, and we can charge her anything we like.

551. Some of the colonies have provided for their naval defence, have they not?—Purely for harbour defences, I believe.

552. But, supposing a war to occur, do not you think it is likely that if a colony, say any of the Australian colonies, thought it desirable to provide a navy for themselves, they would do so?—They might do so if they liked, and if the exigency occurred, India might do so. In fact, India did so towards the end of the great war. The demands upon the British navy were so great that the Company found it was desirable to provide a naval police of their own. I am speaking of the present generation, the actual state of things, the present practice.

553. I will ask you a question or two about Mysore; you have put that grievance amongst sentimental grievances, I think?—Yes.

554. And you said that in your opinion it was a pity altogether that we did not, in fact, annex (though you did not use that word) permanently the whole of Mysore?—Yes; I think it would have been right to do so, and greatly for the benefit of the people of India, including the people of Mysore.

555. The sentimental grievance, in fact, is that we did not annex Mysore?—Yes; I classed these illustrations under different heads, and one head respected native princes and native chiefs; and the reason why I classed Mysore under the head of the sentimental ones, was, that I believe that resuscitating Mysore as a native state was not the result of any large deliberate policy; but mainly of a sentiment.

556. I am going to ask you a few questions now about the increase of the salaries and stipends which you have mentioned; do you recollect at all how much the increase was?—I cannot commit myself to figures. I think the whole together in the Tippoo case is calculated at half a million, the capitalised value of it.

557. *Chairman.*] Are you aware that it was contended that this settlement was one that would be in the end economical to the finances of India?—No; I know that the settlement was originally made as a sacrifice on the part of the finances of India, and was so regarded by all parties. I do not know what new view has arisen of late, or how it has turned out.

558. Sir *C. Wingfield.*] I think it was in the year 1865–66, was it not, that the disregard of orders of the Supreme Government by the Bombay Government was peculiarly marked?—It went all through my tenure of office, which ended in April 1865. The first remarkable instance I observed of it was the Government of Bombay ordering the commencement of a large number of works, the estimated cost of which altogether was considerably upwards of half a million.

559. But I think, in a Government Return which was laid before Parliament, there are some minutes, I forget whether of yours, but certainly of Mr. Massey's and other Members, reflecting very strongly on the disobedience of the Bombay Government?

Sir *C. E. Trevelyan*, K.C.B.

21 February 1873.

Government?—Yes; it went on after my tenure of office.

560. At the time that the speculative mania was at its height in Bombay, the Government of India complained very strongly of their disregard of orders, particularly in the matter of making enquiries into the condition of the Bombay Bank?—Yes; that was under Mr. Massey.

561. By law the authority of the Governor General over the Presidencies of Bombay and Madras, is as absolute and complete as it is over any of the minor local governments?—Certainly.

562. Also as regards expenditure of money they are tied down as strictly as the minor local governments in reference to expenditure, that is that they are allowed to spend 10,000 *l.* on a work themselves; but for anything beyond that, or for any work exceeding that in the estimate, they must obtain first of all the sanction of the Government of India?—Entirely so; and the proof is that the Government of Madras, which stands in precisely the same relation to the Supreme Government as the Government of Bombay, has preserved the utmost moderation throughout, and no exception whatever has been taken to its conduct.

563. Then that limitation existing, and the necessity also existing of submitting a budget, and obtaining previous sanction to that budget, how comes it that the Bombay Government has been able to commit the Government of India to excessive expenditure?—As I said, by taking the bit between its teeth, by taking the matter into its own hands. I have only alluded to some notorious instances. There were a great many others of this resistance, and disregard of the financial control of the Government of India which characterised the whole proceedings of the Government of Bombay. For instance, the Government of Bombay took upon itself, without any previous sanction, to authorise loans to local municipalities. Then there is the famous instance of the operations in connection with the fortifications of Bombay. The Government of Bombay took very proper proceedings for the purpose of getting rid of the obsolete walls and ditches, and esplanades connected with the old Portuguese fortifications of Bombay, and turning them into streets and squares; and they raised a considerable sum of money in that way, but far short of what was necessary to carry out their projects for the improvement of Bombay; and then they took upon themselves to order the commencement of very extensive and expensive works for the improvement of the city of Bombay without previous sanction.

564. But that is an entire breach of the orders of the Government of India not to commence expenditure on a work exceeding 10,000 *l.*, till sanction has been received?—Entirely so; it throws all financial control to the winds. It is impossible that the finances of India could be administered with safety and success under such conditions. Supposing the other Governments of India had done this, India would have been bankrupt in the first year.

565. Since the law invests the Governor General with the most complete and plenary powers over the Governments of Bombay and Madras, it is not quite apparent why he cannot enforce his orders?—I again ask what could he do; he has not the power of suspending the Governor of Bombay. I do not know what reserve powers are included in the Commission of the Governor General of India; he may possibly have even that power legally, but the relations of the Government of India with the Home Government, and the state of public feeling in India and England, especially in England, would have made it totally inexpedient for the Governor General of India to have suspended the Governor of Bombay on his own sole authority. All that, practically, he had it in his power to do was to report the proceedings of the Government of Bombay to the Secretary of State, with his opinions upon them, and to leave the Secretary of State to deal with them.

566. Do you think that this affectation of independence on the part of the Bombay Government proceeds in some measure from the privilege they possess of direct correspondence with the Home Government?—I think not; the Madras Government has the same privilege of direct correspondence, but their conduct throughout has been unexceptionable.

567. Would you concur in the suggestion which has been made to reduce the Governments of Madras and Bombay to the same position as the Lieutenant Governors?—No; I think that a sort of constitutional status and constitutional feeling has gradually arisen and developed itself; and it would be a violent wrench to alter it; there is no necessity for it.

568. In point of area, population, and wealth, they fall short of some of what are called the minor local governments, do they not?—The do; but they are governments of greater stabili and dignity than the more modern governme the Government of Madras is more ancient t the Government of Calcutta; Madras is t mother Presidency of Bengal.

569. Do you think that the old traditi have been preserved?—I think so, and I see practical disadvantage in it. This conduct of t Government of Bombay is entirely exceptiona

570. But you are aware that the Governme of Bombay is excessively costly?—No doub is too costly, and the expense ought to be ve much reduced. There is great necessity for duction of expenditure, but not, in my opini for altering the relation in which the Governme of Bombay stands to the Government of India and the Home Government.

571. You were in India, I think, when the plan for the new barracks was approved?—Yes; I was in India when it arose and when it was discussed. It was fully discussed in my time and with my assistance. I was a member of the Council of India.

572. Was the plan of having an upper storey, which is a novel plan in India for barracks, resolved on at home?—At home, certainly.

573. Or was it concurred in or recommended by the Government of India?—It formed part of the model plans that were sent out, and was accepted as a matter of course. In fact, that arrangement of having an upper storey for the troops to sleep in at night was considered the principal advantage of the new plans.

574. Then, in fact, the Government of India did not consider that there was any discretion left it to depart from that plan of an upper storey?—No; the model plans were prescribed to the Government of India. They were worked out here in London by a commission composed of the highest

highest authorities in those branches of knowledge which bear, or are supposed to bear, upon the construction of barracks.

575. But is it not strange that the members of the Government of India, all of whom had experience of the different climates of India, and especially of the dry and warm climate of Northern India, did not remark on the unsuitability of upper storeys to Upper India?—Yes, it does seem strange, certainly; but all this had been going on for several years. It commenced with the Crimean War, and the public mind had been completely soaked with these modern ideas of sanitation, till at last, when it came out in the cut and dried shape of model plans, which had been worked out by the highest authorities of this new science, it really did not occur to anybody in India to question them, and they accepted them as they stood, and only applied them as they best might; and the proof is that, although we perfectly well knew it would cost upwards of 8,000,000 *l.* (that was the estimate in my time; my successor, I see, made it 10,000,000 *l.* or 11,000,000 *l.*), yet it was not questioned.

576. Do you think that the Government of India rather failed in its duty in not remonstrating when they saw that the Home Government, in pursuit of a theory, had embarked in a totally unsuitable plan of barrack building?—Undoubtedly it was a defect of administration.

577. They ought, ought they not, to have given the Home Government the benefit of their experience?—They ought, undoubtedly; but yet [redacted]re are limits to the protestations of a sub[redacted]nate authority, and the subject had been [redacted] discussed for years. If the Government of [redacted]a had made any objection, they would have [redacted] that the whole thing was a mistake, and that [redacted] true thing was the old Indian bungalow, [redacted]ich the experience of ages has shown is the [redacted] mode of mitigating the great heat of [redacted]a.

[redacted]78. The last time that the Committee sat, [redacted]onel Crommelin was examined, who is the [redacted]ctor of Barracks, and he stated, in reply to me, [redacted]he considered that there was no foundation [redacted]he idea that a bungalow built of mud or [redacted]irnt brick was a cooler thing than a burnt-[redacted]ck building?—All I can say is, that I totally [redacted]ffer from him; I maintain the truth of the [redacted]inion in favour of the bungalow constructed [redacted]with walls of mud or unburnt brick, with a [redacted]hatched roof, as shown by the experience of [redacted]ges in India to be the best corrective of the [redacted]eat; whenever a person in Upper India wishes [redacted] build a comfortable house for himself, he builds [redacted] accordingly; and if he wishes to be more than [redacted]sually comfortable, he builds a large bungalow, [redacted]d delightfully cool they are.

[redacted]579. And is it not the case that almost all the [redacted]pper-storey brick houses inhabited or built by [redacted]uropeans in Upper India were built a great [redacted]any years ago, before people understood what [redacted]as the most suitable to the climate?—There [redacted]re very few of them. I may speak of Delhi, [redacted]here I had my head-quarters for six years; [redacted]here was only one considerable pucka house all [redacted]hrough my time there, and it was by far the [redacted]ottest house. It afterwards acquired a historical reputation as Ludlow Castle. That was built [redacted]n the plan of two storeys, stone walls and slate [redacted]ofs, and it was unbearable in the hot season; [redacted] fact, it was not inhabited then.

580. Sir *J. Elphinstone.*] I think you stated that if the old East India Company and Court of Directors had been in existence, this most expensive system of barracks would not have been entered on?—I am persuaded that it would not.

Sir *C. E. Trevelyan,* K.C.B.

21 February 1873.

581. And I gather from the tenor of your evidence that you attribute a great many of those unnecessary projects to the want of a general authority in this country that should counteract public opinion?—Yes; to the absence of that. I attribute it to the absence of the *quasi*-independent check that formerly resided in the East India Company.

582. I think you must recollect that there was a very considerable number of the Directors of the East India Company who had seats in Parliament?—Yes.

583. And in those days, although you and I were very young, I suppose, at that time, still we can remember that people were much more chary of bringing those projects before Parliament, knowing that they would be met by the experience of the members of the Court of Directors who had seats in Parliament?—Certainly, I remember repeated instances of the members of the Court of Directors who had seats in Parliament rising in their place and defending Indian interests against projects which they considered would be injurious to the Indian taxpayers; and it is to the honour of Parliament that the sympathy of the House was always with them.

584. In fact, they formed that very counteracting power which you think is now wanting?—They contributed to it; that was one way in which the Court of Directors formed that counteracting power; not merely at the India House, but in Parliament.

585. They never, during the period of their administration, at any time, so far as you know, I suppose, abused the power of being in Parliament in any way to the detriment of the interest of the people of India, or by the betrayal of State secrets?—No, I think not. And in proof of my opinion I may mention that, when in after-times it came to be a question whether the members of the Council of India should have seats in Parliament, I was in favour of their having seats there, for the reasons now given.

586. You were in favour of the members of the Council of India being permitted to find seats in Parliament if they could?—Yes.

587. And you did not dread any bad consequences from that to India?—No; I anticipated very good consequences.

588. And are you of opinion that if the present rule of the constitution of the Council of India was rescinded, and the country could have the benefit of the experience of such members as could obtain seats in the House of Commons, it would go far to obviate the evils which you have described in your evidence?—I think it might go some way towards mitigating them. At present, the Council of India is a secret, silent body; however much they may object to particular proceedings, the decision is come to and promulgated without their being heard outside the walls of the India Office. Now if they were in Parliament they would be under a personal responsibility of speaking out, and they would be heard. In fact, many of these points in which the interests of India are overborne would be previously discussed in Parliament.

589. This

Sir *C. E. Treveiyan*, K.C.B.

21 February 1873.

589. This case of the barracks is a case in point?—No doubt it is.

590. Whereas if two, or three, or four of these gentlemen had enjoyed seats in Parliament, the matter would have been fully explained, and the House of Commons would have paid the same attention to them as it used to do to the members of the Board of Directors who had seats in Parliament?—Yes, the case would have been similar.

591. At present we have no means of knowing the truth of any matters connected with India, except through the exposition either of the Secretary for India, or the Under Secretary in the House of Commons, neither of whom has ever been in India, and who must derive their information entirely at second hand; is not that so?—Yes, that is the fact; and more than that, the House of Commons has no means of forming a judgment upon proceedings connected with India until those proceedings have actually taken effect and it is too late to remedy them.

592. And we who have been in India have the advantage of knowing that there is a Council of some 15 of the first men in India, whose opinions upon any great subject concerning the welfare of the inhabitants of India are perfectly unheard?—Unheard, except by the Secretary of State.

593. And the information percolates through him, or through his Under Secretary, to the House of Commons, neither of them being persons who has ever been employed in India, or had any practical knowledge on the subject whatever?—The opinions of members of the Indian Council can be known to the House of Commons only so far as they are laid before the House in the shape of written documents, generally speaking, after the decision has been arrived at and carried into execution, which is just the case of these barracks.

594. But the House of Commons has no power of moving for the opinions of the late Sir Proby Cautley, or any other high authority, upon any particular point; the House of Commons has no power under the present system of knowing what is the individual opinion of the members of Council upon any particular subject?—No, except so far as the Secretary of State lays those opinions, in the shape of written documents, before Parliament.

595. But he lays these opinions before it as the collective opinion of the Council; and, if I am right, I think we cannot move for the Minutes, which are, I believe, frequently lodged against the finding of the majority; is that so?—I cannot speak with any confidence upon that point. Occasionally the Minutes of the Members of the Indian Council are laid before Parliament.

596. But in your opinion it would conduce very greatly to the welfare of India, and prevent those extraordinary expenses which you have characterised, if the members of the Council of India had the means of sitting in the House of Commons?—I think that it might be attended with some benefit; and that, as far as it went, it would tend to reconstitute a *quasi*-independent body, especially charged with the interests of India.

597. Now in the case of these barracks, they were gone into at the time when there was a sanitary mania?—Yes.

598. Have these sanitary theories been borne out by experience?—Not in this case, certainly; the old experience of India has proved to be the right thing in this case; on other points the sanitary state of India is capable of great improvement.

599. Mr. *R. Fowler.*] Is it not open to any member of the Council of India to make a minute as regards proceedings of the Council upon which he differs, and to get any Member of the House of Commons to move for that minute?—It is open to him to make minutes, but how far it would be consistent with his position at the Council of India to arrange with Members of Parliament to move for his minutes after he had made them, is a question.

600. But it certainly is open to any Member of the House, without any arrangement, acting independently of the members of the Council, to move for the minutes?—I believe so; but I really have never entered into the point.

601. Referring to your answer to Sir Charles Wingfield, about the Governor General's recalling the Governor of Bombay, I think I understood you to say that that was a power that was never practically exercised; I suppose you consider that is a relic of a different age?—I do not recollect any instance of a Governor General recalling any Governor. I suppose, as he is supremely charged with the interests of India, that would be included in his power; yet I am not sure of that, as the Governors are appointed by a higher authority.

602. I believe that Warren Hastings superseded the Governor of Madras, and sent Eyre Coote in his place?—It may be; my recollection fails me. I recollect a Governo Madras being deposed by the Madras officers

603. Then, I suppose, that was a power existed in days when there was no communicat between India and England, but would now superseded in these days of the telegraph Practically it does not exist. It would be violent a discrepancy with the existing state opinion for any Governor General to t of it.

604. Sir *D. Wedderburn.*] Do you cons that, while the East India Company still exi in its twofold capacity as merchants and as te torial rulers, a certain identity of interest w maintained financially between the Governme of India and the great mercantile community of this country?—Certainly; and it was well under stood that territory used to supply the deficienc of commerce. That was one of the stronges arguments for abolishing their commercial cap city. They traded, as I mentioned, on a ratho magnificent scale, with great ships, which we framed almost as much for war as for commerce, a they had very expensive establishments in Chin and so forth; and it was well known that if th had been merely regarded in their trading cap city, they would have been annual losers, an territory used to come to the aid of commerce So, quite up to the year 1833, when the Chin trade was finally abolished, the East India Com pany used to cherish territory from a sense o personal interest, as it were.

605. Then the abolition of the Court o Directors has tended to create a state of things which has acted prejudicially in India upon the finance?—It has left the interests of the India taxpayers exposed without protection to th direct action of the English Government D partmen

partments and English interests, mercantile, monied, official, all sorts of interests, and has brought the action of Parliament and of English public opinion, which of course can be operated upon in all sorts of ways, to bear immediately with a direct pressure upon Indian financial interests, without the protection which the *quasi*-independent position of the Company formerly afforded.

606. But I gathered from the instances which you adduced that the influence of the mercantile community in this country, instead of having a tendency to produce frugality in financial administration, as it did in the days of the East India Company, now has a tendency to produce extravagance?—That is so, because formerly the mercantile interest of England in its relation to India, was represented by the East India Company, which was specially charged with the interests of India, and which had strong interested motives for protecting India against all the world; whereas now, mercantile and monied interests operate upon India in their own interest.

607. And to that you refer, in a great measure, the present financial embarrassments of the Indian Government?—Yes.

608. With reference to Mysore; by the creation of the Native State in Mysore, I suppose you would say that a certain injustice had been inflicted upon the inhabitants of British India, inasmuch as they now have to bear the whole expense of certain institutions to which you alluded, of which the inhabitants of Mysore have reaped the benefit, and to maintain which they [illegible] no contribution?—Entirely so; in fact, [illegible]remark applies, in a great degree, to the [illegible] of the Native States. We administer the [illegible]y police of the whole of India, with [illegible] slight contribution from the Native States. [illegible]s regards the other Native States, it came [illegible]ually in the course of historical events, and [illegible] step was the best thing that could be done [illegible]e time; and more than that, a great part of [illegible] were highly national states. Take the [illegible]t States, for instance. The Rajah, with [illegible]tocracy and the bulk of his people, were [illegible]jpoots; and the Jāt States the same, and [illegible]ahratta States the same. But this case of [illegible]e was purely gratuitous; there was no [illegible]se for it at all. It was born out of time, [illegible] had it entirely in our own hands.

609. Would you recommend a contribution [illegible]om the Native States to assist in maintaining [illegible]is military police, the post office, and so on, institutions from which they derive so much benefit, [illegible] to which they do not contribute?—No, not [illegible], because the matter has gone into a question [illegible]ood faith. We formed our arrangements with [illegible] Native States at various periods, under the [illegible]sure of various exigencies. We reaped the [illegible]efit of those arrangements in times gone by, [illegible] it would not do now to turn about upon [illegible]n, and say, "See, you are getting so much [illegible]e benefit than we expected;" we must keep [illegible]n with them. But this case of Mysore was a [illegible] matter entirely at our own disposal.

610. Therefore you consider that, in certain [illegible]stances, our generosity to Native princes has, [illegible] fact, been injustice to our own subjects?—In [illegible]s case eminently so.

611. Mr. *Fawcett.*] The general tenor of your [illegible]idence would lead, I think, to this conclusion, [illegible]t owing to mismanagement, the causes that [illegible] describe as artificial, namely, causes that could be prevented, India, financially, is in a more unsatisfactory condition now than she was previous to the abolition of the East India Company?—Well, that opens a wide general question, because there is a great deal to be said on the other side of the account. The revenue of India has wonderfully increased since the abolition of the East India Company; and if these and other causes of deterioration were effectually corrected, I believe that the finances of India in a short time might be made more flourishing than they ever were.

Sir *C. E. Trevelyan*, K.C.B.

21 February 1873.

612. Suppose that they are not corrected, you think that there is a great deal to cause grave misgivings?—Yes.

613. You have alluded to an increase in the revenue of India, can you say how much of that has arisen from increased taxation; the income tax, for instance?—Well, it is difficult to say; it would be very difficult indeed to make out the account; it is mainly, I believe, owing to the pure, honest development of the resources of the country, to a state of general prosperity.

614. But besides the income tax, have not three causes powerfully contributed to increase the revenue; the increase of the salt duty, the higher stamp duties, and the large increased revenue from opium?—Yes; all those causes have operated.

615. Therefore you cannot say that the increase in the revenue is entirely due to the increased prosperity?—No, certainly not; but the increase in the opium revenue is not an increase in taxation.

616. But without entering into the opium question now, an increase in that is not so certain a source of revenue as others, such as the land revenue?—I consider that in a course of years it is certain; it fluctuates from year to year, but in a course of years it steadily increases; and there are perfectly intelligible reasons why it should continue to increase.

617. You used the expression that the East India Company managed the finances of India on the general principle that the revenue ought not to be considered elastic?—Yes.

618. Do not you think that that was a very wise principle for them to maintain?—I think it was exceedingly wise for them to maintain, because we were a new strange foreign Government, suddenly called to the administration of a great country which had been accustomed time out of mind to be governed despotically. They never had any confidence even in their own rulers, still less in us; so that they looked with the greatest dread upon new taxation, and especially upon the income tax, which is a wonderful instrument for diving into the pockets of the people: and their prevailing feeling was that their only real protection was what they called "dustoor;" that is, established custom; and they relied upon established custom as upon a constitutional right. The East India Company, which founded our Indian empire, were quite aware of these circumstances; and while they abolished the most oppressive of the old taxes, and endeavoured to regulate those that remained, they carefully abstained from new taxation.

619. Then this principle, which was observed by the East India Company, and which has not been observed so carefully since the abolition of the East India Company, you regard as constituting what ought to be the cardinal principle of

Sir *C. E. Trevelyan*, K.C.B.

21 February 1873.

financial administration?—Yes, certainly it ought to be our cardinal principle until we have finally remitted the income and expenditure into the hands of the people of India themselves, by a proper system of local administration; whereas, in fact, since the Mutiny we have been doing nothing else except inventing new taxes; we seem to have forgotten all at once the old maxim, that the true plan was keeping down expenditure, and to have exercised our ingenuity in inventing and discussing, and elaborating all sorts of new taxes, income tax, license tax, tobacco tax, succession duties, marriage tax, and all sorts of taxes.

620. And the evil which you describe as resulting from this state of things, namely, the constantly inventing, elaborating, and discussing of new taxes is not to be estimated by the financial burden which they impose on the country, but a great part, and probably the greater part of the evil is due to the alarm and worry, and irritation and uneasiness which they cause?—Yes, by far the greater part. The income tax of one per cent. is a case in point. The one per cent. is nothing; the native Sahoocars would have no objection to pay one per cent., if they were sure that was all; but they do not like to see a machine maintained in action, which, by a few turns of the screw, would make the one per cent. 10 per cent., besides all the inquisition and extortion of the unprincipled native officers, which is worse than the 10 per cent. itself.

621. You refer to the increase in the gross revenue, independently of any additional increase which has arisen from taxation. You would admit, I suppose, that a great portion of that increase has been due to an increase in prices?—Yes, certainly.

622. Then, if that is the case, an increase of prices would still more affect all the items of expenditure than it would those of revenue, would it not?—Yes; it would affect expenditure directly and revenue indirectly.

623. And it would affect expenditure to a greater extent, because almost every item in the expenditure of India will be affected in pecuniary amount by an increase of prices, whereas a portion of the revenue of India is fixed in a pecuniary amount, and therefore will not increase with the expenditure of the country?—Yes. But, on the other hand, the increase of prices is an indication of a highly prosperous state of things, which renders it possible very much to reduce expenditure.

624. But, without entering into theoretical questions in political economy, have not you given rather too wide an assertion to that principle? That increase of prices may be owing to a depreciation in the value of money, which represents no real increase of wealth, but simply an unfortunate disturbance in the value of money?—I do not think that the depreciation in the value of money has gone far in India. To a certain extent it has gone on all over the world; but in India it has been only slightly in excess of what has taken place in Europe.

625. You are aware, are you not, that our highest authorities estimate the depreciation of money which has taken place throughout Europe of late years, as something between 30 and 40 per cent.?—I do not estimate it as high as that; but no doubt a depreciation has taken place, and has extended throughout India.

626. But whatever the extent of that depreciation is, that represents no increase of the wealth of the country?—No; but I do not think that the depreciation in the value of specie is the principal cause of the increase of prices throughout India; I think the main causes lie in another direction.

627. You have referred to the very imperfect check now placed on the expenditure of money in India, compared with what was imposed on it in the days of the East India Company?—Yes.

628. Will it not be correct, to sum up your general conclusions on this point by saying that, since the abolition of the East India Company, India suffers from almost all the admitted disadvantages of a government of party, and enjoys none of the advantages of it?—I do not think that it is government by party that India suffers from so much as class interests. First of all, it is the sort of semi-public interest of the public departments; the War Department and the Admiralty screw as much as they can out of India, and then the entire body of the military officers extort as much as they can. Then these bankrupt companies are too glad to hand their unsuccessful concerns over to the Government of India. That is class interest; but I do not think that the, strictly speaking, political parties of Whig and Tory, Liberal, Radical and Conservative, have anything to do with it.

629. But, fully admitting all these disadvantages which you have attributed to these class interests, is there not this disadvantage, which might be described rather as a disadvantage resulting from party government. An Adm[illegible] tration falls; a new Administration co[illegible] office; some politician has to be promoted; a man who has occupied a high position i[illegible] House; he must be made Secretary of S[illegible] some place must be made for him; the En[illegible] constituencies will not call out if Indi[illegible] sacrificed, and so India has not the sligh[illegible] security that the man who is made Secretar[illegible] State has a practical knowledge of India?— not think that India suffers more in that r[illegible] than England herself. It is one of the weak[illegible] of our English system that inexperienced [illegible] men, who have acquired influence in H[illegible] ment, are pitchforked into places of which have had no experience, and that equally app[illegible] to India as to the Home Departments.

630. But admitting that it is a disadvantag[illegible] to England and to India also, England has th[illegible] antidote, has she not, which operates to a certa[illegible] extent against the evil which results: if an i[illegible] experienced man is placed to preside at the W[illegible] Office or at the Admiralty, the House of Co[illegible] mons and the English constituencies may wa[illegible] him, and correct him, and to some extent n[illegible] tralise his blunders; whereas, as you have poin[illegible] out, if a Secretary of State commits blunders[illegible] regard to India, none of this correction is ex[illegible] cised upon him by the House of Commons [illegible] That is perfectly true.

631. Therefore, under the present syste[illegible] India suffers this disadvantage of party gover[illegible] ment, and does not, on the other hand, get th[illegible] compensation which England does?—That i[illegible] perfectly true; if an inexperienced person is a[illegible] pointed Secretary of State for War or First Lo[illegible] of the Admiralty, or at the head of any oth[illegible] English administration, he has an extremely w[illegible] instructed House of Commons, and the whole [illegible] the English tax-payers to watch hi[illegible]; whereas,

an inexperienced person is placed at the head of Indian affairs, he has nobody to look after him.

632. Therefore, in that sense, you agree with my opinion?—In that sense I do.

633. Is it not the fact that an illustration of the evil which I have just pointed out is to be found in the fact that it has happened that in six years there were six Under Secretaries of State who were representatives of India in the House of Commons, and that not one of them, before he became so, had the slightest acquaintance with India?—Certainly that is an illustration, as far as it goes.

634. With regard to the official pressure which prejudices the finances of India, many things were done in the amalgamation of the army which were strongly commented upon by the highest authorities in India, but no notice was taken of their remonstrances; is not that the case?—Yes, this matter of the colonels' allowances was very strongly commented upon, and the whole evil was plainly set forth, without any practical result. Nobody in England understood it; the purely English people did not understand it, and the majority of Anglo-Indians who took any notice of it were interested in its being done.

635. Am I not correct in saying that quite up to the present time remonstrances have been addressed from India to the authorities at home about the extravagant Army expenditure, and that the same thing has occurred, no notice has been taken of them?—I think in petitions from Bombay and elsewhere it has been noticed.

636. I am alluding to official remonstrances [illegible] the Governor General?—Yes, there have [illegible] remonstrances, certainly, on several points [illegible]nected with the Army expenditure.

637. Is there not this danger to which India [illegible] exposed, that an English Government fighting [illegible] popularity is very anxious to make any [illegible]mates which show a saving of half a million; [illegible] if they cannot save that in any other way, [illegible]o it by throwing charges on the people of [illegible]a because no one here is sufficiently interested [illegible]hat the people of India have to pay to [illegible]ct?—No doubt it is a severe temptation, and [illegible]t took place in the old days of the East India [illegible]mpany shows how very necessary it is that in [illegible]ese official financial settlements both parties should be fully and stoutly represented, that there should be equal stamina on both sides. In former days, I think, the East India Company had the best of it. Now I am afraid it is different, because it is all done now by officers of the Queen's Government; whereas formerly it was done partly by officers of the Queen's Government and partly by officers of the East India Company. But with all this I must entirely acquit even our officials, still more our Statesmen, of any deliberate intention of sponging upon India.

638. *Chairman.*] You do not think that they fall into the temptation, though the temptation exists?—The temptation strongly exists, and they have put a great deal too much upon India; but I think that is rather a defect in the machinery, for these settlements are in the nature of judicial settlements, and by good right there ought to be a judge and skilled advocates on both sides.

639. Mr. *Fawcett.*] And an independent arbitrator?—Yes; the settlement ought to be of that nature.

640. In the days of the old East India Company what took place was this, was it not; it was a powerful company, and had great influence in the country, and had powerful influence in Parliament with regard to the finances of India; whereas now, in reference to the finances of India, the Secretary of State is merely an individual Member of the English Parliament?—Yes, that is the case.

641. You have referred to that financial burden which results to India from the army; and you have contrasted the cheap way in which recruits were sent to India formerly with their cost now: do you know how many men at present in England, but belonging to India, are in these depôts; have you ever made an estimate of that?—No; I have not gone into that detail. It is obvious on the face of the thing, that a single depôt with a very moderate staff of officers, which is what there was under the East India Company, must be far less expensive than a multitude of depôts, including a great many more recruits than are required for India, with a great many more officers than are wanted to train soldiers for India. If the old standard was preserved, and the War Office charged India only what it would cost India to do the work in the old way, or something analogous to that, then the War Department might be left to make its own arrangements. But that they do not do; they take as their basis arrangements which were framed primarily with a view to English interests, and then charge a fancy proportion upon India.

642. Are you aware that frequent protests have been made by Secretaries of State for India against the charge which India has had to pay for recruits?—Yes, I am aware of the fact, both from my perusal of public papers, and also from my intimate acquaintance with the late and the present auditor of Indian accounts, who have both exclaimed against this injustice in the strongest manner.

643. When the Secretary of State, feeling that injustice is done to India, makes frequent complaints, no notice is taken of them; practically he has done everything he can do, and he is powerless unless he thinks the case so extreme that he cannot remain a member of the Administration?—It is fair to assume that he has done everything he can.

644. *Chairman.*] Has he not absolute power by law over such a question as that?—Yes.

645. Mr. *Fawcett.*] Seeing that the principle of this amalgamation of the Queen's Army is in an Act of Parliament, what would take place supposing that the Secretary of State simply said, "I refuse to pay this charge"?—These detailed arrangements of colonels' allowances and the two-company depôts are not prescribed by Act of Parliament. No doubt it would be a strong thing for a member of the Queen's Government to inform his colleagues that he [illegible] to submit to a decision of the majority [illegible] Cabinet, and in such a case he must [illegible] course.

646. There are a certain numb[illegible] the present time on the Indian [illegible] land; you do not know the ex[illegible] from any official documents I [illegible] what it is. But, assuming th[illegible] couple of thousand, those n[illegible] out of the revenues of Ind[illegible] classed as constituting a po[illegible]

Sir *C. E. Trevelyan*, K.C.B.

21 February 1873.

strength of the army in England. When the Secretary of State for War brings forward the Army Estimates in the House of Commons, and asks for a certain sum of money, say thirteen millions, he says, "You have so many effective men in England;" but what he ought to state, if he put the thing correctly, is this: "You have so many thousand men in England, and so many of these are paid for by the people of India?—I imagine that the Secretary for War in his annual statement of the effective force, includes all the men in the depôts. Then, the real question is, what proportion of the expense of the depôts should be charged to India? That resolves itself into a further question: What is to be the basis of settlement? Now, I think a person arguing on behalf of India would say that the basis of settlement ought to be the sum which it would cost to provide proper recruits for India. Well, that sum is very fairly represented by the former depôt at Warley, which worked extremely well; a single depôt for a single service. But then the War Office say, "That does not suit our arrangements." The rejoinder to that would be, "If it does not suit your arrangements, it is your affair; but it is very hard upon India to charge her with the expense of arrangements which are English arrangements for the benefit of England, and you ought to charge us only what it would really cost to provide recruits for India."

Tuesday, 25th February 1873.

MEMBERS PRESENT:

Mr. Ayrton.	Mr. Eastwick.
Sir George Balfour.	Sir James Elphinstone.
Sir Thomas Bazley.	Mr. Fawcett.
Mr. Beach.	Lord Edmond Fitzmaurice.
Mr. Bourke.	Mr. Robert Fowler.
Mr. Baillie Cochrane.	Mr. Hermon.
Mr. Crawford.	Mr. Lyttelton.
Mr. Cross.	Mr. M'Clure.
Mr. Charles Dalrymple.	Sir Stafford Northcote.
Mr. Beckett Denison.	Mr. John Benjamin Smith.
Mr. Dickinson.	Sir David Wedderburn.
Mr. Grant Duff.	Sir Charles Wingfield.

THE RIGHT HON. ACTON SMEE AYRTON, IN THE CHAIR.

Sir CHARLES EDWARD TREVELYAN, K.C.B., re-called; and further Examined

647. *Chairman.*] I BELIEVE you wish to add something to some of the answers which you gave on the last occasion?—Yes. I was asked where the plan of promotion for the three Indian Staff Corps by pure length of service, without any fixed establishment for the several ranks, originated. It was originally proposed in a letter to the Secretary of State in February 1860 by an Indian officer who was at home on sick leave, and was worked out in detail in the same year by a committee consisting of four English and three Indian officers, including the proposer. To this I may refer to the Parliamentary Papers, [illegible] of 1860, and 77, of 1861. Secondly, I was asked whether the large increase of revenue since the mutiny had not in great part been caused by new taxation. The correct answer is that, setting aside the income tax and opium revenue, it is in part owing to additional taxation; that is, to additions made to previously existing taxes; but as these taxes, even when so enhanced, are neither excessive nor unpopular, the result may be accepted as a legitimate increase of revenue. Thirdly, I was examined at some length as to the expediency of permitting the Members of the Council of India to sit in the House of Commons. Formerly, when we could only reason from analogy, I was in favour of it; but now that we have actual experience for our guidance, I am convinced, on reflection, that it would not be advisable. The East India Directors rested upon the independent basis of the Court of Proprietors; they belonged to a class which did not look for official promotion or court favour, and whether sitting in Leadenhall-street or the House of Commons, they stoutly maintained the grand old traditions of the body whose trustees they were. This is a state of things which could not easily be recreated. It certainly cannot be patched or galvanised into renewed existence. The mercantile and monied interest, which was formerly protective of India, has now become aggressive, and if appointments were made to the council from this class, new facilities would be given for transactions of the character of the Port Canning, Orissa Irrigation, and Elphinstone Land Company settlements, and of the proceeding by which the capital of the Bombay Bank was placed at the disposal of speculative joint stock companies. If Members of the Council of India were permitted to sit in Parliament they would find it difficult to stand up against the Secretary of State, to whom they owe their appointment, and with whom they are in daily habits of confidential communication, and their action would mainly consist of a defence of the proceedings which had been taken in council. The proposed guarantee, therefore, would be likely to turn out as delusive as the last, and the Secretary of State should, in my opinion, be left to his undivided responsibility, and new safeguards for the protection of India should be sought in another direction.

Sir *C. E. Trevelyan*, K.C.B.

25 February 1873.

648. Sir *S. Northcote.*] I observe that in answer to Questions 496 and 497, with reference to the case of the purchase of the Orrissa Irrigation Works, you spoke as though this transaction was one that had resulted from the pressure of monied people in this country, upon the Secretary of State for India in Council, and one which the Government of India would not have under taken as a transaction beneficial to Indian interests; are you aware that the recommendation that these works should be purchased came from the Government of India, and that the Government of India recommended their purchase on far higher terms, at least 100,000 *l.* more than the Secretary of State in Council thought right to give?—I cannot say that I have entered into the details of the question as between the Home Government and the Government of India; and it is no part of my object to apportion the responsibility

Sir *C. E. Trevelyan*, K.C.B.

25 February 1873.

sponsibility between them. My general proposition is that this transaction arose from the pressure of the monied interest upon the Indian Government generally.

649. As you put the matter in that way, may I ask you just to look at the report of that short debate which took place in the House of Commons on the 2nd of July 1868, on the motion of Mr. Bouverie for Papers connected with the transaction, and to my reply (*handing a volume to the Witness*). If you will look at the passages which I have marked, I will ask you whether it does not appear from that account that the facts were as I have stated them, that the Government of India recommended the purchase of these works; that it was not the action of the Secretary of State, but that of the Government of India, and that what the Secretary of State did was to give lower terms than those recommended by the Government of India?—That seems to be so. I will read a short passage from your reply, which shows the state of the case: "Now Parliament had distinctly imposed upon the Secretary of State for India in Council the duty of superintending the expenditure of the revenue and finances of India, and as there was a difference of upwards of 100,000*l.* in the terms mentioned in the despatch" (that is the despatch of the Government of India) "and the offer actually made, he did not think that he would have been justified in offering so large a sum above what he believed to be the real value of the works."

650. Mr. *Fawcett.*] I was asking you some questions about the strength of the depôts in England; can you give me any information upon that point?—I have not entered into the details further than this, that when the depôt battalions, in which the depôts of several regiments were concentrated, were broken up, a system of two-company regimental depôts was established, that is a depôt consisting of two companies for every regiment whatever; and as regards the regiments serving in India, the Government of India has to pay a certain proportion of the expense of those depôts, not the whole, I imagine, nor nearly the whole. So that the question resolves itself into what is to be the principle of adjustment, whether it is to be the fair estimated cost at which the Government of India could do the work for itself, and at which it actually did it in former days, or whether it should be an estimated proportion of the expense incurred for the general purposes of the Government of England.

651. Am I not correct in saying, that whereas formerly these depôts were simply recruiting parties, sometimes consisting of not more, in officers and men, than 16 when the change was made by which the plan of two-company depôts was introduced, this being done avowedly to increase the strength of England against invasion; as many as 220 officers and men were sometimes on these depôts, and this arrangement being specially carried out to add to the strength of England, India was called upon to pay a considerable portion of the expense?—The primary reasons for breaking up the regimental depôts, the consolidated system, had reference to administrative considerations; but the idea of strengthening the home military force entered into the question. No doubt the present plan is highly conducive to the defensive strength of this country.

652. Is it not a fact, that no inconsiderable portion of the army now in England, which constitutes the defensive strength of England, is partly maintained out of the revenues of India?—Yes, certainly, a portion is; how far it should be called considerable is a matter of opinion.

653. But are you aware that last year it was stated in the Estimates that there were 200 officers, 300 non-commissioned officers, 5,600 infantry, and over 500 cavalry on the depôts in England of the Indian regiments?—I cannot answer for the numbers; I should not be surprised that that was stated to be the number. That no doubt is a considerable force.

654. And has your attention been directed to the somewhat singular fact, which I know not how to explain, that although last year it could be easily found out from the Army Estimates how many officers, non-commissioned officers, and men were in England on the depôts of the Indian regiments, this year the Estimates have been arranged in a different manner, so as to make it almost impossible, or extremely difficult, to fish out the information?—I was not aware of that fact.

655. Does not the number of men who have to be maintained by India, and who are in England at any particular time adding to the effective strength of the English army, depend to a very great extent simply upon the will of the Horse Guards?—No doubt the administration of the depôts rests with the military authorities in this country.

656. They, in fact, determine at what rate the men are sent out to India?—So far as the of the men depends upon the length of time t stay in depôt, that is determined by the orders the military authorities in this country.

657. So that this matter, which of cours affects the military expenditure of India to very important extent, is primarily under t control of the Horse Guards, and not primari under the control of the Secretary of Stat India?—Certainly.

658. You think, I presume, that so far as interests of India are concerned that cannot b satisfactory arrangement?—I will not say t it would not be a satisfactory arrangement India was charged a fair sum; I do not think that the interests of India and the interests of England are necessarily incompatible on this point, but I conceive it to be a grievous injustice that India should be charged an additional sum, a larger sum, with regard to arrangements which are made for the benefit of England.

659. And you think that she is suffering under that injustice at the present time?—Yes; I can not help thinking so.

660. In speaking of the financial burdens tha have been cast upon India through the sentimenta generosity of the English public leading them t provide liberally for the native princes, you re ferred to the very great expenses incurred in this country in the way of agencies; I suppose you mean by that that great sums of money are spent in this country by the native agents in influencing English public opinion?—Yes.

661. Are you aware that it was shown in the accounts of the State to which you referred in the last evidence, namely, that of Mysore, that no less a sum than 30,000*l.* was spent in these agencies?

agencies?—I have long been aware that very large sums have been spent out of the revenue of Mysore in order to influence English public opinion; I am not surprised to hear that an item of 30,000*l.* was found in the accounts under that head.

662. Would it be possible, do you think, to obtain any information as to the way in which this money for agencies is dispensed; could you suggest any way of investigating the subject?—It would be extremely difficult, because, so far as the transactions were of a questionable character, they took place between accomplices, which always makes it very difficult to discover the truth. I do not know any mode of obtaining that information except a commission with power to take evidence on oath.

663. In speaking of the Port Canning and the Mutlah Railway, you mentioned the fact that although Papers had been moved for in Parliament, several Minutes by yourself which spoke in strong terms of the transactions in connexion with these schemes had been left out of the Parliamentary Papers?—Yes, that was so.

664. I suppose the terms of reference included your Minutes, and they ought to have been published?—My Minutes certainly had quite as much bearing on the subject as the Minutes which were published. I presume that they were included in the terms of reference.

665. Have you heard any explanation of that omission?—No, I never asked for any explanation.

666. When were these Papers moved for, and who was responsible for the omission of your Minutes?—I think it was in the last Session. I did not think it worth while to inquire who was responsible.

667. Therefore, of course, the proper person to inquire from would be the Secretary of State?—Yes.

668. You referred to the very heavy loss that had to be borne by India from the buying of the Elphinstone Land Scheme. Was it not the case that these shares were at a heavy discount, but that directly rumours began to be bruited abroad that pressure was put upon the Government to buy up the scheme, the shares immediately advanced rapidly, and that then speculators gained enormously in the transaction?—I heard at the time that it was so; that is a circumstance which attaches to all these cases of the interference of the Government to take up the liabilities of public companies.

669. Do you think that we could obtain any light as to the nature of the pressure that was brought to bear upon the Government, and of the direction from which it came, if a list of the shareholders in this company was moved for?—I have no doubt that if a scrutiny was made, full information could be obtained in reference to all these cases of Port Canning, and Orissa, and the Elphinstone Land Company, and the Bank of Bombay, and Back Bay, and the whole of them.

670. And if it could be obtained as you suggest, do not you think it would be very desirable that this scrutiny should be undertaken; because does it not appear to you that the only way of preventing the recurrence of such transactions in which private people obtain an advantage at the expense of the revenues of India is to make them feel that if they repeat such proceedings they are likely to be exposed?—No doubt the exposure of such transactions, and, still more, the punishment of those who are to blame, would have a deterrent effect.

671. You referred in your last evidence to the impossibility of the Government of India, that is to say, the Governor General, exercising any effectual control upon the extravagance of the Governors of Bombay; you used the expression that the Government of Bombay took the bit into its mouth, and it seemed impossible, according to your description, for the Governor General and his Council to take it out again?—Yes, I said that it took the bit between its teeth; that expression correctly describes what took place; the Government of Bombay took the bit between its teeth and ran away; the Government of India ceased to have any control over it.

672. You said that in the days of the East India Company such things would not have occurred; that the Governor of Bombay, if he had done such a thing, or attempted to do it, would have been recalled?—Certainly he would.

673. Do you think, then, that one reason why the Secretary of State seems powerless to recall a governor when he would have been recalled by the East India Company, is to be found in the fact that the appointments, which are sometimes made to these governorships, are political and party appointments?—No, I do not think that that was the most influential reason. I attribute it rather to the popularity of the Government of Bombay. The Government of Bombay had set its sails to a strong popular breeze that was then blowing in favour of public works of all sorts, and irrigation, and improvements connected with the cotton trade, and so on.

674. But as I understand you, if the Governor of Bombay had set his sails to the same popular breeze in the days of the East India Company, his sails would not have been long permitted to fill, would they?—Certainly not; the Company would unquestionably have recalled him, and prevented the greater part of the irregularities which took place; they would have nipped them in the bud.

675. Then you use this as an illustration to show that the Secretary of State is *not* so powerful to check extravagance as the East India Company, because he is naturally more anxious to obtain the advantage of a popularity which results in spending the money of the people of India?—This brings us to what was regarded at the time of the transfer as the real danger of the transfer, namely, that the interests of our Indian Empire should be directly dependent upon the exigencies of the Government of England, without any intermediate barrier or any effectual guarantee. Now the action of the Government with reference to India is influenced to a greater or less extent by purely English considerations.

676. You have altered or modified your opinion with regard to allowing members of the Indian Council to sit in Parliament, therefore I will not ask you any questions upon that point; but I should like to know whether you think it would be desirable to give greater publicity to the discussions which take place in the Indian Council?—I must say, in my own justification, that I did not express any strong opinion in favour of allowing them to sit in Parliament, but I thought that, as far as it went, it might be desirable. In answer to your question, I must say that I consider that the Indian Council, as a

Sir *C. E. Trevelyan*, K.C.B.

25 February 1873.

protection for Indian interests, has so entirely failed, that I am hopeless of reconstructing it in any way. It seems to me to be tainted in its source from the circumstance that it has no independent basis, that it is appointed by the English Government, and public bodies naturally are dependent upon their constituents.

677. With regard to the statement you made just now in reference to taxation which has been imposed, I understood you that it was not so much new taxation that had been imposed in the last twelve years, but that some taxes had been increased in their amount?—Yes; salt and stamps.

678. And did you express the opinion that these were not unpopular taxes?—Yes.

679. Sir *C. Wingfield.*] You said the other day, did you not, that we had been constantly inventing new taxes?—Yes; but we have not carried them into effect; we have only frightened people by them. The only one which we have actually carried into effect is the income tax, and its modified form the licence tax.

680. But local taxes have been carried into effect?—Yes; that is a separate question.

681. Mr. *Fawcett.*] You are now simply referring to Imperial taxes?—Yes.

682. Therefore, the opinion which, I think, you wished to express on the subject, as far as I gather, is this, that the annoyance which has been caused by this taxation is not so much owing to its amount, but owing to the frequent changes and frequent proposals of fresh taxes?—Yes; the perpetual discussion of new forms of taxation, many of which were strange to the people, has scared and harassed them, and had a very discomposing effect.

683. You think that the salt duty has reached its maximum, do not you?—It is difficult to say; I would not propose any increase of it, certainly.

684. Mr. *J. B. Smith.*] As regards the salt duty, are you aware that in many districts, although an increased salt tax has been added, the people absolutely pay a less price for salt than they did before?—I am quite aware of that; the element of carriage is more powerful than the element of increased duty. Great pains have been taken to carry the railways right into the salt depôts.

685. In fact, that the great tax on salt was the carriage?—Yes.

686. Sir *S. Northcote.*] With reference to the question put to you just now by the honourable Member for Brighton, as to whether you considered that the fact of the Governors of the Presidencies holding their appointments from political chiefs, made them more independent, I would ask you whether you consider that, for instance, the appointment of Sir Bartle Frere to the Government of Bombay could in any sense be called a political appointment?—No; that was not a political appointment. He was appointed because he was a distinguished Indian officer.

687. Do you suppose that there has been any period in which the Government of Bombay have more completely taken the bit in their mouths than during the administration of Sir Bartle Frere?—No.

688. Was it not the fact that during the period of Sir Bartle Frere's administration of Bombay the great excitement took place in the cotton trade and in the general commercial prosperity of Bombay, occasioned remotely, but not very remotely, by the great Civil War in America?—Yes.

689. And that it was owing to that great period of excitement that many of these schemes for expenditure were launched; and that a great many undertakings were commenced on the assumption that Bombay had entered into a period of great prosperity, and that it was desirable to develope the resources of India, and especially of that part of India?—Many of the undertakings arose from motives of that sort.

690. Now you say that the East India Company would not have allowed the governor to have given way to that kind of excitement, and to have set at nought, as practically the Government of Bombay did, the moderating counsels of the Government of India and of the Home Government?—I believe not. Judging the East India Company by the whole of its history quite to the last, I am of opinion that it would not have allowed any undue concessions to be made to such a state of things.

691. That is because the constitution and the traditions of the East India Company made it a more conservative and less easily influenced body than the general body of the public?—Yes, it was, for Indian purposes, an independent body; by its constitution it was not liable to be acted upon by the influences which are found in practice to act upon the English Government.

692. You spoke just now of a large number of undertakings which you lumped up together; though it might be questioned whether they are all to be put in the same category, such as the purchase of the Orissa works, the Back Bay schemes, the Bombay Bank and other matters, and you said that they might all be inquired into advantageously; are you aware that a very minute and careful inquiry did take place into the circumstances connected with the failure of the Bombay Bank?—Yes, I am aware of that.

693. Have you seen the report of those commissioners, or the evidence taken before them?—I have not read it with any attention.

694. Have you made yourself sufficiently acquainted with that affair to be able to agree or disagree with me if I say that it gives evidence that the Government of Bombay were very much carried off their legs by the great tide of popular feeling and excitement and speculation then existing in Bombay?—Of that there is no doubt. The only question is whether, being set there as guardians of the public interest, they ought to have allowed themselves to be carried off their legs.

695. Can you say whether they could have had strength to resist it?—Certainly they could.

696. You have sufficiently considered the circumstances to be able to express that opinion?—Certainly; if they felt that they had not strength they should have asked for it; they should have appealed to the Government of India and to the Home Government.

697. Can you say, for instance, in what particular they failed to exercise the control which they ought to have done?—I am not bringing a detailed indictment against the Government of Bombay. I have indicated generally the side on which they failed in yielding to the popular current instead of resisting it.

698. But do you not think it very important that we should get at the real causes of those evils

…ications which ensued, …holders themselves in …directors, who in the …e changes that were …ities originated, that is, … the shareholders in the …were involved in a great …ns that were then in progress

… aware of the fact that the appli… to t… Government for the changes that …e made came from the shareholders as a body …d their directors?—Yes, I understood that it …as so.

702. And are you aware also that the influence to which you have referred, so far as we can judge that there could be any influence, was the influence of the shareholders and the directors as their representatives in the Legislative Coun… of Bombay, by which the change was effected … the charter?—I do not doubt that the prevail…g influence which produced the result was that …f the shareholders of the Bank of Bombay, who were identical with the speculators in the numerous bubble schemes that were then in progress, and who desired to have the funds at the disposal of the Bank of Bombay available for supporting their speculative interests.

703. Does it appear anywhere from the investigation that at that time when the shareholders made their application to the Government, the Government had any cognisance of the fact that there were those private relations which subsequently were discovered when an investigation took place?—That I cannot say.

704. But are you aware whether under the constitution before certain changes to which I will subsequently call your attention were made, the Court of Directors did not allow the Governor to have even the authority to interfere with the establishment of a new joint stock company without first submitting the project to them and obtaining their approval; that his hands were so completely tied down that he could not have interfered at all in the business himself under their administration, but could only have sent the papers home to the Court of Directors?—I was aware that it was one of the conditions pre-

a great deal …
I want to know first of all whether … the Government responsible for that mis… any degree, and secondly, if you do conside… so, in what way you think that such calamit… could be prevented in future; whether the G… vernment hands want strengthening, or on … other hand whether the Government of Bom… ought to be weakened?—That is a very la… question indeed. In the first place, I should … that the calamities, or difficulties I would c… them, in which the mercantile and monied com… munity of Bombay were involved, were not owing to the failure of the Bank of Bombay, but were precedent to it, and were caused by themselves.

708. My question was as to the course pursued by the Bank of Bombay and the subsequent failure; of course in putting that question I had reference to the way in which the directors of the Bank of Bombay supported great schemes which proved to be rotten?—The course taken by the directors of the Bank of Bombay no doubt chimed in with the prevailing over-speculation, and so far assisted it; the whole community was involved in it together.

709. But what I rather want to know is, was the authority of the Government of Bombay, in your opinion, sufficient to have checked that if it had been properly exercised?—Yes, certainly.

710. You do not think that it requires any addition being made to that authority?—No, I consider that the Governor and council are placed there in an independent position expressly to hold in check injurious popular influences.

711. Now do you believe that popular opinion in this country would support the Government of Bombay in checking what would be called the development of the prosperity of a great portion of India?—It was the duty of the Government of Bombay to promote, within reasonable limits and in a proper manner, the development of the prosperity of the Presidency. The question is whether the local government did not go much beyond that limit; the Government of India prescribed the limits, and at-

…ed by an …ment, and that the Bill in the course …passage through the House of Commons …discussed?—I consider that the passing of a …l on an Indian speculative undertaking …ough the House of Commons, is a totally dif…nt thing from a detailed scrutiny into the …fits of the transaction; I cannot accept it as a …stitute.

714. Are you conversant with what took …ace during the discussion of that Bill?—I observed at the time what took place.

715. And with the fact that the grounds of the arrangement were then explained?—Yes; the grounds were then explained as they appeared to the Government at that time.

716. What do you understand were the grounds of the arrangement?—Well, the general ground was, that as the company has found itself incapable of carrying through the works, and as there were certain objections to any private company undertaking such a system of works, it was desirable, on public grounds, that the Government should take charge of the works, that they should be transferred to the Government to be managed directly on behalf of the public.

717. That is a very inadequate account of the transaction; was it within your cognisance that the company had an exclusive right to occupy a field of irrigation which it was thought extremely important to occupy, and which they were absolutely unable to occupy, namely, the field of Behar?—Yes; my answer was intended to include that. I was quite aware that they had an exclusive right of dealing with the irrigation.

718. Are you aware that in consequence of the great famine in Orissa it had become important to the Government to press forward in the interest of the population of India, the completion of works which had been undertaken by this company, which the company however were unable to complete without further assistance?—Well, the recent famine no doubt made Orissa an object of interest, but it could not justify an unreasonable wasteful arrangement.

719. Certainly not, but there you are begging the question; but I wish to ask you first of all, are you aware that an Indian Commission sat …carry them on?… ever irrigation works … or Behar, it was des… carried on in a direct… ment; but whether, th… pletely broken down, it … ment to give a commutati… would have been given if … ful speculation, I think is quit… The question is one of amou… policy.

724. That is begging the ques…a, be… how do you know what price would have be… given if it had been a successful speculation, an… on what grounds do you say that the company had altogether broken down; are you not aware that the company had expended upwards of 800,000 *l.* upon their works in Orissa, that they had brought those works to a very considerable state of development, and that although those works were not then bringing in a profit to the company, they contended that a very little expenditure, or a guarantee on the part of the Government, or even a little patience on their own part, would make them profitable?—The company had entirely come to the end of its means; and if they were sagacious enough to form a correct judgment as to the prospect of their work, they must have known that it was entirely a losing concern; it has turned out that it does not even pay its expenses.

725. That is the result now, is it?—Of a great part of it.

726. Have you seen recent returns with reference to the Orissa works?—I am speaking from information contained in Mr. Campbell's Administration Report.

727. There is one other class of expenditure which I should like to ask you about; you spoke of what you called the sentimental class; there is no doubt that large sums have been from time to time granted to native princes, and others, partly through the pressure which has been brought to bear upon the Government through Parliament; that I understand to be your complaint, and it is one which I suppose is founded upon fact?—Not merely Parliament, but English popular opinion generally.

728. Now, supposing that an Indian prince, or

personage

f any kind, thinks that he has not had e him, to whom is he to appeal?—to the Home Government.

y the Home Government do you mean etary of State in Council, or do you arliament?—The Secretary of State in

Do you consider it illegitimate for a to appeal to Parliament?—Well, that us back to the manner in which the Go- nent of India has been bound up and fused the Government of England. As the retary of State for India is a high func- nary of the Government of England, and as Parliament is the constituent influential assembly of the English Government, the native princes who have objects to attain in this country naturally address themselves to Parliament, and to Members of Parliament; they also address themselves to the press, and to influential people of various sorts.

731. Do you think that the fault of Parliament is in taking too much interest, or too little interest, in Indian affairs?—Well, both. It would be well if they had interested themselves more in some of the things to which I have adverted. On the other hand it would have been well if they had interested themselves less in some others.

732. It may have come within your observation, that the cases in which Parliament most frequently takes an interest in Indian questions, are those where some person's grievances are concerned, and in which a personal canvas has been instituted to induce Members to go down hear the complaints of some individual who been wronged, or who says that he has been nged?—No doubt that is so.

733. You would not impute those excep- ally large attendances of Members of Parlia- t on such occasions to any improper motives, ppose?—The mention of large attendances not from me, and I do not impute any im- per motives to Members of Parliament.

4. But do not you think it natural that men d be more easily induced to go down and discussions upon individual cases which een strongly pressed upon their notice, than they should attend to the great affairs of e empire, which require much more study and ore continuous and sustained attention?—No oubt; it is natural that personal considerations ould be always more impressive than abstract ublic considerations.

735. So that without imputing anything like at are commonly called improper motives to mbers of Parliament, it is an unfortunate cir- nstance that cases of that sort demand and ain a disproportionate amount of their atten- n?—Yes; and in reference to the cases of the ive chiefs, I believe that the interest taken s to a great extent, as I described, sentimental, nnected with natural feelings of generosity.

736. *Chairman.*] To go back to some of your rmer answers, you recollect that the East India ompany ceased to be a trading company on the hange in the charter in 1833-34?—Yes.

737. Do you know whether up to that time it was the recognised view, and oft-repeated view of the Court of Directors, that it was impossible to administer the Government of India so as to make the revenue meet the expenses?—Yes; that was the stock argument of the advocates of the company.

738. Do you know also that it was a stock result of their administration up to that time that they never had succeeded in keeping the expenditure within the revenue; and do you know that, in the preceding 20 years the deficit had been no less than 22,000,000*l.*?—That was the period of the construction of our Indian Empire, and large funds had to be raised by loan to carry on the wars connected with that period, which sufficiently accounts for the fact referred to. But I mentioned two periods, at least, in which, by the exercise of economy, the finances of India were brought into a decidedly prosperous state, one during the latter period of Lord Amherst's administration, and the other during the latter part of Lord William Bentinck's administration. There was a decided surplus in the treasury on both those occasions; a large surplus. They were afterwards dissipated by wars. Lord Amherst's surplus was dissipated by the first Burmese war, and Lord William Bentinck's surplus by the Affghan war; and we went from bad to worse from that period till the great period of the Mutiny, which was worst of all.

739. But the Affghan War and the last period which you have mentioned were after 1833?—Yes; but Lord Amherst's and Lord William Bentinck's administrations were under the East India Company.

740. Do you recollect that previous to the year 1833 there had been a considerable interval of repose, and still up to that time the Court of Directors had not succeeded in bringing the annual expenditure within their revenue?—I maintain that they had, although the advocates of the East India Company in those days argued that the territory could not be managed financially without the assistance of commerce; yet the opposite opinion was held by many, myself included. As a matter of fact, both Lord Amherst and Lord William Bentinck succeeded in bringing the annual expenditure within the revenue previously to 1833, for they had a considerable surplus.

741. Still as a matter of fact, they had received in the shape of a tax upon the people of England, by the means of their tea monopoly, a sum of upwards of 1,000,000*l.* a year to supplement their administration of India?—Yes; but it was not all net, because their commerce was carried on in a very expensive manner. The East India Company did not get all that the people of England paid, or anything like it.

742. But I am not speaking exactly of what the people of England paid, but of what they paid over and above the fair expense of trade by the enhanced price that was put upon tea?—Of course, they paid a monopoly price; but the greater part of the income thence derived was dissipated in the great ships and the China establishments, and so forth.

743. Was not their objection to the change in 1833, that if India were deprived of the subsidy which they obtained by means of th monopoly they would be unable to administration of the Governme their argument, but in the op who were well able to judge it argument.

744. But was not the Duke of Wellington in th not sufficient revenue t expenditure till it wa —A very proper

Sir *C. E. Trevelyan*, K.C.B.

25 February

Charter Act of 1833 had been passed, and the trade abolished, very large reductions were made; Lord William Bentinck prepared the way for that.

745. One consequence of that, and of the economy enforced on the Court of Directors by the British Government in Parliament, was that Lord William Bentinck did succeed in bringing the finances into proper order?—Yes, during the whole period of Lord William Bentinck's administration very strict attention was paid to the regulation of the expenditure, and in the latter years of his administration he succeeded in producing a decided surplus. I remember his remitting a million sterling home in specie about the time of the renewal of the charter.

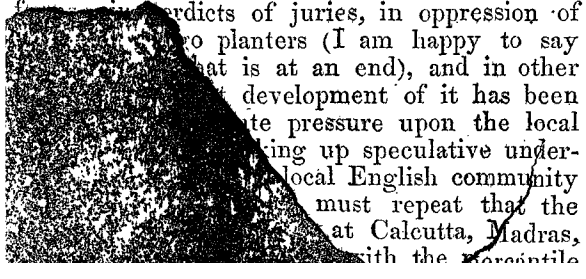
746. It was after the renewal of the charter, and when the commercial assets were being realised, that they got that immediate flush of money, was it not?—My recollection is that it was before the passing of the Charter Act; it was while the discussion was going on; it was, I believe, net surplus of Indian revenue; it was in addition to paying all the company's bills.

747. The policy of reduction was with a view to the attitude taken by the Government that they would put an end to the subsidising of India by the trade receipts or profits?—That was one main motive, and it was an argument ordinarily used by the advocates of the abolition of the trade, that if it were abolished it would enforce economy in Indian administration.

748. You are aware that the determination to abolish the trade was taken by the English Government a considerable time before the Act itself passed?—Yes.

749. Do you recollect that up to a comparatively recent time it was considered that the view on which India was administered by the Court of Directors was, that the local governments were surrounded by European influence of a very limited character, and were also more or less influenced by the European press in a very limited manner; and that unless the Government was practically controlled in all its details, and almost administered from England, the result would be that India would be governed for the benefit of the few Europeans in India, and not for that of the mass of the natives, who never made themselves heard?—Yes; the influence exercised by the local Europeans and the local European press in their own interests, has always been regarded with jealousy by Indian statesmen; and the transactions of the last few years show that that feeling is not without foundation.

750. In fact that feeling may be said to have grown up from the experience of the Court of Directors, beginning with a very early period of misconduct of Europeans in India, as they thought, in relation to the native community?—Entirely so. It shows itself in a variety of f[illegible]rdicts of juries, in oppression of [illegible]o planters (I am happy to say [illegible]at is at an end), and in other [illegible] development of it has been [illegible]te pressure upon the local [illegible]ting up speculative under- [illegible]local English community [illegible] must repeat that the [illegible] at Calcutta, Madras, [illegible]ith the mercantile



and monied community of England; f[illegible] part they are actually their agents.

751. Was it not the view of the [illegible] Directors, and the view maintained in co[illegible] with the administration of India, that the[illegible] counteract that was to have the whole [illegible] vision of the government firmly seated [illegible] country in their hands, so as to be above [illegible] local influence?—No doubt it was.

752. And are you aware that they acted [illegible] large extent in a precautionary manner by t[illegible] up the hands of the local governments and [illegible] allowing them to do various things without pr[illegible] vious reference to the court for their preliminar[illegible] sanction, so as not to have them committed to local influence?—Yes, that was the policy of the East India Company.

753. Do you recollect that within some few years (I cannot fix the exact date) a new theory was started with reference to India, namely, that India was to be governed in India, not in England; you have heard that theory, perhaps, expressed?—Yes, I have heard that theory, and in a true sense I agree with it.

754. Has not that assumed the form of transferring the initiative and almost the complete action upon a great variety of matters to the local governments in India, and more especially to the Governor General, leaving a sort of criticism or veto only in the hands of the Government in this country connected with India?—It has had that tendency.

755. Are you aware whether that has gone the length of dispensing with the transmission of a large amount of information which was for[illegible]merly transmitted to this country to enable i[illegible] complete the supervision of Indian affairs?—Y[illegible] I can speak in detail as to that, because t[illegible] change originated with me when I was Govern[illegible] of Madras. Up to that time, just as the mo[illegible] minute items of expenditure were all stated [illegible] detail in the accounts, so every paper whatev[illegible] was copied and sent home. It had become e[illegible] ceedingly cumbrous and totally unsuited to t[illegible] new system of imperial administration; I m[illegible] that it was practicable while Calcutta, Mad[illegible] and Bombay were factories, but it was ab[illegible] when India had grown into an Anglo-Ind[illegible] Empire, and merely wasted valuable time a[illegible] money, and overlaid the real points of importance [illegible] and confused responsibility; and at my suggestion [illegible] it was changed, and the general course of administration afterwards was reported only in administration reports on the model of the annual Blue Books of the Colonial Governments, and the direct correspondence of the Governments o[illegible] India with the Secretary of State was confine[illegible] to what are called special letters directed to in[illegible] portant matters in progress.

756. Then the analogy that you have given u[illegible] to the Colonial Governments would be that of th[illegible] Governments that have been practically eman[illegible] cipated from the control of the Colonial Office [illegible] and left to manage their own affairs?—Yes, bu[illegible] that analogy must not be carried too far, because under this plan of reporting everything in general letters (I have often laboured at them myself, and so I know what they are), everything whatever was reported in a general letter, which was really a sort of *catalogue raisonné*, or enlarged index of the entire correspondence; they were always many months in arrear, and even if they had been kept up to date, they were so extremely

Sir *C. E. Trevelyan*, K.C.B.

25 February 1873.

[illegible]us that no practical use could be made [illegible] and it was high time that they should be [illegible] of. For that was substituted partly [illegible]nial plan of administration reports giving [illegible]ral view of the different branches of ad-[illegible]tration in each Presidency, and partly the [illegible] of special letters on important subjects of [illegible]rent interest. That is altogether a beneficial [illegible]nge suited to the present circumstances of [illegible]dia.

757. Would your view of this change be strengthened if your attention was called to the fact that this Committee has been sitting now for two years, and the Secretary of State for India has not been able to lay before this Committee such information as is necessary to enable the Committee to understand the financial administration of India, without reference to India itself?—I do not understand why that should be so; if there be difficulties of that sort I am quite sure that they would not have been removed by a continuance of the old detailed system of account and correspondence.

758. Would not the Court of Directors have been in possession of such accurate information connected with the administration of the finances that they could have supplied it to a Committee of the House of Commons without sending out to India to know what the general statements that they had in their hands meant?—Well, I am not so sure of that. In praising the financial administration of the East India Company, I had special reference to their frugality and to their fixed policy of keeping within their means. On matters of detail I do not think that they were [illegible]y any means so perfect.

759. You spoke of the town duties as formerly existing; do you recollect sufficient of the former financial system to be able to tell us to what extent town duties were generally levied in India before the policy was proclaimed that one of the greatest blessings of the British rule in India would be to abolish all town duties?—Yes, I can give full information about the town duties, because it was in consequence of an investigation [illegible]nducted by me, and a report made by me that [illegible]ey were abolished. The great matter was the [illegible]ansit duties, and after they had been disposed of I reported upon the town duties.

760. May I ask whether the transit duties were also generally levied throughout India in various places?—Yes.

761. And were the town duties also generally levied throughout India?—No, only in particular towns.

762. But I mean was it in particular towns throughout India, or was it confined to any particular district or Presidency?—They were levied in all the principal towns of the Bengal Presidency, and also I believe in the other Presidencies.

763. Was it not part of the system of finance of the old emperors of Delhi to levy town duties in all the towns?—No doubt it was, but I should give an imperfect idea to the Committee unless you give me the *parole* for five minutes.

764. Will you then explain generally what the system was?—The ancient system of finance was that everything should be taxed. It was called "sayer" in the north, and "muhtarafa" in the south, both which are Arabic words implying universal application. The question was not what was taxed, but what was not taxed; in fact everything was taxed; each individual exaction was slight, but it applied universally. Well, this was considered a great evil, and Lord Cornwallis consolidated the "sayer" into the transit duties and town duties, that is to say, instead of the same article paying at fifty different places on its way from Delhi to Calcutta, it was to pay only in one place a consolidated duty. The country was covered with customs establishments like the squares on a chess board, and whenever any of the articles included in the tariff (which were nearly the whole) was moved from one square to another, it paid this consolidated duty. The town duties were on a different principle; they were levied on the consumption of the towns, and were limited to a small number of articles, latterly only to seven articles, which were articles of consumption of the inhabitants; under Lord Amherst's government they were appropriated for municipal purposes, but when the Burmese war came they were re-absorbed into the fisc. These transit duties, according to this consolidated rate, although better, perhaps, than the "sayer," were still a great evil, inasmuch as they put a very serious check upon the trade and intercourse of adjoining districts, and often of the same district. When there was no considerable difference in the production of adjoining districts, they positively extinguished trade, and it was only by smuggling that any trade could be carried on; and the old evil of the chokees, the boats and carts being stopped at a hundred different places on a long route, continued, because, although duties were not levied at all these different places, it was necessary to examine the rowannahs or passes, and so forth. In that state of things I happened to be in charge of the Rohtuck district of the Delhi territory, and I always used to see where the articles came from, and where they went, and I found that in 99 cases out of 100, though nominally transit duties, that is duties levied everywhere on goods passing over the country, they were really frontier duties, export and import duties. Then I made a larger induction and inquired elsewhere, and at last I came to the conclusion that the duties actually levied were in so large a proportion duties levied on articles of export and import across the frontier, that is either the inland frontier or the sea frontier at Calcutta, that the whole of the transit duties might be abolished, retaining the duties on the frontier, without any loss. Then I represented this to Lord William Bentinck, and he gave me a commission to go from custom-house to custom-house and inquire into the matter; and as the result of this inquiry, that fact came out perfectly clear, and the transit duties were abolished, and we confined ourselves for the future to the levying of a duty on the sea frontier (Calcutta, Chittagong, Balasore) and the line which was established for salt, sugar, and other things, on the western frontier, between the valley of the Ganges and the states of Rajpootana and Central India, with the result that we got rid of all this oppression and loss arising from the transit duties in the interior of the country; we swept the interior of the country quite clear of transit duties, and got more revenue than ever. That is the case of the transit duties. Now about the town duties; in the later period of the existence of the old town duties, they had been very satisfactorily regu-

Sir *C. E. Trevelyan*, K.C.B.

15 February 1873.

lated; they were really confined to, I think, seven articles of ordinary consumption in the towns, salt, sugar, oil, firewood, and so forth, and so far they were not open to objection; but inasmuch as the towns lay upon the great routes of trade, and the general trade of the country had to pass through them, it was found that these duties were indirectly very obstructive to trade, and that they actually scared away trade from the towns, and small mercantile depôts used to be formed outside the limits of the town duties, and the carts used to take long circuits to avoid them, and so forth; and so it was considered, although the case was by no means so strong as that of the transit duties, on the whole, advisable to abolish them; and as regards the town duties, there was no immediate compensation. Now town duties have been revived in the present generation, and I am sorry to say that the old practice of interfering with the general trade of the country has come back worse than ever.

765. I will not go into that, because we are waiting for returns as to the character and extent of that practice, which returns are not yet before us; I was wanting to get from you a clear idea of what had been done in the past; then the town duties having been got rid of, which, I believe, was considered a great improvement in that day, did any local tax remain in your recollection; was there any small regulated licence tax on shopkeepers, or was there a house tax which went into the public revenue?—No.

766. Not in any part of India?—Of course, in the south of India they had the muhtarafa; there the people were burdened with both systems. They had the transit duties, in a modified form, principally on the frontier; but they also had the old muhtarafa, the old native system, and that remained in Madras till the mutiny.

767. But did it not also remain throughout the whole of the Deccan, when at a period not very long before that every shopkeeper paid a small regulated licence tax?—Yes; that is the ancient custom of India, and it remained in the Madras Presidency and, I believe, in the Bombay Presidency, and in the native states it will be found to be as prevalent as ever.

768. Do you recollect that after the mutiny the question arose between the Government of India and the British Government, what ought to be the standard of European troops in India consequent upon the changes that were to be made in reference to the strength of the native army and the events that had happened?—Yes; there was a great deal of discussion on that subject.

769. Do you know what was the view of the Government of India, and of the official party connected with India generally on that subject, as to what should be the total number of European troops?—The standard last agreed upon was 60,000.

770. But was the standard that was fixed in the first instance after the mutiny, 70,000, or 71,000, or 72,000?—It was about 70,000; it was afterwards reduced to 60,000.

771. Do you recollect that, in consequence of that standard being resolutely insisted upon by the Indian authorities, it became necessary to raise more regiments and add them to the strength of the British army, and that they were so raised?—The nine regiments added to the British army were an equal number of regiments from India.

772. But do you know that in incre[illegible] strength of the British army, the argu[illegible] ployed at that time and founded upon [illegible] the increase of strength of the British ar[illegible] that the permanent demand for India wou[illegible] 70,000 men?—No doubt at the time when [illegible] nine Indian regiments were transferred to [illegible] British establishment, it was believed that [illegible] would be permanently wanted. The standar[illegible] European force, which is the key to the wh[illegible] military system of India, must vary according [illegible] circumstances. As it was reduced from 70,00[illegible] to 60,000, so now perhaps it might be further reduced, with all the advantages of railways, and above all the general course of pacific industry upon which the country has entered.

773. But in entering upon that career of large military expenditure, do you think that what you have spoken of as English influence, so far as the British Government is concerned, was brought to bear for the purpose of making that increase; can you say whether it was not brought to bear to prevent its being made, but it was forced upon them entirely by what may be called Indian influence?—I am afraid that it has been brought to bear to the disadvantage of India in some respects. The general state of the case is that the great native armies which were formerly maintained in the Punjaub and Central India have all disappeared; the native states have been strictly limited in reference to the artillery they are authorised to maintain; and our own native army, to counterbalance and check which wa[illegible] one main purpose of our European force, has be[illegible] in great part dissolved, and I hope it is [illegible] course of further reduction, so that the necessit[illegible] for a large European force is very much less tha[illegible] it was, and especially of artillery. It is difficu[illegible] to see what the large force of artillery which w[illegible] have in India is intended for, because artiller[illegible] is a matter of comparison; if one force has l[illegible] guns and the other has only one, then there ca[illegible] be no necessity for having more than 10 guns; i[illegible] is a matter of comparison altogether, and an [illegible] cessive force of artillery has no doubt been ma[illegible] tained of late years in India, and the Gover[illegible] ment of India represented that it was larger tha[illegible] was necessary and ought to be reduced; and there has been undue delay in reducing it no doubt.

774. It would not be possible, would it, to bring home troops at a moment's notice from India, unless they were to be immediately disbanded in this country?—Well, I believe there is a surplus of artillery altogether, both in England and in India, and I am afraid that India suffers from that circumstance.

775. Probably you have observed that within the last two or three years there has been what may be called an artillery mania?—A great deal of mind and activity has been bestowed upon the perfection of the artillery, there is no question about that. Then in connection with that, it seems to me that it is a great mistake to maintain the gun factory at Cossipore; it is quite superfluous; it would be far better to get our guns from this country. And then they maintain a government tannery at Cawnpore, for making very inferior harness, when they could get a much better and cheaper article from England.

776. You are aware that these are ancient establishments

Sir C. E. Trevelyan, K.C.B.

25 February 1873.

ments which arose out of the considera- the possible interruption to communica- tween this country and India, and from w that India should be self-supporting for ny?—Yes, we had a great deal of discussion I was last in India about both those esta- ments; I urged their abolition, and the only gument on the other side that had anything in at all, was that possibly the communication th England might be interrupted. My answer as, that if we lost the command of the sea, it would be all over with us.

776*. It is a balance of those two considerations; and the question is, which ought to prevail, the economy of getting these things direct from England, or the security of having a true base of operation in India?—I consider that security perfectly ideal.

777. You answered affirmatively to a question of the honourable Member for Brighton that the influence of the Commander in Chief was certainly predominant or conclusive, or decided the number of reliefs between this country and India; do you think that that is consistent with the mode in which the military business of India is carried on, or are these arrangements first duly considered by the two Secretaries of State, one the Secretary of State for India in Council, and the other the Secretary of State for War?—The recruiting system of Europeans for India as well as for England is carried on by the English military authorities on English principles, and with reference to English arrangements; and that being so, it is regulated by the home military authorities. I do not at all object to that being so, but I strongly maintain that the people of India should not be charged for their recruits a higher rate in consequence of the recruiting system being regulated on the English model.

778. But are you aware that all the arrangements connected with reliefs for India pass under the consideration of both Secretaries of State before they even come to the cognisance of the Commander in Chief?—I thought the question which was put to me by the honourable Member for Brighton related to the recruiting and the sending out of recruits; that was the question which I supposed I was answering.

779. In regard to the recruiting, the Government of India pay a consolidated sum, I think, now under a fixed arrangement, which we shall get in detail hereafter?—Yes.

780. Are you aware that before that fixed arrangement was come to, the subject was considered in all its bearings and in great detail by representatives both of the Indian administration and representatives of the military administration in this country?—Well, I do not know in what detail it was considered. I have no doubt it was carefully considered.

781. Sir *J. Elphinstone.*] You must be aware that the cost of sending a recruit out to India under the old company was 15*l.* according to the charter party?—I was not aware that it was so low as that.

782. Sir *G. Balfour.*] The Chairman has referred to an artillery mania; are you aware that both General Adye and myself, both of whom are artillery officers, have strongly urged a reduction of artillery in India?—Yes, I am aware of that.

783. And that these reductions have not been carried out to the extent desired?—Yes, I can easily believe that; I know that an excessive and unnecessarily large force of artillery was retained in India a long time after those representations had been made.

784. Are you aware that when the army was reorganised, the European force proposed to be maintained in India was 75,899 men, and it is now 62,924?—Yes.

785. And at that time it was considered entirely impossible to maintain India without that large force?—Yes, that was the opinion at the time.

786. And that that large force was maintained contrary to my recommendation?—Yes, and when I was last in India I was strongly of opinion that the European force was unnecessarily large; it was often difficult to know where to find a place where the European regiments could be put.

787. And since your time it has been considerably reduced?—I believe so.

788. You are aware that the capitation rate to which the Chairman refers has been abolished, and that now the actual charges are made against India for recruits?—Yes; a certain portion of the expense of the two-company depôts is charged to India.

789. That is to say, the officers and non-commissioned officers and the pay of the men for a certain number of months?—Yes.

790. And that these rates have constantly swelled up to about 68*l.* for infantry recruits and 138*l.* for cavalry recruits?—Yes; as we have entered upon the military question, I should like to state briefly my general view of military reductions, not of detailed reductions, which would interfere with the evidence of any other witness, but generally.

791. *Chairman.*] I think we had better go into that matter subsequently. Perhaps you will now go to the second subject which you wish to bring under the consideration of the Committee, namely, the effect of what you consider over-centralisation?—I was stating what I believed to be the causes of the recent deranged state of the finances of India. Under the second head I attribute it to over-centralisation. The first great step towards centralising the Government of India was taken by the Charter Act of 1833, when the legislative powers previously vested in the Governments of Madras and Bombay were transferred to the Supreme Government, which thereby became the Council of India. At the next renewal of the Charter in 1853, this principle was confirmed by appointing a single representative from each of the other presidencies to the Council of India. The concentration of the financial arrangements at Calcutta took place after the mutiny, and culminated in the appointment of the financial member of council. When I was appointed the financial member of council in India, I was under the impression that what was especially wanted was the improvement of the account system, and I induced the Secretary of State to place two eminent accountants at the disposal of the Government of India for the revision of the system, and they made a very effectual revision; that is acknowledged in the first budget statement of Sir Richard Temple, the present financial minister. But as I went on, it gradually dawned upon me that this was not a case to which the budget system

Sir *C. E. Trevelyan*, K.C.B.

25 February 1873.

was really applicable. I was extremely struck by the impossibility of making any effectual revision of the annual estimates. While each presidency administered its own finances, there was a strong motive to economy, but now that the finances have been collected into a common centre, the only object that local administrations have is to get the largest possible share of the common fund. The pressure upon the financial department from the local governments at the time of the preparation of the budget is overwhelming; they all have a pull at it. It is much the same as if the Poor Law Administration of the United Kingdom was supported out of a single common fund. The *drive* in the financial department at Calcutta at the time of making up the annual budget exceeds anything of which I have had experience, except the work during the Irish famine; that was equal to it, but it was not heavier. The putting together and the re-arranging the estimates in order to bring out the financial results, fully occupies the office, and there is no leisure for detailed scrutiny, even if the requisite detailed information existed at Calcutta, which it does not; and if the financial department proposes to curtail any item it does it at its peril; it is immediately met by the statement that the particular item objected to is indispensably necessary for carrying on the local administration. The Bombay estimates were habitually not sent in until after the budget had been made up, and they were then in such a crude and unrevised state, that obviously they were merely a collection of the maximum sums which the different local officers considered might be advantageously spent, and this has led to a very remarkable inequality in connection with the new provincial assignment system. I beg to be permitted to read this extract from Mr. Campbell's Administration Report for 1871-72, which will explain what I mean. These are his words, "Those who asked most, and asked it most boldly and pertinaciously, got most. * * For instance, Bengal with its 65,000,000 of people, has got 1,168,592 *l.*" ("has got," means that that is the provincial assignment for Bengal, that provincial assignment being founded upon the allotments previously obtained under the annual Budgets); "while Bombay, with something over thirteen millions by the last census, and probably not many more now, got 880,075 *l.*, or more than three-fourths of the assignment, with less than one-fourth the population. * * To supervise the thirteen millions, or possibly fourteen millions of people of Bombay, there were entertained in 1870-71, of police paid by the State, 16,877 men, for whom, before the recent arrangements, an Imperial assignment of 374,703 *l.* was made; while to supervise the sixty-five millions of Bengal, there were, in the same year, 25,043 men, including a considerable number specially employed on the frontier, and the net Imperial assignment was 485,394 *l.* The Bombay grant was thus considerably more than three-fourths of that to Bengal. * * For roads and public improvements, there had been assigned 157,800 *l.* to Bengal, and 121,900 *l.* to Bombay, the Bombay proportion being still higher than in the case of police, while for civil buildings there were assigned 111,370 *l.* to Bengal, and 107,500 *l.* to Bombay; the smallest of the local governments thus receiving under this head very nearly the same as the largest." So that the extreme pressure that was put by the Government of Bombay upon the Indian Financial De[partment] at the time of the annual budgets, has [been] foundation of a permanent inequality, a[s] long as the present system of provincial [assign]ment continues. This is a gross unf[air]ness against the people of Bengal. Well, the g[reat] conclusion at which I arrived from my exper[ience] as financial minister, was that India, not be[ing] a single homogeneous country like France [or] Spain, or Germany or Italy, or England, [but] an aggregate of countries which, with some general similitude, are different in language in habit, and in general circumstances, cannot properly be ruled by any one set of men from any one centre. This was equally true (I say "was," because now we have begun to decentralise) in reference to general administration. The putting of the whole of India under the Presidency of Bengal (for it was really, practically, virtually, under the Presidency of Bengal, because the Government of India was formed out of the Government of Bengal, and was manned entirely by Bengal officers; and not only the whole, or more lately the majority of members of council, but also the whole of the secretaries were Bengal officers) was productive of very unfortunate general results. Everything was brought to the standard of Bengal, local wants and peculiarities were not understood, and it led to great hesitation in accepting the recommendations of the local governments, and to great discouragement and consequent inactivity and stagnation throughout India. But the whole thing has come to its climax in finance; in finance it has fairly broken down, and has come to a *reductio ad absurdum*.

792. Then your view is, that the Supreme Government could not control the finance, unless it controlled all the operations out of which the finance arose?—That it cannot do; the main administration, both of income and expenditure must reside in the local governments; and as the central government cannot control the administration at its sources, it is vain for them to attempt to do it at the extreme end at the eleventh hour, in the course of the fortnight or three weeks allotted to making up the budget. The budget is a mere farce as a budget; the estimates undergo no real investigation or revision whatever. It is impossible that they can.

793. It becomes in fact merely a summary of accounts?—Merely a statement, not of actual accounts, but of such estimates as the local governments choose to lay before the Financial Administration at Calcutta.

794. Do you think that their sense of responsibility in dealing with requisitions or suggestions throughout their presidency is very much weakened by their being able to hand it all over to the finance minister?—Very much indeed. As Indian finance had been placed on the footing of a central fund upon which all the different administrations were to draw, the main motive was who could get most; it was a sort of scramble. There was, however, great difference in the conscientiousness of the different governments. I must say for my old Government of Madras, that nothing can be more praiseworthy than their moderation and self-restraint. I do not believe that they have yielded to this temptation at all; I have not perceived any symptoms of their doing so.

795. Did you, as finance minister, then exercise no financial control over the continuing arrangements

Sir *C. E. Trevelyan*, K.C.B.

25 February 1873.

s which resulted in the expenditure? hen the estimates had once been sanc- d the budget had been closed, there end of our control. The estimates fur- standard and rule for the expenditure ensuing year; they might be exceeded, mentary estimates might be furnished, o far as the estimates had been passed, they been passed for the entire year.

796. Then were not all the papers which came ore the Supreme Government, which could d either in altering the receipts or altering the xpenditure for the year, brought under your consideration, so far as they affected finance?—Well, I did all I could to establish the good old Treasury rule which is fully established in England. I mean that no new expenditure should appear for the first time in the estimates, and that any increase of salary, or increased expense of any sort, ought to be specially sanctioned beforehand.

797. On its own merits?—On its own merits, but I found it impossible to enforce it; and when the estimates of the different administrations were shovelled into the financial department in masses, at the time of making up the budget, it was impossible to say which item had been sanctioned and which had not been sanctioned. The whole concern was too vast, and the time allowed was insufficient; indeed no time could have been sufficient to control such a system.

798. I suppose it is absolutely necessary that estimates for the ensuing year should be made pretty close up to the commencement of the r, otherwise they become too speculative?— s; the estimates are not open to any exception that point; they were made at the proper eriod, just before the commencement of the new nancial year.

799. If that be so, the result must be that ery short time must necessarily be allowed to ny one to examine the whole mass?—Even the financial department at Calcutta had the ata for the revision of the estimates, the time llowed was totally insufficient. Even confining ourselves to compiling the estimates and bringing out the results, as I have mentioned, it was a terrible drive.

800. Mr. *Fawcett.*] In referring to the fact that there is too much centralisation in India, do you think a remedy is supplied to any extent by what is known as the decentralisation scheme?—Yes; but if I may be permitted, I should like to deal separately with it. I have got a separate head for remedies, and the great item is decentralisation; and it would save the time of the Committee if I spoke of it comprehensively.

801. Mr. *Beach.*] Relative to the expenditure at Bombay, is not the purchasing power of money very much greater at Madras than it is at Bombay?—No doubt there was a difference; prices were higher at Bombay. A sort of artificial famine had been created by the excessive cotton cultivation, and prices had been very much run up by the large amount spent on public works, and by the consequent increased demand for all the necessaries of life.

802. Would you place the difference at nearly two to one?—Certainly not. It was chiefly in the necessaries of life, but not nearly to that extent. I am speaking of an average of months. Although at some particular time the difference may have been in excess, yet on the whole it was very much less than that

803. Still some allowance must be made as comparing the expenditure of Bombay with that of any other presidency?—It was necessary to make some allowance at that time. I believe the necessity for that is very much diminished by the collapse of that artificial, inflated state of things.

804. Has that artificial state of things collapsed; I understood that there was still greater difference in the proportion now than there ever has been before?—No; I cannot believe that, because the sea is open, and the railways are open; there is a direct railway communication between Bombay and Madras, and three great railways running into Bombay; and supplies of all sorts can be brought coastwise both from north and south. I cannot admit that there is any sufficient ground for a permanent increase in the rate of expenditure at Bombay compared with Madras.

805. Mr. *Dickinson.*] Did I rightly understand you to say that the Financial Department should be decentralised both as regards income and expenditure?—Yes; but I would pray to be examined separately on that point. If the Committee prefer it, I will go into it now; I am entirely in the hands of the Committee, but I am still upon the causes of the derangement of the finances, and I propose, with the leave of the Committee, to speak to remedies under a separate head. Decentralisation is the principal remedy, no doubt.

806. I rather wanted to understand what you call centralisation and decentralisation. Is it both as regards expenditure and income?—Yes; both as regards expenditure and income.

807. Income is taxation?—Yes.

808. And centralised income is centralised power of taxing?—The local governments actually administer all the taxes; and as regards the land revenue, which is the principal item, they assess it as to its amount, and I should propose to leave that to the local governments.

809. Let us understand the term. What I mean by taxing, is not the power of fixing the amount of the taxation, but the power of fixing the subject of taxation?—Well, I would give the initiative to the local governments.

810. *Chairman.*] You were also adverting to some other causes of the derangement of the finances?—I spoke of over-centralisation as one main cause, but that is not confined to over-centralisation of the general finances, it extends to the departmental administration. For instance, the Public Works Department is now a monster of official centralisation, far exceeding the worst that used to be said of the English War Department. It is mere accumulation without consolidation, and has outgrown all control. It reminds one of the picture at the commencement of Hobbes's "Leviathan" of the State absorbing everything. The public works have been concentrated for the whole of India into a single department. First, the Ordinary Public Works; next, the Military Buildings, for which there is a separate inspector and a separate branch; next, Irrigation Works, for which there is also a separate inspector; next, railways; and an effort was made to absorb all works executed out of local funds by the different administrations, but I came to the rescue, and we had a discussion on

Sir *C. E. Trevelyan*, K.C.B.

25 February 1873.

the subject at Simla, and my view prevailed, and they were saved. My minutes may be referred to on that point if desired. Forests, also, were absorbed into this monster department; however, since the establishment of the Department of Trade and Agriculture, Forests, I believe, have been transferred to that department. The latest development of this extraordinary system is, that this centralised Department of Public Works has undertaken the management of all the existing railways; it has undertaken the management of the relations of the Government with the Guaranteed Railway Companies not merely for the main lines, like the East Indian Railway and the Great Indian Peninsula, which pass through two or more administrations, but also for all the branch local railways, the South Eastern and North Eastern of Bengal, the southern Madras railways, the Bombay and Baroda, and so forth; and they have also undertaken the construction of all new railways. Upon that I beg to be permitted to read two short extracts from a Minute which will explain my view: "The capacity of the Government is only that of a great joint stock company, for the ultimate direction and revision must be concentrated in one superintending office, and its powers are therefore measured by the time, and strength, and health, and knowledge, and judgment, of a very limited number of individuals.* * * The Government is only a single agency and a single superintendence, working under all the disadvantages which beset Government operations, especially in India. Private agency, on the other hand, may be indefinitely multiplied, and it works with a spirit and continuity of which the railway systems of England and India furnish an example. The only fund possessed by the Government for carrying on such operations is the produce of taxation in a poor country, the insufficient capital of which yields a high rate of profit. The fund upon which private enterprise is based, is limited only by the overflowing wealth of England, the unemployed annual accretion of which would be more than sufficient to make India all that she ought to be." One great objection to this monster centralisation is, that it entirely excludes private enterprise; it overlays it, and pushes it out; whereas, our great object should be to encourage English capital to resort to India, and to be applied in industrial enterprises and public works in India, as it was formerly applied to the Southern States of America, as it is now applied to Spain, and above all, to the United States. If we could only get India into the same financial industrial relation to England, as that existing with the United States, the object would be accomplished.

811. What is the date of that Minute?—October the 30th, 1863, at Calcutta. At the bottom of every undertaking ought to be a practical engineer, and a business-like employer, spending his own money or the money of his constituents, and having an immediate direct primary interest in the works; but in India this has been overlaid with official checks, piled one upon the other, until all idea of individual responsibility is lost, and the result is, delay and confusion, and the absence of all real control. Another result of this monster system of centralisation is, that the Government is practically at the mercy of its trusted officers in charge of the Department of Public Works, a very small knot of men; and as the Government has a thousand other things to att[illegible] in the long run, acts on the advice of [illegible] vidual who happens at the time to be at [illegible] of this monstrous system, so that the pu[illegible] terests of the whole of India, in its mos[illegible] concerns, are placed at the hazard of the [illegible] vidual views of a particular officer.

812. Do you think that the organisation o[illegible] military corps of engineers, and their relati[illegible] to one another, and the conditions of their e[illegible] ployment, or the status of a corps of civil [illegible] gineers constituting an organised system of publi[illegible] servants, is conducive to the efficient promotion and management of public works of a reproductive or profitable character?—I think it is organised on far too large a scale; I have nothing to say against the engineers; the old corps of Bengal engineers were a highly intelligent, public spirited, frugal body, and as to the civil engineers who have been introduced of late years, there is nothing at all to be said against them; many of them are very distinguished men; but the advisers of the Government, who influence the action of the Government in reference to public works, are the one or two men at the head of this system who are in daily intercourse with the Government, and I repeat that it is an improper hazard to which the public interests are subject, to give any individual at the head of such a department such a power of influencing the destinies of India. I will give a very recent instance, in fact, one now in progress, namely, the gauges; there is no doubt that a gauge carrying large waggons, and allowing of the operation of the full powers of steam, is the most economical; and that even if we had not y[illegible] chosen our gauge, we ought to have one su[illegible] ficiently large to conduct the traffic economi[illegible] cally on a large scale on the main lines; the branch lines, of course, may be on any scale; but the fact is, that we have chosen our gauge long ago, and with the exception of the gap between Moultan and Kotri, and the extension from Lahore to Peshawur, it is completed; so when that additional reason exists, that the consequence of adopting a narrower gauge will be that the great delay and expense of break of gauge will be incurred, and the main political object of running our regiments right through into Peshawur, or wherever they may be wanted, will be lost, it seems to me that it is a terrible mistake; and I attribute that to the inordinate influence obtained by this gigantic system of centralisation by the individual at the head of it.

813. You think that the use of a French lineal measure, which the French had not even used themselves, for a new railway gauge, savours very much of that centralisation, the action of an individual will?—Yes, that is a symptom certainly, and the same with the irrigation works. Now irrigation is everything in India; water is more valuable than land, because when water is applied to land it increases its productiveness at least six fold, and generally a great deal more, and it renders great extents of land productive, which otherwise would produce nothing, or next to nothing. But it is only when irrigation is properly applied, that it really pays. The village tanks, and the small tanks between adjoining hills, are almost always highly profitable. The Madras Presidency is covered with the remains of ancient tanks erected by

Sir *C. E. Trevelyan*, K.C.B.

25 February 1873.

[redacted]ives in former generations, and to re- would be a blessed work. I will give [redacted]ble instance highly illustrative of the what I am saying. I was Governor of when the first steps were taken to com- *the operations of the Madras Irrigation* ny, and I remember Sir Arthur Cotton, had the management of it, suggesting to me in order to put the Irrigation Company in t, we should let them begin with a particular k of the character I mention, a moderate self- tained work, throwing a bund, or restoring a und, between two hills, which he said would pay, I do not remember how much, but enormously. I believe that the comparison between that tank which Sir Arthur Cotton urged upon me, and the great undertaking of the Madras Irrigation Company, represents the difference between paying and non-paying irrigation. Next to the individual tank, I should put the anicut, that is the dam upon a river, damming up the waters of rivers; we are copying the example of the natives in that. Sir Arthur Cotton acquired his first skill in Tanjore, on the Cauvery, the anicuts there being extremely ancient works erected by the former native dynasties, and he applied that principle to the Godavery and the Kistna. I am speaking, not of the general line of the Godavery Navigation Works, the improvement of the navigation of the Upper Godavery, but of the anicut, the dam, over the lower course of the Godavery, which is a highly profitable work; that is a work of great judgment and of great genius; there cannot be a question about it. But when you come to ambitious, magnificent canals for irrigation [redacted]t navigation like the Ganges Canal, the Upper [redacted]davery Navigation Works, and the Madras, [redacted]rissa, and Soane Irrigation Works, I do not be- eve in them at all. I believe that the element f expense altogether overlays the element of rofit, and so it practically turns out. If the ac- ount of the Ganges Canal is properly taken it a dead loss. The only canals that have paid ithin my experience and knowledge, are the nals made by our predecessors, the Moguls, ort canals on either side of the Jumna near elhi. I must be allowed to make one ob- rvation here: I have observed in connection ith the irrigation system, as it is conducted by the Department of Public Works, two principles. It is proposed that the old objectionable Indian principle of forced labour should be revived, and that there should be a compulsory water rate not merely in the Punjaub; for if the Committee will look into Mr. Campbell's report, they will find that a compulsory water rate was equally proposed to be applied to the Orissa irrigation after it came into the hands of the Government, in fact it was attempted to be applied. The first rate was five rupees per beegah, and nobody would take water at that rate; and then it was lowered to one rupee, but however, the rains are so much more plentiful in that corner of the Indian Ocean than they are in Upper India, that the native cultivators did not see any advantage in taking the water even at one rupee, until there happened to be a break in the rains, and then they began to show a disposition to take it, upon which the young civilian who was in charge of the works on behalf of the Department of Public Works, immediately opened the sluices and covered the whole country with water, and reported that water had been taken to the extent of 20,000*l.*, two lacs of rupees. But the effect of this opening of the sluices, which was done without making any individual arrangements with the cultivators, was that the whole country was covered with water, and nobody could say who wanted it or who did not; or who had previously been provided from wells or in other ways, and who had not; and it merely led to an immense litigation, and instead of 20,000*l.* I do not believe that they got 20,000 pence. That leads me to remark upon another evil of this vast centralised irrigation system, which is that the officers administering the system are placed in a state of independence under the Department of Public Works; they are actually independent (there may have been some relaxation of this *imperium in imperio* lately in Bengal) of every authority except the Governor himself, and so they are under no proper check at all. That is all I have to say about public works.

814. Can you offer any observation with reference to the system that has grown up of borrowing money for the promotion of these works?—Yes, I consider that that is one potent cause of the derangement of the finances of India of late years. The great check upon expenditure is that the income should be limited, and everything that breaks down that check gives scope to the expenditure. Now, of late years a system of borrowing has been introduced, which is quite as open to objection as the old open loans of the company. Indeed, I think it is worse, for the open loans were raised at a minimum rate of interest, whatever happened to be the lowest possible rate of interest at the time, and if the money was not wanted the Treasury was closed at once; whereas now large sums are taken out of the money market, and transferred to the Treasury, forming an elastic and expansive margin, confusing and obliterating the real check on expenditure. It seems almost impossible to make any distinction, either in the accounts or in the objects for which the loans are raised, between ordinary and extraordinary works, and in my opinion the loan system should be entirely closed, except in well defined cases of real emergency. The only real justification for borrowing is when there is an emergent occasion for a large sum of money beyond what can with advantage be raised by taxation; whether it is for war, or irrigation works, or for roads which facilitate all the transactions of the country. That furnishes a justification, but it should be marked out quite distinctly from every other purpose, and strictly appropriated to a particular given object.

815. You would deal then with the loan and its application in the same way as the English Parliament dealt with the loan for the fortifications, when they scheduled the works in the Act so as to make a specific application of the loan?—Yes, I think that entirely a case in point. Nobody in Parliament objected to that loan, because the fortification works were not likely to yield a money profit of so much per cent. The justification of that loan seems to me to be the justification of every loan, namely, that the sum immediately required for the specific purpose is larger than can with advantage be derived from taxation within the year; and I cannot recognise the distinction which has been set up of late between productive and unproductive works. It

Sir *C. E. Trevelyan*, K.C.B.

25 February 1873.

seems to me that a common road, which facilitates production of every sort, is far more productive than these great irrigation works are likely to be. And so I fall back upon the old justification for loans, namely, that there is an exigency which cannot properly be provided for within the year, and for which you must therefore fall back upon capital. You may class the income tax under the same head. Just as this new system of annual borrowing has relaxed the springs of economy, so has the income tax; it is such a very attractive tax to a financier and administrator. You have only to put on two or three per cent. and you get your money at once, without any apparent difficulty; and the constant reference which is made, either in words or in mind, to the possibility of raising as much money as they want by an income tax, has had a great influence in producing the habit of profuseness which has grown up of late years.

816. Do you think that there has been in recent times a tendency to endeavour to deal with every subject at once, as it were, and to do a great deal more within the year than the financial resources of India legitimately admit of?—No doubt there has. We may have been formerly too slow, but of late we have certainly been too precipitate. Works which, spread over a reasonable period, would be attended with general benefit, lead to waste and bad work, and even convulse society by deranging the finances and raising the rate of wages, if put forward all at once. The experience of Ireland for a short period after the famine, or rather during the famine and afterwards, is entirely in point. It was a prevailing argument in those days that if the resources of Ireland were properly developed, there would be ample subsistence for the whole 8,000,000 of Ireland, and so no doubt there would have been if we had taken a period of 100 years; but the consequence of attempting to develope these resources all at once was to interfere with other industries, and to lead to great waste. And the same took place shortly afterwards in reference to English railways. We attempted to make all the railways of England at once, and that also led to a catastrophe. This is a precisely similar case.

817. You think that keeping expenditure within the ordinary growth of the revenue would also keep the works within wholesome limits, and prevent them from too rapidly extending?—Certainly. I consider that the old rule of English finance, that the expenditure of the year should be provided by ways and means raised within the year, is a most wholesome natural check, and I attribute the derangement of our finances in India of late years in great degree to that check having been lost sight of and thrown to the winds. Another cause, I think, is the absence of any departmental financial control like that exercised by the Treasury in this country; that is an interior control within the administration. Lord Ellenborough was very sensible of that, and attempted it, but failed. I had hoped that I should have been able to act upon it, and have a general revision of establishments, but I found obstructions at every point. It was not understood or acknowledged that there ought to be such control. I well remember that once when I proposed a revision of a large expensive establishment, the member of Council who had the administration of that establishment said to me, "I should as soon think of inte[r]fering with your financial arrangements as for you to interfere with my establishment." The idea was foreign to India.

818. The view which they take in the Council is that each member is equally authoritative in regard to his own department?—In regard to his own department; and the authority of the financial department over all the others as to expenditure and reduction of expenditure is practically acknowledged. Then I make another observation: the old rule of Indian finance was to look to your income as a fixed quantity, and to regulate your expenditure accordingly. Now this is completely reversed; the scale of expenditure is first fixed, and the taxation is then brought up to a level with it, with little forethought of whither it is leading us. No doubt this is the English rule; but England is a highly national, homogeneous country, and our people, having the management of their own affairs in their own hands, submit to any necessary taxation from year to year.

819. Does it not appear that this increased disposition to deal easily with finance arises from some change that has taken place in the administration of the governments, namely, that the Governors and Governor General are no longer their own financiers, as they were in former times, but have handed the finances over to an officer in India, who is really their subordinate?—Yes; that division of labour may be necessary, provided the government maintains the necessary control.

820. But do you think that there is any mode of carrying on the Government in India by which the Governor General, as regards his functions, and the several Governors as regards theirs, can divest themselves of the duty of being their own financiers, that is to say, superintending the duties of finance and expenditure themselves; is not that their most important duty?—Certainly it is the duty of the Governor General to supervise the work of every department; and as finance is the root of the whole, that ought to have his especial attention, and so it has been under all able and active Governors General.

821. But do not you think that the system that has been introduced in recent times has rather tended to weaken that sense of responsibility?—Yes; now I appreciate your meaning, which I did not fully before. I think since the appointment of the financial member of council there has been much too great a disposition on the part of the Government of India to depend upon him, as if it were his responsibility, and to take everything on his authority; there is too great a disposition to that, no doubt. And the financial member of council being merely a departmental functionary, has not the same power of checking expenditure as the Governor General. The Governor General, and the Governors and Lieutenant Governors of the local governments are the only really effective financial authorities, and the responsibility ought to be fixed upon them, every necessary aid of skilled financial officers being given to them. I speak from the actual experience of a comparison of my position as Governor of Madras and Financial Minister at Calcutta.

822. Do not you think that that has also had great influence over the local Governors; that they have made themselves less financial administrators

eir Presidencies than they were before, has an idea grown up that they are representatives of the Sovereign in not the administrators of the funds? cal governors in India have of late had to do with finance. When I was Go- of Madras, if I took an interest in e it was merely an amateur interest; estimates used to be got in by the Deputy ountant of the Government of India at dras, and they were laid before Council, and revised them as well as we could, but that s all.

823. Do not you think that formerly, before the new system was introduced, the governors, especially in the Presidencies, regarded the financial administration as their highest and main duty, and did not think so much of being the representatives of royalty, and so forth?—Yes, they were then responsible for the finances, and they did look well after them, no doubt about it; and the finances of Madras and Bombay never within my knowledge in those old times gave any trouble; they were conducted in a very regular and satisfactory way.

824. May we now go to the consideration of what remedies you suggest to put an end to the causes of financial embarrassment which has recently taken place?—First of all certainly reduction of expenditure. There is a great reduction required in the military expenditure, not in the details, but in the general arrangements, to revise the general military arrangements in a manner suited to the circumstances of the esen ttime. These great armies, formerly maintained by native powers, have ceased to exist, d their teeth have been drawn by taking ay their guns. We have an overpowering rce of artillery; and the great Bengal native my, which was a source of great anxiety, much so that the principal use of the uropean army was to keep it in check, has sappeared. On the other hand, the people of many parts of India have not only ceased to arry or use arms, but they have lost the habit nd idea of using them. That is remarkably he case in the south of India; there is no part f Her Majesty's dominions where the people are o amenable to law, so quiet, and so peaceably disposed as they are all through the Madras Presidency, so much so that the Madras native army itself has lost its military character; it has become a sort of family arrangement, and the Committee may have observed that for many years no Madras regiments have been sent on any foreign expedition; they have always been employed to keep the peace at ome.

825. Sir *S. Northcote.*] Except the engineers o Abyssinia?—There is a very remarkable body of pioneers; they were employed upon the anicuts and other public works, and they did good service in Abyssinia, no doubt.

826. Mr. *Bourke.*] Burmah is another case, is it not?—They merely keep the police in Burmah.

827. But they were there in the war?—That was a good while ago.

828. *Chairman.*] Was it not a consideration in sending Madras sepoys abroad, that they had less difficulty in questions of caste than those of Bengal?—Yes; but it is a fact that the famous old coast army, which not merely established our supremacy in the south of India, but formed the nucleus of the Bengal native army, and fought the battle of Plassy, so that the principal Bengal regiments to the day of their death were called after their old Madras officers, has become a very peaceable, unmilitary, respectable sort of body. Then, too, the configuration of the peninsula must be remembered; it narrows to a point; it is approachable by sea on both sides; and now it is traversed by railways in various directions; so that there is a great call for a considerable reduction of military force in the south of India, and all these considerations apply more or less to the Bombay army. Then an additional reason is, that an excellent police, which, although local, is organised, and is quite sufficient to maintain the peace of the country, except in case of any serious insurrection or invasion, and to do all the ordinary duty of jails and guards of treasure, and so forth, has been established. Sir Patrick Grant, who was Commander in Chief when I was at Madras, and I recommended that the Madras army should be reduced from 52 regiments to 40 regiments. It was actually reduced to 44, and the Government of India has since recommended that a further reduction should be made, and obviously it ought to be made in every point of view, both to save expense and to send the people to their homes where they would add to the productive population. In fact, as regards the south of India, a single well-equipped division at Bangalore with an outpost at Madras, an European regiment for the garrison at Madras, is all that is required.

829. Provided the corps is in a movable condition?—Yes; an army corps sufficiently equipped, a proper proportion of it should always be ready for active service. The same at Bombay; there should be another army corps at Bombay. The same for lower Bengal and Behar: there should be another there, one advantage of which would be that the military protection of the eastern frontier would be better looked after than it has been of late years The same for the North-western Provinces. The same for the Punjab; and in the Punjab this arrangement would be attended with the great incidental advantage of absorbing the separate frontier military force which is under the immediate direction of the Government of the Punjab, and has been open to great objection from the military character it has given to the Government of the Punjab. I believe that we owe to the connection of the Government of the Punjab with that frontier force a great many border expeditions that might well have been saved; it would be a great thing to absorb that into the regular army. Then there might be a large reduction of are artillery.

830. Mr. *Dickinson.*] You have left out Scinde?—Scinde is a thinly peopled peaceable country; a very small force suffices for Scinde; that may be taken with Bombay. This large reduction of native force, combined with a considerable reduction of artillery, would amount to a very considerable saving. As regards some branches of the Indian administration, there ought to be a very extensive decentralisation; but as regards the army, the time has come for a very important centralisation. In other words, the time has come when the entire army of India ought to be under the supreme Government of India.

Sir *C. E. Trevelyan*, K.C.B.

25 February 1873.

831. *Chairman.*] You mean made one army?—Made one army under the supreme Government of India. Everything has approached to that, we are on the verge of it; the difficulties have already practically been overcome.

832. Do you mean that there should be only one general staff, so that the economy should be carried through the whole administration of the three armies, by treating them as one?—That there should be one army, one general staff, one general command, and that we should get rid of the separate head quarter staffs of Bengal, Madras, and Bombay. In mere salaries and allowances that would be a very considerable saving; but the indirect saving of stopping expenditure at its source would be still greater. These head quarter staffs of the different Presidencies, with their old traditional ideas of separate armies and separate commands, have a great tendency to keep up expenditure; they must all have the same establishments; they have actually got separate gun-carriage and gunpowder manufactories, and a complete equipment and outfit for each army, just as if it were the only army. In that indirect way there would be a great economy.

833. Do you attach, then, no importance to the view that has been so often expressed by those connected with Indian administration, that it is extremely desirable to have the military force upon more than one base in India, so that in case of a mutiny or other disturbance of a comparatively local character, there would be a chance of the other forces not being influenced by it?—That consideration was entitled to influence in former days; but circumstances now have entirely altered; the old formidable Bengal native army has disappeared; the much smaller native force which we now have in Northern India is well in hand, and the Madras and Bombay armies have virtually lost their separate character, and should be converted into native forces, auxiliary to the local European force. Moreover, we have amalgamated the entire European army; that is a great facility; it is all one army now, all relieved from England; as it is under one command in England, so it ought to be under one command in India. Then, too, the improved means of locomotion by railways and steamers have made one regiment as good as half a dozen.

834. Do you think that the considerations which apply to the English army apply also to the whole native army, and that it is not desirable to continue any amount of separation even between the Deccan and Hindostan?—The local principle may be retained within limits. We might make the native auxiliary force local as regards each presidency; that is, as there is now a native local force auxiliary to the European force serving in Northern India, so there might continue to be a small auxiliary native force for service in the Madras Presidency, and the same in Bombay. Each auxiliary native force should be recruited, as far as possible, within its own limits, although liable to serve beyond them in the event of active operations in the field. We should thus retain whatever benefit may be derivable from the existing separation of the three native armies. In fact, that separation would be more complete than ever, which would save the heavy expense of batta to native troops serving out of their own presidency. I consider that merely a matter of detail.

835. You would have a division of [illegible] under a divisional general, instead of [illegible] separate army as it is now?—Yes; [illegible] it by army corps; there would be five [illegible]

836. Would you rely mainly for the p[illegible]tion of the peace upon the new improved police corps in the different provinces and [illegible]dencies?—The absence of that new imp[illegible] local police corps formerly rendered it neces[illegible] to employ the native troops on a great scale. [illegible] economies that were made in the native milit[illegible] force in the Madras Presidency within the fi[illegible] few months of the establishment of the new poli[illegible] were extraordinary; and but for that we coul[illegible] not reduce the native army. Formerly every jail, every treasury, was garrisoned from the native army; now the native troops are all concentrated for purely military purposes; they have consequently more regiments than they know what to do with, they know not where to put them. They have been retained, not for the sake of the native troops, or for any real use they are of, but owing to the embarrassment of having such a large number of European officers thrown upon the hands of the Government.

837. You think that we have not reaped the full financial benefit that we ought to have derived from the larger European force in the country?—No, but there is still a third economy. I have mentioned a great economy of force, and I have mentioned a great economy of head quarter staff establishments, but there is also a third economy. There is a very anomalous office in India, that of Commander in Chief; it is an overgrown office altogether; the Commander in Chief is too great a functionary [illegible] be a satisfactory subordinate; I can remember beginning with Sir Edward Barnes, several gre[illegible] embarrassments arising from the conflictin[illegible] claims of the Commander in Chief and the Gover[illegible]nor General, and from the semi-independent po[illegible]sition which the Commander in Chief was abl[illegible] to take up under the supposed support of th[illegible] Horse Guards; this was the sort of tone used by his staff, "I know nothing about the Governor General and his military secretary; the only authority I know is the Horse Guards. I see nothing in my instructions except the Horse Guards." That was the sort of tone that was kept up; and the existence of this overgrown, inordinately powerful, office was a great embarrassment, no doubt about it whatever; moreover the Commander in Chief was so situated that he could not properly perform his duties.

838. Do you recollect whether formerly the arrangements for the general staff of the army were kept very much in the hands of the Governor General, who, not merely in form but in substance, regulated the general staff of the army till recent times?—Yes, that is true; I remember that in Lord William Bentinck's time, the action of the civil government upon the administration of the army was much closer and more searching than it is now. In the course of years the Commander in Chief has acquired an independence quite beyond former experience.

839. That would probably arise from the greater proportionate power of the European troops in India, as compared with the native army?—Yes, and from the necessity of his constant absence. That is one great objection to the appointment; the Commander in Chief is divided between two duties, both of which are

equally

cessary, but both of which it is impos- m to perform. On the one hand, he be always on the move, inspecting his n Assam to Peshawur. On the other, t always to be at head quarters, attending ncil of the Governor General.

As the chief military adviser of the rnor General?—Yes, as the chief military iser of the Governor General; and that is one at cause of the want of understanding and of continual irritating correspondence which s gone on.

841. Do you think that in recent times a gr deal of expenditure, as well of time as mone has resulted from the Commander in Chief of India exercising a much more minute control over the Commanders in Chief of the Presidencies, so that the work in connection with the army is done twice over?—That has arisen of late years, because the control of the Government of India over the detailed administration of the armies of Madras and Bombay is a matter of recent years. There are three establishments doing treble work, that is the Commander in Chief for the whole of India with the head quarter Staff in Bengal, and the Commander in Chief and head quarter Staff at Madras, and the Commander in Chief and head quarter Staff at Bombay, all doing very much the same work. And in consequence of the great inconvenience arising from the Commander in Chief's frequent absence on tours of inspection, it has been found necessary that the Governor General should have a second military adviser, the Military Member of Council, so that there is another person doing the same work at a high rate of salary, producing additional complication. Obviously the offices of Commander in Chief and Military Member of Council should be fused into one in the shape of a Minister of War, who should reside constantly at head quarters, and should have no duties at all of personal inspection; and the duties of local command and personal inspection should be entirely relegated to the commanders of the five army corps. Those duties would then be done much more cheaply, and much better; they would be more constantly done; the responsibility would be fixed upon those who could do them, because they would always be upon the spot. The Minister of War would always be in personal communication with the Governor General and the other Members of Council, and he would hold a position similar to that of the Minister of War in France. Every season he might employ inspecting officers, selected by him for the occasion, to report upon the state of the different army corps, and the Ordnance, Commissariat, and other subsidiary establishments connected with them.

842. Mr. *R. Fowler.*] You spoke of one native army corps for Madras; of how many men would that consist?—It would be a very moderate one.

843. Twenty thousand men?—No, nothing of the sort; less than half that; it would be a strong division, that would be all, including all arms, horse, foot, and artillery, with a certain proportion fully equipped for active service.

844. Mr. *Dickinson.*] Do you mean that each army corps should be confined to its own area so far as reliefs are concerned?—As to reliefs from England, no. As regards the auxiliary native troops, I think that they should be confined to their own Presidency, except during active service in the field. As regards the Europeans, it should be matter of general reg... E. Minister of War.

845. *Chairman.*] Do you thi... duction of expenditure could be ... naval branch by any better system ?... the naval force there would be large ... under two heads. First of all, that unjustifi... subsidy that is paid to the Admiralty, unjustifiabl... as it appears to me, ought to be dropped unques... tionably. But the greatest economy would be in vessels needlessly employed, especially in connection with Bombay, under the head of transport vessels, and passage vessels, and steamers at the disposal of the political agents in the Gulf, and under various other heads; I would also strongly urge that the propriety, at any rate, of fully arming the two new harbour batteries should be reconsidered. I doubt the necessity of them at all; it would be far better to depend upon our general naval force in India, which has its headquarters at Bombay, and which can be rapidly reinforced through the Suez Canal when danger threatens. And whatever is saved in sea-going vessels of the descriptions which I have mentioned will be saved ten times over in the dockyards. We all know from our English experience what a prolific source of wastefulness dockyards are, and it would be a great object, an object which I in vain attempted, to bring the dockyards at Bombay under control.

846. Do you think then that it would be better that the Admiralty should undertake all the naval duties in connection with India than that there should be an attempt to carry them on in India separately?—I do not think that there is any occasion for naval services, that is, for maintaining marine establishments, except on a very limited scale, independent of the Royal Navy. The transport of troops, so far as it ... required by sea, can be easily done by runni... contracts or temporary contracts suited to ea... occasion, and I do not see what else there is.

847. Would you carry on all the civil duties in time of peace, and rest on the British navy, in case of war, to undertake the naval duties?—Yes, I would carry on the civil duties by contract. There is plenty of shipping at Bombay, and Calcutta, and at Madras too, and good lines of passage steamers connecting every part of the coasts of India and the adjoining countries.

848. Can you state any principles of reduction of expenditure under the civil departments of the Government?—Yes. The reduction of civil expenditure must be combined with the increased employment of natives. We all know that Lord Cornwallis proceeded on a principle of distrust, and reduced the employment of the natives to the lowest footing; about 100*l.* a year was as much as the highest paid natives got avowedly by salary. By Lord William Bentinck's time this system had completely broken down; there were enormous arrears of business, especially of judicial business, and he gave the first impulse to the increased employment of the natives by appointing a superior class of native judges.

849. Had not Mr. Elphinstone developed that policy fully before Lord William Bentinck's time?—He was always in favour of it, but was not able to apply the principle in this systematic way. Two solemn national pledges were given to employ the natives equally with Europeans, according to their qualifications, without reference to religion, or caste, or colour, or anything, namely, the 87th clause of the Charter Act of 1833, and the clause in the Queen's Proclamation. In

nited effect began to be given to y the 10th clause of the Indian 1861, the natives were declared seats in Council, but that carried ll, it was merely honorary; and by Courts Act of the same year, a single intment of a native judge was authorised in ch of the High Courts. But the most impornt principle which has been laid down, although nothing has been done upon it, was by the East India Civil Service Act of 1861, by which it was enacted that any native, anybody, in fact, who had resided for seven years in India was eligible for any situation ordinarily held by covenanted civil servants, provided that he was able to pass certain examinations; and by the third Act of 1870 some difficulties that were felt about examinations were explained and got rid of; so now it is entirely open to the Government of India, according to regulations to be laid down by them, to admit natives who have acquired experience in India, and who have the requisite qualifications, to any situations for which they may be considered qualified; but up to the present moment nothing has been done.

850. Will you explain how the economy is to be effected by the employment of natives instead of Europeans, unless they are to be employed at lower rates of salaries?—That certainly must be the practical result, because it is undoubted that the present scale of salaries received by the officers of the Civil Service has been fixed with reference to European wants and expectations.

851. Would you add, "and with reference to the fact that they are serving in a foreign country which has not their own climate"?—I included that; the present scale of salaries has reference to the whole of the circumstances of the employment of Europeans in India. I believe that it is no more than is sufficient to induce properly qualified Europeans to devote their lives to Indian service. But as regards the natives the case is totally different, because it is their own country; they have no sacrifice to make of going to a foreign country and an ungenial climate. Their habits also are much more frugal and economical; even if they lived equally well they would spend at least a third less, and perhaps even half less than Europeans; and now that the demand for qualified administrators in the lower departments of Government has so much increased owing to the prosperity and the progress of the country, so many new wants having been developed, clearly we ought to enter upon a plan of employing natives on a large scale in every situation for which they are qualified. There are whole classes of situations for which they are eminently qualified. It has long been a common saying in India, and among people connected with India, that the natives have all the qualities to make them good revenue officers; from Todar Mull, Akbar's minister, who made the first revenue survey of India, and Purneah, who made Mysore so flourishing a country until it was thrown into confusion by the Rajah, down to Madhava Rao, and a very remarkable man, although less known to fame, Ramia Ayanagar, the natives are specially qualified for revenue functions. The whole of the appointments to the Customs might be filled by natives. Then there is the great judicial department; it stands *a fortiori* that if they are fit to be judges of the High Court, surely they are fit for the subordinate appointments. They have fully justified Lord William Bentinck's con them. Previously to his time they rise to be a moonsiff at about 100*l.* a opened to them a class of judgeships of year; and these were declared to be the u courts of first instance, that is every suit wh was first to be brought into these native c The native judges have fully come up to mark, not only in point of ability but in point integrity, showing that the natives of India, they are only placed in favourable circun stances, are quite as capable of being influence good as Europeans. While the Europeans re insufficiently paid, up to Lord Clive's time, they were as corrupt as they could be; so it was with the natives under Lord Cornwallis, and between him and Lord William Bentinck; but now that we have begun to pay them properly, to give them a motive to good conduct and to retaining their valuable situations, and that we place them in a position of self-respect, their morality has improved very much indeed.

852. Do you know whether, apart from the general classification of the subordinate employments that you have mentioned, with scales of salary low, compared with those paid to Europeans, there has been any attempt to classify salaries in the higher appointments now held by natives, making a distinction between the salary due to a native in his own country and the salary due to an Englishman in India?—No; the subject is entirely in its elements. At present the employment of natives in important situations is altogether exceptional, so that the occasion has not arisen for this classification. But if it were determined, as a principle, to fulfil the solem pledges which our nation has given with regar to throwing open civil employments, and military too, to the inhabitants of India in their own country; if that were seriously and honestly acted upon, then that question would force itself upon our attention, and it would become absolutely necessary to draw a distinction between the classes of employment which would be ordinarily filled by natives, and those in which Europeans would still be mainly employed The matter would not be attended with much difficulty, because a foundation has been laid for a native civil service in the subordinate judgeships, and the corresponding situations in the revenue department. I consider the Indian Civil Service, that is the European Civil Service, to have been a highly honourable and excellent body. Our nation appears under the most favourable aspect in reference to the Indian Civil Service. Considering their freedom from corruption and malversation, under circumstances of great temptation, and their remarkable pervading public spirit, they are altogether an honour to our nation. But it is a provisional temporary arrangement; it is a sort of scaffolding which has been erected until the edifice of our Indian Empire is completed, and as it is completed, that scaffolding should be taken down; and it seems to me to be altogether inconsistent and unreasonable that we should profess that our great object is to train the natives to self government, that it is the ultimate end of all our proceedings in the administration of our great Indian Empire, that we should qualify the natives to administer the affairs of their own country in a satisfactory manner; and yet, while we are constantly professing this, we do not allow them to take even the initiatory step. We

want

t-rate artisans, and yet to become apprentices, oyment in the civil and n that the natives can e qualified for higher posts.

. Have you considered whether it would be ssary to make any specific arrangement to re the service being really native, and to ard against this service falling into the hands subordinate Europeans who were content to ke a lesser salary?—It seems to me that the heck of seven years' residence is a satisfactory one; an European who has lived for seven years in India has become naturalised in a manner, and must have become acquainted with country affairs. The entrance to the service should also be guarded by competitive examinations at which the natives are at least a match for Europeans. This has been the practice at Madras for many years. Beyond that everything must depend upon the honesty and faithfulness of the local government.

854. You would leave it to them to carry out the policy without attempting any system of absolute restriction in the selection of persons, who may be called natives, for these appointments?—Yes.

855. Now do you think that economy might be further enforced in India by the decentralisation of the finances?—Yes, I think that is the main point of all; that is really the key to the solution of the whole problem. And I may mention that this decentralisation is not at all a new idea; it was an early aspiration of our Indian administrators, and it has had a gradual growth and development. It soon began to be perceived that it was simply impossible that the whole of that great country, with its immense population, 67,000,000 for the province of Lower Bengal alone, for instance, could be administered on the principle of centralisation; and as early as Lord Amherst's time an Act was passed by which local funds were established, and local agents were appointed; that was merely a small germ of local administration. And as I have already mentioned, the old town duties were put into that fund until it became necessary to reabsorb them into the fisc in consequence of the financial difficulties arising out of the first Burmese war. It will be found, on looking over my three budget statements while I was Minister of Finance in India, that every year the Government of India transferred to local receipts to be administered by the local governments, various sources of income more or less of a local character, and that, developing more fully a germ which had been planted under Lord Canning's Government, I arranged for an annual local fund budget, that is, annual estimates, an annual account, and a regular audit of local funds. Mr. Laing had the same aspirations; he actually assigned 500,000*l.* to be raised by the local governments; but that was a premature effort. Mr. Massey had the same aspirations. The first occasion, however, on which any general substantial application was given to the principle, was the resolution of the 31st of August, 1864, towards the end of my administration of the finances, by which it was arranged that the expense of the police of the towns of every part of British India should be charged upon local funds, and should be so provided for; and the effect of this principle in promoting local self government was pointed out. The final application of it, which now has to be acted upon and practically considered, was Lord Mayo's resolution of the 14th of December 1870, by which certain branches of administration, police, and education, and so forth, were placed under the local governments; and a sum of something less than 5,000,000*l.* was appropriated out of the revenue for carrying on that service.

856. Do you approve of that arrangement?—I entirely approve of it. I think it an excellent first step, but it is of a provisional and imperfect character. It is open to this obvious objection, that no self-adjusting principle is provided between the services which have been transferred to the local governments, and those which have been retained by the central government, or rather between the funds applicable to each; so that from year to year, while there may be a deficiency in the local budgets requiring to be met by local taxation, there may be a decided surplus in the general budget. That want of harmony, and want of mutual arrangement, is a decisive objection, and the more so as the particular branches of administration transferred are those which develope most rapidly under an improving state of society. One main reason given for this arrangement is, that the particular branches of administration transferred to the local governments are such as are likely to be a subject of interest to the local governments and communities; but the fact is that there are other branches which are quite as much a subject of interest to them. The assessment and management of the land revenue, the customs, the salt, the judicial administration, are quite as much a subject of local interest; in fact the judicial and revenue administration are more a subject of local interest to these local communities than some of those branches which have been actually transferred. That I also think a great defect.

857. Do you think then that they ought to have proceeded upon the other basis of leaving the local administration to be borne out of a specific fund, excepting only those that were merely imperial?—Yes, I think that we should come to that. Do not understand me as objecting to what Lord Mayo did; for I think that was a great step in advance, and was perhaps all he could in safety do. The whole of India is going through a process of education on this subject, and that is perhaps, was the best that could be done as a first step; but the main reason why this measure of Lord Mayo's, although so good as a first step, cannot be maintained as a final arrangement, is the influence of the balance of the revenue. In the management of public revenue and expenditure, it is quite as influential and decisive a consideration who have the balance, as it is in the management of a private estate. Even if a private estate has many charges upon it as the [illegible] yet if the surplus, what [illegible] belongs to a particular individual has the strongest [illegible] that estate; and [illegible] virtue of the principle consists in the [illegible] be saved by economy [illegible] expenditure, [illegible] possible, shorn [illegible] Now Lord Mayo [illegible] in that; those [illegible] fact with the

Sir *C. E. Trevelyan*, K.C.B.

25 February 1873.

sons, and many others, I think that the practical application of the principle should be reversed, by taking out the services administered by the Supreme Government, and leaving the entire surplus to the local governments. The real administration of India is vested in the local governments; for all practical administrative purposes they are the major, and the Supreme Government is the minor quantity. Instead of attempting to define what the local governments should do, the process ought to be reversed. The functions of the Supreme Government should be defined, and everything not included in that definition should be left to the local governments.

858. You would put our local presidency governments very much on the footing of a native state which pays a specific sum to the British Government of India and gets the benefit of its general protection?—Yes, with the addition of a more active supervision on the part of the Supreme Government.

859. Leaving all the details to the local administration? — Yes. In fact we are nearer that result than we imagine. The real government of India, as it affects the daily wants and habits of the people, is actually vested in the eight local administrations; the entire civil administration, the assessment and collection of the land revenue (this assessment being much the most important function of Indian administration as affecting the welfare of the people), the police, the entire judicial administration, Public Works, except so far as they have been concentrated under Calcutta, and Education, are all under the local governm[illegible] fore, instead of setting [illegible] of local administration [illegible]king assignments for carrying [illegible]on, the under the immediate ch[illegible]ge of the S[illegible] Government ought to b[illegible] eliminated, a[illegible] carrying them on a sufficient sum shoul[illegible] annually taken out of the general revenue.

860. Out of the general revenue of each d[illegible] trict, do you mean?—Out of the general reven[illegible] of India; and all the rest should be left to t[illegible] local governments. The real key to this grea[illegible] reform would then be reached, the disposal o[illegible] the balance or net surplus; that is the key to the whole. So far as it has been tried, judging from Bengal, where it has been carefully administered, this plan has worked extremely well; but symptoms are already appearing of the imperfection which I pointed out. The Governor of Bengal complains that the branch of his administration which most stands in need of reform is the subordinate district establishments; but inasmuch as they have been reserved by the central government, together with the funds applicable to them, he is not able to enter upon the subject as he would wish.

861. Have you directed your attention to the peculiarity of the arrangement by which the local governments are to look to local sources of revenue to make good any deficiency that may arise in the assignment that has been made to the special services of their district?—Yes; my belief is that if the plan was carried out in the way which I have suggested the necessity for local provincial taxes would disappear.

Friday, 28th February 1873.

MEMBERS PRESENT:

Mr. Ayrton.	Mr. Eastwick.
Sir George Balfour.	Sir James Elphinstone.
Sir Thomas Bazley.	Mr. Fawcett.
Mr. Beach.	Mr. Robert Fowler.
Mr. Baillie Cochrane.	Mr. Hermon.
Mr. Crawford.	Mr. Lyttelton.
Mr. Cross.	Sir Stafford Northcote.
Mr. Charles Dalrymple.	Mr. John Benjamin Smith.
Mr. Beckett Denison.	Sir David Wedderburn.
Mr. Dickinson.	Sir Charles Wingfield.
Mr. Grant Duff.	

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

Sir C. E. *Trevelyan*, K.C.B.

28 February 1873.

862. *Chairman.*] I BELIEVE you wish to add to your answer to the last question put to you on Tuesday?—Yes, with the leave of the Committee I will complete that answer. The necessity for additional taxation arises from the fact that one portion of the finances has been dismembered from the rest. If all the assets and liabilities were kept together, and proper economy were observed, there would be ample for every purpose. It is the old story of the belly and the members; certain members have been cut off from the financial reserve, the special assignments with which they have been endowed being quite insufficient to meet their prospective development, consequently they wither and require to be supplied with nourishment from some other source. The general exchequer has been broken into two, one of the fragments being made dependent upon local taxation.

863. What is your view, or have you any view, as to the mode by which the system of indefinite taxation could be restrained by means of representation, or of the finances being supervised?—I am of opinion that as in other countries where the same principle has been carried out, representation must be commensurate with taxation. I think that there ought to be first, provincial councils, that is, eight quasi representative councils (I do not say that they should be appointed by popular election at first) at the chief seats of the eight local administrations. Then there should be zillah, or county councils, each district being represented by its notables, and confidential men. And, lastly, there should be town and village municipalities, and the principle of direct election should be introduced within such limits as may be safe and expedient.

864. Do you mean for the provincial councils?—Not at first in the provincial councils, but certainly in the town and village municipalities, and possibly in the zillah or county; but that is what we should work up to, actual election, and we have had experience enough to show that it is quite practicable. The earliest instance of it that I remember was when Government separated its connection from the religious endowments of the Madras Presidency; the moment they were set free from the Government control different classes of religious opinion came to the surface; the old-fashioned Hindoos claimed to have their entire management, but the new school, who had been educated under our *régime*, said that they were Hindoos also, belonged to the Hindoo nation, and participated more or less in the faith of their fathers, and they should have a share of the management too; and I remember that the collector of Madura, where there is one of the richest of those foundations, proposed that it should be put to the vote, and he actually distributed voting papers and had an election; the two wardens, as they are called, who were to have charge of this large endowment, were elected in that way by popular election with great general satisfaction; and when I was recalled from Madras considerable progress had been made in the formation of a municipality for Madras on the same principle. I am confident that it would have succeeded.

865. Mr. *Fawcett.*] What year was that?—I was recalled from Madras in June, 1860, but the Madura affair took place I think three years before.

866. *Chairman.*] Probably you know whether amongst the Hindoos the whole community are more or less governed by societies with regular organisations throughout India?—Yes; I was going to remark on the preparedness of the people of India for this development; both by ancient habitude and recent cultivation. The foundation of Indian society is the village municipality; that has been the salvation of India. One foreign conqueror after another has swept over India, but the village municipalities have stuck to the soil like their own Kusa grass, which they liken it to; it is a kind of grass which it is impossible to tear up by the roots, because it grows in bunches, and they say that the village constitution is like that grass. They have been nursed in it, it is perfectly familiar to them, and even in the large towns, for instance, Delhi, although there was then no official municipality, yet the people acted in the municipal spirit. I remember the Sahookars coming forward in a body with their chowdery at their head to make

Sir *C. E. Trevelyan*, K.C.B.

28 February 1873.

a representation on a subject which interested them. The same thing has repeatedly taken place at Benares and elsewhere. Then, the natives are by no means deficient in public spirited liberality; the country is covered with ancient works, tanks, caravanserais, and works of various kinds, which have been constructed by individual munificence, and the extraordinary liberality of the Parsees and others who have acquired fortunes during the late time of mercantile activity, is well known. If the councils were merely consultative, the members would never become emancipated from the control of the European official presidents. The natives should not always be made to go in leading strings. It is the old story of not allowing a boy to go into the water till he can swim; he never will learn to swim unless he goes into the water and incurs a little risk and paddles about. At first no doubt they will be timid and frugal; but a little done willingly is better than a great deal done under compulsion, or done for them. Give them the raising and spending of their own money and the motive will be supplied, and life and reality will be imparted to the whole system. All would act under a real personal responsibility under the eye of those who would be familiar with all the details, and would have the strongest possible interest in maintaining a vigilant control over them. And it would be a school of self-government for the whole of India, the longest step yet taken towards teaching its 200,000,000 of people to govern themselves, which is the end and object of our connection with that country. This is not mere speculation, for under the active administration of the present Governor of Bengal we have already acquired considerable experience. I beg to give in an extract of a page and a half from his Report for 1871-72, which has just been received: "On the whole, after very much thought, he" (the Lieutenant Governor) "came to the conclusion that for the first year at any rate it would be well to invite his Council to devote itself to the subject of local taxation, properly so called, and that as regards provincial expenditure, he might for the present try the effect of constant economy and thrift, and see if he could manage to pull through with the resources which he had. That then was the programme with which the Government commenced the financial year 1871-72. This course, determined on with anxiety and hesitation, has succeeded beyond the Lieutenant Governor's most sanguine hopes. No extensive reductions of establishments have been made in any department, for in the only department in which some branches have been reduced, additions have been made to other branches; really reasonable demands have not, it is hoped, been rejected; real necessities have been provided for; but a constant watchfulness has been maintained over little things; nothing has been spent, so far as the Government could help, without necessity, merely because it was the custom to spend it; excrescences have been retrenched wherever they came to light. The previous scale of efficiency in regard to public works has been maintained, but there has been no indulgence in the æsthetics of bricks and mortar, except so far as the completion of the already far advanced High Court rendered this necessary. The result has been, that in most of the civil departments there has been a considerable saving. In the Department of Public Works a very considerable savi[illegible] been made; some small windfalls have [illegible] and the financial year has ended with a [illegible] about 140,000 *l.*, on a comparison of the [illegible] and expenditure of the year, that sum be[illegible] clear addition to ordinary balances in hand [illegible] commencement of the year. Under these [illegible] cumstances, the Lieutenant Governor has [illegible] that the grounds on which fresh provincial tax[illegible] tion might have been proposed have disappear[illegible] from under him, and at the close of the last ses[illegible] sion of his Council he was able to announce, tha[illegible] as regards provincial taxation, so far as his own personal opinion and the present time are concerned, he does not anticipate the necessity of asking the Council to consider any measures for imposing fresh burdens on the people, but will be content that the efforts of all should be devoted to elaborating and putting in execution the system of local self-taxation for local benefits, which has so much occupied the Council and the Government, and in respect of which also, the Lieutenant Governor hopes that a sort of finality has for the present been reached. The system of account is such that it was impossible to be quite sure of the result till the year was closed, and the financial year 1871-72 may be described as having been, for the most part, a year of economies. Now that the result has been to show so considerable a surplus, the Lieutenant Governor has felt more at liberty to look to improvement as well as to economy, and has made a good many grants in excess of the ordinary Budget provision. In particular, he has made provision in the Budget for 1872-73 of 20,000 *l.* for the new subdivisional establishments already alluded to; and he ha[illegible] since thought himself at liberty to devote a ver[illegible] considerable sum towards the commencement [illegible] a system of popular education. He hopes tha[illegible] the provincial finance is now sufficiently easy t[illegible] enable him to invite the submission by local an[illegible] departmental officers of any plans by which grea[illegible] public improvements may be effected at a mode[illegible] rate cost. Before leaving this subject the Lieu[illegible] tenant Governor would ask to be allowed to sub[illegible] mit his humble testimony to the wisdom and the practical efficiency of the system of provincial finance inaugurated by the Government of the late Earl Mayo. It seems to him that for a beginning it went quite far enough, and not too far; that it has most successfully applied a motive to economy and method which has taken full effect; that it has immensely diminished the friction between the Supreme and subordinate Governments to which the finance of the civil departments continually gave rise; and that it has enabled the local governments to mould and shape the departmental establishments and expenses, with a view to their efficiency and their adaptation to local requirements, in a way which was impossible under the old system. The experiment has been, the Lieutenant Governor ventures to say, a complete and unalloyed success." I alluded in my last evidence to the Government of Bengal intending to propose to the Government of India to extend this system to the subordinate executive service; and I beg leave to put in another shorter extract on that point. He says, "There may be difficulty in so arranging the services that part shall be paid from Imperial and part from provincial funds. The Lieutenant Governor hopes that the Government of India may perhaps consent to make over to this Government the funds assigned

Sir *C. E. Trevelyan*, K.C.B.

28 February 1873.

the uncovenanted services, together estimated cost of the various special and duties, for which temporary establishe so often entertained in Bengal; and may be able to weld the whole into one enanted Civil Service. With this view hole scheme will be submitted to the Goment of India."

867. With reference to the provincial coun, do you consider that for the present the nstitution of those councils should be on the oting established by law for Madras and Bomay?—No; I think it should be enlarged. I think that there should be a representative of every district in the Presidency, selected at first by the Government, but in selecting him the Government should take appropriate means of ascertaining that they got the man who, on the whole, possessed the confidence of the district in the greatest degree. That should be the primary qualification; mere executive ability or even extensive knowledge, should be considered quite secondary compared with the fact of the representative having the confidence of the district.

868. Are we to understand that it is to be a person engaged in the public service, or that it is to be a native inhabitant?—Anybody whatever. In many cases they would be persons engaged in the public service, because the most advanced class, especially in the south of India, are the young men who have been educated at our schools and colleges, and trained in the public service; they are a very remarkable set of men.

869. Do you mean natives of India?—Yes. They show a solidity of character and a thoughtulness which I have never seen exceeded in any eople, European or Indian.

870. Would they be paid or unpaid as members of the Council?—I think where they reuire it they must be paid; they must have substence where they want it; but if they are en of property and independent fortune, they ould not require any payment. That point as been discussed with reference to the native embers of the Council of India, and the course dvocated by me, and which was looked upon with favour by the other members of Council, was that those who wanted it should be paid. And, in fact, payment was made in one case, probably more.

871. Do you see any important distinction s regards independence of character between e subordinate public servants with a larger rospect of promotion before them, and public ervants who are at the head of the service either ith no prospect of promotion before them, or ith only promotion to very important stations, hich are the subject of public observation?—here is no doubt that men in the early vigour f life who look forward to a career in the public rvice would regard the authorities with more ference and respect, and would be more likely e guided by their influence, but at the comcement of the system I think there would be harm in that. And I must do these native officers the credit of saying that, whatever their views or aspirations for themselves might be, I always found them ready to speak out candidly in the interests of the country and the public. I have no fear of their withholding their genuine sentiments. In the municipality at Calcutta if any fault is found, it is rather that the ak out too openly.

872. Do you think that any further c should be imposed in the constitution Councils?—Yes, I think that the budget system by estimate, account, and audit, and the principle of Treasury or Financial Departmental control, should be firmly established at the seat of each of the eight provincial administrations; in other words, instead of merely training a small number of officials at Calcutta to the true principles, of finance, I would train the whole country through these provincial, district, and municipal councils; and I conceive that the annual scrutiny and revision of the estimates and accounts, and the discussions which would arise out of it at the seats of the eight provincial governments, would have a highly educating effect in a political sense. It has been so in England; that is the political training which our ancestors had, and it has borne excellent fruit here; and why should it not in India? The natives are excellent accountants, and have a sharp eye to their own interests, and they are not barbarians waiting to be civilised, but they are an ancient people who were a literary and scientific people when our own ancestors were barbarians, or something very like it.

873. Would you preserve the present power of the Supreme Government over the provincial councils to prevent any new tax being levied without the sanction of the Governor General?—Yes, entirely so. I think that no new taxation, or borrowing, should be permitted without the express previous sanction of the Supreme Government, with a full statement of reasons; and, moreover, that it should be shown that each particular proposal had undergone full local scrutiny, and that it was approved by the prevailing good sense and influence of the province. In other words, I think that the check from above should be firmly maintained until that from below has been fully matured.

874. Then you would require that check and judgment to be interposed before the local government submitted any scheme of taxation to the provincial council?—I think it should first undergo the ordeal of a full local discussion by the representatives of the people of the province.

875. Is it your view that, after the local council has discussed the subject and formed its opinion, the Governor General should then interpose his authority, or do you mean that the finance should be carried on as it is in this country, and that the proposal for taxation should be on the authority of the government, that is to say, the local government and the Supreme Government?—I think that the point of interposition and contact of the Supreme Government should be after the matter has been fully discussed locally. I conceive that until that has taken place, until it has been seen what the people have inside their minds on the subject, and what the local interests and influences are, the Supreme Government would not be in a position to judge of the merits of the different cases.

876. Have you considered what the effect would be of the British Government playing off two governments upon the people; one at Bom-

Sir C. E. *Trevelyan*, K.C.B.

28 February 1873.

b[illegible]posing a tax, and the other at Calcutta [illegible] it?—I think that one of the chief [illegible] the framework or scheme, into which [illegible]ian Empire has settled down, is, to follow Mountstuart Elphinstone's view, that it furnishes the opportunity of trying all sorts of experiments in politics and administration on a small scale, without compromising the rest of the country, so that the plans which are successful in any particular province become a model to the whole country, while those that fail act as a warning to the whole country.

877. Was not his remark applicable rather to what may be called administrative officers dealing with large districts?—No doubt it was, but it equally applies to administration however conducted, whether entirely on the old official system, or with a greater or less infusion of the popular element.

878. But do you not see a distinction between an administrative officer administering a district and the representative of the Crown administering the actual government in place of the Crown?—In this point of view I see no distinction; I do not apprehend your meaning.

879. Is there not a distinction between an administrative officer administering one or two zillahs, and the representative of the British Crown in India administering the whole Government of the Presidency?—I do not understand that the governors, lieutenant governors, and chief commissioners administering the eight provinces of the British Indian Empire stand now on a different footing in respect to the public interests or their own public responsibilities, from what they did under the East India Company.

880. Was not Mr. Elphinstone's view applicable to the administration of the district when he was administering a district in the Deccan, or was it applied by him to his functions as a governor?—On the occasion when I remember it, it had reference to differences between the Governments. He said that, so far from objecting to the absence of uniformity, he considered it a positive advantage, because it enabled the same experiment to be tried in a variety of different ways, and the absence of any such power of trying experiments in different ways was one main objection to the system which is now coming to an end, of governing entirely from the single centre of Calcutta, by one set of people, according to one model, namely, the Bengal model.

881. In these councils you would propose that all the responsibility of finance or of originating finance should rest with the executive Government, I presume?—Yes, entirely so; an individual member of Council should have no power of originating any expense.

882. Or any tax?—Or any tax; the initiative would remain with the responsible executive Government.

883. And would you propose that the eight provincial Governments should be reorganised to carry on their administration in the same way as you propose that the supreme Government should be reorganised in the relation of the executive Government, finance, and expenditure?—It does not require any reorganisation; the organisation is all there; it is merely that the springs should be placed in the hands of the local governments instead of the Supreme Government. It is a more easy transition even than that, because it is only quite of late years that the Supreme Government has taken [illegible] these springs, and it is merely to retur[illegible] to their former state.

884. I meant, whether you proposed [illegible] should be a Budget prepared by the local [illegible]ment, and submitted to the local council? [illegible] the Deputy Accountant General at Mad[illegible] instance, or Bombay, instead of being the se[illegible] of the Supreme Government, would become [illegible] he was in former days, the servant of the lo[illegible] government, and the auditor the same, and wo[illegible] conduct, under the directons of the local gover[illegible]ment, this improved system of finance under im[illegible]proved circumstances. The Accountant General at Calcutta might, or might not, gather up the whole in an annual general statement to be submitted to the Home Government. I suppose each of the eight administrations would send at least one copy of their Budgets home direct to save time. I should like to touch briefly upon the application of this great change under three heads: first of all, Public Works. Of course, as the accountant officers would again come under the control of the local governments, so would the Public Works officers, and we should then at last have disinterred the practical engineer and man of business employer, to whom I alluded in my former evidence, from under the mountain of useless, mischievous, expensive officialism. We should have got at an authority entrusted with spending the money who has some very considerable direct interest in economy. We should have arrived at real direct personal action and responsibility, and should have got rid of the scramble and the uncertainty, and have vindicated the principle of individuality against that of a vast un[illegible] manageable aggregate. And the same in referen[illegible] to irrigation. The change would be especiall[illegible] blessed in reference to irrigation. I have not [illegible] doubt that as soon as it is known in the south [illegible] India that a change of this sort is in contempl[illegible]tion, the agricultural population will immediatel[illegible] begin to look up those hundreds of ruin[illegible] tanks I was speaking of, and think of re[illegible] storing [the bunds between hills, and s[illegible] forth; and as for the canals, it will neve[illegible] enter into their imagination to undertake them[illegible] at least in the manner in which we have been doing. And then it will have another remarkable effect in sweeping up alienations from the revenue. Our Government, ever since Lord Cornwallis's time, has been in a chroni[illegible] state of antagonism with the landowners an[illegible] other people of influence in regard to aliena[illegible]tions of the revenue, jaghires, inams, an[illegible] everything of that sort, and we have been all through in a false position, because our objec[illegible] was to sweep all these alienations into the fisc[illegible] Now, inasmuch as the people of the country ha[illegible] no direct personal influence over the fisc, they regarded these resumptions as a dead loss; the[illegible] were swept into a general reservoir, where the[illegible] were entirely beyond their own control, and co[illegible] sequently they were continually fighting [illegible] question with us; but when the finance of In[illegible] is localised and broken up into manageab[illegible] sections, then a strong natural interest in these alienations will arise in the minds of the local populations. In the Punjaub, for instance, the proportion of the revenue which has been alienated for a longer or shorter period, is extraordinary. Viewed in a popular sense, in the taxpayer's sense, it is a great grievance; it imposes an in-

ordinate,

unfair burden upon those who still charged. I will answer for it that the f the first council at Lahore, constituted r less on the popular principle, will run his, and they will think how much they t do by recovering such and such alienations which there is no real ground, and they will able to do what we cannot do. And the same with the large payments out of the revenue, of which we have been speaking, to the Tippoo family, and the Carnatic family, and so forth; those would become grievances and scandals of the highest order; in fact they could not take place; it would be impossible to take the money directly from under the control of a local popular council, and give it to people who spend it in idleness at the best, and generally much worse, in gross dissipation. The junior collateral branches of those families are the most depraved people on the whole face of the earth, for the simple reason that generation after generation they have been entirely relieved from the condition of our race of working for their bread; they live in perfect idleness, and spend their time in dissipation. Gulam Mahomed as I said, was an exception, and he has spent a great part of the additional funds that were so unexpectedly placed at his disposal in large donations to charities, by the lac of rupees.

885. Mr. *J. B. Smith.*] Is it your opinion that if these grants had been submitted to native councils they never would have been allowed?—Certainly they would not; in fact the people would no longer be indifferent to these things, they would be brought face to face with them. And then the last incidental, but great advantage of this plan would be that the Supreme Government would become detached from its exclusive connection with Bengal, and would be reconstituted by selecting the ablest and best men from every part of India for the secretariat as well as for the seats in Council. There would be an end to the mischievous plan of employing one presidency to govern the others, and of course to impose its own limited experience, and its own model, upon all the rest. The injurious effect of that, although it comes less to the surface, has been very great indeed; it had almost paralysed the administration of India before the change took place.

886. *Chairman.*] May I remind you that the proposition to separate the Governor General from the Government of Bengal is one that Parliament endeavoured to enforce upon the administration of India in 1834, and that it has repeatedly endeavoured to enforce it from that time to this, and has never succeeded in doing so; can you tell us the reason why, or have you ever heard the reason why?—I am not speaking of the Government of the province of Bengal proper, because the actual administration of Bengal has been separated; what I was speaking of is the fact that, in spite of this desire of Parliament to constitute the Supreme Government of India a real Government of India composed of officers selected from the whole of India, that has not been done; there are many reasons for its having failed.

887. Did you ever hear the reason that has been very often stated and repeated, of the extreme difficulty of carrying on the Government, if it happened that the Governor General should be in Calcutta and its neighbourhood, as he ought to be very often, and if the Governor of Bengal happened to be a much superior man to the Governor General in point of character?—No, I never heard that reason given, and I do not think it is a sound reason. I think the matter had got into a rut; it is a tradition. The Supreme Government of India grew out of the Government of Bengal; it was formed out of the Government of Bengal, not only the Council, but the secretariat, and the under secretaries, and the clerks, and the whole were Bengali; there was a strong Bengal tradition, and spirit, and enthusiasm, and their mission, as they conceived, was to impose Bengal models, and Bengal ideas, upon the whole of India, and they succeeded to some extent.

888. Still at any time for these 30 or 40 years, if the Governor General had chosen to give effect to the policy of Parliament, he could have done so, and he must have known that he would be completely supported by the authorities in this country; and yet it seems that no Governor General has ever taken advantage of that state of things?—No doubt he would, but this local official interest was too strong for him; he could not contend against it. It reminds one of the family compact in Canada, until the rebellion; until it was all rooted out by revolution, it could not be got rid of. Canada for a long period was governed by an official clique, called the family compact, a tradition of this sort, and many efforts were made, in vain, from home to get rid of it. The false nomenclature, which has grown up of late years, would by this plan be corrected; "Government of India" would again become "Supreme Government of India." It is logically false to call it the Government of India; it is not the Government of India; much the largest part of the Government of India is the eight administrations; whereas the name, "Government of India," has been appropriated to the single supervising power.

889. And you would build it up of intelligence derived from all India, all the Presidencies, of administrative officers of superior intelligence?—Yes, it was always called the Supreme Government in my time, but now the Bengal party have adopted the fashion of calling it the Government of India, and the Council of India. The fact is, that the Council of India now, is what is called the Council of India plus the Councils of Madras and Bombay, and so forth; and we should hear no more about the "minor Presidencies," for their equality, under the supervision of the Supreme Government, would become a matter of fact, as well as of constitutional right. That term, "minor Presidencies," was invented in Bengal, and means that all the other Presidencies are habitually subject to the direction of Bengal, which ought to be put an end to.

890. We may now go to the more general question of the taxation of India with a view of raising the requisite supplies; and I will ask you whether on that subject you wish to offer any observations, confining them to the points more immediately under consideration?—First of all, I would speak of the right of India to raise her revenue in the manner most convenient to herself. As India provides in the fullest manner for all her expenses, she ought to have the same privilege which is accorded to the British colonies, of levying the amount in the manner most convenient to herself. We bear with Canada and Australia when, with a more or less covert view to protection, they impose duties which are decidedly injurious to British

Sir *C. E. Trevelyan*, K.C.B.

28 February 1873.

trade; while, on the other hand, we do not permit India to levy even ordinary moderate revenue duties. We ought not to have one law for the weak and another for the strong; or, rather, we ought not, either in justice or policy, to take advantage of the circumstance of our having at present entire control over a country of great latent strength, a country which has a great future before it, to do to India what we should not venture to do to Canada or Australia, or even to the Cape or New Zealand. Then I would call attention to the difference between direct and indirect taxation in its bearing upon India. We all learned when we were boys, from Adam Smith, that indirect taxation brings the whole of the population under contribution at the time, and in the manner most convenient to them, with a minimum of interference with their personal comfort and habits.

891. That is supposing that the indirect taxation is addressed to all articles of consumption?—Yes. For the most part they pay the tax in the price of the article without knowing that they do so. Indirect taxation is still so much in vogue in England, that we raise about four-sevenths of our revenue from consumable articles, which by habit have become necessaries. Taxes of this class are represented in India only by the salt tax, and the excise upon spirits and drugs, amounting together to about one-sixth of the revenue; but if the feeling of the people be consulted, that is the most popular part of our fiscal system. The native alternative for the income tax is always some form or other of indirect taxation; and Imperial policy coincides with popular predilection. Administering, as we do, a foreign government, which can never have a strong hold upon the affections of the people, or an intimate acquaintance with their circumstances, which is best for us? An easy going self-acting system to which the people have long been accustomed, or one which is totally unsuited to their character and habits, and is singularly odious to them? It matters less now, but wait till another crisis comes, and see how it will be then.

892. To apply those views to the particular taxes that have been much under our consideration, do you consider that a license tax is a direct tax?—A direct tax, certainly.

893. Do you consider the license tax so generally odious, that it ought not to be enforced?—I consider that, in the next degree to the income tax, the license tax, in the hands of the central government, is extremely odious. If the charge for each license is put high, then it becomes unequal and oppressive. If it is put low, then it is unproductive. Mr. Laing illustrated that in a remarkable manner, showing that from an extraordinarily large number of people, an extraordinarily small sum was found to be capable of realisation; but nevertheless it is suited to municipal taxation, because there the people have the management of their own affairs in their own hands, and they are not afraid of the tax; in fact, the inequality ceases there; they make it equal because they are familiar with all the circumstances which have to be considered in assessing the tax.

894. Are you speaking now of a classified license tax?—The ordinary form in which a license tax exists in India is, that it is fixed upon trades and professions; so much for bankers, so much for grocers, so much for this, so [illegible] that.

895. That every man, whatever be [illegible] of his business, provided he comes under [illegible] particular class of trader, pays the same [illegible]—Yes; the same remark applies even to the income tax. The natives are not afraid of an income tax, if they are allowed to levy it themselves: and it will be seen from that remarkable report of Mr. Campbell, that the most popular municipal tax in Bengal is, a very rude form of income tax, which is merely the heads of the village or town sitting down together, and considering how the sum which they require could best be apportioned among those who they know could afford to pay it, leaving out those who could not afford to pay it for any reason best known to them. They know the sum required for the expenses of the town or village, and then the notables of the town or village put their heads together and apportion it.

896. What is your view then with reference to the schemes of income tax that have been enforced in India since the introduction of that tax?—I think that they are an entire mistake. An income tax based upon the principle of self-assessment is unsuited to India. I have endeavoured to save the time of the Committee, by showing briefly why it is unsuited to in India. It is unsuited, first, to a Government occupying, as the Supreme Government of India does, a central position at the head of a system of local administrations. The personal interest of the different populations is enlisted on behalf of their respective administrations, while the central Government is regarded with cold indifference. There is actual ignorance, to a degree little appreciated. I became sensible of that when I was at Madras. I used, both as an old Bengal officer, and also as an Indian public man, to talk to natives of respectability, who I thought would have taken a more general view about the Government of Calcutta. I found that they knew absolutely nothing about it. Their government entirely was the Governor and Council of Madras; they had never looked beyond that; and when the orders came from Calcutta for levying the income tax, it was much as if an avatar of one of their malignant deities had imposed a new strange instrument of torture. Whatever, therefore, partakes of a voluntary character in the taxation of India ought to belong to the separate revenue of the local governments; and below that it should attach to the purely municipal administrations, where the people have the raising and spending of the money entirely in their own hands. Next, this income tax based upon the principle of self-assessment, is unsuited to a people who are not united to their government by a strong tie of national interest. A foreign rule can never be popular in this sense. Voluntary assessment, without the stimulus of a strong personal interest in the government to be supported, is not likely to be very productive. We have the example of our own people in respect to that. Our fathers and grandfathers paid their 10 per cent. income tax with great satisfaction, as long as they thought the money was wanted to keep Boney off our shores; but the moment the war was over, away it went; it disappeared the very first session. Next, it is unsuited to the low state of morality of an Asiatic people. The temptation to evasion is overpowering to them; and extensive fraud and

Sir *C. E. Trevelyan*, K.C.B.

28 February 1873.

e inequality are the inevitable result. eir old Native Governments, the evasion of taxation by the monied as carried to an extraordinary extent. habits still prevailed in Upper India I served there; you used to see men n to be worth lacs upon lacs of rupees king about in the streets dressed in the comnest and dirtiest garments, and all the outside their *ménage* was as shabby and obscure as ossible; if they indulged, it was indoors, or perhaps some one of them might get appointed treasurer to the Residency, or obtain some other ground of confidence of that sort, and then he would launch out a little and set up his expensive bullock carriage, and so on. They have continued that under our *régime* under another form. They are no longer afraid, indeed, to keep their carriages, but when it comes to assessing themselves for the income tax, they just evade it in every possible way. Lastly, it is unsuited to a people who, owing to the same low state of morality, eagerly avail themselves of every opportunity of extortion. We are under the necessity in India of employing large numbers of ill-paid public servants to collect a tax of this sort, and the consequence is the gross violation of another of Adam Smith's rules, namely, to take out, and keep out, of the pockets of the people as little as possible that does not come into the Treasury; whereas the fact is that for every rupee paid into the Treasury from the income tax, 20 or more are taken out of the pockets of the people.

897. Those are the officers who practise this extortion?—Yes, the subordinate agents of the Government, the intermediate people. Infinitely more sticks to the fingers of the intermediate people than goes into the Treasury. That objection does not at all apply to indirect taxation; everything goes into the Treasury there. The answer usually given to all this is, "Would you let the monied classes go scot free?" My answer to that is, India is a poor country in this sense, that with enormous productive powers there is a serious deficiency of capital. The great want of the country is cheap capital. The prevailing rates of interest among private persons are exorbitant, and business can therefore only be carried on at high rates of profit. Wealthy people are few, and the town populations are small compared with the rural communities. If, therefore, the taxable minimum of income is fixed high, little is got. If low, then the Government is brought into the irritating antagonistic relation with the people so well described by Mr. Laing.

898. Those expressions "high" and "low" being merely relative, could you give us some idea what you mean by "high" and by "low"?—When Sir Richard Temple revived the income tax, he urged in defence of it that only 150,000 persons would be assessed out of 150 millions, or one in a thousand; but the consequence of that was that he got nothing worth having. His estimate was 900,000*l.* By his last budget the minimum assessable income was raised to 1,000 rupees a year, and the estimated produce, at the same rate of one per cent., was reduced to 570,000*l.* But if the taxable income is low, then the Government is at once brought into a cat and dog relation with the people, and there is general fraud, extortion, and resistance to the tax. It is a mistake to suppose that the rich few pay no more than the poor many. The rich pay the taxes on consumable articles in proportion to their families and dependents, who are very numerous in Indian families in easy circumstances. They pay nearly the whole of the stamp duties, and they contribute, in proportion to their real property or consumption, to the municipal taxes upon which so large a share of the public expenditure is to be thrown. This last reason is acquiring increased force, because now that it is admitted that the wants of India cannot be supplied out of Imperial taxation, the stress is daily falling more and more upon municipal taxation. Now, as municipal taxation is based upon joint action, we can trust the people to see that the rich pay in proportion to their riches.

899. Would not that have this defect, that a rich man coming to live in a village with a number of small people, his whole wealth would be made tributary to the expense of that one village, although it might be derived from investments in various places, and in the public funds?—No; there would be no fear of that. The natives of India have a strong sense of justice, and a still stronger social and domestic sense; and if a rich Sahookar lived in a small village he would be a source of such great benefit to that village that the people would practically be under his influence. But we have quite experience enough of Indian municipal administration to be able to judge, and as a matter of fact no such danger has arisen.

900. But then if he were not taxed he would be exempted from direct taxation, and he would not pay his share, unless we adopt the theory that a rich man in all his expenditure bears his share of taxation; because all the people to whom he pays money pay taxes?—The case which you point out is a very exceptional one, so exceptional that I do not remember a single instance of it. I was, therefore, speaking of it as a theoretical abstract question. I never heard of a rich Sahooker who lived isolated in a small village. They live in towns where they carry on their trade.

901. Supposing that he lived in a large town, and had half a million of money invested in the funds, is he to be taxed for that half million of money for the benefit of the town, because he lives in it, though the income is derived from the whole people of India?—That is as it may be. Possibly the municipal revenue would be derived from a house tax, then he would pay only in proportion to the premises occupied by him. It might be derived from town duties, then he would pay merely according to his consumption. If, as in many places in Bengal, it was derived from a rough income tax, then, no doubt, his money in the funds would come under consideration; but the roughness implies that it would only be in a very general way indeed. The practical standard is not the income, but the expenditure.

902. But, with regard to your observation that the income tax is a means of considerable extortion, does it apply, do you think, to the tax assessed on incomes of such a high standard as 1,000 rupees a year; or would persons having that income be sufficiently under the view of officers of the Government of a higher position who would be considered incapable of extortion?—Persons in the receipt of 1,000 rupees a year are extremely numerous; that is 100*l.* a year; that is a sort of lower middle class, and it would embrace tens of thousands of the agricultural

Sir *C. E. Trevelyan*, K.C.B.

28 February 1873.

population. Certainly the European officers of the Government have not a sufficient knowledge of the individual circumstances of that class of people to enable them to furnish protection. They would be at the mercy of the subordinate native officers of the Government. But when we came to the case of a man like the great Gwalior Sahookar, a very rich Sahookar who attends the durbar of the Lieutenant Governor at Agra, and so on, we should see that he was not oppressed.

903. What limit do you conceive of income would bring the persons liable to income tax under the direct observation of the officers of the Government to whom we could not generally impute the vice of extortion?—I think it depends more upon their local personal relations with officers of the Government than upon their income. A native, even of large income, who resided in an out of the way part of the country would be very much at the mercy of the local native officers, while a person of small income in daily communication with the European officers would be safe.

904. Is it your opinion that still, at the present day, the European officers of the Government, and those higher native officers whom you have stated to be above the vice of extortion, have not a personal knowledge of the community in each zillah, or part of the zillah, with an income of 100*l.* or 200*l.* a year?—No, not sufficient for this purpose; take the hundreds of flourishing villages in the districts of the North Western territory; what knowledge has a commissioner, or even a collector, who, under the present system, is often an acting officer new to the district, of these thousands, and tens of thousands, of flourishing peasant proprietors that would enable him to protect them individually.

905. When you use the word "collector," you mean the assistant collectors and sub-collectors, and all the class who would be fairly classed as not practising extortion?—Yes, I am speaking of Europeans.

906. And natives, because your proposal is that natives, being equal in morale to the Europeans, should be admitted to the offices which the Europeans hold?—Well, I think that the income tax is a severe trial to the morality of all public officers, except the highest. We know that a tehsildar in the North Western Provinces, was in the way of making a fortune out of the income tax. I should trust some of the native officers of whom I was speaking, in the south of India, certainly. To one of them I confided a trust of that sort, as great as was ever confided to any European.

907. Would you not trust any young civilian, as regards his integrity, in collecting income tax, though you might not trust his discretion in dealing with such questions as you mentioned last time with regard to irrigation?—Entirely as regards his integrity, but then, being young and inexperienced, he would be very much in the hands of his native officers, and every civilian, especially a young civilian, has a surrounding of more or less favourite native officers.

908. Your view is that neither the license tax nor the income tax can be adjusted upon any basis that will give satisfaction, or will not create such dissatisfaction that it is undesirable to make use of them?—Entirely so, that is my view; I think that they are only practically available as municipal taxes.

909. Are these the only sources that of, apart from the land revenue, of direct in India?—Yes, but before I leave dire tion, I should like to be allowed to put paragraphs from my last financial statement, ing the financial results of the first income t

910. It went very low, I think, in the scale It did at first, but it was altered afterwards. will read the passages, if you please; "the incom tax which, to use Mr. Wilson's words, was passed for a limited period with a view to the present emergency, will expire on the day appointed by law, the 31st July next. As a potent, but imperfect, fiscal machine, it should be regarded as the great financial reserve of the country; and it will now be laid on the shelf complete in all its gear, ready to be reimposed in case of any new emergency. The income tax was passed for five years from 31st July 1860, at the rate of 2 per cent. upon incomes between 200 rupees and 500 rupees a year, and of 4 per cent. upon incomes above 500 rupees; and of this last-mentioned 4 per cent., 1 per cent. was appropriated to roads, canals, or other reproductive works. The assessment was to be an annual one" (that is a very important point) to make it equal, "but before the first year had expired, an Act was passed authorising the Governor General in Council to continue the original assessments for another year. In May 1862 this power was extended to the remaining three years, and the limit of exemption was raised from 200 rupees to 500 rupees." That was under Mr. Laing. "From the 31st July 1863, the rate of 4 per cent. was reduced to 3." That was my first budget. "The original assessment has become obsolete in every sense. Persons deriving their income from salaries and the funds pay the full 3 per cent., but the assessments made five years ago" (upon variable incomes), "which were originally insufficient and unequal, have become much more so by the great increase of wealth, and by the change in the circumstances of individuals during the interval. The gross amount that will be realised from the income tax in five years will be 8,008,127*l.*, and the cost of the establishments employed in collecting it will be 366,160*l.*, or at the average rate of about 4½ per cent., leaving 7,641,967*l.* as the net proceeds of the tax. The sum appropriated to local works" (out of that sum) "will be 1,500,000*l.*, so that the benefit to the general revenue from the income tax will be about 6,141,967*l.* Debt to a much larger amount than this has been paid off at home and in India within the last three years." So that the practical effect of the income tax was to enable us to pay off so much more debt. We paid off in those three years about 12,000,000*l.* of debt, so practically the income tax went to the payment of debt. "I have followed the usual course in taking the cost of the tax at the expense of the machinery actually employed in collecting it; but in order to estimate the real cost, the work it caused to the different Governments, secretariats, army and police, the printing, translating, telegraphing, stationery, and all the other incidents of the tax should be included." In fact, the Government for many months did nothing but try to work this income tax into the country, and failed entirely after all. Then there is another head of expense that I have not included here which ought to be included, which is the vast sum extorted from the people which did not go into the fisc, and the cost of the harassment

Sir *C. E. Trevelyan*, K.C.B.

28 February 1873.

and disaffection and other evil consequences of the tax.

Have you any opinion to offer to the Committee with reference to the system of indirect taxation?—Yes; I will begin with the principal item, salt. The principal indirect tax is the duty on salt which has a bad name arising from a fallacy. It is popularly assumed, that because there is a tax on salt, therefore, there must be a diminution in the quantity of salt which each person consumes. Salt, however, is the last thing in which a native of India of any class, economises. He would economise in anything sooner than in his salt, because their diet is chiefly vegetable, and salt is an absolute necessary of life. They are great hands at what we call condiments, musalah; and of the musalah, number one A, is the salt, and they would save in their dress, their house, anything whatever, rather than salt. The annual incidence of the highest existing rate of duty on salt (that in Bengal proper) is less than 1 *s.* I may mention that, since it has been found that the population of Bengal proper is much larger than it was supposed to be, that calculation is supposed to have been put out somewhat; but any how, it is very small. The profits of agriculture, and the wages of labour have so increased of late, that this bears an inappreciable proportion to the income even of the most ordinary labourer. Several circumstances have also combined to mitigate the operation of the salt tax. The first of these, is the abolition of the Bengal salt monopoly, and the substitution of free trade in salt for Government manufacture, which was finally accomplished in February 1863; and a description of the measures taken for that purpose, and for gradually disposing of the great accumulated stock of salt, will be found in my financial statements for 1863-64, pages 25–8; for 1864–65, pages 24–5; and for 1865–66, pages 26–7. It was going on all through my administration. The great increase in the export trade (and here I would remark that India is full of anomalies and strange contingencies) has led to a corresponding increase in the importation of salt from Cheshire, for the returns made in manufactured goods are quite insufficient to occupy the outward freight, and the Liverpool ships are filled up at very low rates with salt from Cheshire. In fact, it is brought as ballast, or at very little more than the cost of ballast. Then the railways have had an immense influence in cheapening salt. In the Madras Presidency the opening of the railways into the interior, gave an extraordinary lift to the salt trade. Pain have also been taken to carry the branches from the different coast termini of the railways, Calcutta, Madras, and so on, right into the salt depôts, so that the salt is laden at once, and of course from the ships it goes at once upon the railway. My opinion is, and any one who really knows India will agree with me, that the railways, and the great facility which has been given to the importation of salt from Cheshire, have cheapened salt more than any increase of duty of late years has enhanced it. But there is an invetérate prejudice in England against this tax quite as strong as the feeling in India in favour of it, and, therefore, as it will take a great deal to root that prejudice out of the English mind, I venture to put in a passage from my last Budget Statement. The prejudice in this country against the salt tax is so strong, and, as it appears to me, so unreasonable, and so contrary to the real facts, that I would be glad to be allowed to put in that paragraph. "The body of the people of India are the countless peasant proprietors, and the much smaller number of persons who live by wages in town and country. The annual incidence of the highest existing rate of duty upon salt, calculated upon the consumption of a single individual, is less than 1 *s.*, and the profits of agriculture and the rates of wages have so increased of late, that this bears an inappreciable proportion to the income even of the most ordinary labourer. Owing to the greatly increased importations from Liverpool, the average price of salt in Bengal, exclusive of duty, is not half what it was; while in the south and west of India the price has been greatly diminished by the reduction in the cost of carriage, arising from the opening of the railroads to various points in the interior. Half the revenue of England is levied upon consumable articles which, from habit, have become necessaries, but taxes of this class are represented in India only by the salt tax and the excise upon spirits and drugs, amounting to about one-seventh of the revenue. No tax can be collected more cheaply or with less annoyance to the people than the salt tax. In India, where the interference of subordinate fiscal agents is more than usually disliked, this is one of the greatest recommendations of a tax. The only really productive taxes are those which are paid by the body of the people. Clearly, they ought to pay their fair share, for they profit even more than the rich by the advantages of good government. A rich man can generally protect himself, but if the interests of the poor man" (I mean the comparatively poor) "are not cared for by the State, he is ground down by the rich, and is rarely able to rise in the social scale." That is exactly the state of the case under the native governments. We are a government for the body of the people, the comparatively poor. "The increased prices and wages from which the bulk of the payers of this tax are enjoying such great advantages, are distinctly the result of strong and just government, and they are also the main cause of the increased expenditure for which we have to provide." That is all I have to say about the salt question.

912. Mr. *J. B. Smith.*] Do you think that the salt tax is unpopular with the natives of India?—No; decidedly popular; I mean as popular as a tax can be; no tax is really popular.

913. *Chairman.*] You perhaps recollect the fact that the first indirect tax that the people of this country abolished after the great war was the salt tax?—Yes.

914. Perhaps that is the foundation of their prejudice against it?—They abolished a great many others. In order to come to a true analogy we must review the whole of the events of that period.

915. With reference to the excise on spirits and drugs, do you wish to observe anything to the Committee?—Well, the excise on spirits and drugs, although highly approved of by the educated, sensible, and well-disposed natives, is by no means so popular with the mass of the people as the salt tax; in fact the salt tax is neither popular nor unpopular; they do not know anything about it. The millions of Bengal and the North Western Provinces, and of Madras and Bombay away from the sea coast, do not know anything about it. But the spirit duty is

Sir *C. E. Trevelyan*, K.C.B.

28 February 1873.

brought to every village as an universal excise, and as such, and as diminishing their enjoyment of spirits and other stimulants, it is less popular with the body of the people than the salt tax; but nevertheless it is an excellent tax; all well-disposed natives are entirely in favour of it, and they readily concur with the Government in fixing the tax, district by district, at the maximum amount which is consistent with its realisation. That is the principle; great freedom of adaptation is allowed. The rate varies even from district to district of the same Presidency with a view to adjust the tax according to the circumstances of the district on that principle, to obtain a maximum of revenue from a minimum of consumption; and that principle is honestly acted up to by the Government officers, and great progress has been made of late years by establishing a strict control over the distilleries, and so forth. The most injurious of all these stimulants is the hemp drug or ganja; it habitually produces violent deeds and much insanity. But Mr. Campbell reports, "We have succeeded in raising, and have in the past year still further raised, the duty, so that in 1871–72 the consumption was about a third less than 15 years ago, while the revenue derived from it was more than doubled."

916. Have you any observation to offer upon the stamp duty?—It is so far a good tax, that it is raised in general from those who can afford to pay; and it is raised with great facility without any inquisition or interference. In fact it is a voluntary tax; but I cannot accede to the opinion that the stamps upon legal proceedings ought to be maintained because they discourage litigation. How can this be reconciled with the opposite true maxim that justice ought to be made accessible to everybody, however poor? It is a painful necessity of the present state of Indian Finance, that we have to levy taxes on law proceedings; and as soon as the administration is placed on a proper footing. This is one of the first taxes that ought to be taken off.

917. Is it your opinion then, that the law should be administered gratis to the community?—Yes, as far as the Government establishments are concerned, they all pay for that in the taxes, and those who are under the unfortunate necessity of having recourse to law proceedings, and of incurring thereby great expense and loss of time, are the last people who ought to be made to pay extra.

918. But do they not resort to courts of justice often from the negligent and unskilful and irregular manner in which they manage their own affairs?—The applicants to the courts are generally people who are craving for justice.

919. Have you anything to state to the Committee with reference to the opium revenue?—Yes; opium is not a tax at all, except so far as it diminishes the profits that would otherwise be derived by the landowners. It is a trading speculation of a highly speculative character, which troubles Indian financiers by the odd jumps it takes up and down from year to year, but which in a course of years is our great standby. It is a fertile source of revenue without any taxation.

920. Sir *Stafford Northcote.*] May I ask if you have ever considered the possibility of avoiding those fluctuations in the yield from opium, by taking a fixed sum from opium each year?—That is only a matter of account. We practically do it, because if we get more from o[illegible] we expect, and it leads to a surplus, i[illegible] the balances.

921. It goes to the reduction of the d[illegible] goes into the balances of India, the res[illegible] fact, and lightens the stress upon us in l[illegible] years. In fact, I consider that that is act[illegible] done. The result of all my observation of [illegible] opium revenue is, that although it is very varia[illegible] from year to year, yet in a course of years [illegible] is as thoroughly to be depended upon as the ta[illegible] upon spirits in England. It rests on the same basis entirely. It is a remarkable instance o[illegible] the extraordinarily fine prolific character of the soil and climate of India, that it grows this drug of a superior quality to that grown by any other country in the world, and the Chinese will never be able to do without it, I believe. It is the habitual favourite stimulant of unnumbered millions of people. There is a question which has been agitated for the last 30 years or more, whether the Bengal opium monopoly might not be converted into a transit duty on the Bombay footing. There is no doubt that transit duty in the abstract is a very preferable mode of levying the tax, because it is levied without any interference at all with the cultivators. In fact it is a mere export duty; and before I left India I had begun to consider whether it would be practicable to extend the Bombay system of collecting the opium revenue to Bengal, and I recorded a minute on the subject which I should be glad to give in, because it contains very curious information, and it is a sort of *résumé* of that part of the subject up to that date, and throws considerable light upon it and also upon the bearing of the expenses of production upon the net produce of the tax. My administration unfortunately covered the transition period between the previous contracted annual supply of opium and the larger supply which was subsequently produced, so that my three budgets came in for a disproportionate share of the outlay.

922. But was it your conclusion that the present mode of levying the duty was the best in Bengal?—I came to no conclusion. The most mature views I had been able to form up to that time are expressed in this paper to which I have referred, which is not very long.

923. As to the customs; have you any suggestions to make with reference to the present arrangements?—Yes; first of all I would call attention to their total inadequacy. In 1860 Mr. Wilson stated in his budget speech, "Upon the whole the customs in the present year are expected to yield 3,430,000*l.* as compared with 2,073,000*l.* the year preceding;" thus an increase was provided for of a good deal more than a million in one year, while Sir Richard Temple took only 2,416,500*l.* for customs in his budget estimate for 1870–71. So it is Mr. Wilson's three millions and a half to Sir Richard Temple's 2,400,000*l.* So that, although the trade of India increased in those 10 years from 60,000,000*l.* to 106,000,000*l.*, the customs yielded 1,013,500*l.* less. If customs duties are a legitimate source of revenue, so small an amount as 2,400,000*l.* for the whole of India is simply ridiculous. The ground has been cleared for a good customs revenue by the abolition of, first, the sayer and muhtarafa, and next of the transit and town duties which were substituted for them, but were after all found to be injurious. I wish to mention, by the way, what I omitted in my former notice of the muhtarafa;

that mixed up with the Madras was a very sound house tax, which of the most productive items, and I proat, while the rest of the muhtarafa were ed, that house tax should be retained as a pal tax. But that was the day of grand cial operations, and so the entire muhtarafa swept away wholesale. Now the house tax be revived in the shape of a municipal x. And the ground has been cleared for a ood customs revenue also by the general reduction of the assessment of the land revenue, and as this general reduction was made according to a regulated wholesale system, it overlapped the time when the great necessity for it existed; it took years to mature the arrangements for this general reduction of the assessment, and when the machine had once been put in motion it could not be stopped, and so it went on long after the necessity for it had ceased. The great necessity for it was when the prices of agricultural produce were low. I must give the Committee some idea of that period of Indian finance.

924. Mr. *Fawcett.*] What year was this?—I should say from the year 1820 to the year 1835. The grain was hardly worth moving.

925. *Chairman.*] What part of India are you speaking of?—The whole of India, more or less, but especially Upper India, and the North West Provinces; in fact, in the bulk of India. Grain was hardly exported in those days at all. Only rice was exported, and so it was a little dearer in Bengal by comparison; but Bengal was always a cheap country. No doubt the assessments then ressed very heavily. The great necessity for e general reduction of the assessment of the nd revenue was when the prices of agricultural roduce were low; but in the meantime those xtraordinary circumstances occurred which led o a great increase in the price of agricultural roduce, so that now the landowners profit both y the rise of prices and by the reduction of the ssessment. If prices in those former days had een at all what they are now, I do not believe hat the assessment would have been lowered at all; but prices then being very low, the assessment was universally lowered, and in the meantime prices went up, and so the agriculturists got it both ways, and they have been further benefited by the railways, roads, irrigation, and other works. Then I would remark upon the customs policy prescribed by the peculiar conditions of the Indian trade, and first the course followed by the Company. There are two modes of levying duties upon trade; one, which has been generally adopted in Europe, of exacting a high rate of duty upon imports, leaving exports entirely free; and the other, which was in use in India, of levying low rates of duty both upon imports and exports. The Indian practice was adapted to the special circumstances of the trade. The exports of merchandise from India greatly exceed the imports, the difference being balanced partly by great importations of treasure, and partly by the large sums which have to be remitted from India to England on public and private account without return. The profit of mercantile transactions (I consider this a very important point) does not depend merely upon the return cargo, but upon the combined result of the outward and home voyage. That is seen very plainly in freight; for instance, freight to Calcutta is always less than it is to Bombay, because they are able to get such an abundant return cargo from Calcutta; and, to carry the comparison further, freight to Bombay is always less than it is to Kurrachee for the same reason, because they can get hardly anything to take home from Kurrachee. Therefore, in such a state of things what is most required for the improvement of the trade of India is to give all possible encouragement to her imports. Such is the abundance and richness of the productions of India, that, without absolutely possessing the monopoly of any article except jute, India has in respect to many articles such a decided superiority over all other nations taken together, that they can easily bear a moderate export duty without checking the demand for them. A net revenue of several millions a year is obtained from the export of opium. That is entirely an export duty, and it is paid partly by the people of China, and partly by the landowners of the Valley of the Ganges in the indirect and impalpable shape of a diminution of what would otherwise be their income. And it is the same at Bombay. The landowners of Malwa and Central India would get so much more if we allowed their opium to go to China tax free.

Sir *C.E. Trevelyan*, K.C.B.

28 February 1873.

926. But does that extend to articles in which India would not have a *quasi* monopoly of production?—Take an example: it extends to jute. India has an entire monopoly of jute; it has no monopoly of opium, only a superiority in growing it. In fact, one small portion of India, eastern Bengal, has the entire monopoly of jute; it is all grown in three or four districts of eastern Bengal; and jute has filled the channels, not only of trade and manufacture, but of consumption, in Europe to such an extent, that if a moderate duty, three per cent. or five per cent. (three per cent. I propose), were placed upon it, it would be paid without any perceptible effect whatever upon the trade. How far that slight burden would be divided between the consumer in Europe and the landowners of Bengal, who might get an infinitesimal sum less than they would otherwise get, it is difficult to say, but that would be the result. Indigo has for many years paid an export duty of three rupees a maund, and lac dye and shellac a duty of four per cent. *ad valorem*, without any injury to the trade. In 1859 the export duty on rice was increased from half an anna to two annas a maund, and so far from the exportation of this article having been checked, it rose from a total value of 2,265,656 *l.* in 1859 to one of 3,936,709 *l.* in 1863-4. An *ad valorem* duty of three per cent. is charged upon the export of all unenumerated articles without its having had any perceptible effect upon the demand for them. This includes oil seeds, the trade in which has of late years become so important. In the case of saltpetre only, has any injurious consequence resulted from an export duty. The manufacture of artificial saltpetre was, no doubt, encouraged by the increase of the duty to 5 *l.* 10 *s.* a ton; but this is an argument, not against export duties in general, but against unduly high export duties. There is no reason to believe that if the rate had remained at three per cent. any such effect would have been produced. But although Mr. Wilson made a mistake about increasing the export duty on saltpetre, yet it is important as showing that a high authority on such matters did not object to export duties on principle.

927. At the same time he illustrated the error?—Yes, but it was an error of application entirely.

Sir *C. E. Trevelyan*, K.C.B.

28 February 1873.

entirely. If he had left it at its old low rate nobody would ever have heard anything about it. I had better put with Mr. Wilson, Mr. McCulloch. I beg leave to put in a letter from him to me. I often used to discuss this subject with the late Mr. McCulloch; and when I was appointed to the charge of the financial department in India, I requested him to give me his opinion in writing, which he did in the following letter:—"Stationery Office, 27th January 1859.—Dear Sir Charles, I know of no book in which you will find a summary statement of the objections to duties on exports." (I had asked him to refer me to some place where I could find the objections stated fully.) "And in truth there is no general objection to them; for in their case everything depends on circumstances, and though, in general, duties on exports are objectionable, there are many cases in which they are about the best that can be imposed. In all cases in which substitutes for exported articles may easily be found, or in which the exporting country has no very peculiar advantages of production, duties on exports would be highly objectionable, and would, in fact, endanger the whole of the foreign trade of the country which had recourse to them. But when a country has any very decided natural or acquired advantages of production on her side, then I think that moderate duties on exports may be advantageously resorted to. They would not endanger the branches of industry which they affect, and they would be paid by the foreigner." I think in India they would be divided between the foreigner and the landowners, who are extremely well off, and have profited more by our Government than any other class whatever both in Bengal and everywhere else. "On this ground it has always appeared to me that the abolition of the duty on coal when exported from this country was a great error; and I further believe that it was a scandalous job, and that the public were sacrificed to promote these private interests. If China were subjected to a vigorous and efficient government like Russia or France, then I think her rulers would act wisely in imposing a duty, say of twopence or threepence or sixpence per lb. on all tea exported." But he was under a mistake there. The Chinese have charged an export duty of 12 per cent. for a long time upon tea, and we take 33 per cent. more. "This duty would entirely fall on the English and Americans; and though it might give some little stimulus to the substitution of coffee and other articles for tea, that would not countervail the advantages China would derive from the revenue she would raise on tea. The duty on opium exported from India has been highly advantageous. Latterly, it has produced to the Company 5,000,000 *l.* a year, and, instead of being injurious to the Chinese, it has been advantageous to them" (by limiting the consumption, I suppose); "no doubt it has acted as a bounty on the culture of opium in China, but its prohibition would have given it a still greater stimulus." We need not be afraid of China opium; then he concludes by saying, "This, therefore, you will see is not a question of principle, but of circumstances. Duties on exports should not be rashly imposed; but neither, on the other hand, should they be uniformly rejected. Cases are every now and then occurring in which their imposition would be highly expedient."

928. It all comes to this, then, that the duty is a good one if you can lay the duty upon the foreign consumer; and if you bring it [illegible] the home producer it is not a good on[illegible] why should not the home producer share?

929. That is to be worked out upon t[illegible] cumstances of each particular article, an[illegible] upon any general theory of export duty?—[illegible] so. I would not, for a moment suggest a d[illegible] upon cotton, because India is subject to a ve[illegible] sharp competition indeed from America. I would be suicidal to put a duty upon cotton, bu upon jute, in which it has a monopoly, I woul certainly impose a duty. Rice pays on exporta tion from China a duty of 6½ per cent., and raw silk only 2½ per cent. Olive oil and sulphu each pay 5*d.* per cwt. to the Italian Govern ment. In fact the Italian Government now take export duties from all their valuable semi-tropica products. The second principal source of re venue of the Greek Government is the expor duty on currants.

930. They wanted us to take off the duty tha they might put it on?—Yes. I proposed an in crease in the duty upon rice. I was overrule by the Home Government, but in March 186[illegible] (Mr. Laing) again proposed it, and then it wa accepted. When the necessity of making nev financial arrangements consequent upon the grea expenditure arising out of the mutiny became ap parent at Calcutta, previously to Mr. Wilson's ap pointment, the merchants of Calcutta took coun sel among themselves, and the best opinion then were in favour of imposing a duty upo exports. Not expecting to be examined upo this I have not brought the papers, but I can show that, not only on that occasion, but als on one or two other occasions quite recently i the Bengal Council, very high practical authori ties have expressed themselves in favour o duties upon exports; and the best mercantil opinion of India, I mean the European mercan tile opinion, is in favour of duties upon exports.

931. We may take it as your view that thi question should be reconsidered in India witl reference to various articles of export on th principles which you have stated?—Yes. A the very time while I was proposing a low ex port duty on tea, the tea planters of Assam pro posed to Mr. Beadon to pay 2½ per cent. upo their tea for making roads. Since that th Wynaad coffee planters proposed to Lord Na pier to pay 3 per cent. upon the export of thei coffee for the same purpose, showing that the had no objection to it in principle; but Lor Napier said that it was a thing not to be hear of. In fact it is a deep politico-economical pre judice of the present day to object to expor duties on principle as export duties.

932. Mr. *J. B. Smith.*] But in that case i they got roads as a compensation for this duty they would not ultimately be the losers by it?—No, certainly not; but still it shows that the did not object to an export duty on principle for although that happened to be the applicatio of the money which they proposed, there ar many other beneficial applications of money raise by export duty.

933. But they saw that they could recou themselves by having better roads?—Yes, an so coffee planters and tea planters may recou themselves by having good police, and goo judicial tribunals, and good post-offices and tele graphs, and good laws, and so forth. The Ceylo planters in the same way passed in their Islan Assembl

Sir *C. E. Trevelyan*, K.C.B.

28 February 1873.

uty of 1 *s.* per cwt. upon coffee. ly one other observation which I ke, which is as to the real limit to ction of the staples of the export ndia, because that has bearings of a nificant kind. The real limit to the tion of the staples of the export trade dia is, not the capacity of the country roduce them, but the limited amount labour and capital applicable to their pro-tion; so that when the demand for any rticular staple is much pressed, it checks the oduction of other articles, the price of which is consequently enhanced. When the price of cotton rose to a great height during the American War, it led to such an increase of the cultivation at the expense of other articles, that the price of every other exportable product rose in the market, and it was commonly remarked that no profit was to be made from any return cargo except cotton. For the same reason, grain, the food of the people, rose greatly in price; so much so, that with the additional advantage of quicker returns (for it was sold on the spot) it became to a great extent more profitable to cultivate grain than cotton. At this present time the artificial extension of industrial crops, under the strong pressure habitually applied to our Indian administration by Manchester, is bringing about an artificial famine, which, if it once sets in, cannot be relieved from abroad. So vast a population, scattered over the recesses of a great continent, cannot be fed from abroad. The point at which we have arrived, therefore, is, that India is in a far more independent position than she formerly was as regards the staples of her export trade. The demand for them is greater than the supply; so that, even if one or more of them fell off, as saltpetre has done, the void would quickly be filled by at least an equal development of other articles. The existing stock of capital and labour is insufficient to meet the demand upon it; and until this is largely increased in proportion to the demand, there will always be more than sufficient employment for it, whatever fluctuations may take place between different articles of export.

934. Mr. *Grant Duff.*] You have rendered in your long career many services to India. You would think, would you not, that you had done another service to India if you succeeded in impressing upon the members of this large and influential Committee the immense importance of strengthening the hands of any government that may chance to be in power against the constantly recurring claims of those Indian officers who have already got so much out of the Indian taxpayer, and are banded together to get so much more?—Yes, that is entirely my view.

935. The same remark which applies to the importance of strengthening the hands of Government against the pecuniary demands of Indian officers applies, does it not, to the claims that are made from time to time in Parliament for the payment of large sums to Indian magnates who come or send over here and spend most lavishly in influencing public opinion?—Entirely so. And I beg to be allowed to take this opportunity of explaining my previous evidence on that subject, by saying that I did not mean to go beyond a statement of these three facts; first, that large sums have been appropriated in the exchequers of these Indian magnates under the head of agency, that is, money to be spent in England; next, that when ordinary purely public questions relating to India come before Parliament, for instance, the annual Indian Budget, the attendance is of the smallest; and thirdly, that when these personal questions, in which the Indian magnates are concerned, come before Parliament, there is often a large attendance. I entirely refrain from any personal imputation, but those three facts must be taken in connection with each other.

936. You suggested a commission with the power of examining upon oath as a means of getting at the truth about the sums for what is called agency, spent by Indian magnates in this country. It would certainly be a most admirable thing if this could be done, but do you really see your way to proposing it; how would you proceed?—I was asked whether the only effectual way to prevent a recurrence of such transactions would not be to have a scrutiny, and to drive it home, and I answered yes; and my experience of public life, both in India and in England, is that the only way to keep the body politic sweet and pure is never to be restrained from investigation by the fear of disgraceful disclosures; but to scrutinise and search every matter of that kind to the bottom. When it becomes perfectly known that, as a matter of national policy, that will be the consequence of malversation, then malversation will be powerfully checked. In fact that is the only effectual check, and if such things are passed over without a full investigation, they will be encouraged for the future. The relative position of the British nation towards India is such that this is a very serious danger indeed. We know what took place under the Empire of Rome in reference to this, and our Empire is at least as great and as full of temptation.

937. You said in answer to Question 733, that you imputed no improper motives to Members of Parliament in connection with these cases, and we, of course, who sit here would entirely agree with you; but are you not aware that the kind of thing that goes on under the name of agency causes things to be said in India about the bringing of the cases of native magnates before the House of Commons, which it is well should not be said either in India or anywhere else?—I readily concur in that. It is perfectly well known in India that these large sums are charged to these Indian magnates as agency to promote their objects in England, and the natives of India interpret it according to their own experience; they know what agency in India means, and so they presume that it has the same meaning in England.

938. Now I am going to read you a portion of a very curious document which has come into my hands. It is an English translation of a letter written in Urdoo, and it purports to be from certain persons in London to a great native chief, and I am going to ask you whether you are aware that letters of this kind are written to native princes of India; whether it is not lamentable that such things should be written and circulated in India; and whether you could suggest any way better than the kind of publicity which I am going to give at present to this document for stopping such proceedings: "The commercial relations of the petitioners and their acquaintance with people of rank and power here afford them access and importance. The petitioners can obtain correct information on any cases pend-

Sir *C. E. Trevelyan*, K.C.B.

28 February 1873

ing in the several offices here, and can advocate and prosecute any case before Her Majesty's Secretary of State for India. They can also bring any case forward in Parliament, and can obtain the legal opinions of experienced and renowned legal practitioners. They can assure that every secrecy will be observed, and that every effort and precaution will be used to conduct the cases entrusted to them. It is of the greatest importance that all orders in such cases should be accompanied with hoondies of amounts suited to each case. The petitioners promise that they will have every regard to economy in disbursing the monies thus entrusted. Native chiefs are aware how the * * * has from time to time been advocating the necessity of all uniting in appointing a Member of Parliament to advocate their interests in that assembly. The advantages of this arrangement are undoubtedly very great, and the petitioners are ready to give their sincere co-operation in the matter. But it is necessary that to carry out this arrangement, unanimity should be secured; and as the success of the proposal is calculated to be attended with heavy cost, it is not within the means of one or two chiefs to carry it out. The petitioners have adopted Urdoo in this communication, believing that it would be the more suitable, and if allowed, will continue to write in that language in future"?—I do not doubt that such letters, and worse, are written to India; and I am perfectly convinced that it is high time that some public action should be taken in the matter. The only action which I can suggest is that which throughout my public life I have followed to the extent of my power, both when I was a young man in India, and afterwards during my 19 years at the Treasury. It was a principle which I invariably followed, never to pass over any case of malversation. I do not mean that I urged that the cases should be severely dealt with; but that it should be felt that such transactions would not be ignored or allowed to drop out of sight; and on that principle I have six or seven times, with the help of Sir Richard Mayne in this country, and Sir Duncan Macgregor, the head of the constabulary in Ireland, followed embezzlers and defaulters across the Atlantic, greatly to the public advantage (and there are many similar instances in England); and I believe with excellent effect to the manifest elevation of the standard of morality on those points in official life in England; and the same when I was Governor of Madras. I can only suggest that the same rule should be applied to this case, and that the matter should be searched to the bottom; that we should turn it out, and see what is in it; that we should see what became of that 30,000 *l.*, for instance, which was charged in a single item for agency in the Mysore accounts. I was previously aware that very large sums had been taken out of the remainder of Purneah's treasury with the professed object of forwarding the local official cause, for it was really the Anglo-Indian and native official cause, of reviving the native government of Mysore.

939. Sir *Stafford Northcote.*] The euphemistic expression is "for diffusing information"?—Yes.

940. Mr. *Grant Duff.*] You said with great truth and felicity (if you will permit me to say so) that the repairing to England of Great Indian personages, and their spending here heavy sums of money given for agency and other purposes to English people, reminds you of th[illegible] of the Roman Empire; you are a[illegible] ever, are you not, that disgraceful a[illegible] arts that are resorted to by these people persons whom they have in their pay, worse in the days of the Company; for ex[illegible] is it not true that the Nawab of Arcot was posed actually to return no less than 18 M[illegible] bers to the House of Commons?—That is a v[illegible] old state of things indeed; we might as well g[illegible] back to Sir Robert Walpole's English Admini[illegible] tration. The standard of morality in Englan[illegible] has greatly improved since that, and the prac tice of this generation, and that of the generatio[illegible] of which you are speaking, cannot with an[illegible] fairness be brought into comparison.

941. But still, as a matter of fact, it was so?—It was so.

942. Now I want to ask you about the pres sure of home interests and ideas upon India[illegible] finance: in your reply to Question 426, yo[illegible] began by saying that the old Company left th[illegible] several governments much more to their ow[illegible] discretion than the Secretary of State does; an[illegible] then you go on to say that India and Englan[illegible] have been brought side by side, and that th[illegible] influences of Parliament and the press ar[illegible] brought to bear upon India without any barrie[illegible] at all. Now I will first ask you whether yo[illegible] are under the impression that the Secretary o[illegible] State in Council limits himself for the most par[illegible] to revision and control, or whether you imagin[illegible] that he is in the habit of frequently interferin[illegible] to originate; and, secondly, I will ask yo[illegible] whether you suppose that the influences yo[illegible] speak of, the influences of Parliament an[illegible] the press, are brought to bear on the Secre tary of State and his Council, or upon the Vicero[illegible] and the Governors of Madras and Bombay di rectly?—No doubt the primary function of th[illegible] Secretary of State is revision and control, but I conceive that a practice has grown up, since th[illegible] transfer of the Government, of more frequently originating particular works in India. Th[illegible] Godavery case, for instance, occurs to me, th[illegible] Madras Irrigation, the Orissa Irrigation, and I think the Port Canning Railway. I conceiv[illegible] that although the Company kept a very tigh hand indeed over their Indian Governors, an[illegible] required to know all they did, and limited an[illegible] checked them very effectually, yet, in the mod[illegible] of adopting measures, and the detailed applica tion of measures as to the time and mode o giving effect to them, they left a great deal mor[illegible] to the local governments than is left now: Fo[illegible] instance, I recollect that the correspondence abou[illegible] half batta and reducing the officers' allowances had been going on for many years, and repeate[illegible] general injunctions had been sent to reduce th[illegible] batta, but being left to the local governments t[illegible] give effect to these instructions, it was delaye[illegible] for many years until Lord William Bentinck wa[illegible] appointed. As to the second question which yo[illegible] have put to me, it is difficult to say whether th[illegible] influence is brought more to bear on one or th[illegible] other. It is brought to bear on both; it is no[illegible] entirely, or perhaps chiefly, through instruction sent by the Secretary of State to India that thes[illegible] things are done. It commences by the formatio[illegible] of a company; then it becomes a popular subject then the newspaper press accept and advocate it then Manchester and the city are all for it; an[illegible] then such a power of public opinion is formed tha[illegible] it is very difficult either for the Home Govern men

the Indian Government, or both withstand it.

943. But as a matter of fact, is it not true that the Secretary of State in Council very rarely originates any expenditure in India?—Compared with the whole of the expenditure very rarely no doubt; but still he does originate.

944. Would it not be true to say that he hardly ever has done so?—No; I would not go so far as that. Take the Tippoo expenditure, for instance, the grant to the Tippoo family; and the Godavery, I know was, in the main, in fact entirely, an English enterprise pressed from England.

945. Are you quite sure of that, because it is quite contrary to my impression about the Godavery?—Very little was known about it either at Madras or Calcutta. A great deal more was known and thought at Manchester about the Godavery than was known at either of those places.

946. Now, you have said, in answer to Question 416, that the arrangements made to continue in the Council the exclusive control over payments out of the revenue have, as regards expenditure, gone for nothing; the Council has now existed for 15 years nearly. Will you have the goodness to tell me on how many occasions the control over the expenditure has been taken out of the hands of the Council of the Secretary of State, either by Parliament or by any other body or person whatsoever, directly or indirectly?—Well, the Council has yielded to this moral pressure of Manchester and the city, and of the body of military officers and Indian magnates, or rather their English friends, just as the Secretary of State has yielded; and it is because they have yielded to it that I cannot point to any instance in which there has been any overt action in the matter. In fact, they had the power, and nothing but a change in the law could have taken it from them.

947. But do not you mean, when you speak of their yielding to pressure, that the members of Council simply shared, more or less, the opinions of their time about Indian subjects?—To a great extent certainly. It is because they too fully shared the opinions of their time, and of the society in which they lived, that they have failed as a safeguard. Public officers who have been placed in an independent position and fenced round with every guarantee, as is the case with the Council, are expected to exercise a check which does not belong to more popular bodies; they are our final reserve. I would make the same answer in reference to the Indian Council as I did in reference to the Government of Bombay. It was what the Government of Bombay was paid for. It was their duty; they were sitting on the bench like a judge; and, instead of yielding to the *popularis aura*, or setting their sails to it, as they really did, and backing up those strong popular interests, pressing, for instance, 500 shares of the Back Bay Company upon the Government of India with extreme vehemence, the Government of Bombay ought to have stood upon its independence, to have endeavoured to check this popular madness, and to have fallen back for support upon the Government of India and the Home Government; but so far from the Bombay Government looking to the Government of India for support against this madness, the great difficulty of the Government of India was to control the Government of Bombay itself.

948. But with regard to the Council of the Secretary of State, does not what you say after all only come to this: that your opinions as to certain measures were different from the opinions that were held by the Council and the Secretary of State. You cannot say surely, that the Council of the Secretary of State was in any way overborne by any external force whatever?—Well, they were so far over-borne, that if they had taken up an independent, conscientious position, and had exerted themselves to withstand this popular madness, we should all have heard of it, it would have made a great controversy. That shows that there was a moral pressure, perhaps also a moral or immoral contagion, which affected them.

949. But what right have you to say that they did not take up a conscientious position. Does it not simply mean that you differed in opinion from them as to particular things?—Well, we are sitting in judgment now upon a large class of transactions.

950. I have attended something like 150 meetings of the Indian Council. I have been in the closest business and private relations with many of its members for between four and five years, and I am under the impression that its control over the finances of India is very strictly exercised, and all but supreme, theoretically and practically. Will you explain to me from what data you have arrived at a conclusion so entirely opposed to mine?—I have pointed out, first of all, that a new profusion has characterised the administration of the finances of India since it was transferred to the Crown. I have also pointed out various grave instances of questionable expenditure; and I find that the Council of India has not opposed any check upon this profusion and upon these questionable expenditures, and therefore I say that the Council of India has failed to exercise that check which it was intended and hoped that it would exercise.

951. By whom intended and hoped?—By those who constituted it and gave it those independent powers, the same which are possessed by the judges. They have their places for life.

952. Then you do not mean to say that the Council has been frequently overborne either by Parliament or by the Secretary of State?—It has not come to a controversy, because if this Council had, according to my view, done its duty, then we should have seen whether it was officially overborne. It fact it could not be officially overborne because they had the law on their side, and the law has not been altered, so it must have been a moral compulsion; and perhaps the Council itself partook more or less of the contagion of these popular delusions.

953. In short, because the policy of the Council of the Secretary of State, with regard to certain matters, has differed from your policy, you believe that the Council of the Secretary of State has been affected by a moral contagion?—That is not a correct way of putting it; I have pointed out a policy of profusion, and a series of transactions of a cognate character, which not only I, but various other people of greater authority than myself, consider very objectionable, and I see that the Council of India, notwithstanding all the guarantees that were introduced into the constitution of the Council, have failed to oppose a check to these transactions.

954. But

Sir *C. E. Trevelyan*, K.C.B.

28 February 1873.

Sir *C. E. Trevelyan*, K.C.B.

28 February 1873.

954. But you admit that the Council of the Secretary of State has been very rarely overruled in any matter by the Secretary of State during the 15 years for which it has existed, and still more rarely by Parliament?—I do not doubt that in the majority of cases they have gone together.

955. In how many cases do you suppose the Council has been overruled by the Secretary of State?—As the papers are not laid before the public, I consider the Secretary of State and the Council as one. He has his Privy Council. All this policy and these transactions are the act of the Secretary of State in Council; I cannot distinguish between them.

956. Would you be surprised to learn that the Secretary of State has in the 15 years during which the Council has existed, only overruled his Council eight times altogether?—No, I should not be surprised; so far as the Council yielded to this policy and these transactions, there was no occasion for overruling them.

957. Are you aware whether the present Secretary of State has ever overruled his Council upon any one occasion?—It is a secret Council; its transactions are not laid before the public.

958. You do not know as a matter of fact?—No; I view the Secretary of State and his Council as a single political body; I know the safeguards that were intended to be provided, because I took part in the discussions, and I see that this political body as a whole (I cannot separate the parts) has failed to answer the purposes that were then intended.

959. You mean that you think so?—I know it, because I know what the purposes were, and I know what has taken place since.

960. Then, in reply to Question 400, you stated that there had been much greater weakness in recent times in the finance of India than there was formerly, and you ascribed the former more satisfactory state of things to the frugality and independence of the East India Company; is it not the fact that the directors were opposed to the Affghan War, and that although undertaken without their approval, their representations that India ought to be relieved of a portion of the enormous expenditure on that war, were entirely disregarded?—That is perfectly true. If the Company had not been entirely overruled, the Affghan War, and all the disasters which grew out of it, the least of which perhaps was the excessive expenditure, would never have taken place.

961. Nothing so bad as that has happened since the transfer of the Government to the Crown; no such great expenditure has been saddled upon India since that time?—No, because the *régime* of the Crown in India was inaugurated by a thorough reconquest of India, and all the circumstances indicate that that was the turning point from a period of war and territorial aggrandisement, to a period of settled peace and industry; India has been set upon a course of peaceful industry. But there was something at the commencement of your question which I am not prepared to admit, in reference to there having been greater weakness in the finances of India since the Queen's Government has been inaugurated. Those were not my words, I think, but "embarrassment" and "derangement." But if the circumstances which have caused that embarrassment and derangement were removed, the finances would be stronger than ever.

962. Is it not also the fact, that [illegible] frequently remonstrated against the [illegible] in India of a larger number of Brit[illegible] and men than the circumstances of Indi[illegible] and that those representations were [illegible] vain?—Yes, no doubt they often re[illegible] against the number; the standard of the [illegible] military force in India was then very much [illegible] than it is now, and therefore, their remonstran[illegible] are an additional proof of their frugality. [illegible] fact, they erred on the side of having too sma[illegible] European force latterly.

963. *Chairman.*] Of officers, not of men; y[illegible] recollect the enormous number of officers sent out with the regiments?—Yes, there was always a controversy going on between the India Office and the War Office, and the Horse Guards, a chronic warfare.

964. Mr. *Grant Duff.*] Now, I will take another illustration: is it not also the fact that notwithstanding the positive assurance given by the President of the India Board to the Secret Committee of the Court of Directors in 1840 "that it was not the intention of Her Majesty's Government that any part of the expense of the first expedition to China should be defrayed ultimately from Indian revenues," a claim was subsequently made by the Treasury, that India should bear the ordinary charges of the troops and ships employed, and that, notwithstanding the urgent remonstrances of the Directors, those charges were finally imposed on Indian revenues; and is it not also the fact, that the letters from the Treasury advocating the payment from Indian revenues were signed "C. E. Trevelyan"?—Yes; I can speak from personal knowledge [illegible] all that. It appeared to the Treasury of th[illegible] day that, inasmuch as India had a large intere[illegible] in China, arising from the opium revenue an[illegible] the trade, she ought to pay her share in thi[illegible] joint expedition, and I recollect strongly urgin[illegible] that the best rule of distribution would be tha[illegible] India should pay the ordinary, and the Queen[illegible] Government the extraordinary, expenses, that is[illegible] that India should be at no further charge beyond what she would have been at if there had been no war at all; that she should lend her troops and pay the ordinary pay and allowances exactly the same as if they had remained in India, and that everything beyond that, including the whole of the heavy transport charges, should be paid by the Queen's Government. The India House showed extreme reluctance and fought the Treasury step by step, and I have an obscure recollection that among the arguments they used, was this, that expectations had been held out to them that they would be more liberally dealt with, or differently dealt with; but I cannot speak positively about that.

965. But now, do not all these instances which I have given prove that the pressure of the Imperial Government upon the Indian Government with the view of getting as much, and paying as little as it can, is by no means a new thing, but was just as bad in the days of the East India Company as it has ever been in the days of the Crown?—I agree that it is not a new thing, but I entirely deny that it was as bad. In fact, these stout resistances which the East India Company opposed to the demands of the Queen's Government in former days show that a substantial barrier did exist, and I can answer for those resistances having been to a great extent effectual. And then what has been

Sir *C. E. Trevelyan*, K.C.B.

28 February 1873.

does not at all go to general character usion or economy. I could give 50 in- of the habitual frugality of the East Company. The most striking comparison t between the administration of Public s under the Queen, and their administra- under the Company.

966. Now a word or two, as you have alluded to it, about the frugality of the Company; the Company were in many ways extremely frugal, but there has been a great deal of talk, as you know, at different times, about a certain ball that was given in the year 1868 to the Sultan; do not you think that if the Sultan had come to London during the reign of the Company, it is highly probable that the Company would have entertained him, and entertained him right royally out of the revenue of India?—Well, the Company would have done what the occasion required, but there was a frugality even in their entertainments. The typical story in Hadji Baba of the Two Chairs emerging from the hackney coach when the Persian Ambassador expected a grand cavalcade, is characteristic; they did entertain, not right royally, but very hospitably, their officers and various public people.

967. Now I want to ask you something about their entertainments: the Company, as I am informed, was perpetually giving entertainments out of the revenues of India; did it or did it not give a great dinner to every Governor General and every Governor and Commander in Chief whom it sent out; did the directors not, up to a comparatively recent period, dine together once every week in one of two large buildings in the city, one of which, when that thrifty, but nevertheless jovial body ceased to enjoy those dinners, was sold, and now subserves graver purposes as the Wesleyan Centenary Hall; and did not the expense of their entertainments amount every year to between 2,000 *l.* and 3,000 *l.*?—As for themselves, I know they had luncheons which were very frugal, as far as I remember; and as for the dinners (for it was merely dinners; there were no decorations at all) they were at the London Tavern, and there was no expense whatever, except for what was eaten and drunk; and if there was wine of any special quality, it was sure to be labelled on the bottle to make the most of it. It was part of the policy of that day; the directors were a corporate body, and they could not receive their Governors and Commanders in Chief at all their 24 private houses, so they used to receive them in their corporate capacity at the London Tavern; but there was no extraordinary expense at all. Several years of those entertainments would not amount to what the Sultan's ball cost.

968. Mr. *R. Fowler.*] They drunk principally port, I suppose?—Yes, not much champagne in those days. I remember old Madeira was a great luxury then, and the principal part of the entertainments was the toasting afterwards.

969. Mr. *Grant Duff.*] As a matter of fact I suppose you would not deny that in the year 1830–31 they spent on dinners 2,865 *l.* 18 *s.*; in the year 1831–32 they spent 2,606 *l.* 5 *s.* on dinners; in the year 1832–33 they spent 2,465 *l.* 18 *s.* 6 *d.*; in the year 1833–34 they spent 1,808 *l.* 6 *s.* 1 *d.* on dinners; in the year 1851–52 they spent 1,895 *l.* 0 *s.* 6 *d.* on dinners; in the year 1852–53 they spent 2,016 *l.* 10 *s.* on dinners; in the year 1853–54 they spent 2,320 *l.* 16 *s.* on dinners; in the year 1854–55 they spent on dinners 2,014 *l.* 7 *s.* 6 *d.*; and in the year 1855–56 they spent 2,004 *l.* 18 *s.* on dinners?—Well, really it seems to me very moderate.

970. Then I want to know why the Sultan's ball was so immoderate, the only entertainment that has been given by the Queen's Indian Government since it has existed?—Well, I am sorry that I mentioned the Sultan's ball; I mentioned it among the other instances. I have no doubt that the Company would have paid some compliment or other to the Sultan; still it is a popular example.

971. Mr. *R. Fowler.*] But I suppose these dinners were in connection with business?—I want to explain about the dinners; judged by the standard of the City Companies, this annual expenditure on the East India Company's dinners was extremely moderate. I also think it was very proper that India, having a great Mussulman population, and being under great obligations to the Sultan for the facilities he has given for keeping up the communication with India, should have marked its sense of his advent to this country in some handsome manner; what was peculiarly exceptional in it was, not that Anglo-India paid this compliment to the Sultan in London, but that it was not counterbalanced by any similar mark of distinction on the part of the Queen's Government.

972. Mr. *Grant Duff.*] The mistake, if any, was, that the Imperial Government entertained the Sultan too little, not that the Indian Government entertained him too much?—Yes; in fact we had it on one side, not on the other; the primary compliment should have been on the part of the Queen's Government, but that was omitted, and it was all put off upon India.

973. Sir *Stafford Northcote.*] Have you not heard it commonly said that the great fault committed at that time was that Her Majesty's Government wished to entertain the Sultan, that they did not desire to do it at their own expense, and that they therefore handed him over to the Indian Government to entertain?—That was the popular way of putting it; but the real thing was that India was charged, and I do not say improperly charged, with the expense of a very handsome entertainment to the Sultan, but that there was nothing corresponding to it on the part of England.

974. Just let me tell you very briefly what the real circumstances were, and ask you whether that puts a different complexion upon it. The original idea of that entertainment was a suggestion of mine to my Council, or to some members of it, that as the Sultan was coming here, and as our new office was very nearly finished, it might be desirable to show him our office, and I asked them whether they thought it would be desirable to invite him to a luncheon there. The answer that I received was, "It would be quite a right thing to do; it is what the old East India Company would certainly have done, and the only question is whether we can find a room fit to receive him in, the building being so imperfectly prepared." Upon that I went down with two or three members of Council to the India Office to see whether there was a room in which we could entertain him, and we thought that the state of preparation was such that it would hardly be possible. However I said to them, "See if you can do anything, and send for the architect." I went away, having other busi-

Sir *C. E. Trevelyan*, K.C.B.

28 February 1873.

ness to do. When I saw them afterwards they said, "The architect has suggested a plan by which this can be done; if we would cover in the central court we could give him a very handsome entertainment," and their suggestion was that that would be the thing that the East India Company would probably have done, the object being to show this magnificent building which had just been completed. I threw the matter rather into their hands, and it was taken up, and at the first moment no idea of what the expense would be had arisen. Subsequently they having a committee found that it would cost this amount; but, in the meantime, the idea had taken very much hold on their minds, and it was thought best to go on with it. Do you believe that if those circumstances had been fairly known to the public, and it had been well known that it was an Indian matter, and not at all one concerning Her Majesty's Governmen[illegible] nothing about it until it had made some p[illegible] the same kind of fault would have been [illegible] that has been commonly found?—Well, it [illegible] beautiful entertainment, and quite worthy [illegible] occasion, and suited to it. It was a very [illegible] idea, and if I could undo what has been do[illegible] would not. I think it was what ought to hav[illegible] been done. The real point of the question is, not what we did on behalf of India, but what was left undone on the part of England; and I mentioned it in somewhat the same sense. We were speaking of how much more easy and agreeable it is to spend other people's money than our own. Now this was a case in which we entertained the Sultan with other people's money, and spared our own. The imputation is not against the Administration of India; they only did their duty, in my opinion.

MEMBERS PRESENT:

Mr. Ayrton.
Sir George Balfour.
Sir T. Bazley.
Mr. Beach.
Mr. Birley.
Mr. Bourke.
Mr. Crawford.
Mr. Cross.
Mr. Beckett Denison.
Mr. Dickinson.
Mr. Grant Duff.
Mr. Eastwick.
Sir James Elphinstone.
Mr. Fawcett.
Lord Edmond Fitzmaurice.
Mr. Robert Fowler.
Mr. Hermon.
Mr. Lyttelton.
Mr. John Benjamin Smith.
Sir David Wedderburn.
Sir Charles Wingfield.

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

Sir CHARLES EDWARD TREVELYAN, K.C.B., re-called; and further Examined.

975. *Chairman.*] I THINK you wish, with reference to your former answers, to make some observation respecting the dissents of the Members of Council from the acts of the Secretary of State?—Yes; the tabular statement in the Appendix, No. 26, of the Second Report of the Committee throws a strong light upon the view which I then submitted as to the character of the Council under the new *régime*. Regarded as individual dissents, there were 35 in 13 years, or less than three in a year; the subjects of the dissents were 13, or exactly one a year. With the exception of the additional grant to the Mysore princes, none of the subjects to which I have called attention, as having specially required the interference of the Council for the protection of Indian interests, in the exercise of the exclusive power entrusted to it for this purpose of ordering payments out of the revenue, are alluded to. No allusion is made in any of the dissents to the novel abnormal arrangement by which promotion in the staff corps was made to depend upon length of service only, without any reference to vacancies in a fixed establishment. The present and prospective effect of this arrangement was described by the late Major General Sir Henry Durand, in his Minute of the 7th September 1869, as follows: "Admitting that Major General Hannyngton's estimate may be the more correct one, it is to be observed that he calculates on a maximum number of colonels with colonel's allowance in the staff corps at 749 instead of 982, according to the calculations of the undersigned. He makes no reference to the local colonels, of whom at the same period the undersigned calculated there would be 172. Reducing this latter number according to Major General Hannyngton's ratio would give 139, which, with the 749 of the staff corps, would represent a total of 888 recipients of the allowance, which will give an annual cost of 998,866 *l.* 16 *s.*, or close upon one million sterling, and this for a purely native army, not half the strength of that for which, prior to the Mutiny 176 colonels' allowances were deemed sufficient at an annual cost of 197,973 *l.* 12 *s.* It is clear that, whereas on the 1st January 1868 there were 145 Indian officers drawing the colonel's allowance, which, with their English pay, amounted to 165,452 *l.*, there will, on the 1st January 1880, be over half a million sterling paid to officers drawing colonels' allowances, and after a further period of 12 years, 1st January 1892, over a million sterling of charge on the like account. We shall therefore progress rapidly, if existing arrangements are maintained, towards a non-effective charge bearing the same ratio to the net military expenditure on effective services, as does the costly non-effective service of the British army. To suppose that, *pari passu* with this growth of non-effective charges, the Government of India can succeed in future years in reducing the effective service charges so as to keep down military expenditure to a particular amount, by crippling the force necessary for the security of the Empire, is simply absurd; yet, I must reiterate that as the staff corps system was imposed upon the Government of India contrary to the late Lord Canning's views, the Government of India, which will have to contend against this source of military financial embarrassment, is in no degree responsible for its creation. As an incubus calculated to be an effective counterpoise to military economy, it is a difficulty which, though it will weigh heavily upon, did certainly not originate with the Government of India or its advisers, but was forced upon them by the Home authorities." And again, in his Minute dated 16th October 1869, he says, "From Table H, it will be seen that, as compared with 1856, we have, in 1869, a reduction of 1,201 European officers in number, that is about one-fourth, but an aggregate increase of cost of above 7 lacs annually; notwithstanding the reduction in staff corps pay, the average cost for officers has increased from 4,448 rupees to

Sir *C. E. Trevelyan*, K.C.B. 4 March 1873.

Sir *C. E. Trevelyan*, K.C.B.

4 March 1873.

to 6,278 rupees. The result is that the 3,312 officers at present cost above 7 lacs more than the 4,513 did formerly, and actually cost 60,60,960 rupees, or 606,096 *l.* more than the same number would have cost in 1856. We have therefore the singular result as regards the officers of the Indian army, that though they have been reduced in the interval between 1856 and 1869 by 25 per cent., their average cost has increased more than 1,800 rupees each, or a total of above 60 lacs. The fact is that the larger proportion of the higher grades now existing annuls the effect of the lower rates due to the decreased staff corps pay of grades, and this cause of augmented expenditure will increase and not diminish for a considerable number of years. It cannot be said, therefore, that the present system, for which the Government of India is not responsible, as it was imposed upon it by the Home Government, is a financial success from an economical point of view."

976. Was that written by General Durand when he was in India, or when he was at the India Office?—When he was in India as Military Member of Council.

977. Have you been able to pursue that investigation to know whether it was a policy enforced upon the Secretary of State by Indian opinion and Indian Members of Council in this country?—It was pressed upon him by the parties immediately interested, namely, the officers themselves; it was the invention of an Indian officer, and was worked out by a committee composed of English and Indian officers.

978. Do you know whether this proposal was not supported by the members of the Indian Council in this country?—I presume that, as they did not dissent from it, they supported it.

979. I believe you wish to make some further remarks on the subject of exports and imports?—Yes. Our true policy in India is to levy low rates of duty both upon exports and imports, imports being at least as much deserving of encouragement as exports. Acting upon this policy, I proposed in April 1863, as part of my first Budget, that the duty upon iron, the great material of industry upon which the works of every kind in progress in India so essentially depend, should be reduced from 1 to 10 per cent.; and in the following year, 1864, the import duty upon several hundred articles, including all the other metals besides iron, was reduced from 10 to $7\frac{1}{2}$ per cent. In 1865 the Government of India, on my recommendation, reduced the duty on saltpetre from 2 rupees to 1 rupee a maund; reimposed the normal export duty of 3 per cent. upon jute, wool, tea and coffee; reimposed the export duty upon hides, sugar, and silk to the extent of 2 per cent.; and raised the export duty on rice and other grains from 2 annas to 3 annas a maund. Jute, when manufactured in India into gunny bags and other articles, was already charged with an export duty of 3 per cent., and the manufacture of the country was thereby placed at a disadvantage in any market where it might be brought into competition with similar articles manufactured in England. The export duties imposed at my recommendation, were disallowed by the Secretary of State; but two years after the additional anna upon grain was reimposed at Mr. Massey's recommendation, and was sanctioned by the Secretary of State. Although the Secretary of State objected in 1865 to an export duty of 3 per cent. being levied on [illegible] coffee for the benefit of the Indian Exchequer, a duty of 45 per cent: was levied on this same [illegible] in England for the benefit of the English exchequer. This was neither just nor general, and the more so because great part of the [illegible] exported from India is sent direct to France and other foreign countries, and the Indian Treasury therefore misses any benefit from it. It should be explained that as the cultivation is carried on in wild frontier and mountainous districts, the public expenditure is more than usually heavy, both for making roads for the conveyance of the produce to the coast and supplies into the interior, and for providing the machinery of a civilised administration for a thinly scattered population.

980. In those districts?—Yes, in those districts, Assam, Wynaad, and so on. Hence the admission which has at different times been made by the tea planters of Assam, and the coffee planters of Wynaad and Ceylon, of the natural equity of their paying a moderate export duty upon their respective products. The tabular statements at pages 22-3 of the Statistical Abstract relating to British India, showing how the principal articles of export have increased from 1862 to 1871, clearly indicates that the time has arrived for dealing with this question in a practical way. Then I stated that the best mercantile opinion in India was in favour of moderate export duties; and I beg to give in support of that an extract from the proceedings of a meeting of the Calcutta Chamber of Commerce, 17th of March 1859; an extract from the proceedings of a public meeting on the customs duties at Calcutta, 7th of April 1859; and a short extract from the proceedings of the Legislative Council of India on the Income Tax Bill, the 17th of March 1871. In the Calcutta Chamber of Commerce, Mr. Remfry spoke as follows:—"His suggestion was that the Chamber ought to impress upon Government the necessity of levying an export duty on such articles of produce as cotton, sugar, indigo, &c., &c. These articles would bring in a large revenue, and he would explain to the meeting why the duty on exports should be increased more than the imports. The merchant in England would not pay a single pice less for the goods, nor will the merchant here (the shipper) pay one pice more to the producer. So that it was plain that the tax affected the consumer and not the producer. It was the wealthy zemindar who profited by it, and always reaped a rich harvest. As the price of every article of produce increased, the zemindar wrung it out of the ryots. He would now briefly state to the meeting how the price of certain, in fact all, articles of produce in this country had risen within the last 25 years. In referring to his accounts, he found that in 1835-36, not 1835, for he arrived in the country in 1836, he meant the latter year, he then bought mustard seed at the rate of 2 rupees a maund; it was now sold at 4 rupees per maund. Teal seed he bought at *Rs.* 1. 8., it was now *Rs.* 3. 8. Linseed at *Rs.* 1. 6., now *Rs.* 3. 12. and *Rs.* 4. 8. Rice at *Rs.* 1. 4., now *Rs.* 3. 8. The difference of price of the several articles he had just mentioned, in 1835-36, and those ruling now, left the zemindar an excellent profit, and as it would continue to increase he will be the gainer; and he took every possible advantage over his ryots by increasing the revenue, and he was, as all know,

perfect

Sir *C. E. Trevelyan*, K.C.B.

4 March 1873.

over them. Though the prices he g in 1835-36 compared with the s were less than one-half; still they left t to the grower, a good profit to the and enabled them to compete in the rkets. Where then had all the enor- erence in present rates gone to? Why e pockets of the zemindars, who gave no- in return, *and these* were the men who ld be made to contribute to the necessities e State. He (Mr. Remfry) would ask the eting would it not have been far better for the overnment to have increased the export duty an to have levied 20 per cent. on the imports, some of which were on articles which may be called necessaries of life. He understood perfectly well that the theory of commerce was not to tax exports, but they should still adopt a course which would benefit the poorer classes. It was a shame, he thought, that Englishmen should be made to pay the expenses of the mutiny after their having, to the risk of their lives, fought hard in putting it down. It was the Englishman who saved the life of the zemindar, and protected his land and property; and Government, as if repaying his kindness, now taxed him. He had an opportunity of speaking to a Member of Council the other day, and he told that gentleman that he and his brother members ought to be ashamed, sitting as Englishmen in that Council, to allow such a Bill to pass, which was legislation backways. He pointed out to him (the member) who were the people that should have been taxed; the wealthy native zemindars or landowners. 'But,' asked the mber, 'how are we to get at them?' This estion he thought could easily be answered. ey all remembered the way the shareolders of the defunct Union Bank were assed, each man was made to pay according to s means to meet the necessities of the case, and he would have these rich proprietors, in the st resort, assessed, and so proceed in the legitiate way, without fear or prejudice, to extricate he country from its difficulties. If through the Englishman the natives were saved, it was but air that they should be taxed, and not he. After some further remarks, Mr. Remfry concluded by expressing a hope that Lord Stanley, to whom the Europeans in India must appeal for a modification of the present Customs Bill, would increase the exports, and see the propriety of making the wealthy natives of this country contribute towards the expenses caused by the rebellion, and that the chamber would agitate the question. Mr. Remfry said he was certain that Lord Stanley would attend to his suggestions of increasing the export duties, if the matter was represented by the chamber. Lord Stanley was a sensible man, and he did not think that that statesman would be led away by any clique. He (Lord Stanley) would not be inimical to such a measure when he saw that it was for the good of the country, and that the Government would recover an immense revenue by it. Lord Stanley might not proceed with it immediately, still he would not lose sight of the measure. He thought it was absolutely necessary that some such step should be taken, so that the people who were well able to pay might be taxed. They were, as he said before, the zemindars. The zemindar was not a person who was taxed like other people. He paid the same revenue to Government which he had paid years when the state of the country was quite different from what it now was. In the revenue he paid, the zemindar could not be touched, while he raised the rents of his ryots in proportion to the value of the article." Then I find this passage in a speech delivered at the same meeting by Mr. Bullen: "Now he (Mr. Bullen) was not going to argue in favour of export duties in the abstract. He knew that they were opposed to recent commercial legislation, and that which argumented in favour of them were not likely to meet much approval. But he agreed with Mr. Remfry, that the circumstances of this country were peculiar, and such as would possibly justify a departure from principles applicable elsewhere, and if it were a question whether it would be wiser to increase the import or export duties here, he was free to confess there appeared to him more arguments in favour of increasing the latter than the former. He believed the export trade of this country was in a position better able to bear increased taxation than the import trade. What, he would ask, would be the effect of an increase of export duties? It would, he thought, be admitted on all sides that a purchaser of a produce for a foreign market could only afford to pay for it such a price as, plus the duty and all charges, would enable him to lay that produce down in the market of consumption at certain limits. What then would necessarily follow an increase of the export duty? Why, that the first cost of the commodity must decline in proportion; this again would re-act on the grower, and eventually, through him, on the landholder. Well, this was just what was wanted. All of them who have had much experience in this country must remember how important has been the rise in prices of all articles of produce within the last few years. As Mr. Remfry had shown, the greater portion of the profit had gone into the pockets of the landholder. And, unless by a system of direct taxation, there was no other way, except by export duties, in which these profits can be got at, for owing to the rental of their estates having been proportionably fixed years ago, when the produce of the land was worth so much less than it has been of late, that rental no longer represented even approximately the value of their estates. Then, if they took such articles as were produced in India alone, and which consequently would not have to compete in foreign markets with such as could be produced cheaper in other countries, the effect of any increase in the export duty would rather be to raise the price to the consumer; and if by such a device they could raise revenue out of foreign consumers, without detriment to the producer, that would seem to be the very perfection of customs taxation. He alluded to such articles as saltpetre and, possibly, indigo. He (Mr. Bullen) would not, however, wish it to be understood that he was arguing in favour of export duties in the abstract; which indeed would be inconsistent with his own resolution, but merely, that as between the two trades, in the peculiar position of land tenure in this country, the export was in a better position to bear an increased impost. There was, however, one argument in favour of encouragement, instead of discouragement, being extended to import trade. Our exports always exceeded our imports by several millions sterling annually, and to balance that debt, England had to send us large amounts of bullion, to the great disturbance occasionally

Sir *C. E. Trevelyan*, K.C.B.

4 March 1873.

occasionally of her money market. It was not likely that India would for many years take from foreign countries as much produce as she could export, but it would be a wise policy to encourage imports as much as possible, though the impositions of heavy duties was certainly an Irish kind of encouragement." At the public meeting on the Customs duties, Mr. Maitland, in the course of his speech, said this: "The tariff made only two alterations in exports. The export duty on raw silk was removed, while that on rice and grain was quadrupled, being raised from half an anna to two annas a maund, whatever the quality and value of the grain. The reason given for removing the silk duty was to enable Indian silk to compete more successfully with that of other countries. The duty was only 3½ annas a seer, or less than 3*d.* per pound; and he believed that the general feeling among merchants was, that such a trifling change would produce no effect at all, and that the Government might have kept their revenue." The following is the extract from the proceedings of the Legislative Council of India on the Income Tax Bill, to which I have referred. It is from a speech by Mr. Bullen Smith: "Assuming, as he had said, that all export duties were objectionable, but that the necessities of the State rendered some income from such a source imperative, the question then surely arose, which among our considerable articles of export most nearly approached the conditions under which, according to the universally received principles of political economy, an export duty could best be borne? In other words, which of our considerable articles of export had, as regards supplying the wants of other countries, a monopoly, or the nearest approach thereto? He thought none would deny that the institution of such an examination as he had sketched, into the position of our various export trades, would be the proper course to pursue under the circumstances; but he found nothing in this exposition showing that the principle he spoke of had even been considered. By way of illustration, he would take the three important articles of indigo, rice, and jute; and he specially selected jute, because, in the financial statement before him, the continued flourishing condition of this article was dwelt upon. He found that this article, of which he might say that British India had almost an entire monopoly, the value of which had nearly doubled of late years, and the export of which had marvellously increased, left the country free of all duty whatever. He found that indigo, of which British India furnished the main supply to the world, although Guatemala to a certain extent competed, paid an export duty of 3 rupees per maund, or, say, 1¼ per cent. on the average selling price of the season just closed; while rice paid an export duty of 3 annas per maund, equal at present prices in the Presidency to nearly 9 per cent. on the common, and over 7 per cent. on the better qualities. That is to say, the article of which we had virtually a monopoly, and the growing prosperity of which was matter of universal comment, paid no export duty; the article which met with a certain competition paid 1¼ per cent., while the article which was exposed to a keen competition in every market to which it went, was at the present moment paying an export duty of 9 per cent." I was also desired by the Committee to give in a copy of my Minute, dated in November 1864, proposing the appointment of a Commission at Calcutta, to consider the propriety of converting the [illegible] monopoly into an export duty. [illegible] entertained up to that time is expr[illegible] following sentence: "I feel confide[illegible] change of system could be effected wi[illegible] the government revenue, and without [illegible] derangement of the trade." There are [illegible] memoranda, one upon the Bengal opium a[illegible] ments, and the other upon the Malwa opi[illegible] rangements, which were carefully prepare[illegible] me in the Financial Department at Calcut[illegible] that time, which I will give in; it is for the C[illegible] mittee to say whether they shall appear as part [illegible] their proceedings.

981. Mr. *Grant Duff.*] In answer to Questio[illegible] 758, you said that you praised the financial ad[illegible] ministration of the Company with special refer[illegible] ence to its fixed policy of keeping within it[illegible] means. Did it keep within its means?—The Company was the founder of our Indian Empire, and the whole period of the administration of the Company was a period of construction of th[illegible] Empire; so that the expenses of the wars out[illegible] which that Empire originated were continuall[illegible] pressing upon them, and therefore they were ofte[illegible] in deficit, although on two or three remarkable occasions, by the exercise of strict economy, a surplus was produced; but the observation that I have to make is, that if it had not been for this habitual frugality of the Company, they never could have done what they did; they never could have constructed that Empire.

982. No one wishes, I am sure, for a moment to detract from the glory of the Company; it is difficult to speak too strongly about that. I confine my questions entirely to the financial as[illegible] of its affairs, and I want to ask you whethe[illegible] kept anything like so well within its means as [illegible] Government that has succeeded it, especially [illegible] you remember what an amount of actual proper[illegible] the present Government has created for t[illegible] people of India out of the taxes of t[illegible] people of India; while the Company created [illegible] little that it was a common, though no doubt ve[illegible] exaggerated, saying 30 years ago that Englan[illegible] would leave no monuments on the soil of Indi[illegible] except mountains of beer bottles?—I hav[illegible] already admitted that the bad side of the Com[illegible] pany was their dislike of roads and indifferenc[illegible] to education; but looking only to finance, they had in their latter years, before the great Affgha[illegible] war was forced upon them by the Queen's Govern[illegible] ment, two periods of financial prosperity, under Lord Amherst and under Lord William Ben[illegible] tinck; and I think that they may well compare with the brief periods of surplus under the Queen's Government.

983. Do you think that the financinl admini[illegible] tration of India was the best or the worst part [illegible] the Company's system?—That is too large [illegible] question to receive an answer offhand. I shou[illegible] say, on a brief consideration, that it was neithe[illegible] the one nor the other. The character of thei[illegible] financial administration was as I stated; it ha[illegible] the cardinal merit of frugality; and although they did not construct a system of public works like the Queen's Government, they constructed the Empire, without which those public works could have had no existence.

984. Then how was it, may I ask you, that on the 7th of July 1853, you told the Committee which was then sitting, that "The financial system of India is the least perfect and advanced of all branches of administration in India; in fact it is still

Sir *C. E. Trevelyan*, K.C.B.

4 March 1873.

and elementary state"?—I was r of Her Majesty's Treasury, and orking for years at the elaboration m of estimate, account, and audit; essing that opinion I had particular o the perfection of the machinery of e synthetical arrangements by which is reduced to a science. That opinion is istinct from the consideration of the par- merit of the Company as to its frugality.

986. But do you know that that statement you made shocked Sir James Melville so ich that he came forward and gave evidence ectly opposed to it?—I know that perfectly; what I pointed at then was what I afterwards had the happiness of introducing, with the assistance of Mr. Forster and Mr. Whiffin, namely, a plan to reduce the machinery of Indian finance into a regular synthetical state. That the Company never arrived at; their accounts were conducted n the antiquated, purely mercantile, system ich I described in a previous day's evidence; l the whole of that part of their finance was a very crude state indeed.

986. So that you would agree, I suppose, that the financial system of India has been gradually improving since the early days of the Company up to the present time, although we may admit that it is still by no means perfect?—Yes, I think the foundation has been laid of very great financial improvements. The extension to India of the improved English system of public account, by estimate, account, and audit, commonly called the Budget system, was a very great improvement; and although it has broken vn in the application that was given to it Calcutta to the finances of the whole of India, t I expect that it will be applied to the separate finances of the Supreme Government, and of e different local governments, with the greatest ossible advantage. As between the financial stems of the Queen's and the Company's overnments, I should describe the difference in is general way, that while the financial system f the Company was best in substance, the finanial system of the Queen's Government hitherto as been best in form and external arrangement.

987. You say that the finance of the Company was best in substance; I suppose you admit that very considerable change has come over mercantile feeling in the last generation?—Yes; ut I do not precisely understand what you ean by a considerable change. The mercantile ofession has advanced, and has come more to e front, and is much more powerful than it as.

988. And also more speculative?—Yes, more peculative also.

989. *Chairman.*] Perhaps it might be said at it deals more with other people's capital han it did formerly?—Certainly it does; and it hows the same disposition to deal with the apital of the Government of India.

990. Mr. *Grant Duff.*] You say, in answer to Question 537, that the East India Company represented the mercantile interest of England of that date; but I also understand you to say that much of the unnecessary expenditure to which you object has been forced on the Government of India by the pressure of the mercantile interest here and in India; would not the pressure of the mercantile interest have been stronger on a mercantile body like the Company, than on a body like the Council of the Secretary of State?—No; because the East India Company incorporated in itself a great amount of mercantile interest, and it had extremely deep roots in English society. It was a popular body; the proprietors, and the numerous other families interested in the maintenance of the Company, represented a great body of substantial English opinion.

991. Is it not one of the commonest commonplaces of Indian reformers that there ought to be a much larger mercantile element in the Council of the Secretary of State, because it is now supposed to be too little influenced by mercantile opinion?—I think it is merely a commonplace; I think it is a mistake. I think that the experience we have had of late years of the action of the mercantile and monied interests upon the finances of India shows that it would be extremely dangerous to admit the mercantile and monied influence into the Council.

992. You said in answer to Question 440, that the Company managed the recruiting for themselves, and that they had a single depôt at Warley, in Essex; it is true, is it not, though the Warley depôt was only for recruits actually in the service of the Company, and that in regard to the Queen's regiments which went to India, an entirely different arrangement existed, based on the principle of repaying to the British Exchequer the actual cost of providing recruits under the Imperial system?—That is the case. I consider that there is great virtue in that expression "the actual cost;" the actual cost is just what India ought now to be required to pay.

993. In answer to Question 628, you said that the War Department and the Admiralty screw as much as they can out of India, and then the entire body of the military officers extort as much as they can; now it is quite true that we want all the help the House of Commons can give us both in standing up against the War Office and the Admiralty, which do not, I am sure, mean to do anything unfair for India, but simply to do what they conceive to be right to the British taxpayer; and we want all the help that the House of Commons, and above all, which this Committee can give us, in standing up against the officers who are fighting for their own hand; but did not precisely the same state of things exist in the days of the Company?—No; the difference is that in the days of the Company these discussions were carried on between two independent Powers; for the Company, in all detailed financial matters of this kind, was virtually independent, and was not interfered with. I know that from experience, because I had the settlement of these accounts with the officers of the Company for a great many years, and a very heavy burden it was upon me. In those days I had to stand up for the British taxpayer, and when the Melvills had given me their ultimatum on any particulur point, I had to consider whether it was worth my while to go to the Chancellor of the Exchequer, and lay the matter before him, and induce him to enter into all the intricate considerations upon which the settlement was founded. On the whole the Company had decidedly the best of it in those days.

994. Does not now, what you so expressively called in your evidence the other day, the same "cat and dog business," go on between the India Office of to-day and the War Office?—Yes; but now both sides are Queen's officers. Before, this

Sir *C. E. Trevelyan*, K.C.B.

4 March 1873.

chronic controversy was carried on between the virtually independent power of the Company and the departments of the Queen's Government; now it is carried on between two departments of the Queen's Government.

995. But an independent power, which, as I think we proved the other day, could be at any time overruled by the Board of Control the President of which was a member of the Cabinet?—Not in expenditure out of the revenue. By law the Company was vested with an exclusive power of ordering payments out of the revenue, and if in these controversies between me and the Melvills we had come to a final issue, the only way in which the view taken by the Treasury could have been forced upon the India House would have been by a *mandamus* from the Court of Queen's Bench.

996. And that procedure was resorted to in extreme cases, was it not?—I do not remember its being resorted to in any case in which the Home Government itself was interested. The only instance which I remember in my time is when the President of the Board of Control attempted to force the Court of Directors to send a despatch to India ordering the payment by the Nawab or King of Lucknow of debts alleged to be owing to British subjects.

997. You mean the Nizam, do you not?—No.

998. Mr. *Fowler.*] When was that case to which you refer?—It is a great many years ago. I should think about the year 1830 to 1835, when Mr. Charles Grant, afterwards Lord Glenelg, was President of the Board of Control.

999. There was a case of this sort about the year 1823, was there not?—This was much later; it may also have happened in reference to the Nizam.

1000. *Chairman.*] You are thinking of the case of the Lucknow bankers?—Yes; I really forget when it was, but it attracted my attention at the time, and I thought that the Company did extremely well in resisting it, and they carried the day. The debts had been bought up by British subjects.

1001. Mr. *Grant Duff.*] Have you had your attention drawn to these papers which I hand to you (*handing the same to the Witness*), because if you have not, I think you should look at them in justice to some servants of the people of India, who do their duty by them as zealously as even you yourself ever did either at Whitehall or at Calcutta?—Without looking at the papers I am quite ready to admit that.

1002. *Chairman.*] Will you state what those papers are?—It is a "Copy of the Proceedings of the Committee of which Mr. Seccombe was a member, which sat at the end of last year, to inquire into the expense of the recruits for the regiments serving in India." It is Parliamentary Paper No. 129, of the 27th of March 1871. There is a Report of the Committee. I am quite ready to admit that the officers of the India Office do the very best for India that they can.

1003. Mr. *Grant Duff.*] You believe that Mr. Seccombe and Sir Thomas Pears made just as stout a resistance to Mr. Cardwell's subordinates as ever the Melvills did to you?—So far as depended upon them they did, but they were not backed in the way that the Melvills were.

1004. Do you see from that Paper that the conclusion arrived at was one which resulted from the labours of an impartial Committee which went into the subject of recruiti[ng] doubt it. I have not time now to g[o] tails, and I therefore cannot form upon the results; but I feel sure that of the India Office did the best they India, and that the officers of the War the best they could for the War Office.

1005. You admitted, I think, the othe[r] that the Cabinet has never overruled the retary of State in Council in any matter tha[t] cost India anything like so much as the Affg[han] War, in which the Company were overruled? I freely admit that. That is the most expensi[ve] matter on which Anglo-India was ever overrul[ed] by the Queen's Government.

1006. In short, ever since Mr. Pitt's Act, whe[n] the Home Government was determined to over rule the persons who were immediately charge[d] with the Government of India they were able t[o] do so?—Yes, they were able to do so; but th[e] power was rarely exercised under the Company the instance of the Affghan war is quite a uniq[ue] case.

1007. *Chairman.*] Do you know whether th[e] Cabinet overruled the Court of Directors or no in the annexation of Oude, or whether the Cour of Directors were concurrent with the Cabinet i[n] the appropriation of Oude by the British Govern ment?—The question of the annexation of Oud[e] had been going on in various forms all throug[h] the period of my public life, and both sides o[f] the question were fully represented, not only i[n] Parliament, but among the officers of the Com pany, and at last the pear fell when it was quit[e] ripe. I do not remember whether the Compan[y] agreed to it or not. It was a matter of cour[se] and was quite right. My impression is that th[ere] was no decided stand made by the Compa[ny] against the annexation of Oude.

1008. You do not recollect whether it was policy which they favoured adversely to th[e] Governor General?—Well, the Company wa[s] generally adverse to annexation, but the circum stances were so very strong in favour of th[e] annexation of Oude, that even if they did g[o] through the form of objecting, it did not amoun[t] to much.

1009. Mr. *Grant Duff.*] I want to ask yo[u] one or two questions about barracks (on whic[h] you gave us some very interesting evidence th[e] other day), just to make our information com plete; Sir Charles Napier was one of the firs[t] persons, was he not, who called attention i[n] India to improved barrack accommodation?—Ye[s] I think so.

1010. Do you chance to remember a passag[e] in his "Indian Misgovernment," published i[n] 1854, which is a sort of *locus classicus* on th[e] subject; I will read it to you: "The barrac[k] system sacrifices soldiers' lives and happiness t[o] a fallacious, dishonest economy. I charge th[e] Court of Directors, the Military Board of Cal cutta, the Government of Bombay with shamefu[l] negligence of the soldiers' safety. Colaba barracks slaughter-houses of more thousands of Britis[h] soldiers than would suffice for the winning of 50 battles, a pestilential barrack. In Bengal barracks are, with few exceptions, extremely bad, but more pernicious still is the number of men crammed into them." Do you chance to remember that passage?—Yes, I remember it, and I agree with it.

1011. The writings of Sir Charles Napier and others excited, did they not, a good deal of interest in

Sir *C. E. Trevelyan*, K.C.B.

4 *March* 1873.

rack question in India, even before the and when it broke out a huge double d barrack was being erected at Cawn- That may be so.

2. After the Mutiny the greatly increased of British troops caused renewed attention directed to the subject, did it not?—Cer- inly.

1013. Did you ever see this Despatch of Lord Elgin's, dated 7th January 1863, I think a few days before you took your seat in Council, from which I am going to read an important extract?—This is a Despatch to Sir Charles Wood, then Secretary of State in Council, and is dated the 7th January 1863. "Your Despatch of the 30th August, No. 145 in the Financial Department, authorising us to apply a portion of the cash balances to supplement the amount which can be set aside year by year from the current revenue of India for expenditure upon public works, having been transferred to this department for further consideration, we now have the honour to report to you the conclusions at which we have arrived on this very important subject. (2.) You express an opinion that 3,000,000 *l.* sterling may safely be withdrawn from the cash reserves for this purpose, and you propose that this sum should be wholly devoted to useful works of a remunerative character, such as the Godavery river improvement works, the canals in Sindh or elsewhere, roads for the transport of cotton, and so forth, leaving it, however, to our Government to select undertakings to which the funds should be applied. (3.) The permission which Her Majesty's Government has thus accorded for laying out a large sum from the accumulated surplus cash balances on works of internal improvement was received by us with much satisfaction, for ample and most profitable employment could certainly be found for any amount that could thus be safely made available, either by applying it to enhance the grants that can be made from surplus revenue to the different important works of this class, which are now under construction in various parts of the country, so as to admit of their being carried on with greater energy, and brought more rapidly to completion than would otherwise be possible; or by appropriating it in aid of altogether new works of a similar character, of which many have been projected, but the commencement of which has been unavoidably postponed for want of the necessary funds. (4.) But on proceeding to consider more in detail the exact nature and weight of the various claims that might be made upon us, in behalf of the numerous classes of works dealt with in the Public Works Annual Estimates, we were compelled, though not without a strong feeling of disappointment, to accept the conclusion that there is still a more urgent call upon the resources of the Government of India than that for extending works of internal improvement, namely, that for the provision of permanent barrack accommodation for the European troops quartered in the country, and that this alone will probably absorb all the additional means which the state of the cash renders available. (5.) You are well aware that when the great increase in the strength of the European forces in this country took place in the latter end of 1857 and the beginning of 1858, it became necessary to provide shelter for the additional troops in a very short time, and that it was only possible to accomplish this with the necessary promptitude by constructing barracks of a very temporary and imperfect kind. In some parts of the country, as in Oudh, the barracks created since the mutinies, though not equal in size to the standard barracks, nor built of the best materials, are, it is true, very airy substantial buildings, and are calculated to last for several years. And at other places, as Secunderabad, new permanent barracks have been altogether or nearly completed. But speaking generally the new barracks are of quite a temporary character; they have been constructed of such material as were immediately available, and have, in many instances, been placed on hurriedly chosen sites. Moreover, in many places, as for instance in Rohilkhund, at Delhi, and Saugor, the troops are still in a greater or less degree unprovided with regular barracks, and are partly quartered in hired dwelling-houses, or in Government buildings which, having been destroyed during the mutinies, were hastily repaired and appropriated to meet the most pressing wants of the European soldiers. (6.) The accommodation for a large portion of the European troops being of the nature we have described, the necessity for speedily replacing it by proper barracks has never been lost sight of. But a final consideration of the subject was necessarily deferred while the state of the finances was so unfavourable as to demand the restriction of all expenditure within the narrowest limits; nor indeed could it have been usefully taken up so long as the strength of the European forces serving in India remained uncertain, nor until the distribution of the force finally fixed upon had been determined. Our expenditure on military works for the last three years has, therefore, been confined in great measure to the maintenance and improvement of existing buildings, and little or nothing has been done towards increasing the number of permanent barracks (7.) But the time has clearly now come when a different line of action may properly be followed"; and then they go on to press most strongly this scheme of new permanent barracks upon the Government at home, are you acquainted with that Despatch?—Yes, I am aware of that Despatch, and I freely admit that English sanitary improvement has been productive of great advantage in the military, as well as in other departments in India, and is likely to be productive of still greater advantage in calling attention to the elementary sanitary considerations connected with the lodging of the troops. For instance, it was thought at first that, provided the troops were only put in the hills, they must be healthy there, whereas it was found by experience that if they were put into stuffy, ill-ventilated, ill-drained houses in the hills, it was worse than their being in the plains. Well, sanitary science has set that right. I mention that as an example. And as regards barracks, I freely admit that a great deal had still to be done for the improvement of the barracks. The question is, not whether something considerable ought not to have been done, but as to what was really done. There are two ways of doing everything, a good and a bad way, and it appears to me that what was actually done was open to several objections, which I am prepared to mention.

1014. I think we will get to that presently; but let us quite understand each other now, if you please. This Despatch, so far as it goes, shows,

Sir *C. E. Trevelyan*, K.C.B.

4 March 1873.

shows, does it not, that the first pressure to make these great new barrack works was first put by the Government of India upon the Secretary of State; not by the Secretary of State upon the Government of India?—No; I do not think it proves that, because I believe that the fountain of the sanitary stream was in England. All this time a Commission was sitting in England to consider the subject of housing the troops in India on a grand scale, and in a complete form, and the mere mention of the "standard plans" shows that all this statement had reference to what was in progress in England.

1015. I think not; this Despatch that I have read to you was dated, was it not, the 7th January 1863?—Yes.

1016. Do you know what the Secretary of State replied to that Despatch?—I do not remember.

1017. Then I will read you a paragraph from his Despatch: "But in alluding to the mortality of European troops at several military stations, and the importance of increased sanitary precautions in all matters relating to barrack buildings; you observe 'that some of the worst outbreaks of cholera have occurred in places which are supplied with standard barracks of the best kind erected before 1857;'" now, that phrase, "standard barracks erected before 1857," shows, does it not, that standard barracks existed long before the Royal Commission on the sanitary state of the army in India was called into existence, because that Commission was only appointed in 1859?—Certainly; if the term "standard barracks," as an official Indian term, can be traced to 1857, it would show that it was precedent to the Royal Commission.

1018. Then the Despatch continues: "'And that the stations provided with only temporary quarters have proved generally as healthy as others;' there is, consequently, so far as the health of the troops is concerned, no immediate demand for a large expenditure on this account. Her Majesty's Government are, nevertheless, very desirous that measures should be taken for providing suitable barrack accommodation, but that must be done gradually, and there is no reason for separating the necessary charge to be incurred on this account from the ordinary expenditure of each year." Now, would you not say that that Despatch from the Secretary of State, being the answer to the pressing demand of the Government of India to create great new barracks, looks very much as if the pressure came from India upon England, not from England upon India?—The Despatch from the Secretary of State, so far as it goes, no doubt is an injunction to caution; but I cannot reconcile that with the general course of events, because the great estimates of 8, 10, or 11 millions, and the extensive plans of palatial barracks in various parts of India, were fully known to the Secretary of State, and fully reported.

1019. I am speaking now of the Despatch that was written from the Secretary of State to the Goverment of India on the 9th March 1863; we will presently come to discuss the so-called palatial barracks; you admit that that Despatch is a genuine document?—Yes; I do not doubt that.

1020. Now then, still sticking to the date, is it not true that on the 2nd July 1863 the Government of India passed a resolution recognising the necessity for completing the old and erecting new barracks, and appointed Colonel C[illegible] to assist it in doing so?—Yes; I recolle[illegible] resolution.

1021. Was not that several months bef[illegible] Government of India received the Report [illegible] Royal Sanitary Commission?—Well, if [illegible] stated as a fact, I am quite ready to admit it.

1022. The Government of India did not receiv[illegible] the Secretary of State's Despatch calling its attention to the Report of the Royal Commission on the sanitary state of the army in India, for more than two months after that, did it?—I am quite ready to admit that; but I may remark that it was perfectly well known in India that the Royal Commission had been sitting for months, and the out-turn of the Royal Commission was perfectly well understood in India, and formed the rule upon which the Government of India acted.

1023. And when the Secretary of State did call the attention of the Government of India to the Report of the Sanitary Commission, he did it in this spirit, did he not; "as you are making barracks, at least consider the suggestions of the best sanitary authorities at home before you finally determine what to do"; was not that the spirit of his injunction?—I do not doubt that that instruction was given.

1024. The designs for the new barracks were all made in India, were they not, and either carried into effect in India without reference to home, or else they were sent to England for criticism and returned to India; they were not model plans sent out from England to be obeyed in India; is that not so?—My recollection is that the plans received from England were taken as the basis; any important deviation from them had to be justified and explained.

1025. But would you be surprised to know that that was not so; would you be surprised to learn that Colonel Crommelin was so far advanced with his plans, made by the orders of yourself and your colleagues, not by the orders of the Secretary of State, that he had time to make very few alterations in his plans, after receiving the suggestions of the Royal Commission, the Secretary of State's Despatch having reached India in the end of September, and Colonel Crommelin having reported to you on the 29th October?—The impression I received from all the discussions which took place in the Supreme Council of India on this subject was that the model plans and the recommendations of the Royal Commission were our polar star, even before the Report of the Royal Commission was received. I cannot say how far Colonel Crommelin received inspiration from home from the Royal Commission.

1026. I think Colonel Crommelin has already told us in evidence that he made very few alterations indeed in his original plan in consequence of the suggestions of the Royal Commission. (To Colonel *Crommelin.*) I think as a matter of fact you made in the Report that you presented on the 29th October, 1861, to the Indian Government, very few changes indeed upon what you had resolved to do, in consequence of the suggestions of the Army Sanitary Commission?—(Colonel *Crommelin.*) The changes were very slight indeed; they were only in the disposition of parts of the building. (Sir *Charles Trevelyan.*) Might Colonel Crommelin be asked whether he first became acquainted with the plans and recommendations of the Royal Commission when the

Sir *C. E. Trevelyan*, K.C.B.

4 March 1873.

[illegible] was received by the Government of [illegible] a formal shape?

[illegible] (To Colonel *Crommelin.*) When did you [illegible] acquainted with the Report of the Royal [illegible]ission?— (Colonel *Crommelin.*) After I [illegible]mpleted my first memorandum.

1028. *Chairman.*] Was it through the Govern[illegible]nt of India sending it to you, by a direct communication from England?— After I had completed my first memorandum which embodied the whole of the principles, I received from Sir Charles Trevelyan himself a copy of the Sanitary Commission Report which he had received before its official publication. I re-read my memorandum, and pointed out the various points in which my recommendations were the same as those of the Sanitary Commission; but no alterations of any material consequence were made in my Report.

1029. Mr. *Grant Duff* (to Sir *Charles Trevelyan*).]—Now we will pass to the double storied barracks; I want to find out definitely who was responsible for them; did the Royal Commission recommend double storied barracks?—My impression is that they did.

1030. Is it not the fact that they did not say one word about them, for or against?—I may be mistaken, but I know it was one grand principle of the Royal Commission that the troops should not sleep on the ground floor; that they should be above the pestilential exhalations which affect people sleeping on the ground floor.

1031. *Chairman.*] Are you clear in your recollection as to what came from the Royal Commission in England, and what came from Colonel Crommelin's report, which reached you at much the same period?—I believe they were much of the same opinion.

1032. Mr. *Grant Duff.*] You do not commit yourself to the assertion, surely, that the Royal Commission said anything whatever about double storied barracks, for or against them?—I say what is equivalent to it, that I believe that the opinion expressed by the Royal Commission was that the troops should not sleep on the ground floor. It was one principle that was constantly before us, that the troops were not to sleep upon the ground floor, and I remember a question when the barracks were very large, and the troops not very numerous, what was to be done with the ground floor; it was difficult to utilise it.

1033. Did Colonel Crommelin recommend double storied barracks, or did he not?—Colonel Crommelin was merely a subordinate officer of the head of the Public Works Department. Unquestionably the director, the secretary of the Public Works Department, recommended double storied barracks.

1034. But it was on Colonel Crommelin's report, sent in on the 29th October 1863, that the Government of India deliberated, was it not?—Yes, that was the principal document, but it was not then merely; the subject was going on for months.

1035. I think Colonel Crommelin was ordered by you, Sir Charles Trevelyan, and your colleagues, to make that report to you, and he did make that report to you?—Yes.

1036. And in that report there occurred the following sentences:—"In damp climates like Bengal the expense of raising the sleeping apartments of the men well above the ground must be incurred, and here it may be advisable to carry out the arrangement; but even then the lower floors must be well raised for the auxiliary accommodation, although not so much as would be necessary if they were to be occupied as dormitories. On the score of health there do not appear to be any manifest reasons why Government should be put to any great expense in placing men in upper stories in the North West Provinces, or in the Punjaub, or in other parts of India, where similar dry climates and soils exist. The average rates of sickness and mortality throughout all the military stations in the Bengal Presidency shown in a table prepared in the office of the Principal Inspector General, Medical Department, for the year 1872, when there was fair accommodation for the men, are 7·27 sick to strength per cent., and 20·97 deaths from all causes to strength per thousand, and it must be remembered that the troops, with but few exceptions, were housed in barracks, having ground floors only." You will not deny that I am right in saying that Colonel Crommelin was against and not in favour of double storied barracks, except in the damp climates of Bengal?—That opinion is perfectly correct, but I am unable to reconcile it with the fact that double storied barracks were erected in those dry climates.

1037. I think I will reconcile it in a moment; but now I want to know who is responsible for the double storied barracks; on the 18th March Sir John Lawrence made a Minute in these words, he being then the head of the Government of India: "I am of opinion that all barracks for unmarried European troops in the country ought to be constructed with an upper storey; the extra cost of housing a regiment of Infantry, by letting the upper storey be used only as a dormitory, and the ground floor for dining rooms, workshops and library, &c., may be reckoned at a lakh of rupees. The expense would, in my opinion, be well incurred even as a financial measure by the saving of life, lessening disease, and thereby reduction of expenditure incurred in hospital." From that it results that the Governor General was strongly in favour of the double storied barracks, and was to a certain extent responsible for them?—Yes.

1038. But on the 19th March 1864 one of his ablest and most influential colleagues wrote as follows: "I agree with the Governor General in preferring upper storied barracks and in attaching importance to the concentration of the buildings in our military stations; I am also entirely against the cottage system;" that influential Member of Council was yourself?—That certainly very far from expresses the opinion which I have since formed.

1039. That is entirely opposed to your present views, as I understand?—It is entirely opposed to my present views.

1040. But you were one of the members of the Government of India who was personally responsible for these double storied barracks?—Yes; I have no recollection of that, but I do not doubt it.

1041. The conclusions of the Government of India were as follows, were they not, "That the buildings should be of moderate size; that the double storied buildings, in which the upper floors only should be used as dormitories, and the lower ones as day rooms and for auxiliary purposes, should be adopted as a rule in all parts of India; these conclusions having been come to

Sir *C. E. Trevelyan*, K.C.B.

4 March 1873.

by you and your colleagues after very full consideration, were concurred in by the Royal Commission, and so far from its being true that the only question was where these barracks were to be erected, and for what force, you expressed your personal opinion on a great number of minute points, is not that so; I can read your Minute here if you wish?—Well, I must look over my Minute. I cannot recollect each particular Minute which I recorded. I know that I gave the best assistance I could, according to the views which I then entertained; and in order that justice may be done to the views which I then entertained, it must be understood what was meant by the "cottage system." I believe that I had in my mind the state of things which I described in the hills, where the troops died from being put into small low buildings imperfectly ventilated and drained.

1042. But, nevertheless, if anyone involved the people of India in an expenditure of 10 or 11 millions in new barracks, much the largest portion of which has been entirely thrown away, one of these persons was yourself?—Yes; I am quite ready to take my share of the responsibility.

1043. But now tell me did any persons involve the people of India in such an expenditure for new barracks; tell me if there is one penny that you can put down to the cost of the new barracks over 5¼ millions, and tell me how you arrive at your figures?—When I mentioned the figures quoted, my meaning was that up to the period of my holding the office of Financial Minister, the sum which the Government of India expected to provide for barracks, including, no doubt, military works (at Peshawur, for instance, the barracks were to be in a fortified *enciente*), but still military works connected with barracks, was 8,000,000 *l.* My successor, Mr. Massey, in his first Budget, stated it at 10 or 11 millions, certainly at 10, and I think at 11. When, therefore, I spoke of 8, 10, and 11 millions, I was speaking of the estimated sum that the Government of India expected to have to provide for barracks and military works connected with barracks, which appear never to have been carried out. The honourable Member is speaking of the sum which was actually expended. I am very glad to hear that it is comparatively small.

1044. Mr. *Fawcett.*] What you meant to say is that you cannot form an opinion as to what has been spent?—I take the 5¼ millions from the honourable Member's statement; I cannot speak to it myself.

1045. Mr. *Grant Duff.*] Then I want to understand how it is that the largest portion of what you call 10 or 11 millions, and what I call 5¼ millions, has been thrown away?—I altogether deny the assumption that the 5¼ millions which you are speaking of, and the 10 or 11 millions which I spoke of, refer to the same thing. They refer to totally different things. A very small sum had been provided in my time; it had hardly commenced.

1046. You certainly stated that the largest portion of the sum of 10 or 11 millions has been thrown away?—I meant to state that a large portion of the sum actually expended was thrown away.

1047. Now what does that mean?—First of all, that the barracks were constructed according to a wrong plan, with an extensive face to the sun both on sides and roof, and also that they were badly constructed accordi[illegible] plan, and in some cases either tumbled [illegible] were so unsafe that they could not be occ[illegible]

1048. Now I want to ask you abou[illegible] How much waste do you suppose has been [illegible] by the unquestionably very deplorable failu[illegible] the new barracks at Nusseerabad and Saugo[illegible] The admission of "very deplorable failures" [illegible] presents what I have to say; I am not speaking of a period when I was personally cognisant of the facts, but I am speaking from general observation; and the information which I have obtained in reference to the later proceedings on this subject is the same which is open to everybody, and it is accepted in English society as a fact that there were great failures in the mode in which the barracks were built, and great waste, and Lord Mayo took very serious proceedings in consequence.

1049. No doubt he did, but your statement was that the greater part of 10 or 11 millions has been thrown away. I want to understand how you make out that the greater part of 10 or 11 millions, which would be something over, say six millions, has been thrown away; how by any calculation you can bring out that the greater part of 10 or 11 millions has been thrown away?—I have already repudiated my having had before my mind at the time when I made that assertion the entire sum of 10 or 11 millions, because I had been speaking of that, not as the actual expenditure, but as the total estimated sum.

1050. What sum do you suppose has been thrown away; could you at all give any idea what sum has been thrown away from all causes whatever in the making of the new barracks?—That is for the persons now in official charge to say, not for me who am entirely outside the coach. And when I said "the greater part," of course I was speaking popularly; it would have been more correct to have said "a great part."

1051. Would it be true to say that a great part, or only that some part, had been thrown away?—No; a great part, I would say.

1052. Do you suppose that by these failures at Saugor and at Nusseerabad a greater expenditure would be entailed upon the Government than 50,000 *l.*?—Yes, I expect so, for I know what the work of the Department of Public Works was before these barracks were built, and when they had to build these grand barracks simultaneously at a variety of places, not through the agency of experienced architects and builders, but of officers who had been picked up from various quarters, and appointed to the Department of Works without any previous experience, it is not in the least a matter of surprise that they were not properly built.

1053. Now, to pass from the barracks to another subject: you said, in answer to Question 465, that the arrangements made about the Red Sea telegraph could not have been made under the East India Company; what does that mean. Why should not the East India Company have made a mistake as well as the British Government and the Indian Government; were all its railway contracts models of perfect sagacity?—I think it was the best thing that could have been done at the time, and it has been productive of very admirable results; as regards the Red Sea telegraph I explained what I meant, that the East India Company, proceeding from an independent basis, and vested with full power, and influenced

by

frugal habits, would have been ve prevented such an unfortunate

t the East India Company might e a mistake as well as the British nt?—No doubt it might.

With reference to your answer to Ques-, I want to ask you whether India does enjoy the general protection of the British y, just as much as Australia does?—Yes.

1056. Does she not pay her 70,000 *l.* a-year in urn for a special service done to her by the ritish Navy, quite unlike the services rendered Australia?—No; I do not see why the Persian Gulf should be eliminated from the whole of the services performed by the British Navy, and charged separately to India; I cannot admit that it is a special service; I do not see that it is different in principle from the services which the navy performs on the coast of Africa and in the Straits of Penang and China, and in various other parts of the world.

1057. Have we any interests worth speaking of in the Persian Gulf that are not connected with India?—The trade with the Persian Gulf, no doubt, is chiefly carried on with India; but if there was any excuse for a special subsidy to the navy from India, it would be, I should say, not with regard to the Persian Gulf, but China, because India has a very important interest in China.

1058. You know that in the earlier part of this century the Persian Gulf was infested by pirates, who gave us a great deal of trouble?—Yes.

1059. We could hardly, with any justice, ask the Admiralty to keep vessels perpetually on that station for the purpose of protecting our Indian trade without some return. If we had no navy of our own, and no assistance from the British Navy, we should be soon obliged to land a force on the Arabian coast, as we did in 1810, should we not?—Of course, if we had not the assistance of the British Navy to keep the police of the Indian seas, India would have to maintain a navy of its own; but the condition of the Persian Gulf now is totally different from what it was 40 or 50 years ago; those pirates have long since been extinguished; the habits of piracy have ceased; trade has been increased; and whereas formerly a vigilant outlook had to be maintained against pirates, now the matter is done with much slighter means.

1060. Do you really mean to say that if we did not keep the police of the Gulf, you would guarantee us against pirates rising to prey on our Indian trade?—Certainly not; anywhere on the coast of India itself pirates would spring up if the police of the seas maintained by the British Navy were withdrawn.

1061. With reference to your answer to Question 503, in which you stated that one of the resources for reduction, which you were told before you left England you might chiefly rely upon, was, the absorption of the Indian Navy, costing about a million a year; is it not the fact, that that sum included all Naval and Marine charges in India and England on account of India, the Bengal Pilot Establishment, Dock Yards, Lighthouses, Indus Flotilla, Pensions, and numerous other charges?—I may have been mistaken as to the figure; it may have been something less; it may have been only 800,000 *l.*; but by far the principal charge was the Indian Navy; and the absorption of the Indian Navy was regarded as a great financial resource of that day to which I was taught to look.

1062. You made some observations about the Government of Sir Bartle Frere. With reference to your reply to Question 507, in which you admitted that the real reason why the Government of Bombay disregarded the exhortations and reprimands of the Government of India, was the weakness of the Government at home in not properly checking and controlling the Government of Bombay; are you aware that in September 1864, the Secretary of State censured that Government for their disregard of the financial control of the Government of India, and earnestly enjoined their adhering strictly to the rules in future, and that the Government of Bombay in reply stated, that the proceedings in question had arisen from oversight; that such mistakes could not occur again, and that it was their desire, and it was their duty, to obey such rules implicitly as long as they remained in force?—I am very glad to hear that; but it was merely a censure, and it did not check the Government of Bombay, for they went on as bad as ever.

1063. But now, who was responsible for the sins, if such they are; the Government of Bombay?—I should say that the Secretary of State was officially responsible; the Government of India did its best to control the Government of Bombay, and failed; and therefore the burden of controlling them rested with the Secretary of State.

1064. But supposing that somebody else was responsible; is this the fact: in 1863 Sir Bartle Frere, being Governor of Bombay, had to propose the details of expenditure for the Public Works Department; he had allotted to him by the Government of India a certain sum for appropriation, of which he had to send up a detailed estimate; instead of confining himself to this sum, he sent up an estimate very greatly in excess of it, and Lord Elgin, then Governor General, declined to deal with it; thereon a discussion arose, which was not ended when Lord Elgin died; the matter was referred to the Government at Calcutta, where Sir Charles Trevelyan was, and he was mainly instrumental in getting Sir Bartle Frere's largely increased demand complied with, if not in its entirety, to a very great extent; and he did strictly in accordance with the views which he had expressed in favour of giving the local governments freer play and more authority as against the Government of India?—I imagine that this refers to the transaction in the first year of my Indian financial administration, which I have already described to the Committee. In my first Budget, I made an ample provision for public works in Bombay, and elsewhere, but I also stated, that although provision had been made for public works, both in the Presidency of Bombay and in all the other Indian administrations, yet, if, in the course of the year, any further sums were required for cotton roads, or irrigation works, or other good plans, money would be provided for them; upon which the Government of Bombay assembled at Poonah the congress of public works' officers and collectors, to which I alluded, and sent to the Government of India a supplementary estimate for public works of various kinds, amounting, in the whole, to upwards of half a million, and asked the sanction of the Government of India to them. The answer to which was, that they could not be sanctioned wholesale, and that further information

Sir *C. E. Trevelyan*, K.C.B.

4 March 1873.

must be furnished in regard to many of them; some were rejected at once, or were postponed altogether; in reference to others, further information was asked, the intention being that when that information was received, final orders would be given. We were told, in reply to that, that a large portion of these works had actually been ordered to be commenced; and that, I believe, is the transaction alluded to. Notwithstanding that great irregularity of the Government of Bombay, I recommended that a certain limited portion of the works should be proceeded with.

1065. Now, you said a few moments ago that the Secretary of State merely censured Sir Bartle Frere; do I rightly understand you to go the length of saying that you think it was the duty of the Secretary of State to have recalled Sir Bartle Frere?—I maintain that it was the duty of the Secretary of State to have brought back the Government of Bombay to financial regularity.

1066. But was there any middle course between censuring the Governor of Bombay and receiving an apology from him, and recalling him?—The object was to bring the Governor of Bombay under control. Whatever was necessary for that purpose ought to have been done, even to the extent of recalling him.

1067. Now I want to ask you one or two questions about the mètre guage. You have expressed, in answer to Question 812, a strong opinion against the adoption of the mètre guage for the Punjaub railways. You will admit, I presume, that, putting aside the policy or impolicy of making those railways on the mètre guage, some saving will result from it?—Some saving, in first construction, would result from it; that is the only certain saving.

1068. You are aware, of course, that the Secretary of State in Council could have overruled Lord Mayo, and said, "In spite of the ardent desire of yourself and the Government of India to save money by making these lines, you shall make them on the standard guage"?—No doubt he might have done so.

1069. And you would have liked the Secretary of State to take the responsibility of overruling the Government of India in a matter in which local circumstances and local requirements are of such vital importance to a right decision?—I think that railways are a matter in which the experience, not only of the whole empire, but of the whole world, should be brought to bear. The subject, in fact, is far better understood in England than it is in India. There is a much larger experience in England, and the conferences that have lately been held at the Institute of Civil Engineers show what a variety of information is available here; so that the cases in which a full guage, allowing of large waggons and the full application of the power of steam, and the cases in which a narrow guage and a more limited scale of operation, would be more suitable, would be likely to be better understood here than they are in India. In India it is at best a few officers of the Government; here it is the great civil engineering profession which has arrived at such a high standard of experience, ability, and eminence.

1070. But has not, in this instance at least, the Secretary of State in Council stood firm against an enormous pressure from English engineering railway and mercantile opinion. Are you sure that you yourself are not overborne by that very English influence which you think has acted so unfavourably for the last 15 ye[illegible] finances of India?—No reasonable [illegible] fesses infallibility; but yet, after we [illegible] the best judgment in our power, we [illegible] we are right. In this case I agree [illegible] body of the professional and mercantile e[illegible] of England.

1071. Just as the Council of the Secr[illegible] State has done in some cases in which you [illegible] not agreed with that mercantile opinion?—[illegible] that may be so.

1072. May I ask if you have been influenc[illegible] by authority in this matter, or whether yo[illegible] formed your own personal judgment from th[illegible] examination of narrow guage railways?—I have had the subject before me for more than 30 years. I have taken a great interest in railways, both the trunk lines and the branch lines; and all the time that I was in India I had the subject before me, because the plan of the light railways as they were then called, was strongly advocated even then, and one was actually made, the Nulhattee branch.

1073. Have you ever seen a mètre guage railway at work?—Yes.

1074. Where?—In Wales.

1075. *Chairman.*] When you say that it was the mètre guage, you do not mean the exact size of the Indian mètre guage?—No; I mean a very narrow guage.

1076. Mr. *Grant Duff.*] And have you formed your own opinion from the experience that you have had?—Well, I had formed my own opinion long before I saw that railway; one forms one's opinion from the whole of one's experience; and from the time I came home from India, as a young man, when railways had just come to the birth I have had the subject constantly before me, and have interested myself in it very much.

1077. You say, in answer to Question 619, that a certain policy must be adopted until we have finally remitted the income and expenditure into the hands of the people of India themselves. That time must be a longish way off, must it not, if you are right in asserting, in answer to Question 620, that the extortions of unprincipled native officers are worse than a 10 per cent. income tax?—No; I think the two things are quite distinguishable. By remitting the public income and expenditure into the hands of the natives of India, I had in view the higher, cultivated, experienced, class who are under the influence of a wholesome public opinion; and I am confident from what I have observed during my service in India, that there is such a class quite equal, and quite willing, to take an active part in administering the finances of India. But when you come to such taxes as the income tax and the license tax, it becomes indispensably necessary to let loose upon the country a very large number of ill-paid natives; such considerable numbers of persons are necessary in order to assess and collect those taxes, that you cannot pay them properly, and the amount of work is so vast, embracing, as it does, the whole of the upper and middle classes, down to the lower middle class, and the higher portion of the agricultural class, that you cannot provide a sufficient number of European public servants, or of native servants of the higher and more responsible class, to prevent the liability to extortion.

1078. I see, if I rightly understand you, that in answer to Question 850, you express yourself strongly in favour of employing natives at lower

salaries

Sir *C. E. Trevelyan*, K.C.B.

4 March 1873.

Europeans to do, I presume, the Have you considered to what bitter h a policy would give rise; is there of Indian agitator to whom it would atest of blessings, supplying him, as it ith a never-ending theme for decla—No. If the arrangement was, that two of salary should be attached to the same , one to be given if they were held by peans, and the other to be given if they re held by natives, the plan would be open to t objection; but that is what I by no means template. I consider that for a considerable time to come, the general principle that the administration of India should be conducted by natives under European superintendence must prevail, and what I look to is the extension from below of the classes of employments filled by natives; in fact, a development of the plan of Lord William Bentinck (he raised the appointments in the judicial department open to natives, from 100 *l.* to 500 *l.*); and then I would go upwards, developing and maturing a native civil service.

1079. Then your policy would not differ materially from what has been adopted, would it?—It has been acted upon, but in a desultory unsystematic manner; I think the time has come when we ought to apply ourselves vigorously to the development of this policy.

1080. You said, in answer to Question 682, that the perpetual discussion of new forms of taxation has had a very discomposing effect, and you say, in answer to Question 764, that before our time the question was not what was taxed, or what was not taxed, in fact everything was taxed. Now I want to ask you, has the British Government of India discussed one tax for 10 that the previous Governments levied. If it has not done so, surely there is some exaggeration in the talk we hear about the discomposing effect of our discussion of new taxes?—The two statements are perfectly consistent. The native system was, as I stated, a system of universal low taxation, petty taxation; I could mention many laughable and immoral instances of it. Everything whatever was taxed, but the rates were extremely moderate, and each particular exaction was only slightly felt. The natives had become thoroughly accustomed to it from long tradition; it had almost become part of their nature; it had become the dustoor, the common law of the country, and it did not in the least alarm them, because, although vexatious, yet they had no fear of any further inquisition or any further extortion; whereas, now, the income tax is a portentous instrument of inquisition and exaction; it is a machine by which you might dive into the purses of the natives to any extent, by giving a few turns to the screw.

1081. How many in a thousand does it affect it is levied now?—It depends upon the minimum income assessable, and we have rung all the anges upon it.

1082. As it is now, how many in a thousand does it affect?—I think one in a thousand now; but then the question occurs all over the country, in reference to everybody, whether he is that one or not; and that is the point of extortion, whether a particular individual should be included in the taxable number.

1083. Then, with regard to the phrase, "perpetual discussion of new taxes," by "perpetual," I suppose you mean occasional?—No, perpetual; the commencement was what I called, in the minute for publishing which I was recalled from the government of Madras, the three tremendous taxes proposed by Mr. Wilson, namely, the income tax, the license tax, and the tobacco tax, an universal income tax, an universal license tax, and an universal tobacco tax; I sacrificed all my prospects of official advancement to the duty of preventing that at all hazards.

1084. How many new taxes have thus been discussed?—Since that every possible tax has been discussed.

1085. Have there been a dozen discussed?—Yes; I could name a number.

1086. Do you think you could name a dozen?—I daresay I could; in fact, the income tax has been constantly under discussion in its various forms of income tax, license tax, and certificate tax; then there is the tobacco tax, the succession duty, and the tax upon betel grounds.

1087. Have there been a dozen?—I feel sure there have; the Government of India sent a circular to all the principal officers in India, asking them to suggest taxes, and asking their opinion upon different taxes, and I will answer for it that if those papers were consulted, it would be found that there were a great many more than a dozen.

1088. Were many of these taxes, or were any of them, taxes that had never been levied by Native Governments in India?—In some form or other they had all been levied by a native government; but it was under the circumstances I have described; it is a very old observation that the natives are extremely tolerant of established burdens; the meaning of that is, that they have been accustomed, time out of mind, to live in a despotic country, and they look at established custom as a sort of constitutional protection; the moment that is departed from they become alarmed.

1089. You said, in answer to Question 515, and, as I think, most wisely; that it would not be advantageous to keep a stock account; of course, however, if you did keep a stock account, it would be seen that the amount of the aggregate deficit since the conclusion of the Mutiny is trifling compared to the amount of property which has been added to the previous property of the Government; would not that be so?—It would have to be considered in detail; I do not know what you would rate the great canal and navigation works at, for instance; undoubtedly there has been a tremendous loss there.

1090. You mean to say that it would not be fair to take them at their original cost?—Quite so.

1091. But nevertheless you would, I suppose, say that, calculated in any way in which a merchant would calculate his assets, the amount of property which has been added to the soil of India since the time of the Mutiny is very much greater than the amount of the deficit?—The deficit also has been very considerable.

1092. Has it been so very considerable?—The whole of the deficits put together have.

1093. Since the conclusion of the Mutiny, what do you suppose that it has amounted to?—The borrowed money also must be included in such an account as that; in order to arrive at a just comparative statement of the expenditure on public works, and must be set against the out turn or stock of public works since the Queen's Government was inaugurated in India; the whole

Sir *C. E. Trevelyan*, K.C.B.

4 March 1873.

of the money expended, including what has been borrowed since my financial administration, and also the deficits, must be set on one side, and the actual value, the present value of the public works of all kinds, canal and navigation works, barracks, everything of all sorts, must be set upon the other, and I should be very sorry to hazard an opinion as to the balance. But I must beg not to be considered as intending to throw discredit on the efforts which have been made by the Queen's Government to promote the benefit of India by public works. Although, as I believe, it has been done too hurriedly, and too much has been attempted at once, and there has been more than a due proportion of failure, yet the mere fact of the Queen's Government having broken through that old tradition of no roads and the smallest possible modicum of public works, is a just, a blessed thing, and all that I am aiming at, according to my humble influence, is, not to prevent this grand development for the improvement of India, but to regulate it, and to get as much good, and as little evil, out of it, as possible.

1094. If it is right to regard the financial affairs of the Government of India exactly as you would regard the financial affairs of a mercantile concern (which I do not think is the proper way of looking at the matter), then it would be right to have a stock taking, and not otherwise?—Yes, I think that a stock taking would be unstatesmanlike and unnecessary.

1095. In short, the financial affairs of the Government of India are not to be treated precisely like the affairs of a company that is trading in the City of London?—No; this would be merely a curious, interesting inquiry, if it was thought worth while to make it. I am far from thinking that it ought to be made.

1096. Now you gave the authority of your name the other day to a statement that I think you will see was a mistake. You said, or at least you accepted the statement, that there had been six Under Secretaries of State who had represented India in the House of Commons in six years?—I took that on trust from the gentleman who asked me. If I had been responsible for the statement, I should have somewhat qualified it. I should have said that some of them, although they may never have been in India, had made India their particular study.

1097. But as a fact, there have only been two Under Secretaries of State who have ever represented India in the House of Commons; India has always been represented in the House of Commons by a Secretary of State, except during the four months and 23 days when Mr. Stansfeld represented it, and under the present Government when I have represented it?—Quite so; I must take that statement also on trust.

1098. Mr. *Fawcett*.] But if the Under Secretary of State is in the House of Commons, even if the Secretary of State is there at the same time, what does the Under Secretary of State represent there if he does not represent India?—He represents India subject to the superior authority of his principal, like the Under Secretary for War and for the Foreign Office.

1099. Mr. *Grant Duff*.] As a matter of fact in Parliament, we never understand the Under Secretary of State to represent the department if his superior is at the same time in the same House?—That is, he does not represent it as chief, he is not responsible.

1100. You say, in answer to Qu[illegible] the increase in the revenue of Ind[illegible] abolition of the East India Compan[illegible] as you believe, owing to the pure, hon[illegible] ment of the resources of the country t[illegible] general prosperity; but again you say, to Question 619, that since the mutiny [illegible] been doing nothing except inventing new [illegible] Now I am sure that latter statement is n[illegible] that you would wish to stand?—Indeed it is. [illegible] the phrase "inventing new taxes" I did [illegible] mean that they were carried into effect. On [illegible] contrary, I said that the principal evil was t[illegible] they were held up as bogies to frighten th[illegible] country. The change is very remarkable indeed Under the Company if a person proposed a ne[illegible] tax, I do not know what would have happene[illegible] to him, whereas, under the Queen's Government circulars were sent inviting opinions as to ne[illegible] taxes, and there was nothing but new taxation and when we come to the military expenditur[illegible] if I am cross-examined on the Madras militar[illegible] expenditure, I shall be able to indicate the exac[illegible] turn of the road where the old policy of reducin[illegible] expenditure ceased, and the new policy of invent[illegible] ing new taxes began.

1101. But do you still stand to your forme[illegible] statement that the increase of the revenue [illegible] India since the abolition of the East India Com[illegible] pany is mainly, as you believe, owing to the pur[illegible] honest development of the resources of th[illegible] country into a state of general prosperity?—Ye[illegible] entirely. Actually, except the income tax an[illegible] the license tax, although we have talked a grea[illegible] deal about new taxes, we have not imposed any[illegible] we have increased some of the old taxes, and [illegible] increase of revenue is partly owing to tho[illegible] additions which have been made to the salt ta[illegible] the excise upon spirits and drugs, and stamps.

1102. *Chairman*.] Perhaps you recollect tha[illegible] at the time of the Court of Directors there was on[illegible] attempt made to tax the Europeans in India, an[illegible] that they exerted so much influence with th[illegible] Court of Directors that that attempt was abrogate[illegible] by the Court of Directors?—Yes, that was th[illegible] case of the stamp duties; I remember that.

1103. Mr. *Grant Duff*.] Have you chanced [illegible] hear anything of the results of the recent in[illegible] quiries made from district officers with referenc[illegible] to their approval or their disapproval of the in[illegible] come tax?—Yes, I have seen something of them I have not read the whole, but I have seen tha[illegible] the balance of opinion is decidedly against th[illegible] income tax, and that very strong opinions hav[illegible] been given by experienced officers against it.

1104. Would you be surprised if I were to te[illegible] you that out of the 36 opinions that have com[illegible] in from Bengal 21 are not opposed to the incom[illegible] tax, and 15 are opposed to the income tax?—Well, it may be so, but we must look [illegible] weight as well as to quantity.

1105. And that in the North Western P[illegible] vinces 12 have come in for abolition against 8 [illegible] retention?—Very likely.

1106. These statements would go to show would they not, what I have always maintained that whether the income tax is right or wrong, a man who wanted to decide the questio[illegible] for himself purely on authority would find excessively difficult to make up his mind?—Well, I think not; I would refer to another ver[illegible] remarkable return of opinions about the incom[illegible] tax. Before it was adopted Lord Canning sen[illegible] a circular to the local governments all over Indi[illegible] requestin[illegible]

sting that they would consult their most d and experienced local officers as to the ty of levying an income tax. Now there more solid, mature, thoughtful class of fficers in India than the Madras collec- ey answer something to the French pre- centres of circles; and I think that with- ception the opinions given by them were e to the income tax, and some of the as were of a very remarkable and strong Those were all before me when I had to up my own mind.

7. And yet, although the controversy has now raging for so many years, you still find two of the great divisions of India such an raordinary difference of opinion as I have just nted out?—It would appear so from your ement.

108. You consider that the administration of a is at present too much centralised; and if ghtly apprehend your answer to Question your view is this: whereas the Government dia now puts the local governments, so to k, upon a fixed allowance, you would have Government of India put upon a fixed allow- by the local governments?—No, not by the governments, but by itself and by the Home ernment. I suppose I shall be examined re particularly as to the details of that pro- sal. I consider that it should be determined rst, as a preliminary measure, what services hould be appropriated to the Supreme Govern- nent.

1109. Do I rightly understand that you would make the budget of the Supreme Government fixed, and the budgets of the local governments elastic?—Yes, I would take out the debt, and home expenses, and army, and diplomacy, and treaty allowances and pensions to former native chiefs and sovereign families, the Post Office, Telegraphs, and Mints, and retain them under the Supreme Government.

1110. So that the Supreme Government would be put upon a fixed allowance, while the other Governments had elastic budgets?—Yes; the Supreme Government would make up a central budget for these special services, which are of a general kind, affecting the whole of India, and whatever from year to year might be necessary for carrying on those services should be taken out of the general revenue of India; the particular mode of taking that out I should like to explain, if not now, hereafter.

1111. I want to clear up a trifling matter; the other day you were under the impression that some Minutes of yours that ought to have been presented last year were not presented?—Yes, I was under that impression.

1112. The fact is, is it not (you may take it from me), there was no return last year alluding at all to Port Canning?—Then it was the year before.

1113. No; that it was in the year 1865?—I only saw it last year.

1114. I should like you to know why your Minutes were not presented; the official statement put into my hands is this:—"Sir Charles Trevelyan's Minute (the only one recorded by him), dated 20 June 1864, was recorded as an enclosure to a letter from India of 14th July 1864. It was not included in the Parliamentary Return, No. 200, of 1865 (not last year, as Sir C. Trevelyan thinks), because the terms of the reference did not include either correspondence between the Government of India and Secretary of State, or Minutes by the Government of India. The Address of the House of Commons was for the orders of the Bengal Government constituting municipal commissioners at Port Canning or Cannington, and also of all communications which have passed between them and the Government of India, and between parties in England and the Secretary of State for India, relative to the development of that port"?—I am quite ready to accept that explanation; the matter was all over, and I did not think it worth while to make any remarks upon it.

1115. Mr. *Eastwick.*] You have said that the East India Company's finance system was better in substance, and that the present system is better in form?—Yes.

1116. That being the case, I want to know whether you do not think that some features, at all events, of the old system, might have been advantageously retained in the present system, and especially the Capital Account, but also the very minute, or to some extent minute, account which was given under the East India Company of expenditure?—No, I had to consider that subject in detail, in a perfectly practical manner, and, on a full view of the whole subject, I came to the conclusion that that old mercantile plan of reporting the whole of the expenditure in full detail, item by item, was simply impossible under an Empire. It suited a factory but not an Empire; it could not be done. It was only attempted to be done, until by my recommendation it was brought to an end, for the consequence was that these immensely voluminous accounts were always several years in arrear, and were sent home to be used as waste paper, for nobody ever looked at them. Then as regards the Capital Account, you must have observed that it is not the custom of any Government whatever, either the English or any other European Government, to keep a stock account of all its fixed property. The analogous thing here would be that the present value, indeed worse, that the whole of the sum laid out upon the Houses of Parliament, the whole sum laid out on the public offices, the value of the buildings and stock in the dockyards, the value of all the barracks and the Arsenal at Woolwich, and all its contents, the whole of the landed estate of the Crown, should be annually shown in the accounts. Practically the thing is impossible; there must be some limit to human affairs; it is quite enough to look well after the current annual income and expenditure.

1117. I am quite ready to admit the immense difficulty of keeping this account, but I still must return to the question, because I must ask you whether, if it could be kept in any degree, it would not be an advantage. I wish to ask whether it would not be an advantage in this way; for example, supposing we had a capital account stating the quantities of military stores that there were in the country, would not that be a means of checking the expenditure of a Government which wished to make a show of economy, and which was perhaps using up the military stores instead of keeping the stores at the proper average amount, and purchasing in the expenditure of the year?—No doubt there ought to be a store account, but that is in the nature of current income and expenditure; although it is not money, yet it is value, which is a matter of constantly recurring interest, and store accounts are kept. When I was Governor of Madras I looked up,

Sir *C. E. Trevelyan*, K.C.B.

4 March 1873.

with General Balfour's help, the stock of old stores in the Arsenal, and a quantity of old material belonging to a bygone state of the military art was converted into money. Afterwards I took great pains with the store account of the East India Railway, and a great deal of dead stock, old sleepers which were rotting, and a whole fleet of river steamboats which were set up for conveyance during the mutiny, was turned into money. No doubt to that extent there ought to be a stock account; but that is quite different from the dead stock account to which I alluded as not having been kept, for it really was not kept, it was mere make believe. It was professed to be kept, but it was not even attempted to be carried beyond a few conventional items which were repeated from year to year. It was a discovery of mine; no member of the Government had ever heard of it. The thing became a laughing stock when I mentioned it in Council.

1118. I will go back immediately to what you call the dead stock, but with regard to the Capital Store Account, is there, I ask, in India anywhere such a return as would inform persons wishing to inquire how many guns, cannons for instance, we had in the country, and of what calibre, and what amount of stores there is in the different arsenals; without going to absurd minuteness, is there any such statement that if a great expedition was intended, the Governor General or the Commander in Chief could see at once what resources he had to fall back upon?—Unquestionably there is. I believe that the store accounts kept at the different magazines in India are very satisfactory. I never had occasion to find fault with them; at least I do not remember having found fault with them, although they were quite capable of improvement.

1119. No doubt at the great arsenals there is such an account, but is there a general account which might be looked at at once?—I doubt it as regards the Supreme Government. Of the government of Madras I think there was, that is for the ordnance stores there was. It was divided into heads, and there was one head of ordnance stores. My recollection is that there was a general store account at Madras.

1120. I should like to ask your very serious and well-considered opinion as to whether, supposing there was such an account in Madras, and therefore the possibility of such an account being kept for the whole of India was established by that fact, you do not think some attempt should be made to keep such an account, in order that it might be available for particular occasions; that for instance, when you yourself went to inquire into the stores you might have known at once the state of the case without the difficulty and mistakes that otherwise occur?—I think that in this, as in other matters, there is danger of attempting too much, too vast a concentration. I think the store accounts ought to be dealt with, as they are at present, departmentally. Unquestionably there ought to be a full account of ordnance stores of every kind, capable of being examined at one point of view. So there ought to be, and I believe is, a full account of all commissariat stores and of public works stores. I believe that is done; and I think that that is the best way of dealing with the subject.

1121. And would not you think it desirable that some such account should be transmitted annually to this country in order that the War Office might know, in the case of any great expenditure being required, or any other Department of the State might know they had to put their hand upon?—Yes, it would be very desirable as regards o stores; and I think it would be a good instructions were given to look up all the cannon balls, and chain shot, and obsolete gu sorts of stores lying in the arsenals of India to sell them for what they will fetch. attempted to do that at Madras, but the de for home freight was so heavy, and the co high, that we had great difficulties.

1122. *Chairman.*] Might you not have them as ballast?—If they had been in En land we might have sent them to India ballast, but the difficulty was how to get the home. We could not put them at the top of cargo of cotton.

1123. Mr. *Eastwick.*] I would ask whether selling old guns and muskets, we might perhaps be breeding a danger to ourselves?—T matter has been considered. The question raised in Council. It was said that the K of Burmah was buying our old stores; the question was raised in the Council of In whether it would not be politic to check it. argued in favour of selling them to the high bidder, whoever he might be. They were not fi rate; they were not the last pattern Enfields.

1124. Also, I would ask whether the very fact of this exactness in keeping these accounts would not have a beneficial effect generally. Perhaps you may be aware of circumstances which happened in our expedition to Afghanistan, and what a prodigious waste there was in stores, through nobody knowing what stores there were. Or again, I suppose you know such cases as what occurred to myself; that having a quantity of Treasury chests to be made for the expedition, I found quantities of valuable wood lying about belonging to the Government that nobody knew anything of; so that in that respect I suppose you would admit the advantage of having such accounts?—I think, in that point of view, that is in order to utilise stores of all kinds, and if they are not likely to be wanted for current use, to dispose of them at the earliest good opportunity, is one very important object of such an account; in fact, to keep the state of the stores constantly, before the responsible authorities; and a copy of the Anglo-Indian Store Account, that is of all the stores of a durable kind, ought to be sent home every year, no doubt.

1125. *Chairman.*] Have you known any case of administration of stores in any extensive field operations which has turned out satisfactorily?—The waste and confusion of war are very great. The question is merely who makes least blunders.

1126. Mr. *Eastwick.*] Then, with reference to the buildings, for instance, the barracks, would it not be a desirable thing to have a regular account of barracks, that there might be from time to time a statement of what they have cost, so that we should not in fact fall into these mistakes at the present moment as to the amount that has been expended, because we should have a regular yearly statement of the barrack accommodation and what it has cost, and what has been added during the year, kept before us?—No, I think not; I think that when public money has once been sunk in fixed immoveable capital it had better be left; and that it would be more expedient

expedient for the Government to confine itself to what is currently necessary, to maintaining it in proper repair if it is wanted, or disposing of it if it is not wanted. The circumstances under which all these public buildings were erected, are so infinitely various, and a great part of them so entirely exceptional, that they would not furnish any useful experience, or at any rate, the volume of information of that sort would be so vast, and so detailed, that it could not practically be made use of. To take a strong instance, there is a building that you may remember at Patna, an enormous bell-shaped building, which was erected soon after the great famine in Bengal as a store house for corn. It was never used at all. If the plan you suggest were adopted, that would have to be included with all the circumstances of its erection, and its never having been used, and so forth.

1127. Sir *G. Balfour.*] Are you aware that at the present moment we have got most detailed returns laid before Parliament by the Admiralty, with the closest appropriation of every fraction expended upon the ships of the navy, so that the Admiralty can at any moment tell the whole cost of each ship, and the sum laid out in its repairs?—No doubt; and full and detailed accounts of all buildings and public works of all sorts ought to be kept, so that in case of need, in case of any circumstances requiring that special attention should be paid to any one of them, the information may be forthcoming. And more than that, I think it would be well if a sort of inquisition were made every few years, say, once in 10 years, of the whole of the fixed property belonging to the Government, and it were deliberately, according to the altered circumstances of the time, considered what had best be done with it. I know that in my official tour over the Madras Presidency I found several ancient barracks of Coote's and Clive's time, which had continued to belong to the Government, but which, in fact, had been entirely lost sight of. They did not cost much, but still they cost something, even in keeping them in a bad state of repair, and they cost something more in establishments to look after them.

1128. But still they were well built?—Extremely well built, as was usual in that day.

1129. And required very few repairs?—They were built with first-rate Madras chunam; but it would be well, I think, if instructions were sent to the Government of India to have what we call here a survey made of all Government real property, fixed property, with a careful consideration of what had best be done with it; either to keep it for the uses for which it was originally intended, or for any new uses to which it may now be applicable; or if it is not required for either of those purposes, then to sell to the highest bidder. With regard to these ancient buildings, and esplanades, and former barracks, I remember more than one magnificent piece of land, originally covered with the mud-and-thatch bungalows of sepoys and the huts of sepoys, and so on; they had disappeared; but the land was there, and there were bells of arms, which was the only pucka building. Then, too, there were such stifling bomb proofs into them in our nature upon such a time at once.

old barracks that you found in your tours in Madras, would any of them be sanctioned or passed in the present day?—If you mean the ancient barracks, unquestionably not; they were a piece of antiquity altogether.

1131. And not suited to the health of soldiers?—Not in the least; even the 10 minutes I spent in the bomb proofs which I have in my mind, made me very uncomfortable. I can only hope that the troops were not permanently kept in them, that they were merely placed there in case of emergency; but yet I believe they did live in them.

1132. Would that remark apply to all the old barracks that you saw which belonged to the time of Coote and Clive?—There are but few remaining, because the barracks of those days were generally temporary buildings; it was only when it happened that pakka buildings were erected at such places as Trichinopoli and Dindigul, in defensible positions and forts, that they remained.

1133. Still our soldiers did occupy them in those days, and managed to conquer the country?—Yes.

1134. When you were at the Niljiris, did you visit the Wellington Barracks?—Yes, I changed the name; they were called Jackatalla; and the only time I ever changed the name of a place was by ordering that they should be called the Wellington Barracks instead of Jackatalla, and the name became at once popular.

1135. They are three storied barracks, are they not?—Yes; a lofty building seem[ed] to that climate. In fact the climate is [such] that, provided you have proper [ventilation] proper drainage, any building [is] healthy.

1136. Do you think th[ey] adapted for European t[roops]? I heard of them was only complaint I Irish couple, an Irish corporal and [his wife] whom I found in one of the married [quarters] I asked them how they liked their [quarters] upon which the man looked up (it wa[s very] lofty), and said: "Rather wasty, sir"; "[the] clartier the cosier" I suppose was his maxim.

1137. They were intended for the quarters of European regiments, I presume?—Yes.

1138. They will hold 1,000 men?—I believe so.

1139. Are you aware that they are used simply for convalescents, soldiers who are invalids, and that they are never half full?—Yes, I am aware that they are used for convalescents, because that arrangement was made at my suggestion; it seemed to me that the best way of utilising those barracks in that beautiful climate, was not by giving the different European regiments a turn in the barracks for six months or a year, which involved a serious change of climate, both going up and coming down. And there are other objections also. Those barracks, beautiful as the climate is, are by no means popular with the troops: the troops prefer the full tide of human existence in the bazaars below; and their wives complain that they cannot get washing, and the men who follow trades complain that they can get no customers at Wellington; so, all these circumstances considered, it appeared to me that it would be better that this should be the Convalescent Military Depôt for the South of India, because just as the officers and civilians require to be set up by a change to a more bracing climate from time to time,

Sir *C. E. Trevelyan*, K.C.B.

4 March 1873.

so do the soldiers; the circumstances are precisely the same; therefore I proposed that this should be the Simla of the European Army of the South of India, that they should all have their turn. I am sorry to hear (in one sense I am glad to hear) that the barracks are not properly filled; of course it would be desirable to utilise them fully; if not in that way, in some other.

1140. That is the point I was coming to; do you not think that it is a great pity that when there is accommodation for 1,000 European soldiers in the Niljiri Hills, in that beautiful climate, where they would be almost as well as they would be in their own country, there should be only 400 soldiers there, and that therefore quarters for 600 men should be utterly thrown away and wasted?—No doubt it is to be regretted.

1141. I should like to ask whether when you were in India as Financial Minister, or when you were Governor of Madras, the subject of locating European soldiers in the hills was fully gone into, and examined and reported upon?—You mean, as I understand you, locating them as soldiers, as a military body. It has been a constant subject of discussion in every part of India, in every possible way, in official circles, in the newspapers, and in private society, for the last 40 years, and increasingly so; and I think that now we have arrived at a pretty fair average opinion, namely, that there are certain main points of political importance in the plains which [illegible] held by a sufficient force of Europeans; [illegible]es as Agra, and Delhi, and Madras and [illegible]nd so forth; but that, provided that [illegible]filled, the remainder of the troops [illegible] in the hills as a reserve. [illegible]ould say that supposing the [illegible]rent could be ensured [illegible]e desirable to put as many European [illegible]nto the hills as you could?—Certainly. [illegible]would encourage colonisation in every [illegible] form in the hill tracts. We must not [illegible] the Indian hills, as they are called, as [illegible] a range of mountains; it is a region, which is as large as Spain and Portugal put together; in fact much larger, if you take the whole together. The Niljiri plateau alone, and another beautiful plateau, which is less known to fame, the Pulni Hills, south of the Niljiris, might form the seat of a *quasi* English Christian population, which would strongly confirm our hold upon the south of India. I promoted that as far as I was able during the short time I held the Government of Madras. For instance, I laid the foundation for the transfer of the Military Orphan Schools from Madras to the hills. That was a great measure of colonisation.

1143. Would you be surprised if you found that out of an army of from 60,000 to 70,000 Europeans there are only about 4,000 soldiers, besides convalescents, after all these 40 years deliberations, in the hills?—I am sorry to hear it; I should have supposed that there were more.

1144. Let us take Peshawur, for instance; you are aware that Peshawur is one of the most unhealthy stations in India?—Yes.

1145. And you are probably also aware that in the hills in the neighbourhood, and on this side, the left side of the Indus, there are some of the most salubrious places in the world. I want to know if you are aware at all what are the reasons that have induced the Government to keep European soldiers in that most pestilential spot for so many years when they have got most salubrious spots close at hand?—I suppose it was considered to be an object of political importance to hold Peshawur itself, as the key to that part of India, by a force sufficiently large to be safe from any sudden assault. I think it is a subject fairly open to consideration whether a small European and native force properly entrenched at Peshawur, with a larger reserve in the neighbouring healthy country, would not be preferable.

1146. You spoke of an enceinte to the camp at Peshawur; are not you aware that there is no such enceinte?—I know it formed part of the general barrack plan, that there should be an ample and carefully fortified enceinte.

1147. You are not aware that it is one of the parts of the plan that has not been carried out?—That is my impression, and I think it would be well to review our proceedings, and to consider whether it would not suffice to have a small garrison at Peshawur sufficient to hold the place until support could arrive, and to put the main body of the force in the adjoining high and healthy country.

1148. Mr. *R. Fowler.*] Is Peshawur unhealthy to the natives?—Yes, but it is worse for Europeans; it is decidedly an unhealthy place.

1149. I suppose it might be made partly a native garrison?—Yes, only to make quite sure, there must be a sufficient proportion of Europeans.

1150. Mr. *Eastwick.*] But with regard to those stations that you have mentioned which you say must be maintained by European troops in the plains, I want to know why is there any necessity for such a maintenance; what danger is there to be apprehended in Madras, for instance?—The old doctrine was that you must exhibit your troops. It was supposed that the natives were only impressed by what they saw.

"*Segnius irritant animos demissa per aures*
Quam quæ sunt oculis subjecta fidelibus."

It was on that principle that our European troops were placed at the main points of political importance in the plains, and there was a great deal to be said for that view in former days; but the natives have advanced with the rest of the world; and now that a great peace has been established in India, and that they see railways capable of bringing our reinforcements at a very short notice, I think we might relax our adherence to that old doctrine. But still I would hold such places as Delhi and Agra by European garrisons sufficient to maintain the place against all comers, until supports could arrive; I think that the old doctrine still is good to that extent.

1151. You would probably think it immeasurably important to hold a place like Agra or Delhi; is there any necessity to keep European soldiers in the fort at Vellore or Trichinopoly?—C[illegible] I can speak from personal obs[illegible] inquiry as to both places. At Vell[illegible] absurdity. It is a beautiful place, bu[illegible] sity of garrisoning Vellore arises en[illegible] the fact of our maintaining the four w[illegible] place. In fact I found the most muti[illegible] posed sepoy reg[illegible] that fort, which [illegible] *ad absurdum*, and [illegible] of the wall should [illegible] interior of the fo[illegible] garden. The s[illegible]

was the most absurd case I ever remember in administration. There is a charming old fort at Masulipatam, which was a perfect model in its day, a square brick fort with a ditch round it, bricked on both sides, full of water, in which our official ancestors of the Masulipatam factory used to row the ladies; but, however, the point is that there was a great breach in the wall 50 yards wide, into which a whole regiment of troops might have entered; but with all that there were two sepoys standing guard at the adjoining gate of the fort. That is an instance in point. Trichinopoly is not as bad as that, still it is very bad; it is quite unnecessary to keep Europeans there.

1152. Then I would ask whether, with regard to Indian finance, there can be so important a subject, first, as regards the preservation of the lives of the European soldiers, and secondly, as regards the amount of force to be retained in India, as this, namely, the location of the European troops, because I would ask you what is the good of spreading these stations at Vellore, at Trichinopoly, even at Benares, at Cawnpore, and all over the country, when, if you would place European troops in the hills, they would be in thoroughly good health and fit for active service, and when there is really no danger of any enemy in the plains at all?—Well, I think the circumstances have changed so rapidly since the mutiny, that the time has come for a survey; I would rather enlarge my original suggestion; I would have a survey, not only financially, to make the most of all our property in forts and barracks, and everything else, but also to consider in a political and military point of view how far we may withdraw our troops from the plains and consolidate them as reserves in the hills.

1153. With regard to that other point, the minuteness of account in the old Company's accounts, I want to ask you whether to some extent that might not be at all events imitated by us; that is to say, that when the accounts are sent to this county a number of items should not be put under one heading, those items being utterly heterogeneous; to give an example, one that you mentioned yourself, the Muhtarifa tax, was going on in Madras when it was not shown in account; the consequence was that there was an income tax going on and a Muhtarifa tax, and consequently Madras was suffering more taxation than any other part of India?—Yes, I think that we may with advantage go somewhat afield from the strict limits of the accounts. For instance, the alienations of all sorts from public revenue ought to be taken into account. I do not mean that they should be made the subject of an annual account and appear in the Budget; but the case stands thus, that the native Governments which preceded us were in the habit of paying for the most ordinary services by assignments of land revenue, and we have continued them to a great extent from personal motives according to various tenures, sometimes life tenures, sometimes perpetual, and every gradation between those two limits. Now these alienations from the revenue never appear in the public accounts; they are lost sight of. The Government has, however, taken spasmodic action in reference to them from time to time when their attention has been drawn to the subject, and they have appointed Commissions and officers to investigate and resume improper alienations. I would not advise any more action of that sort; but when the finances have been decentralised and popularised, when the popular element has been largely introduced, then will be the time for looking up these alienations; then it will become an alternative, a choice, between resuming many of these alienations or adopting an oppressive, harassing tax.

1154. I think you said that there had only been one dissent a year by the Indian Council on the average?—Yes.

1155. Is it not the fact that when the amalgamation scheme first came up there were several, that is to say, five or six dissents by members of the Council?—Yes; I suppose that was previous to 1858. I do not see anything in the Return which was put into my hand to day, about the amalgamation. The proposal to amalgamate the Queen's and Company's European armies violently divided Anglo-Indian society, and if dissents had been taken upon it I should say that two-thirds or three-fourths of all Indian officers would have declared against the amalgamation.

1156. In spite of the enormously increased expense of the European army as it exists at present, are you of opinion that it is advantageous for India not to have a local European army?—Yes, entirely so. I think it would be totally unsafe; I consider that, in order to hold that extraordinary Empire under those anomalous conditions, we ought to have a perfectly homogeneous European force, recruited from England, disciplined from England, returnable to England, in fact, identified with England.

1157. I suppose you are of opinion that it is a m[redacted]tem?—It is more expe[redacted]

1158. [redacted]to the Council, I do not recollect whet[redacted]u gave a distinct opinion as to the debates of the Council being public, and being open to the press?—No, I was not asked that question.

1159. What is your opinion on that subject?—I have not turned my attention to the subject lately. So far as I have reviewed the past and reconsidered the subject, I must confess to being hopeless of the Council. I am not speaking of it personally, but as an institution: I think it has not answered its purpose of being a barrier between English and Indian interests; it has not given the protection to Indian interests that was expected, and no mode that I have heard of would suffice to place it on the footing that was intended when it was originally constituted.

1160. But I would ask, whether the publicity of the debates would not strengthen the hands of the Council, and enable them to represent more forcibly, and with greater weight, the interests of India?—I see a danger even in that. The Council are sitting in the midst of English interests. The councillors naturally care most for those with whom they are in daily communication, whose good opinion is the greatest object to them, and they are naturally influenced by the opinions which prevail around them; and I should fear that if the debates of the Council were thrown open, it would only strengthen those class interests which the Council was intended to guard against. I think that the interests of Manchester and the City, and the military officers, and such interests as those, would be strengthened by it, and that the case would be worse than ever.

1161. Do you think that those interests would overbear the weight of the comments of the Anglo-Indian press and the Indian associations of these

Sir *C. E. Trevelyan*, K.C.B.

4 March 1873.

these Indian Members of Council?—Indeed, I think so. I think that if the Council were held in India instead of England, it would be different, because there the surroundings and the prevailing influences would all be Indian; but held here in London, under the pressure of such tremendously powerful interests as Manchester and the City, and the clubs and Anglo-Indian society, would bring to bear upon it, I think we should probably go from bad to worse if we adopted such an expedient. I prefer the simple personal responsibility of the Secretary of State.

1162. Then your great financial safeguard is, I presume, these provincial councils which you have recommended in India, where every financial proposal would be discussed previously to its being carried out by the Government, or previously to its ever being discussed by the Government?—Yes; that is my opinion. I conceive that if the finances of India were decentralised, and reconstructed, with the infusion of a strong popular element, round the eight local centres (these would be nine in the whole, including the central government), then the finances would be placed on a solid basis; and although there would be a transition period, and the security would be by no means perfect at first, yet there would be a steady, wholesome growth in the right direction.

1163. The only difficulty that I see, and I want to ask your opinion about it, is this, that the Government might be very anxious to carry out a measure which might, in fact, be a judicious [illegible]re, but if it were strongly protested against [illegible] by the provinci[illegible]al councils, they could hardly [illegible] carry it out?—No [illegible] ob[illegible]jection, although, on [illegible] ill[illegible] considered Government [illegible] would be checked by native local e[illegible]nce and [illegible] strong sense of personal interest. But what benefi[illegible] scheme is there which has not its weak points? What we really have to look to is balance of good and evil. I am clear that the balance of advantage is on the side of the application of that principle. I consider that the natives have advanced much further in their education than is generally supposed. It would be a very narrow view to consider native education as confined to the "Spectator," Macaulay, and Colenso. They have become politically and socially educated by the Government, the press, intercourse with Europeans, the general impression produced by the teaching of the missionaries and of the Hindoo reformers, the railways, and political events. The Mutiny was a great educator. The Mutiny amounted to a thorough re-conquest of the country, and changed our position towards the natives. Up to that time we were on sufferance, so to speak, in India; since that time the whole of India sees that we are there by our own strength.

1164. In point of fact, education gives no advantage as respects the native opinion with reference to finance, because is it not the fact that some of the best native financiers existed at a period when there was nothing that we should call education; for instance, I suppose that Nana Fardnavis would have managed the finance of the Marahta country much better than we can now?—The natives are exceedingly sagacious and skilful, and they have a speciality for finance.

1165. With reference to direct and indirect taxation, your opinion is strongly opposed to direct taxation in India, as I understand you?—Yes, by the Supreme Government.

1166. You think that even the income tax might be carried out if it were done by the natives?—I think that the income tax might be, in fact it is, applied in principle, in a small manageable way, as a municipal tax. It is not so much an income tax; it is really a tax upon expenditure. The Punch sit down, the five or six head representative men of the place sit down together, and estimate what they call the Gunjaish of the different people, their capacity, their resources; and the way in which they estimate their Gunjaish is really by their expenditure.

1167. But do you see any objection to a [illegible] tax?—I consider that we have a very impo[illegible] poll tax in the salt tax.

1168. I mean a direct poll tax?—I certa[illegible] would not have a separate tax on that footing.

1169. It is the fact that the poll tax exists [illegible] British Burmah, is it not?—Yes, it is peculiar [illegible] that province, and I would not alter it rashly.

1170. And it is also the fact, is it not, that the Mahommedan rulers of India did impose a poll tax upon the Hindoos?—Yes, the Jazia, but they suffered for it. Akbar abolished it; Arungzebe revived it, and that marks the beginning of the decadence of the Mogul dynasty.

1171. Still it was imposed?—Yes.

1172. Are you aware that the Russians are imposing a poll tax in their new territories in Central Asia, and that it is paid most regularly?—I was not aware of it; there may be local circumstances that render it suitable. Those emphatically Mahommedan countries have been accustomed to a poll tax; the Jazia is a poll tax, although by good rights it ought to be levied [illegible] only on Infidels.

1173. I suppose if the limit of the income tax was placed very high, say 10,000 rupees a year income, you would not see any objection to it?—I should see very great objection, because, even so, you cannot get over the question who comes within the circle liable to the income tax. Of course, in proportion as you contract the circle, it becomes less objectionable; but if you confined it to people with incomes of 10,000 rupees a year, you would get nothing worth having; it would not be worth the trouble.

1174. With regard to the public works, I would ask, at the present moment would you not think that it was better to obtain a surplus and to bring our finances into a good state than to carry out any public works whatever except those that are absolutely necessary for the safety of the country?—Yes, I consider that to place the finances in a proper state, and to let India and all the world see that we are able to establish an annual surplus without having recourse to oppressive unpopular taxation, is a more important object than any public work whatever.

1175. *Chairman.*] Do you wish to add anything with reference to the course pursued by the Bombay Government?—As a great point has been made of that transaction with the Government of Bombay about the Congress of Poona and the results of it, I beg leave to put in a Minute which I recorded at the time entirely on that subject.

1176. Mr. *J. B. Smith.*] You have expressed a strong opinion that it is expedient to decentralise the Government of India, and to adopt local governments?—Yes.

1177. How

1177. How many local governments would you adopt?—The existing number of eight.

1178. What are they?—They are Bengal, Madras, Bombay, the Central Provinces, the North Western Provinces, the Punjaub, British Burmah, and Oude; but Oude, no doubt, will be absorbed into the North Western Provinces.

1179. Will you be so kind as to define the functions of your proposed Governments of these several provinces?—I can do it better by defining the functions of the Supreme Government, and then saying that everything else will belong to the local governments. The functions of the Supreme Government I conceive to be, first, the management of the public debt of India; next, to be the organ and manager, so far as the matter depends upon Indian management, of the Home expenditure, that is to say, that all communications in regard to the Home expenditure should be carried on by the Supreme Government, between the Governor General and the Secretary of State; then the diplomacy of India, the foreign relations. But I will mention the subjects in the order in which I find them in Sir Richard Temple's last financial statement: interest on funded and unfunded debt; interest on service funds, and other accounts, which is debt under another form (I am speaking of expenditure now); customs, salt, opium, mint, post office, telegraph, political agencies, allowances, and assignments under treaties and engagements, army, and railways, so far as it may be desirable that the central Government should influence the railways

1180. *Chairman.*] To produce harmony in relation to one another?—Yes, for the same reason for which it takes entire charge of the post office arrangements, I would have the Supreme Government take a limited qualified charge of the railways merely for the purpose of producing harmony throughout India, especially in reference to those railways which pass through more than one administration. As regards those that belong entirely to the same administration, the Supreme Government might leave them to be managed by the local administration. Then the next head is guaranteed interest on railway capital less traffic receipts; there are three heads of debt, and that is the third. Then it will be seen that there are several heads of expenditure which are connected with revenue, and so, perhaps, I had better proceed at once to the mode in which the expenditure of the Government of India, in the performance of these services, should be provided for.

1181. Do you include in "army" all military works?—Yes, all military works whatever. It would be public works as far as the army is concerned.

1182. Sir *G. Balfour.*] You are aware that there are no military public works charged in the army expenditure at present?—No; but I think that the administration which manages the personnel of the army ought also to manage the works of the army. I do not mean that they should have officers of their own to do it; probably it would be done through the public works establishments of the local governments; but still it should be done on the responsibility of the Supreme Government, which would be charged with the administration of the army; it should be for them to say what barracks should be built, and how they should be built, and fortifications and everything else. Then I was going on to speak in reference to the manner in which the services should be provided for. Now, no doubt if we went strictly according to principle, the supreme Government would confine itself to the administration of these services, and would draw upon the different local administrations *pro rata* for the whole of the expense; and the most so, because the whole of the revenue is actually managed by the local administrations, and must continue to be so managed; there cannot be any such thing as the Supreme Government having itself the direct detailed administration of any branch of revenue properly so called. There are incidental receipts connected with some of these services, rather large receipts, for instance, connected with the army, and the post office, and telegraph, which of course would be brought to account by the department which managed those administrations; but with that exception (which is not properly revenue, but merely an incidental receipt of a public service), the whole of the revenue proper always has been, and always must be, managed by the local governments, and therefore the right thing would be, if we proceeded in a perfectly symmetrical manner, that the Supreme Government should charge the cost of those services, minus the incidental receipts, to the different Governments *pro rata*. But there are objections to that principle being fully carried out, because there are some branches of revenue which cannot be entirely attributed to any one administration, but are more or less common to all. I will go through them. The first of these is the customs. Although the customs, both import and export, are collected by the maritime local governments of Bengal, Madras, and Bombay, and a small portion on the North Western Frontier, by the Government of Allahabad, yet the receipts really belong to the whole of India; and it would be impossible to say what portion of the customs duties received at Calcutta belonged to Bengal proper, or what portion came from the North Western Provinces, or other countries beyond; and the same with the Madras and Bombay receipts; and so there is that difficulty. The same in respect to salt; Madras levies salt duty to a great extent from the Central Provinces, Hyderabad and Mysore, and Bombay also from the Central Provinces and various native States. Then, since of late years the Liverpool salt has had such free course in the Gangetic valley, it has been continually encroaching on the Sambhur and other indigenous salts, and has been pushing its way up the Ganges and Jumna, ss that a great deal of the salt revenue, although collected at Calcutta, really belongs to the North Western Provinces. Then, opium is an anomaly altogether. Opium is managed entirely by the Government of Bengal; but the field of the monopoly, the district in which the opium is grown, is partly in Behar under the Government of Bengal, and partly in the North Western Provinces and Oudh, and there is a talk now of extending it to the Punjaub, which I hope will not be done. Then Mints, I think everybody will agree, are an Imperial central affair. The Mint at Calcutta is actually under the Government of India, and it would be well if the Mint at Bombay were so also.

1183. Mr. *Dickinson.*] Is the Mint at Bombay necessary at all?—Yes, I think so; I could give reasons for that. The Madras Mint, however, was abolished with great advantage. The paper currency,

rency, as being part of the monetary system, ld be under the Supreme Government. Then, ost-office, of course, is general; the tele- of course, is general. As regards the have already given my reasons for pro- that it should be under the Supreme ernment.

1184. What about marine?—That ought to be ocal entirely; in fact we ought to have no marine establishment at all. It is difficult to invent excuses for having any marine at all, because now, besides the abundance of freight ships, there are capital lines of passage and freight steamers round all the coasts of India and the adjoining countries. The way in which I would provide for the expenditure of the Government of India is, first, by appropriating to the Government of India the entire produce of the Customs. Of course the analogy of the United States will be remembered; it is through the Customs that the expenditure of the central Government of the United States is provided for. Then I would appropriate to the Supreme Government the entire produce of the salt duties, and the entire net produce of the opium monopoly, and the entire produce of the Bombay export duty upon opium, and the receipts from the Mints, Post-office, and Telegraphs; the incidental receipts of the army, and, of course, the railways.

1185. Mr. *J. B. Smith.*] Stamps?—No; stamps would be essentially local. I calculate roughly that the expenditure, according to the present scale of the Government of India, according to this scheme, would be something less than 30 millions a year, and that the ordinary available income would be something [illegible] 20 millions, so that the balance, whatever it might be, would have to be declared from year to year by the Supreme Government when it made up its Budget, and would have to be apportioned among the local governments; and I should hope that it might be done simply by a *pro rata* charge upon their respective revenues. There has been a great deal of loose partial discussion on this subject in former years, without our having had any clear idea of what we were aiming at, and it was always the army expenditure which put everything out of joint. There was always a question going on between the military and the civil expenditure in the Provinces, and local governments, which, excluding the army expenditure, would have a considerable surplus, the moment you include the army expenditure are thrown into deficit. That thorn would be extracted, according to my proposals, by eliminating the army expenditure in the first instance; for instance, take the Punjaub, which has a disproportionate amount of military force; the military force in the Punjaub would all be attributed to the Supreme Government, and, except so far as the Supreme Government would, from year to year, apportion upon the Punjaub its allotment of the balance of the expenditure of the Supreme Government after taking into account the branches of revenue specially attached to it, that Province would be left with a clear surplus over its ordinary current expenses. Then we come to the influential result of this. In the first place the Supreme Government would be put upon its good behaviour in regard to expenditure. It would not really have much to do with the income, because, as I said, that would continue to be managed by the local governments; but still it would have to look after customs, salt, and opium, and see that they were made the most of. But as regards expenditure the Supreme Government would come under a powerful motive to economise. My belief is that when the Supreme Government, instead of making up the Budget for the whole of India, which is an unmanageable confused thing, shall be limited to the expenditure for which it will be itself responsible, it will look to it in a way it never has before. The thing will be manageable, the Supreme Government will be able to do it, it will have it well in hand, and will have the strongest motive to do it well. My belief is that the army expenditure will go rapidly down when the whole 16 millions (including the Home expenditure, the estimated cost of the Indian army for 1872–73 is 15,862,000*l.*, besides a large charge, in the Public Works Department, for military buildings), which it has now grown to, a most preposterous sum, is charged to the Supreme Government, for then whatever savings the Supreme Government may able to make from year to year, will go to diminish the deficit on its annual Budget, and so far to diminish its claims upon the local governments. Then there would be an incidental advantage in opium being put into the Budget of the Supreme Government. We are never tired of remarking the confusion which the opium revenue introduces into the Indian accounts from its variableness; but if it were safely deposited under the Supreme Government, with the power of drawing upon the local governments for the difference I think we should hear much less of the variableness of the opium revenue. Then, to turn to the local governments, the motive to economy on their part would be more powerful still, because they would have the entire balance. After deducting their own necessary expenditure for establishments, and so forth, and the annual allotment in aid of the expenses of the Supreme Government, the entire balance would belong to them; and that brings us to the real motive for economy.

1186. How would you appropriate the land revenue?—Under the local governments entirely; that is essentially local; and more than that, the management of the land revenue is a great deal more than collecting so many rupees. The assessment of the land revenue is a point of the most vital concern. How the land revenue is assessed determines whether the great agricultural population of India lives in a state of comfort, or even affluence, or in a state of misery; I have seen both states of things, both extremes. I have seen by mismanagement of the assessment, by over assessment, whole districts depopulated, to our disgrace, and taking refuge in the adjoining native States; and I have also seen large wide districts living in a state of the greatest possible comfort and well-being, all owing to the good management of the land revenue.

1187. You would propose that the Councils should be composed of natives as well as of Europeans?—Yes; from the first I would have a scheme of representation. Take the Madras Presidency as an example; I would have a representative from every one of the 19 or 20 districts of the Madras Presidency, and others from the principal towns, to be selected by the Government in the first instance.

1188. Do you mean natives?—Yes; I would also have a senatorial element, composed of official people selected for the purpose.

1189. Do

1189. Do you propose that these representatives should be selected by the Government?—In the first instance by the Government; but although selected by the Government, if they were properly selected, and if real representative men were taken, they would be as really representative of the respective districts as if they had been elected by popular ballot.

1190. Now would you propose that there should be in each locality a separate Board of Works?—I propose that the administration of the public works should be entirely decentralised and placed under the respective local governments.

1191. But those would comprise only local works; works belonging to that province?—Only belonging to that province certainly.

1192. But how would you do in the case of these great irrigation works which have been paid for by the general Government?—I would localise them. If irrigation works are worth paying for, and likely to be profitable, the local governments would provide for them, and I consider that to relegate those great irrigation works to the respective local governments in whose provinces they are situated, will furnish the best security for their being dealt with in the best possible manner, either by discontinuing them altogether, or by limiting them, or by completing them. You will find sufficient evidence of that in the report of the Governor of Bengal, which has just come.

1193. The whole of the railways throughout India you would propose to place under the general Government?—As the railways are, like the post office and telegraph, a means of general communication, I think that the general Government must have the power of determining, subject to certain general conditions, how far it will administer the railways. As far as possible I would have the detailed arrangement of the railways left to the railway companies in communication with the local governments.

1194. You gave some evidence about export duties, and you appeared to think that in many cases they were justifiable?—Yes.

1195. Now I think that you instanced the case of jute, which is an article which is not grown by other countries?—So far as I can obtain information it is grown in no other country than India, and in India only in a particular district, Eastern Bengal.

1196. But now the Bengal settlement is such that it prohibits us from deriving any benefit from the increased value of the land in Bengal?—Yes.

1197. But millions of money have been expended by the general Government in that province which have probably doubled or trebled the value of the land?—Far more than that.

1198. Would it be unjust, therefore, in your opinion, in consideration of the advantages which these people have derived from this expenditure, to place an export duty on their produce?—No; on the contrary, it would be highly just. As regards opium, we do that with a vengeance; we take three-fourths of the net produce of the opium. As regards jute, I would only propose to take 3, or at the most 5 per cent.

1199. Is not India at large entitled to some compensation for the vast sums spent on the province of Bengal by the Government?—Yes, certainly the Government has made an enormous sacrifice in limiting its claim to land revenue in Bengal, and thereby has increased the burthen of taxation upon all the rest of India; therefore, so far as we can do so consistently with good faith, we ought to replace a portion of the burthen upon the province of Bengal.

1200. Can you suggest any means of doing so, except that of a duty on exports?—No. As the municipal taxation is common to the whole of India, that cannot be regarded as a means of making this readjustment of taxation of which you speak. Therefore the only mode of which I am aware, of doing this justice to the rest of India is by placing such a moderate export duty upon the products of Bengal as it can bear without injuring the trade.

1201. It would be no injustice to Bengal if we tax their produce without taxing the other provinces, would it, inasmuch as the land settlement in all the other provinces of India is a limited one, and the Government derives the advantage at the expiration of the settlement of obtaining a larger revenue from the land?—The circumstance of the limitation of the land revenue in Bengal, and the wonderful pecuniary advantages which have been obtained by the landowners of Bengal thereby, is a reason for imposing any just, and proper, and moderate tax which can be levied on the province of Bengal. But whatever tax is levied, I would make it common to the whole country. If jute is grown anywhere else than in East Bengal, I would take the same tax from it. There are other articles produced in other parts of India, upon which I consider that a moderate export duty should also be levied; for instance, hides, and one or two other things which I could name.

Friday, 7th March 1873.

MEMBERS PRESENT:

Mr. Ayrton.	Mr. Grant Duff.
Sir George Balfour.	Mr. Eastwick.
Sir Thomas Bazley.	Mr. Fawcett.
Mr. Beach.	Mr. Robert Fowler.
Mr. Birley.	Mr. Hermon.
Mr. Bourke.	Mr. Lyttelton.
Mr. Baillie Cochrane.	Sir Stafford Northcote.
Mr. Cross.	Mr. John Benjamin Smith.
Mr. Beckett Denison.	Sir David Wedderburn.
Mr. Dickinson.	Sir Charles Wingfield.

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

Sir CHARLES EDWARD TREVELYAN, K.C.B., called in; and further Examined.

Sir *C. E. Trevelyan*, K.C.B. 7 March 1873.

1202. *Chairman.*] Do you wish to make any further explanation with reference to the evidence which you gave about the supplementary estimates for public works in Bombay?—Yes. When I was last before the Committee I asked leave to put in a Minute which would fully explain the state of the case as regards the large number of public works which the Government of Bombay took upon itself to commence without the sanction of the supreme Government. That is dated the 11th January 1864. And I beg leave to add to that another Minute, dated the 1st of February, 1864, in fact, immediately following the other, relating to a precisely similar transaction, in which the Bombay Government took upon itself to order the payment of additional money allowances to civil establishments to the extent of five or six lacs of rupees. I will read a short extract from each, to show the point of the case, but the Minutes themselves will probably go into the Appendix, if the Committee so determine. This is from the first Minute about public works:—"But the Government of Bombay took the further step of ordering the immediate execution of a large portion of the works without waiting for the sanction of the Government of India. Nothing short of an urgent exigency of the public service, involving consequences of serious loss or disaster if immediate action be not taken, can justify the exercise of such a discretion; and the existence of such an exigency is not even alleged. Such a practice is entirely subsersive of financial control. Every Government in India might, with equal propriety, exercise a similar discretion, and the State would then become insolvent, and all sorts of projects would be commenced according to the views of the different Governments, without a possibility of revision." Then from the other Minute about the Civil Establishments, I will read this:—"In August last, the Bombay Government, acting without the knowledge or sanction of the Government of India, ordered the immediate commencement of numerous public works, included in a supplementary estimate for 56 lacs of rupees; and now it has in like manner committed us to what must be considered a permanent annual charge ... amount mentioned in the preceding paragraph,' namely, "from five to six lacs of rupees a year." "The financial administration of India will b impossible if each local government exercise the discretion of incurring such liabilities as this Example is contagious, and advantages secured by one Province cannot easily be withheld from the rest. By this assumption of power the regulation of the finances has been virtually transferred to the Government of Bombay; and it only remains for the Supreme Government to provide funds to meet any expenditure which the local government may think proper to incur. If the Government of India is to be responsible for the finances of the whole of India, its control over the income and expenditure must be of a real and substantive character; and it is one of the greatest merits of the budget system that, by means of it, this control may be maintained without interfering with the necessary freedom of action of the local governments."

1203. Do you wish now to add anything to the evidence that you gave with regard to the aggregate estimate for the barrack expenditure?—Yes; a confusion was made in some of the questions put to me on my last day's examination between the aggregate estimate for the new barracks and the actual expenditure on them, the fact being that I had only alluded to the aggregate estimate. In order to make this point quite plain, and also to show what a very serious stumbling-block this great expenditure, spread over such a very short period, was to the finances of India, I beg leave to read two extracts; one from my last financial statement, and the other from Mr. Massey's second financial statement. This is from mine: "The paramount necessity of providing the barracks required for the health of the European troops, and the works of defence upon which the public security depends, has long been admitted, but the preliminary arrangements have only lately been completed. The total outlay will, probably, not be much less than 10,000,000*l.*, including the cost of establishments; and the work is obviously one which ought to be carried

carried on as fast as the requisite preparations can be made. The expenditure on this account for 1865–6 is estimated at 1,000,000 *l.*, after which it will proceed at an increased rate until the object has been accomplished. Whatever may be the general objections to providing for any portion of the public expenditure by means of loans, it is evident that the large sums which will be required for some years to come for military works cannot be furnished from the revenue of the year, in addition to all the other demands upon it, without an increase of taxation which would interfere with the prosperity of the country, and that it would not, therefore, be right to impose on the existing generations the entire charge for works which are intended for the public service for all time to come. This principle has been acted upon in the parallel case of the dockyard fortifications in England. The argument applies with increased force to new works for irrigation, which, properly managed, include their own sinking fund; and, in reference to these, it has been determined by Her Majesty's Government that 'when the surplus revenues and available balances prove insufficient to supply the requirements of the country, funds, by means of loan, shall be raised.' It will be proposed to the Secretary of State that relief shall be afforded to the revenue of 1865-66 to the extent of 1,200,000 *l.*, which will be raised by loan in England, and the drafts upon India will be *pro tanto* diminished." Mr. Massey, in his financial statement, says, on the same subject, "In the estimate for public works there is one conspicuous item which covers one-third of the whole grant. I refer to the head of military works, consisting chiefly of the new barracks which are to be constructed at almost every military station in India, at a cost, on the whole, of nearly eleven and a-half millions, to be spread over five years;" so the estimate had gone up a million and a-half since my time. "These extraordinary works commenced in 1865, and at the close of the present financial year upwards of 1,800,000 *l.*, on account of these works will have been defrayed out of ordinary revenue. The estimate for 1867-68, after making all proper abatements, is nearly two millions. In the following year we shall have to provide 2,800,000 *l.*, and in 1869-70 2,700,000 *l.* will be required to complete these great works. We might, of course, have lessened the annual expenditure by spreading it over a wider space of time, but looking at the question on the mere ground of economy, without any regard to higher considerations, there can be no doubt that economy can be best consulted by making the earliest possible provision for the health and effectiveness of the army quartered in this country. I should have preferred to go on as hitherto, defraying this charge, special and temporary as it is, out of the revenues of India. If a financier were to lay down any precise rule of separation between ordinary and extraordinary charge, there is scarcely a year in which he might not have a plausible pretence for transferring charge from revenue to capital account. I do not know how long such a process might go on; but sure I am that it would end, sooner or later, in a collapse of public credit. Questions of this sort are practically to be determined, not so much by rule as by circumstances. I must remind you that we have to propose new taxation this year. Are we still further to increase that taxation on account of new barracks? In other words, is all the cost to fall on the taxpayers of the day, and all the benefit to be derived, without any other cost than the annual repairs, by the taxpayers of 1870 and future years? We think we are not warranted in extending taxation for such a purpose, and that we shall fulfil our duty if we provide all that we can out of revenue, and throw a part of the burden on our successors. We shall borrow a million towards the construction of barracks in the ensuing year, and even after this million has been borrowed, the remaining million will be charged to the revenues of the year." Although the loan which I had recommended for the same purpose was disallowed by the Secretary of State, when it was brought forward again by Mr. Massey, it was sanctioned. But what is more remarkable still, this process of borrowing for barracks was a second time disallowed by the Home Government, who finally determined that borrowing should be confined to what were called reproductive works. It was this immense expense forced upon the Government of India within such a short period (I use the word forced deliberately), which rendered it absolutely necessary to borrow, to enter upon a system of loans, for although the loans were finally raised under the name of reproductive works, the necessity which caused them really was connected with the barracks.

Sir *C. E. Trevelyan*, K.C.B.

7 March 1873.

1204. You wish, I think, to add some observations to the evidence you gave us with reference to the metre or narrow gauge railway system that has been recently introduced?—Yes; in some questions that were put to me on this subject it seemed to be doubted whether I was a competent witness upon it, which makes it proper for me to mention that on my return to England, after 12 years' service in India, owing to my connection with the Cropper family at Liverpool, I found myself in the thick of the railway question, in its early stage of development, when the question of the gauges especially was stoutly contended. After that, during my 19 years' service at the Treasury, I cannot remember on how many occasions the question of narrow gauge, and light railways, and tramways, and so forth, came before me as head permanent officer of the Treasury, especially in reference to the proceedings of the Exchequer Loan Commissioners, as they were at first called, afterwards Public Works Loan Commissioners; and I also had to consider the subject in connection with affairs in which my own family were interested in Somersetshire, Devonshire, and Northumberland. With that state of preparation, I went as Financial Minister to India, and I found myself at once plumped into the midst of a controversy on the subject. There was a company called the Indian Light Railway Company, of which a Mr. Wilson was the managing man in India, and he was looked upon with favour by the head of the Department of Public Works. A short line of light railway had been established connecting Moorshedabad with the Hooghly, called the Nulhattee Railway. That was afterwards completed soon after I arrived, and it was pressed upon the Government to establish a system of light railways over the whole of Oude and Rohilcund; that is, leaving the East India Railway at Buxar, it was to cross the Ghazepore and Azimgurh districts into Oude, including the very important piece of railway between Cawnpore and Lucknow, and, so on through Rohilcund, until it

Sir *C. E. Trevelyan*, K.C.B.

7 March 1873.

rejoined the East Indian Railway near Seharunpoor. It was pressed upon the Government to include all this in a system of light, narrow-gauge, railways. Applying all my previous experience to this question, and also applying to it the Indian experience which I had acquired during my former service in Bengal and at Madras, I soon came to a decided opinion against the narrow gauge, and I expressed that opinion, with my reasons for it, in a series of Minutes, from which I have extracted the parts which immediately relate to this subject; and as the matter is of the utmost public importance, and is at present of urgent interest, inasmuch as if the narrow gauge system is not stopped now, we must reconstruct all the railways of India on the narrow gauge, I beg to be allowed to make these extracts part of my evidence. There is also an important letter from Major De Bourbel, of the Royal Engineers, old Indian branch, to me; he is a remarkably intelligent officer, and I requested him, on his way up country, to look in upon the Nulhattee Railway, and to write me about it.

1205. Sir *C. Wingfield.*] Was this the narrow gauge metre; it was not as small as that?—That I cannot say.

1206. Not so narrow as the metre which they now adopt?—I think not; but the question of principle is between the standard Indian gauge and any narrow gauge. I am speaking of what ought to be considered trunk lines; of course, where you come to a mere branch railway it is another thing.

1207. Sir *Stafford Northcote.*] What was the ultimate result of that?—The intention then was to make the Oude and Rohilcund system of railways according to the subsidy system advocated by Lord Elgin, that is, that the Government should give a lump sum per mile, and leave the profit and loss entirely to the company; but the funds could not be raised by this Light Railway Company, and so it fell to the ground; and the Oude and Rohilcund system has since been taken in hand by a solid company on the guarantee system, and the railway is in process of construction on the standard gauge.

1208. Mr. *J. B. Smith.*] You stated that, in your opinion, with regard to Bengal, in consideration of the large expenditure by the general Government in that province, and the increase in the value of land which had resulted from it, we might justly impose an export duty on its produce; but you stated that you would also levy a like export duty on the other provinces; do you see no distinction between the two cases?—No distinction in principle at all. I consider that all taxes ought, as far as possible, to be equal; and a moderate export duty on an article of Indian produce, which has a decided superiority in the markets of the world, is an equally good subject of taxation, whether it is produced in Bengal, or Madras, or Bombay, or any other part of India. I, however, think that the circumstance of the landowners of Bengal, who would be the class principally affected, having been so highly favoured by the limitation of the demand of the Government upon them, makes it specially appropriate as regards them, and it would take away from them all ground of complaint.

1209. Is there not this distinction, that in all improvements and outlay by the Government upon the provinces in general, they return an equivalent in a constantly increased rent of their land, whilst Bengal gives no equivalent whatever, and does not allow of any increase in the rent of her land; so that the outlay upon Bengal is made at the expense of all the other provinces?—Bengal gives no equivalent in the shape of an increased land revenue; but she gives a magnificent equivalent in the shape of indirect taxation. Bengal is still the treasury of British India, our great financial reserve. The net annual surplus, everything included, is about 12 millions sterling.

1210. What articles do you refer to?—Salt, stamps and taxes, excise, opium, of course, and so forth. The surplus revenue of the other provinces is not to be compared with that of Bengal. Madras comes next, but still Bengal is greatly in excess.

1211. But does not that arise from the position of Bengal?—It arises partly from its position, but also to a great extent from the fact of the land revenue having been fixed 80 years ago. That has led to an increase of cultivation, and a great development of wealth which could not otherwise have taken place.

1212. But you cannot call customs revenue belonging to Bengal?—Well, there are 67,000,000 of inhabitants in Bengal, that is a large proportion of the population of the Gangetic Valley; in fact, it is the great bulk of the population of the Gangetic Valley.

1213. Mr. Campbell, the Governor of Bengal, in his recent report, states that the rental of permanently settled estates in Bengal is now 10, 15, 16, and even 120 times the Government revenue at the time of the permanent settlement, although the officers who made the settlement in 1793 intended at that time to reserve for Government 10-11ths, and to leave to the zemindars 1-11th of the rental of the country?—It must be remembered that in the majority of cases in which the present rent of the land in Bengal so vastly exceeds the Government jumma, it is owing to new cultivation. A large proportion of Bengal was in a state of jungle at the time of the permanent settlement, and it was the confidence that the undertakers would receive the full benefit of their outlay and pains, which induced the breaking up of this large proportion of waste land. This brings us to the general question of the permanent settlement.

1214. Has not the land risen very much in value; have not rents very largely increased since the opening out of the railways and the canals in Bengal?—Yes, but that applies to the whole of India; rents have very much increased all over India. In the last 15 years especially; owing to the great rise of prices, the agricultural population have been placed in a state of abundance which is unprecedented.

1215. But with regard to the increase in the rents of the other provinces, the Government share in them, and so get compensation for their outlay on public works, but they get no share in the increase of the rents in Bengal?—They get no share in the shape of increase of rent, but, as I mentioned, they get a full share in the shape of the increase of other sources of taxation, and also in the shape of diminished expenditure arising from the contentment of the people. Bengal is not only a treasury, it is also a citadel.

1216. But if the owners and the cultivators of land, in consequence of the great expenditure by the Government on railways and other modes of conveyance, are able to bring their produce to market at a much cheaper rate, ought they not to pay something for this disadvantage?—Certainly, but they

hey do pay something, and a great deal. Mr. Campbell gives the surplus revenue of Bengal at 12 millions sterling. It is enormous; it is our great stand by, our great reserve.

1217. Then you are still of opinion that if any export duty be levied, it ought not to be confined to the produce of Bengal?—No, I think that, as regards each article upon which export duty is levied, the export duty ought to be made general to the whole of India.

1218. You stated that you would have each province govern itself, and that the revenue should be applied to the expenditure of the province. Would you give any control to the general Government over the expenditure of the province?—In the first place, I would have the general Government deduct, according to a well-considered plan, the proportion which each province should contribute towards the deficiency of the branches of revenue immediately assigned to the Supreme Government; and then I would give the Supreme Government an absolute control over the finances of the local governments as regards new taxation, and as regards the incurring of debt; and, beyond that, as the Central Government is the Supreme Government of India, and there must be a Supreme Government, the functions of which in case of emergency cannot be limited by any strict rules, they would have the power of commenting upon, and issuing orders on, any subject whatever; but the ordinary distribution of functions and responsibilities would be what I have recommended.

1219. You have complained of the extravagant expenditure in Bombay, and you said that the general government disapproved of this expenditure, but that they could not control it. In what way would they be able to control it under your plan of separate provincial governments?—In the first place, I think that the people of Bombay would look after it, because, at present, the people of Bombay, that is the influential people, the European and native merchants and bankers, and the classes of people who directly influence the local government, know that it is not really their own money which they are spending, but the money of the other provinces of India; and, therefore, under present circumstances, excessive and profuse expenditure is highly popular in Bombay; but if the finances were localised, and these classes of people in Bombay knew that they were spending their own money, and that if there was a deficiency, they would have to make it good themselves, they would be careful how they exceeded; and then there would be the control exercised by the Supreme Government over new taxation and borrowing. As deficiencies can only be made good from one of those two sources, it seems to me that the control of the Supreme Government would be complete.

1220. Did the merchants of Bombay make any complaints of the extravagant expenditure by the Governor of that province?—No; the course of profusion followed by the Bombay Government was highly popular with the merchants of Bombay.

1221. And might it not be so again under your plan?—No, for the reason which I mentioned; because they would be spending their own money.

1222. Then do I rightly understand you to propose that the general Government should have a veto on any expenditure which they think improper by the separate governments?—No, I think not; they should have a veto upon taxation, and a veto upon borrowing; but the ordinary expenditure should be left to the local governments, with a power on the part of the Supreme Government to interfere when any changes proposed in the local expenditure have a bearing upon the general administration of India. For instance, if the Government of Bombay were to propose to give much higher salaries to its civil or military officers than are given in other parts of India, that would be a case for the Supreme Government to interfere. In fact, that is the function of the Supreme Government, to look to the general interest, and to maintain a harmony throughout the empire.

1223. Now take the case of Madras, where there are ancient watercourses and irrigation works; would you allow the Government of Madras to repair these works, and to erect such other works as they may think necessary for the benefit of the public?—Certainly, I would not interfere with their doing so.

1224. Supposing that additional means were required to effect these objects, would you allow the provincial government to borrow the money for that purpose?—It would be a fair subject for consideration; but my belief is, that if the finances of India were localised in the way proposed, there would be ample for everything, including public works, and the supposed necessity for new provincial taxation would cease; I wish provincial taxation to be distinguished from the purely municipal taxation of towns and villages; that must always go on, and also of districts, for roads and so on; but the necessity for new provincial taxation, such as has lately been imposed by the Government of Bombay, would cease to exist altogether.

1225. Then you would not authorise the separate governments to raise loans for any objects that might be required?—Not without the sanction of the Supreme Government; and the general objections to the loan system are so strong that a very decided case ought to be made out in order to justify a loan.

1226. You are, no doubt, alive to the importance of cheap carriage for the conveyance of the produce of India?—Yes.

1227. The produce of India being itself of little value, it is of the greater importance that it should be carried at a cheap rate?—Yes.

1228. I believe when you were Governor of Madras you took great interest in that question?—Yes, I did. I went into the whole question of railways, and exerted myself very much; and I well remember that I came to a very decided conviction that the principal change that was wanted to make the Indian railways productive, was to lower the rates both upon passengers and upon goods, because India, although it produces exceedingly rich commodities, nevertheless is itself a poor country; that is to say, the people are poor.

1229. According to the Report of the Indian Railways, it appears that the average charge for merchandise throughout all India is 2·18 *d.* per ton per mile. Now, that is only half the cost; the railways in India only yield a return of one-half their cost, and therefore the Government, in effect, add another 2 *d.* to the 2 *d.* which is charged by the railway companies; they make a present of 2 *d.* per ton per mile on all the goods carried. Now,

Sir *C. E. Trevelyan*, K.C.B.

7 March 1873.

do you think that at that extravagant rate it is possible to carry the chief produce of India with advantage?—My belief is that, if the rate was lowered both upon goods and passengers, the railway traffic would rapidly come up to its maximum, I mean come up to the full existing powers of the railway, and that we should get a great deal more than we get at present, and that the incidental advantages of the railways, which, after all, are the great advantages, would be wonderfully increased; I mean their incidental benefits in stimulating and promoting the whole machine of society, and traffic, and business of every sort. In regard to passengers it amounts to demonstration, because the bulk of the people, 99 out of 100, are what we should call poor men; they can only afford very small payments; so that if we wish to fill our third-class carriages, we must make the rates very low.

1230. Do you think that when railways are made in India, they should be made for the accommodation of the towns of India?—Both town and country. At Madras they were so arranged that it seemed as if the towns were intended to be expressly excluded, a theoretical straight line was taken without any reference at all to the towns.

1231. Were you Governor of Madras at that time?—No, that was all done before my time; I commented upon it.

1232. It appears that for 400 miles of the Madras Railway it has not a single town, whilst on the line there are two towns of 15,000, one of 10,000, one of 11,000, two of 100,000, two of 40,000, and two of 30,000 to 40,000 inhabitants?—It was a most unfortunate arrangement, but we must not be too hard upon the Indian administrators of that day, because our own enlightened towns, such as Oxford, Worcester, and Northampton, determined for themselves the same arrangement, and forced the main lines of railway to pass them at a considerable distance.

1233. But was there any opposition to the railway being brought to the towns in this case?—Not at Madras; it was our own enlightened administrators that did it.

1234. In India what was it?—The Department of Public Works.

1235. Not the inhabitants themselves?—No.

1236. I believe you took considerable interest as Governor of Madras in the opening up of the Godavery River?—Yes; I spent some time on the Godavery, and went up it a good way, and went fully into the subject.

1237. The object being to bring the produce of Central India to the port of shipment at a cheap rate?—Yes, a most attractive project; there being no cheaper conveyance in the world for bulky raw produce than the downward stream of a river.

1238. For instance, the article of cotton, of which Berar grows the finest quality, had no means of exit at that time when you were Governor of Madras, except by carrying it on the backs of bullocks 500 miles to Bombay?—That is the case.

1239. But the River Godavery runs through this cotton district for more than 100 miles?—Yes; and its affluent, the Wurdah.

1240. Now, if that river had been opened out, which might have been done at a much less expense than a railway, the consequence would have been that that produce would have been brought to market at a very low rate; cotton, timber, and other produce on the borders of the Godavery?—Yes; if the river had been opened out it would have been so.

1241. You are aware that coal has been found in the Godavery since that time?—Yes; in my time there was a strange discovery of a lump of coal in the Godavery, and nobody could tell whence it came.

1242. Mr. *Eastwick.*] What size was it?—Not very big, but still evidently a product of the country washed down.

1243. Mr. *J. B. Smith.*] Now it appears that it is some 70 miles from the place where the coal has been discovered to the railway; are you aware that instead of opening out the river for that distance, they propose to make a railway?—I have not entered into that question. My impression is that it is quite right that the coal mines should be connected with a railway, and if the navigation of the Godavery is completed, of course they will be connected with the Godavery also. There is quite enough demand for coal on both sides to justify both works.

1244. But your opinion is unchanged as to the desirability of opening out the rivers where practicable, to enable the conveyance of the produce to be effected at a cheap rate?—Yes, quite unchanged. I may say in my own justification that when I took this interest in the Godavery works, no complete estimate of the works had been formed; the whole transaction was in its germ. Very early in my Indian service, when I was political agent at Kotah in Central India, I was very much struck by the beautiful deep still water of the Chumbul in that neighbourhood, and I sent one of my native officers to make a survey of the river all the way to Jumna.

1245. You are so well acquainted with the financial state of India, that I should like to put this question to you. According to the last Budget, as far as I remember, there is a surplus of 250,000 *l.*, but that surplus arises from the opium revenue unexpectedly exceeding the estimate by upwards of 2,000,000 *l.*; if the opium revenue had not produced that sum, there would have been a large deficiency. Now, it is proposed to spend, I think, about 30,000,000 *l.* on narrow gauge railways, chiefly for political objects. Do you think that it is wise, in the present state of the finances of India, to go into the market to borrow money for such objects?—Yes; I have long been of opinion that it is essential, not only for the opening of the trade of the North West, but still more for our political safety, that we should complete the railway communication from Lahore to Peshawur, and also with a view to dispose the warlike population of that region to peaceful pursuits; for, although very warlike, they also have a strong mercantile genius, and nothing would pacify that frontier more than opening a railway to Peshawur; I think that it ought to be done as a military and political measure for the benefit of the whole empire; even the commercial returns will not be despicable at all; the railway, for instance, will strike the great salt range.

1246. The estimated outlay of a railway from Lahore to Peshawur is only 3,000,000 *l.*, which is 10 per cent. only upon the proposed outlay in India; the remainder is for other lines?—Then I had better express the whole of my opinion. I am also of opinion that the railway should be completed between Moultan and Kotri.

1247. Sir

1247. Sir *G. Balfour.*] But not of the narrow gauge?—No, full gauge.

1248. Mr. *J. B. Smith.*] You perhaps have not paid much attention to the returns that are likely to be produced; it is not calculated that there will be any returns on this railway; but it is expected that there will be a deficiency, and perhaps you may form some idea of that from the fact that the Scinde, Punjaub, and Delhi Railway, which cost 15,000,000 *l.*, made in 1870 a return of 11 *s.* 6 *d.* per cent. only, and that since that time the returns have been even more unfavourable and against it than that?—Well, in the first place, I would not do it all at once, according to the favourite modern plan. I consider much the most important of those two lines politically is the Peshawur line; I think that that ought to be gone on with throughout. The other would keep; and in the meantime the country would be becoming more flourishing, and trade increasing. And I also think that if the rates upon passengers and goods were reduced to a level with the capacity of the people of India, the profits of all the railways would very much increase, especially in those high and dry regions where the produce is of a bulky kind, chiefly grain. The great staple of the Punjaub is dry grain; and my belief is, that if the communication by rail were completed with Kurrachee, we should get a great deal of wheat to reinforce our English market.

1249. Then under any circumstances you would complete the railway from Lahore to Peshawur?—To Peshawur, certainly, without unnecessary delay. The other, I think, will keep, and will be the better for keeping; but still, it will have to be done sooner or later.

1250. You would lay it down as a general principle, would you not, that it is not wise in the present state of our finances to incur further debts for objects which are not likely to pay?—Not for speculative objects; for instance, such objects as the Saone Irrigation Works. I consider that a very doubtful speculative object, a gigantic irrigation work on that scale; I think that very likely to turn out like the Ganges Canal, or, worse than that, more like the Orissa Irrigation Works; because the climate of the Saone country is quite different from that of Madras or Northern India; it is closely connected with the great mountainous and woody districts in the interior, and in ordinary seasons they have plenty of rain; it is not water that they want.

1251. Mr. *Lyttelton.*] Is it your opinion that one of the very great advantages of the system of the permanent settlement, consists in the sense of security given to the cultivator?—Yes; I conceive that the institution of property in land cannot be properly said to exist unless the demand of the Government is limited; that is to say, unless the demand of the Government upon the income of the landowners is equalised with that upon the income of all other owners. Even in the case of a long lease, a 30 years' lease, which is the existing practice, I consider that the motives and encouragements implied by the institution of property exist in a very imperfect degree; because, although it is a 30 years' lease in the first year, it is only a 29 years' lease in the second, and a 28 in the third, and so on, till at last it dwindles to a narrow margin, and they actually begin to deteriorate their lands. I remember when, as the leases approached their expiration, instead of thinking how they should increase their cultivation, they used to arrange to diminish it; they used to fill up wells, and obliterate them so that one could not see where they were, and so on. Then I think the question may be tested on a large scale by comparing the results. However elaborate the investigations may be in what are called the revenue settlements, that is, in assessing the land revenue or the proportion of the rent to be taken by the Government, it really after all entirely depends upon the opinion of the settlement officer: no doubt about it. I have made settlements myself, and so I know; it was a terrible responsibility, that is to say under the old state of things, when the object was to get as much as you could for the Government; the responsibility was awful, and I was very glad to have done with it and go into another line; but even at present when we are exceedingly indulgent, and only take half what we suppose to be the net produce, it depends upon the accuracy of the information, the accuracy of the calculations, the individual judgment of the settlement officer, whether it should be for the next 30 years a happy, wealthy, well-to-do village community, or one which would have a prolonged struggle. Now compare with that, Bengal. Bengal is the garden of India; it is a wonderful country; notwithstanding all the mistakes which were made, and the deteriorating, disqualifying circumstances, especially the fact that the persons with whom the settlement was made were not really the owners; notwithstanding all that, Bengal has flourished wonderfully under the permanent settlement. Two great mistakes were made in making the permanent settlement of Bengal; one, that the settlement was made in reference to all land, whether cultivated or uncultivated, and consequently, as about a third of Bengal was then waste, the Government, that is, the taxpayers of India, lost the benefit of the land tax upon that third; the other mistake was the one which I have mentioned, that instead of making the settlement with the real proprietors, the old peasant proprietors belonging to the village communities, we set up an ideal proprietary class of our own, taking the collectors under the former Governments and others. Of course, in extending the permanent settlement we should avoid these errors. In fact, the matter was discussed and fully gone into for the fiftieth time a few years ago, when Lord Halifax was Secretary of State; it was very fully considered, and a very wise decision was come to, namely, that, so far as any district might be considered to be fully cultivated, the advantages of a permanent settlement should be conceded, but that they should be withheld from districts that were only partially cultivated. Now, that seems to me exactly to hit the point. If a permanent settlement is made on those conditions we can lose nothing; that is, the public can lose nothing under the head of new cultivation, because the cultivation is complete. The only loss to which it can be subjected would arise from the increase of prices, the depreciation in the value of money, say, and the increase of prices, either from that cause or any other. No doubt the Government would lose the opportunity of increasing the assessment at a future time, but I consider that any possible loss from that cause would be far more than compensated by the general well-being and development which would arise

Sir *C. E. Trevelyan*, K.C.B.

7 March 1873.

from the fact of the demand of the Government upon the land being limited. I consider that those instructions ought at once to be applied, that is, with all proper consideration and care, to such districts as Tanjore, to the great bulk of the North West Provinces, and so forth.

1252. You are aware that this Committee have recommended the suspension of the operation of that system?—Yes; but I must express my independent opinion, it is the opinion of a whole life; my Indian service commenced in the year 1826, and I have had the subject constantly before me, discussing it with all sorts of people; I have been three times to India, and I have seen the land system of India under all its phases; I have seen it under the permanent settlement of Bengal, under the ryotwar settlement of Madras, and under the village settlement of Western India.

1253. You consider, in fact, that the Government will be recouped by the increased prosperity arising from a system of permanent settlement?—Far more than recouped, in my opinion, and then there is the stake it gives to the agricultural population, who are the bulk of the population of India, in our Government. I well remember the time when even a 10 years' settlement was considered what they called an istimrar; it is an Arabic word, meaning permanence; and the highest form of grant ever made by the Delhi family of jaghirs was in the form of istimrar, that is perpetual. One of the first public services I performed was recovering a tract of country about 40 miles long by 20 miles broad from the Rajah of Bickaneez, who had improperly taken possession of it; and after we had recovered this tract I was sent to it a second time to make a revenue settlement of it, and I recommended (and it was done) that the first settlement should be purely temporary for a single year, perhaps two years, or it may be three years, in some of the better cultivated villages, in order that we might not do anything hastily; and I remember the disappointment of the poor ryots; they said, "We thought when we came under the British Government our lands would be like an istimrar, that we should have at least a 10 years' lease." Now the extension of the permanent settlement to the bulk of the population of India would be so regarded, it would be considered the greatest possible boon, and it would give them all a stake in the permanence of our power, and would attach them to us more than any other measure that could be adopted; and that being so, we should feel the indirect benefit of it in a reduction of expenditure on all points, military expenditure, police expenditure, and even judicial expenditure; the expense of re-settling the revenue, which is very heavy, would be entirely saved, and the expense of collecting it would be much diminished; and observe the bearing of what we are now coming to upon it, I mean the new plan of governing India through the Indians on a system of local municipal government; we are going to throw the greater part of the expense of Indian administration upon the people themselves, the bulk of whom are agriculturists; now so long as the land revenue settlements are temporary, that cannot be done with any effect, and the two things will be constantly mixed up together, and cause discontent; the manner in which additional cesses, under the name of local cesses for roads and education, and so forth, are added to the Government jumma in Madras, the North Western Provinces and the Punjaub, is very questionable; the natives do not really distinguish between them; they are both temporary; they are both substantially of the same character; but if the Government jumma was fixed, then they would have a fresh starting point, as it is in Bengal; so far from the provinces of Bengal proper being less suitable for municipal taxation than the other provinces of India, it is far more suitable, owing to that very circumstance that the Government demand for land revenue is limited.

1254. Is not the uncertainty arising from the liability to be taxed every year, under the permanent settlement, greater than the uncertainty arising from a re-settlement every 30 years?—No; because they will have it in their own hands to tax themselves; if they do not choose to do it, it will be their concern; they will have to choose between good and bad roads, or between a full and an insufficient supply of water.

1255. But you say, do you not, that the zemindars of Bengal should be taxed all the more, because they are under a permanent settlement?—I do not say that they should be taxed by us any more, but that, being under the permanent settlement, they are in a better position to tax themselves through the municipal system. No doubt in Bengal we made an unfortunate arrangement; instead of settling direct with the actual proprietors, we settled with middle men; but we shall not make that mistake now. During the 80 years which have passed since the permanent settlement, since Lord Cornwallis's time, especially within the last 40 years, since Lord William Bentinck's time, and since Munro's and Elphinstone's time, we have acquired an amount of detailed information in regard to the tenures by which land is held, which will effectually prevent us from repeating the mistake. Now we shall give the benefit of the permanent settlement to the actual proprietors.

1256. Then you would take nothing from the landowners except for purely and strictly local purposes over and above the land revenue?—Just so.

1257. In the system which you have sketched out of a subdivided Government of India?—That is to say, nothing under the head of land revenue. Of course, in regard to other taxes, salt, for instance, the case would be different.

1258. Does not that come very much to giving with one hand and taking away with another?—No. They are liable now to all the other taxes, salt, and excise, and stamps, and so on, so that would be no new liability; and now we are going to make them liable, if they choose to incur the liability, to municipal taxation, even without the advantage of a permanent settlement of the land revenue; so if we begin by giving them that benefit, they will be in a much better position to pay taxes in other ways.

1259. Is there no force of native public opinion sufficient to counterbalance in any degree the monied interest of Bombay and Calcutta?—There is a great force of native public opinion in matters which they understand, and which immediately affect themselves. I spoke of the great objection that they have to new taxation. The Chairman illustrated that by the resistance that was made to the introduction of the stamp tax at Calcutta. There are two other very remarkable instances.

instances. The entire population of Benares turned out within the memory of men still living, made a wulsah, as they call it, went out into the fields, men, women, and children, to avoid a house tax. Then, at Bareilly, there was an insurrection to resist a similar tax.

1260. Does not the expenditure of Bombay affect very nearly the population of Bombay itself; is not a great proportion of the taxes in that presidency raised from the town?—The municipal expenditure does affect them very nearly, but then they have provided for that chiefly by borrowing; they have borrowed money to a great extent, so that the pressure of that will only come gradually and indirectly. They have also, most improperly, levied duties for local purposes on the general trade.

1261. What proportion of the native element would you give to the chief local councils in your scheme?—I would have every district of the country represented by its best man, the man best fitted for that purpose.

1262. And what proportion should they bear?—Take Madras as an example; each collectorate would be represented; that is the best established territorial division; there is in each of these districts a collector and magistrate, with deputy collectors and joint magistrates under him; every such district should return one representative, who, in the majority of cases, would be a native, but I would not confine it to natives. Two or three districts, such as Wynaad and the Nilgiri plateau, and possibly one or two more, would be represented by Europeans. That would make 20 or 21 representative members, who would, with [illegible] options, be natives. Then [illegible] entatives for Madras and [illegible] ge towns, who might be [illegible] East Indians, or Natives. [illegible] a strong senatorial element, [illegible] the official class, but also [illegible] efs and persons selected from [illegible] antile class.

[illegible] emplate, in fact, the possibility [illegible] ity on such councils?—Yes.

[illegible] ould have no fear of such a thing?

1265. Do you think that anything short of a native majority would much influence the financial policy of these councils?—No. I think when it is made quite plain to them that they are spending their own money, whether they are Europeans or natives, we may trust them.

1266. What are the functions and the position of the Zillah Councils that you spoke of?—That would be for roads and the lines of avenues which are such a blessing in India; then the rural police and the higher branches of education; of course they would aim at having a college in each district, and high schools in the principal places; the popular education would be strictly municipal.

1267. Would the council be entirely native?—No; the European planters, indigo planters, merchants, and others in the plains, and the tea and coffee planters in the hills in the Madras Presidency, have always been on excellent terms with the natives.

1268. What hold would you have over such councils?—Well, the main safeguard would be that they would be spending their own money.

1269. But supposing that they refused to spend any money on education or roads?—Then we must wait. Of course, no system that can be adopted can work quite smoothly; there is nothing perfect in human affairs; and it is only through actual experience, that is, at the expense of a certain proportion of blunders, that people can arrive at a satisfactory result.

1270. You would not require the supreme local government to set them to work, if necessary?—Well, there may be points on which obligatory injunctions might be given. I will not take upon myself to say, but generally speaking, I would leave the management of their own local affairs to themselves.

1271. *Chairman.*] Can you refer the Committee to any State Paper of recent date that contains any summary or statement of the increase that has occurred, either in the increase of rent or in the increase of cultivation, or both, in any considerable number of villages under the permanent settlement since the time of the settlement; do you recollect whether any such inquiry has taken place in India, and whether there is any report on that subject of recent date?—By searching the records it may be found; it can only be obtained in a very rough way.

1272. I mean do you recollect any existing report of that nature?—I will not take upon myself to say that there is not one, but of this I am confident, that fair estimates were made of the extent of wild land, uncultivated land at the time of the permanent settlement, and we know the existing state of the country; every part of Bengal, and some parts more than others, is full of instances of extraordi[illegible]xtension of cultivation.

1273. [illegible] say that the permanent [illegible] great confidence on the part of the population of Bengal. Would not there be equal confidence in a 30 years' settlement if they knew that they could not be disturbed for that time?—Certainly not. When I say the population of Bengal, I mean that part of the population which is affected by the permanent settlement; I will answer for it that the Rajah of Burdwan would not feel the same confidence in a 30 years' settlement of his estates which he does in the permanent settlement of them.

1274. But would not the leaseholders in the North Western Provinces feel as great confidence in their rentals not being raised as the ryots in Bengal?—By no means. As I mentioned, it is a fallacy to call it a 30 years' settlement; it is only a 30 years' settlement in the first year, and it gradually dwindles till it becomes no settlement at all, and, as time goes on, the security diminishes, and the feeling of insecurity increases, till at last they are left to all the chances of the knowledge and discretion of the person who has to make the settlement.

1275. You are perhaps aware that we have it in evidence that the 30 years' settlement in the North Western Provinces has given the greatest satisfaction to the people, and that there is perhaps no part of India where the people are more prosperous?—It has given great satisfaction by comparison with the previous state of things; I can remember a very different state of things. I can remember when the population of whole districts were forced to emigrate in order to escape the over assessment of our officers.

1276. But that was not a 30 years' settlement, that was an annual settlement?—It was not a 30 years' settlement, certainly; but it was more than annual, it was five years at least, and I think 10 years.

1277. I sat

Sir *C. E. Trevelyan*, K.C.B.

7 March 1873.

1277. I sat on the Cotton Committee, and I know that at that time all that part of the country was under an annual settlement, and no wonder there was discontent; but a 30 years' settlement is like a lease in this country, is it not?—Thirty years is better than 10 years, and 10 years is better than an annual settlement; but a permanent settlement is best of all.

1278. Sir *G. Balfour.*] Has not the permanent settlement left the cultivator of the soil at the mercy mainly of the zemindars with whom the permanent settlement was made?—It was not owing to the permanency of the settlement, but to the mistake that was made in making the permanent settlement, not with the actual peasant proprietors, but with certain middle-men whom we chose to call zemindars, and to make the settlement with them.

1279. But still the fact is that the cultivators of the soil have complained very grievously of the exactions of these middle-men?—Certainly, they have in Bengal. We attempted the same thing at Madras. We tried to set up a set of so-called zemindars there, middle-men, but the people would not stand it; it was so abhorrent to the habits of the people that they were got rid of; it all broke down.

1280. In Madras nearly all the zemindaries have been bought in by the Government?—Yes.

1281. You have expressed a very decided opinion against the new taxes which have been levied in India in the last 12 years. I wish to bring out clearly fr[illegible] as to whether you entertained those s[illegible] when the great financial c[illegible] was necessary to take decided [illegible] financial equilibrium?—In proof that it was so, I may mention that, finding on my arrival at Madras that the Government of India had called for the opinion of the Madras Government upon the imposition of a tax on native-grown tobacco throughout India, and that this tax was strongly condemned by the Board of Revenue and the other members of the Government of Madras, who suggested, as a preferable alternative, an increase of the salt tax, I recorded my opinion in a Minute, dated the 10th of June 1859, which contains the key to all that subsequently took place. I began by saying, "The objections to the scheme for a tax upon tobacco are so grave and decisive that it would be a waste of time to discuss them;" and I said no more about that. And then about the Madras proposals to increase the salt tax, I said, "There is, however, another class of measure to which I shall give my attention as soon as the pressure of other business permits, which is to increase the productiveness of the salt tax at the existing rates, partly by facilitating the circulation of salt in the interior by the establishment of depôts in connection with the railway, and in other ways, and partly by a more rigid enforcement of fidelity and exactness in the collection of the tax. This important branch of revenue has not received the attention which it deserves, and I am convinced that it might be largely increased, without any increase in the existing rates, if two or three of the ablest and most experienced European and native officers of this Government were directed to give their minds to it;" that I did. At that time the coast districts of the Madras Presidency, I mean the collectorates which line the coast from Ganjam on one side to Malabar on the other, ate their salt tax-free, by a wholesale system of smuggling; but by the arrangements which I made with the Board of Revenue, and more especially with Mr. Robinson, the very able officer, who formed, under my direction, the new police, we put an end to all that, and greatly increased the salt revenue. But the passage to which I wish particularly to call attention, is this: it is not long, and I will read it because it will save time in future. "I am convinced, from a long and large experience of Indian affairs, including a close observation of what has taken place since the commencement of the great catastrophe in Upper India, that the present financial exigency might be overcome in two or three years, by reduction of expenditure combined with various measures of good administration. Instead, therefore, of exhausting our ingenuity in devising new taxes, and raising new loans, I recommend that we apply ourselves in serious sober earnest to reducing expenditure, many large items of which are capable of being immediately acted upon, and to rendering the large balances in the treasuries more available. My Minute of the 28th ultimo shows what important financial results may be obtained even from an ordinary attention to the military expenditure of this Presidency, in which the extra establishments consequent upon the war have not been carried to any great extent; and it may hence be inferred what may be accomplished by a detailed manipulation of the whole expenditure of India, including the vast provisional establishments in the north. We ought not to increase the burdens of our Indian fellow subjects until it has been clearly ascertained that t[illegible] cannot be effected by the primary [illegible] mode of reduction of expe[illegible] cially due to the people o[illegible] who, so far from having adde[illegible] ments and losses by rising ag[illegible] us noble support, and have co[illegible] out an increasing amount of [illegible] crease in the collections in th[illegible] the first 10 months of the curre[illegible] on a total revenue of only 4,86,[illegible] has been 54,65,705 rupees, of wh[illegible] rupees is from the land tax, and 3,11,399 rupee[illegible] from salt. The gulf of northern expenditure ought to be speedily fathomed in justice to the rest of India, else our taxation will be indefinitely increased, and our most indispensable public works, military as well as civil, will continue to be postponed or rejected. The inhabitants of this Presidency have already been hardly dealt with by the retention to this day of that most objectionable system of native taxation known by the name of muhtarafa, although it was to have been abolished a quarter of a century ago, with the transit and town duties of Upper India, and it is believed in England that it was abolished long ago, and credit has been repeatedly taken by members of the Home Government for its abolition. With the exception of a small portion, which consists of a house tax, and might be retained for municipal purposes in towns which undertake to tax themselves for objects of health and recreation, this tax takes such a disproportionate sum from the people compared with the amount paid to the Government, and presses so heavily on the springs of industry by mulcting the poorest of the people, and exercising an inquisitorial interference with business of every kind, that its abolition combined with the full collection

First expression of opinion in favour of the policy of reduction of expenditure as against that of new taxation.

collection of the salt tax and the equalisation and fixation of the land tax" (that had begun to be considered then), "would soon be felt in a much larger increase in the other sources of taxation."

1282. Your policy was then, not increased taxation, but reduction of expenditure; will you be good enough to state what measures you were taking then to effect that?—From that time two conflicting policies prevailed in India; one the policy advocated by me of reduction of expenditure; the other, which was the favourite at Calcutta and in England, increase of taxation.

Second expression of opinion.

On receipt of that Minute, the Governor General in Council requested a fuller explanation of the views of the Madras Government in respect to those other measures, he adoption of which, as suggested by me, ight render a resort to further increased axation unnecessary; upon which I recorded nother Minute of the 11th July 1859. And would ask to be allowed to put in an xtract from it, as containing a more full development of the principles laid down in my [illegible]e. "In the letter from the Secre- [illegible]vernment of India, dated the 20th [illegible] asked for a fuller expression of [illegible]e Madras Government in reference [illegible]ion of expenditure combined with [illegible]res of good administration,' which, [illegible]ed in my Minute dated the 10th [illegible] reader a resort to further increased [illegible]cessary. Experience warrants the [illegible]h proper management, the finances [illegible]be rapidly restored to a satisfactory [illegible] been done twice in my own time. [illegible] embarrassment consequent upon the [illegible] Nepaul wars, was so completely [illegible]ing the early part of Lord Amhurst's [illegible], that it was seriously proposed to [illegible]portion of the surplus in paying the [illegible]ts of the civil servants. This plethora [illegible]d by another depletion, caused by the [illegible]ese war; and this was relieved by the [illegible]orous administration of Lord William [illegible]ancial prosperity in the latter [illegible]n Bentinck's and the first part [illegible]s administration, was brought [illegible] Affghan and Sikh wars. It is [illegible] finances of India are, on the [illegible] The revenue is no doubt so, in [illegible]ew, because the people are poor, [illegible]t being represented in the Govern- [illegible]aving any effectual confidence in it, [illegible]ually take refuge in passive resistance [illegible]ly protection against new and indefinite [illegible] It was by acting upon the expenditure [illegible]nances were restored in Lord Amhurst's [illegible] William Bentinck's time. There was [illegible]remission of impolitic taxation by the abo[illegible] of the transit and town duties; but I do not recollect a single new tax having been imposed. Circumstances are now more favourable for the restoration of our finance than they were on the two occasions above adverted to. Large independent native armies were then maintained at Gwalior, in Oude, and in the Punjaub, and we had to keep up a large Sepoy army to counterbalance them. Those independent armies no longer exist, and most of the revenues which supported them, besides other large annexations, have been added to our exchequer. Formerly, with the revenue of rather more than half of India, we had to provide for the military protection of the whole of India under conditions which, for the reason above stated, were peculiarly burdensome; now, with two-thirds of the revenue of India, we are left to choose our own method of military administration. The Sepoy army of Upper India, which continued the old scale of expenditure after the occasion for it had ceased, has dissolved itself. Both in our foreign and domestic relations we are now our own masters. India is at our disposal as it never was before, and we ought to do our utmost to profit by it before the opportunity has passed. In the present crisis of our affairs, the full value of this advantage cannot be too clearly understood. One of the earliest observations made of the people of India was, that the fighting was done by a separate caste, and that everybody else followed his ordinary occupation. This holds good to this day. The people of India are, in general, extremely docile and easily governed. There are particular castes or classes among them, who, although they usually follow agriculture and other peaceable pursuits, are soldiers by hereditary profession. The Rajputs and Brahmins who composed the late Bengal army gave us no molestation while they were cultivating there ancestral acres in Oude or Behar. After the fierce struggle which ended in the subjugation of the Punjaub, the Sikh soldiery were rapidly absorbed into the body of the people, and it was only after we had called them out, and given them a new military organisation, that they again [illegible]use of anxiety to us. The p[illegible] [illegible]o evoke spirits [illegible] lay. Our chief danger is from our nativ[illegible] army itself. Our Mahommedan predecessors acted upon this principle; they maintained a moderate force composed chiefly of Mahommedans, and the result was that there was always a surplus in the Treasury. Every Hindu State acts upon it. The head of the state is surrounded by a few hundred or a few thousand, as the case may be, of his own tribe, while the rest of the people quietly do their own business in their respective municipalities. Hence the normal condition of native Indian states has been that they have had a surplus revenue, which has been systematically laid up against the time of need. The true remedy, therefore, in every point of view, political as well as financial, is to reduce the auxiliary native force which has been raised as a set-off against our late Sepoy army. It was hastily called forth from the body of the people, in numerous cases by local officers acting upon their own discretion, and it can as easily be returned to it. This has been done on every former occasion. The large levies raised by Lord Lake in Upper India in the first Mahratta war were disbanded by Lord Cornwallis. The same thing took place in Lord Hastings' and Lord Amhurst's time, after the second Mahratta war. As Indian financial difficulties are caused by the enormous levies which the nature of Indian warfare demands, so those difficulties are relieved by their disbandment. By adopting this course, important immediate results are obtained. There is no danger to be apprehended; for irregular troops raised to meet a sudden emergency do not expect to be permanently maintained, and can easily resume occupations which they have only recently laid down. The greater number gladly return to their families, with the donation of so many

Sir *C. E. Trevelyan*, K.C.B.

7 March 1873.

months' pay which it is customary to give. The only danger is in keeping them embodied when there is no longer active employment for them. The prevailing high prices of agricultural produce, of which the withdrawal of so large a portion of the youth of the country from productive labour is one of the chief causes, makes the present time particularly favourable for such an operation. In Madras the ancient military organisation, the parent stem from which the withered Bengal branch sprang, still occupies the ground. Yet I showed in my Minute of the 28th of May, that large savings of military expenditure were in progress in the south of India; and that in two or three years it might be reduced below the ante-mutiny standard. In Northern India there are much greater advantages for dealing with the subject. What we have there is a *rudis indigestaque moles*, which, by proper manipulation, can be speedily contracted to a vessel of rare excellence. These results can, however, be obtained only by good administration. The first, and main point of all, is to have a clear plan blocked out for the re-organisation of our military system in Upper India. I long ago expressed my opinion on this subject in a series of letters, which I wrote at great personal sacrifice, and published in England; and I have since adverted to different parts of the subject in my evidence before the Indian Army Commission, and in some of the Minutes which I have recorded since I returned to India. The Commander in Chief of this Presidency has worked out, in a series of minutes and [illegible] the practical application of a [illegible] measures, is similar to [illegible] nisation of our Indian military system is the reformation of the existing police on the English and Irish constabulary principle. Until this is done, the army cannot be concentrated, and reduced to the proportions really required as a reserve in support of the civil power, neither can trustworthy, vigilant aid be obtained for the full collection of the salt tax, and the sayer, or excise upon spirituous liquors; above all, until this is done, we cannot give our Indian fellow-subjects that protection of personal property, without which it is impossible they can pursue their avocations with confidence and spirit, to the augmentation of the wealth of the community, and with it, through the medium of all the taxes, of the public revenue. A complete, and, in my opinion, a very satisfactory, plan for the re-organisation of the police of the Madras Presidency, has been before the Legislative Council since February last, and I will not attempt to estimate the pecuniary loss to the State from the opposition it has met with there. It was not "Police corps" which it was proposed to establish. These are neither police nor regular army; and while they cause a heavy expenditure, they are a source of disquietude both to the Government and people. It was a *bonâ fide* re-cast of the actually existing police, on the English and Irish principle, superintended in all its details by European officers, but placed entirely at the disposal of the magistrates."

On the evils of over-centralisation.

I also recorded another Minute, dated the 13th July, two days after, in which I described the great evils arising from over-centralisation; the correction of those evils being an indispensable part of the course of restoration I proposed. I propose to put in also: "Another point of vital importance is the relation of the local and Supreme Government; when I was in the secretariat at Calcutta I assisted Lord William Bentinck in taking the first timid, tentative steps towards the establishment of the control of the Supreme Government after the Charter Act of 1833 had been passed; I also assisted in re-moulding the constitution of the Indian Governments in 1853; it was not intended that the Supreme Government should occupy the place which had previously been held by the local governments; it is physically impossible that the real Government of the whole of India can be carried on by one set of men from one place, and the result of the attempt has been to paralyse the local governments without providing any effectual substitute for them. The south of India differs from the north as much as France does from Germany or England, and if it had been intended that the detailed administration of the south of India should be conducted at Calcutta, provision would have been made for assisting the Governor General in his Secretariat and Executive Council with officers trained in the peculiar system of the south; the terms in common use, of 'subordinate' and 'minor' presidencies, show [illegible] the mistaken notion arising from the [illegible] cillors, and the secretaries of the [illegible] neral, being taken exclusively fr[illegible] Presidency has taken root; accord[illegible] stitution of British India, there is [illegible] general government without an[illegible] and several co-ordinate local gove[illegible] practice ha[illegible] been very different. [illegible] in Council of this Presidency is th[illegible] sentative of the authority of Gover[illegible] to 22 millions of Her Majesty's [illegible] functionaries in this position have a[illegible] feeling that it is better that they sh[illegible] thing, than do that which would [illegible] authority into contempt. As the lo[illegible] ment cannot be superseded, it ought [illegible] tained in all authority and honou[illegible] infinite waste of invaluable time and s[illegible] been caused by the following assumpt[illegible] which the Supreme Government h[illegible] acted of late years: Firstly, th[illegible] should be made in reference t[illegible] which is not applicable to all[illegible] condly, that *primâ facie* groun[illegible] ever is applicable to Norther[illegible] applicable to the Madras and [illegible] cies. Progress is impossible if, [illegible] that a measure is required for the [illegible] Malayalam, and Canarese people, or [illegible] we have also to show that it is not t[illegible] the Bengalees, and the countless millio[illegible] ing the great plains which extend from [illegible] Hindustan. The consequence of the [illegible] position is even more injurious to the [illegible] terest. In government, as in other t[illegible] true process of reasoning is the Baco[illegible] one. We ought to build upon the foundation of actual induction; making only such amendments, whether suggested from within or without, as experience may show to be required. When, therefore, we are asked to conform our system to that of Bengal, we are called upon to forego the ripe fruits of experience round which the public feeling, and the *esprit de corps* of this presidency, have gathered through many official generations, and to enter upon the discussion of what to us are entirely abstract propositions. Can we be surprised that, under these circumstances, a feeling of general discouragement

Sir C. E. *Trevelyan*, K.C.B.

7 March 1873.

[redacted]l, to [redacted]nc- [redacted]late such [redacted]uper- [redacted]ments, [redacted]n form, [redacted]al prin- [redacted]tantially [redacted]whole of we have [redacted]overnment [redacted]roper limits [redacted]ernment for [redacted]ral position, [redacted]y, and by its as well as councils, of [redacted]of India; but [redacted]y to be shaped [redacted]which is finance, [redacted]e sought in that [redacted]nd expression of the 7th of Sep- General in Council [redacted]e Government of Ma- [redacted]llowing effect: "His Council will be glad [redacted]elected officers in the Presidency, in whose and knowledge of the native Honourable the Governor in [redacted]dence, should be invited to opinions," on the first License and Tax Bill, "fully and freely." That was previous to Mr. Wilson's more complete and symmetrical measure; it included both; it was both a license and an income tax. Seven days after, the Madras Government received from the Government of India a very remarkable letter, showing two things: first, that alarming results were anticipated from the new taxation which they had themselves entered upon, and the other, that the fact of their entering upon this system of new taxation was certain to obstruct the reduction of military and other expenditure which was so desirable. I must be allowed to read two short passages from it. It is "From William Gray, Esq., Secretary to the Government of India, to T. Pycroft, Esq., Chief Secretary to the Government, Fort St. George, dated Fort William, 14th September 1859, No. 1845." It commences: "With reference to my letter of the 7th instant, No. 1780, regarding the Bill for licensing trades and professions, I am directed to request that his Excellency in Council will take into his consideration the steps which, as a matter of precaution, it may be expedient to adopt with the view of preventing any opposition to the law, if, in the opinion of his Excellency in Council, there should be reason to apprehend such in any parts of the Madras Presidency." "There is one point in particular of great importance to which [redacted]overnor General in Council is anxious to attention of the local governments, the necessity for placing the best and liable civil officers at those points where y be most reason to apprehend opposition ew law." "The Governor General in is of opinion that in giving practical he provisions of a new and an unpala-

Precautions directed to be taken against expected discontent.

table law such as that under consideration, the Government should take care to have all the more important posts filled by the best executive officers at his command, and should also avail itself of the services of any other officers who, though not holding executive posts, may be distinguished for the possession of those qualities which control and influence the native mind. No officer in whose ability and discretion full confidence is not felt, should be retained in any position which, from special circumstances, may be likely to demand on such an occasion the exercise of those qualities in a high degree. His Excellency in Council is desirous that during the interval which will elapse before the Licensing Bill becomes law, each local government should take the question of its practical enforcement into serious consideration, and make such a disposition of the means at the disposal of Government" (meaning the military force), "and otherwise adopt such measures as may seem most likely to ensure its peaceable reception by the native subjects of Her Majesty, more especially by those inhabiting the principal cities and towns of the empire." The opinions of all the ablest and most experienced officers of the Madras Presidency were accordingly taken, and I forwarded them to Calcutta with another Minute of my own, dated the 1st December 1859. I will read a short extract from it: "Exhausted by the efforts and excitement of the last three years, this country is more at our disposal than it ever was; but we have not yet seriously begun to reduce the enormous additional establishments accumulated at the discretion of almost every district officer during the late crisis in Northern and Western India. As regards the Bombay Presidency, this assertion is fully borne out by the reports of the Military Finance Commissioners, dated the 21st of September and the 29th of October last. It will there be seen that the two great heads of extra expenditure, new levies and transport, have hardly been touched. In Northern India there is a threefold establishment where there was only one: first of all, there is the old police; then there are numerous native levies, and Sikh regiments under the Commander in Chief; and, lastly, there is a separate civil army under the local governments known as "Military Police" and "Police Corps." This anomalous force is police only in name. It is neither disciplined nor disposable like the regular army, nor is it brought into contact with the people for their protection like a properly organised police. The levies of this description, which have been formed since the mutiny in Bengal Proper, are singularly out of place. The Bengalees are the most unwarlike people in the world. They gave us no trouble during the mutiny. Our difficulties were entirely with the mercenary troops stationed among them" (actually at Dacca and other places these new levies had begun to be almost as great a source of anxiety as the old Sepoys); "and this new mercenary force is at once a cause of alarm to the inhabitants, and of embarrassment and anxiety to the Government." "If the reductions are properly handled and are properly combined with measures of civil amelioration, I am persuaded that they will not be attended with danger; but if some risk must be incurred, it would be over as soon as the new levies had been

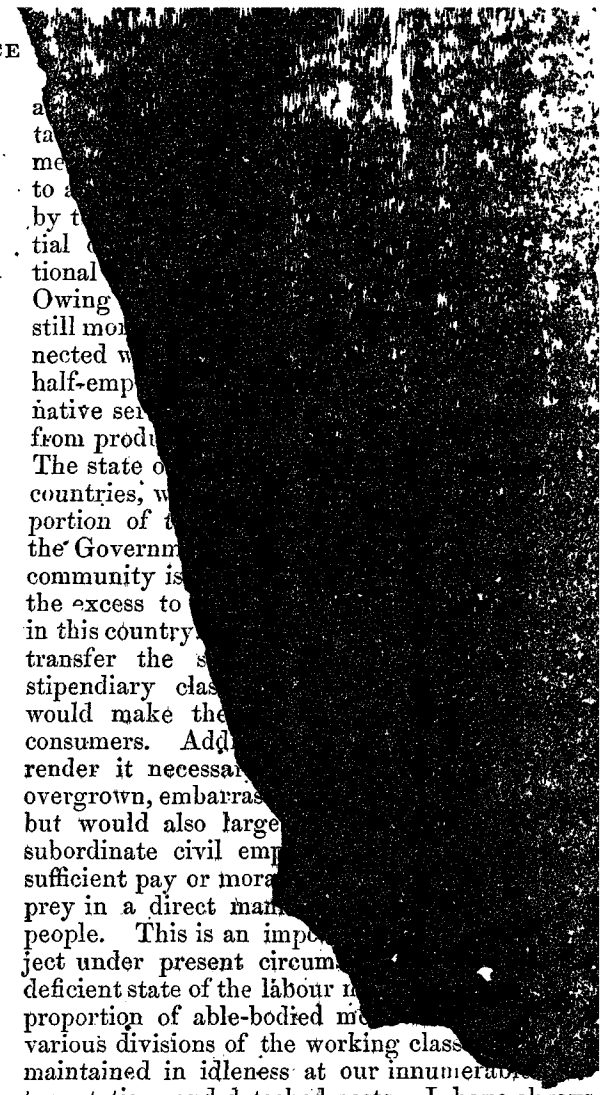
Third expression of opinion in favour of the policy of reduction.

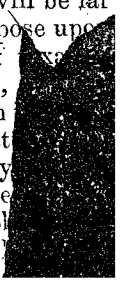
Sir *C. E. Trevelyan*, K.C.B.

7 March 1873.

been returned into the mass of the population, and would result in a state of the finances which would inaugurate a new era in India. If we choose the other policy the danger will be cumulative; more troops must be employed to meet a general state of discontent, and the employment of new troops would add to our financial embarrassment, and increase the probability of another explosion. On the late occasion it was only the Bengal Army; now the whole people of British India would have a common cause. No course we can adopt is free from risk; what we have to do is to weigh opposite considerations, and to determine in what direction the risk is least, and may be incurred with the greatest prospect of an early and unsatisfactory settlement." That was a third expression of opinion in favour of the policy of reduction. The fourth was in my Minute upon Mr. Wilson's Budget, for publishing which I was recalled; it was dated the 20th of March 1860. I would especially call attention to that part of it in which I compare the two modes of readjusting the national balance sheet, namely, by diminution of expenditure or increase of income:—"There are two modes of readjusting the national balance sheet, diminution of expenditure and increase of income; but these by no means stand on the same footing. Taxes are a portion of the property of the community taken by the Government to defray necessary public expenditure. The Government, therefore, has no right to demand additional taxes, unless it can be shown that the subject cannot be attained by a reduction of unnecessary expenditure. In other words, reduction of expenditure is the primary mode for making good deficiency. In framing our English Budgets, we never think of proposing additional taxation if the balance can be restored by reducing establishments. The transfer to this country of the forms of English finance is of much less consequence than the naturalisation of the principles which are the basis of our national prosperity. We ought not to have one rule when we govern ourselves, and another when we govern our Indian fellow subjects. Another important difference is, that reduction of expenditure is pure gain. Nay, the advantage is even greater, for, by reducing expenditure, the machinery of various kinds required for carrying it on is rendered unnecessary, and thus a further saving follows. In military affairs the second economy is greater than the first; for the expenditure in subsidiary departments, pensions, &c., is notoriously larger than the payment of the officers and men. In taxation the case is reversed. What is obtained by taxation is gained at the expense of a heavy charge for collection; and this is especially the case in reference to new taxes. In another way, heavy deductions would have to be made from what would be gained by these taxes. Our immense native civil establishments have always been underpaid, and, owing to the general increase of the prices of the necessaries of life, the pressure upon them is now more severe than ever. For the same reason, our European officers of the junior ranks, and our European non-commissioned officers, and native commissioned and non-commissioned officers, find it difficult to live upon their pay. We should, therefore, have to increase the remuneration of large classes of public servants. The effect produced would be like that of the superannuation

Fourth expression of opinion.





combined with some obvious administrative improvements, whereby both our civil and military establishments would be rendered more effective, and the existing taxes would be more fully collected. Nobody who knows anything of India supposes that any important financial result can be obtained by a reduction of civil salaries. Some reductions may be made, but these will be balanced by necessary increases in other quarters. The cause of the present financial difficulty is the increase of the military expenditure, and the remedy is to be found in the removal of that cause, namely, in a corresponding diminution of military expenditure." And then I said, "Here, therefore, we stand in a position of great advantage at the turning point of two policies. If we determine upon reducing a large portion of our native army and improving the condition of the remainder, the financial difficulty will be overcome; we shall have a feeling of security which we have not enjoyed for many years, and we shall be free to work out those improvements in the different branches of Indian Administration upon which the prosperity of the country depends. The result of this policy may be as clearly foreseen as anything in human affairs can be. But it will be far otherwise if we use our strength to impose upon the people of India a new system of [illegible] which is extremely distasteful to them, not justified by any necessity, and which unsuited to the present state of society country. The arguments used by my my colleagues, and by many of the able officers serving under us, against the to licensing taxes are equally applicab

taxes now proposed. To those papers I refer in justification of my strong expression of condemnation of these taxes." Then I showed in very pointed manner that the two policies [illegible]w taxation and reduction of military [illegible]diture were incompatible: "If we use [illegible]trength which our present advantages give [illegible]force obnoxious taxes upon the people, we shall [illegible]lace ourselves in a position towards them which will be totally incompatible with a simultaneous reduction of the native army. We cannot afford to have a discontented people and a discontented army upon our hands at the same time. The Secretary of State, in his recent positive orders for the reduction of the army, properly pointed out that if recent levies are to be reduced, it ought to be done at once, else they acquire claims and habits which might make their subsequent reduction hazardous and expensive. Frankenstein might re-appear in another shape." Then I pointed out an extensive and comprehensive course of improvement which was in progress in the Madras Presidency; but I will not trouble the Committee with that. That was the fourth strong expression of opinion in favour of the policy of reduction.

1283. It was the publication of these strong opinions on the policy then pursued, which led to your recall?—Yes. My reasons for publishing that Minute are contained in my subsequent Minutes of the 4th of April and the 1st of May 1860, from which Minutes I should like to put in two extracts. The first is this: "In his financial statement, Mr. Wil[illegible] invited, in the most emphatic manner, the fullest and freest public discussion of his plan. But when this Government only asked for time to consider it, we were rebuked for sending the message by open telegram; in other words, Mr. Wilson claimed to have the exclusive use of publicity, which is the privilege of absolute despotism. All the three taxes, tobacco, license, and income, proposed by Mr. Wilson had previously formed the subject of correspondence with the Supreme Government, and we had made earnest representations against them. These papers were treated as confidential so far as was required to suppress the representations made by this Government and some of its principal officers, on behalf of the interests entrusted to them; but the most public [illegible]e was made of the papers when they were [illegible]d to furnish grounds for a condemnation [illegible]o be borne as I have shown it to be un[illegible]Well, but Sir' (observes Mr. Wilson), 'I [illegible] to notice one further claim which has [illegible]de for exemption, so utterly untenable, [illegible]hould not have even alluded to it, unless [illegible]een it cropping out in official documents [illegible]g encouraged by gentlemen of influence; [illegible]efer to this with the deepest regret; but it [illegible]luty to do so. Sir, our fellow subjects [illegible]ras and Bombay claim exemption from [illegible]ed taxation; and on what grounds? [illegible]ms incredible,' &c. But the President [illegible]uncil did not leave us in doubt as to [illegible]ntentions; they informed me in a con[illegible]al letter, that they had finally determined [illegible]ose the three taxes on their own re[illegible]ility, and that what they expected of [illegible]vernment was merely to give effect to [illegible]cision, and to put down any opposition [illegible]ght be offered. The circumstances were [illegible]at it would have been clearly contrary to our duty to have accepted this position. We knew that the proposed new taxation would have been totally incompatible with the reduction of the native army, which had been recently and imperatively enjoined by Her Majesty's Government, and which had not only been already arranged by us, but, owing to the extensive substitution of the new police for military detachments, had become necessary to avoid serious administrative and financial embarrassment. We were persuaded the adoption of this Budget would be productive of great public calamity. We also knew from the report of a speech of the Secretary of State for India, in a recent debate on Indian Finance, that Her Majesty's Government were prepared to allow of different financial arrangements in reference to the great territorial divisions of the Anglo-Indian Empire, according to their respective circumstances; and this Government was ready to provide its quota by reduction of expenditure only, without any increased taxation. Knowing all this, we should have been faithless to our public trust if we had accepted the position assigned to us by the President in Council, and had become passive as public men influencing the course of events, and active only as exactors of unpopular taxes, and suppressors of popular resistance. The keystone of the Budget was English public opinion in India and England. Owing to the causes alluded to in my Minute, if the President in Council had succeeded in silencing this Government, Mr. Wilson would have had his own way until we were actually at issue with the natives, and then it would have been too late. In England the popular view is, that, as the people of India have got us into financial difficulties by rising against us, they must get us out of them by bearing new taxation. But it was not the people, but the army, which troubled us, and the remedy is to reduce the army, and to put it upon a proper footing. This mistaken state of public opinion had to be corrected in order to influence the Budget, and I therefore accepted Mr. Wilson's challenge to public discussion, and disregarded his subsequent injunctions to secrecy. Knowing the responsibility of this extraordinary crisis, I should have been deserving of contempt if I had allowed any regard for my own interests to weigh a feather in the balance of such portentous results. A public servant should bear obloquy in silence and patience when the public service requires it; but in this case submission would have been active participation in a course of policy leading to destruction." The other extract is from my Minute, dated 1st May 1860, and is as follows:—"Mr. Wilson charges me with wanton indiscretion for having published the Minutes of the members of this Government in which we criticised his financial statement. However much he may have disapproved of this act, he ought not to have called it "wanton." In my Minute of the 4th April I showed that the step was deliberately taken, for reasons of the most grave and weighty description. What has since occurred completes my justification. Our representative was sent for to a meeting of the Executive Council at Mr. Wilson's house, and was commanded not to obey the instructions he had received from his own Government, to present our Minutes, together with the previous important correspondence on Mr. Harrington's Bills, and to advocate our course in the Legislative Council; and Mr. Wilson has now announced in reference to the

Reasons for publishing the preceding Minute.

Sir *C. E. Trevelyan*, K.C.B.

7 March 1873.

Sir *C. E. Trevelyan*, K.C.B.

7 March 1873.

Minutes, 'but for their publication I should not have referred to their existence." He also says, that the only opposition to this scheme is from Madras; but, if I am not mistaken, the existence of important representations from Bombay has also not been referred to. The abolition of the transit and town duties, to which the remarkable subsequent increase of the trade of India is chiefly attributable, was effected by my exertions, and I was at least entitled to courtesy when I put in my protest, after an interval of more than a quarter of a century, against another system of taxation which, in the present state of society in this country, would be productive of far worse consequences than the transit and town duties. In complaining of the opposition of this Government, Mr. Wilson entirely mistakes the relations of the local and central governments in matters of legislation. In respect to the passing of a particular measure, we owe to the Government of India, not support, but sound and faithful advice. The Legislative Council of India is a free deliberative Assembly. Its constitution and forms have been carefully arranged on that principle. It stands in the place of the local Legislature which this Presidency formerly had; the difference being that, instead of taking a direct part in legislation, as this Government formerly did, we act through a representative. The Executive Council has silenced that representative; and it has therefore become necessary for us to speak on our own behalf. This answer ought to be made as public as Mr. Wilson's speech. The pretension that any one should monopolise free speaking and discussion has never before been heard of in the British Empire in the memory of the present generation. Lastly, I suggest, for the consideration of the Council of India, whether it is right, whether it is even decent, in the present expiring state of the Legislative Council, and with the Governor General and two other members of the Council absent, and another member silenced and deprived of his independence, to push forward, with breathless haste, a system of taxation which is entirely new to India, and is certain to be attended with momentous consequences. Her Majesty's Government and Parliament, and the British nation generally, who have, since the Mutiny, made great progress in acquiring sound information about India, and take a warm interest in the welfare of their Indian Empire, may also think that they are entitled to a voice in the decision. There is no necessity for refusing the usual and legal period of three months for the consideration of the subject, and a safer and more mature result would be so arrived at."

1284. Have you reason to believe that the policy of reduction of expenditure which you advocated would have proved sufficient to restore the equilibrium of the finances?—I feel quite confident that it would; I consider that the experience we had of the effects of that policy in the Presidency of Madras proves that it would have been so.

1285. Was the reduction of expenditure carried out in other presidencies subsequently to that?—No; no other effort was made to reduce the military expenditure until Mr. Laing was appointed Financial Member of Council; and he, with the assistance of Sir George Balfour and Sir George Jameson, the members of the Military Commission of Inquiry, made a reduction of military expenditure, which righted the ship at once, and produced a surplus.

1286. You have been pleased to mention Mr. Laing in connection with that; I hope I may be allowed also to bring in another name, of whom special reference has been made, and is Sir Bartle Frere; I hope also that you bear testimony to the great services that rendered in supporting that reduction of expenditure which was effected?—Sir Bartle Frere co-operated with all the measures of Lord Canning's Government, to the best of his ability; he was a very important member of Lord Canning's Government, and I feel sure that he gave very effective assistance in this, as well as in the other measures.

1287. I merely wish to mention to you, that without his cordial assistance, and that of Lord Canning (and Mr. Laing would corroborate this), the great changes in the expenditure could not have been effected?—I do not doubt it; any assistance given in support of that movement for the reduction of expenditure was a great public service. He strongly supported the policy of new taxation; and when reduction at last came, he supported that also.

1288. *Chairman.*] Do you recollect whether the movement of which you have spoken for reduction of expenditure originated in a very peremptory Despatch that was written out by the present Lord Derby, then the Secretary of State for India, to the Government of India, amounting almost to an intimation that if the Governor General did not carry it out he would probably have to be recalled?—I was not aware that any instructions of that extremely strin character had been sent, but I know that from the first moment of the suppression of the Mutiny repeated injunctions were sent by the Home Government to the Government of India to reduce expenditure. Why they delayed so long I could not imagine. They got upon a wrong track. It was a fancy, a delusion, that the thing was to be done, not by reduction of expenditure, according to all former Indian precedent, but by increased taxation; and then there was an English feeling that the rich natives of India did not pay their fair share of taxation; that had a great deal to do with it; and then there was the Manchester feeling that taxation ought to be, to a greater extent, direct from the wealthy classes, and that the imports and exports of Ind should go free.

1289. Sir *G. Balfour.*] Is it not however, that Lord Canning had himsel the arrival of that Despatch from Lord adopted measures for the purpose of in an inquiry into military expenditure?—Y much earlier period; for while I was G of Madras he telegraphed to me, informi that he had appointed a Commission to into the military expenditure, and asked nominate a member from the Madras service, upon which I nominated Colonel B

1290. Has the military expenditure bee down to the standard to which it was reduc Lord Canning's Government, or has it inc since then?—It has been very much incr The full effect of the reductions made Mr. Laing's financial administration were r during the two first years of my financ ministration, namely, the years 1862- 1863-4. After that a new scene was o Lord Lawrence very properly pressed u

ecessity of increasing the allowances ve troops in some proportion to the d prices of provisions; and simultaneously hat orders came from home, giving increased ages to the European troops. My last ial statement for 1865-6 contains a sum- of the new expenditure under this : "For increased price of Europeans' ns, compensation to native troops for dear- of provisions, and increased cost of feeding es and keeping and hiring transport animals, 500 *l.* Substitution of full for half batta, eased pay to medical officers, and compensa- for extra clothing to European troops, 000 *l.* Purchase and repair of barrack fur- e; gas ings for extra lighting, and in- d bedding, 57,500 *l.* Additional oney to men re-engaging, com- of property, appointments, Increased consumption of diminution of the ration strongly urged upon the meet the exigencies of e met, we must not be from taking down the ed the purpose of the the new charges upon ly become insolvent; o bear the burdens which did not relieve ourselves of eight which was already press- he manner in which I proposed to cy is described in this Minute, 7th of December 1863, on the ncreased subsistence allowances ative Army. "We must face question as a general question for the whole dia, and we ought, therefore, to deal with it rding to general principles. The case of the dras Native Army has to be dealt with first, e most pressing; but it ought to be settled eneral principles which will be equally appli- e to the rest of India. If we merely increased ay of the existing establishments in propor- the increase in the expense of living, the uer would soon be bankrupt. The true e is that increase of pay should be coin- with reduction of numbers. This would, lf, be a great administrative improvement. tate of most of our subordinate native estab- s, civil as well as military, is that we e servants than are wanted for the work; re ill paid; do their work badly; and r the deficiency of their pay by ob- stance in an indirect, and often very manner, either from the Government eople. Our maxim ought to be, 'Few, l worked, and well paid.' Pains would n be taken to simplify the work, and get unnecessary processes. One of the bad ences of having had an unlimited com- f labour has been a general indifference to ption of methods of abbreviating and ex- the work, to which so much attention n paid of late years in England." And after a great deal about what took place at as, the proposed reduction of the army and tution to a great extent of civil police, I The proper way of dealing with the sub- my opinion, will be to reduce four more nts" (that is, Madras Native Infantry nts), "and to increase the pay of the rest;" ould like to take this opportunity of sub- to the Committee as part of the Appendix two other Minutes; one upon Punjaub frontier policy, in a financial point of view, the difference to the finances of a sound, sensible, pacific policy on that frontier, and the opposite policy; and the other a very important Minute, dated Simla, 22nd of July 1864, on military expenditure generally. (Vide *Appendix.*) But I was overruled; no reduction of the Madras and Bombay native force was made.

1291. And since that date the expenditure has increased to which you have already referred?—Yes.

1292. Amongst the various items of that increase of military expenditure, you would have seen in the Blue Book which I have before me one item, that of the staff corps, which has been a great corps of increase of military expenditure?—Yes.

1293. You are aware that that cause is a novel feature in the military administration not only of India, but in the military system of all countries?—Yes.

1294. And that it was introduced subsequently to the Mutiny?—Yes.

1295. You have already mentioned how that staff corps was formed. Will you tell the Committee whether you see any dissents against that staff corps amongst the dissents which have been made by the members of the Council of the Secretary of State?—There were very weighty dissents by Lord Sandhurst and Sir Henry Durand, and the very important, though less authoritative, dissents of the military financial officers, General Hannyngton and Colonel Broome, the Controller of Military Finance.

1296. Do you find any Minutes of dissent recorded prior to the formation of this staff corps; I will hand you in the list of dissents (*handing the same to the Witness*)?—There were none on the part of the Council of India. The dissents that I am speaking of were in India itself.

1297. After the evil had been experienced?—Yes; none before.

1298. As you have looked over that Blue Book of the 17th of August 1871, connected with military expenditure, will you be good enough to explain to the Committee your views with regard to the discussions therein?—I have read this Blue Book with extraordinary interest, because the correspondence in it is a continuation of that which took place while I was at Madras as Governor, and while I was at Calcutta, as Financial Member. It begins with a remarkable letter from the Secretary of State, dated the 29th of January 1869 calling the attention of the Government of India to the necessity of a large reduction of military expenditure, and ending with the statement that the military expenditure "might be reduced, at least, to the scale of 1863-64, or it might even be possible to bring the whole military charge in India (including stores) a million and a half below the present amount." Upon that the Government of India went into the subject in great detail, and reported their opinion in a letter, dated the 4th of October 1869, the substance of which is contained in this paragraph—"In the whole native army, our proposals, it will be seen, involve an entire reduction of one regiment of native cavalry, and 12 regiments of native infantry"; then follow some consolidations of native cavalry and reductions of native artillery. "The savings eventually arising from these reductions of

Sir *C. E. Trevelyan*, K.C.B.

7 March 1873.

native troops would amount, in round figures, to 300,000 *l.*"; that is exclusive of the artillery. Of the 12 regiments of native infantry to be reduced, eight were to have been from the Madras Native Army. To that the Secretary of State replied in a long letter, dated the 27th of January 1870, giving a number of reasons against the proposals of the Indian Government, but the whole of those resolved themselves into an objection to the reduction of European officers. The 42nd and 43rd paragraphs contain the substance of the Despatch:—"Considering the present condition of the several staff corps, the probability that the services of many officers now serving in the police will be dispensed with, the extreme importance of avoiding by all possible means an augmentation of the present unemployed list, and the fact that in breaking up regiments you can only save the officers' staff salary, not dispose of the officers themselves, or relieve the state of their military pay, it is very desirable that the reduction should be effected as much as possible by the gradual absorption in each regiment of a certain number of native non-commissioned officers and rank and file, and that only such number of native regiments should be broken up, as will entail little difficulty in regard to the early employment of the British officers, and may be accepted as a reduction both practicable and sufficient. On these considerations Her Majesty's Government would much prefer that the requisite reduction in numerical strength should be effected wholly through the regimental establishment; but should this be found impossible, then four regiments of native cavalry might be broken up, two in Bengal, and one in each of the other Presidencies, and six regiments of native infantry, two in each Presidency." The alternative proposal made by the Secretary of State, therefore, was that there should be a gradual absorption in each regiment of a certain number of native non-commissioned officers and rank and file, and, instead of reducing a large portion of the Madras army (which the Government of India had reported to be far more in excess than any other portion of the military force of India, and which, taken regiment by regiment, costs one-third more than the Bengal army), the Secretary of State ordered that, if any entire regiments were reduced, the reduction should be made in equal proportions from the three armies, two regiments from each. The next proceeding was a compromise, which the Government of India proposed, that instead of eight Madras regiments to be reduced, there should be only four regiments, and so on. That is contained in a letter, dated the 3rd of October 1870. The Secretary of State's ultimatum is contained in a letter, dated the 2nd of March 1871, the substance of which is contained in the 26th paragraph: "As, however, I entirely agree with your Lordship, that a reduction of military expenditure, in so far as it can be effected with perfect safety, is much required by the financial condition of the country; as, moreover, the progress of the railway system in India, and especially the recent completion of the line which connects Bombay, through the Central Provinces, with the valley of the Ganges, affords new and most important facilities for military communication, I am prepared to hope, and expect, that a sensible reduction can be safely made in the strength of the native army. As regards the method of making this reduction, by diminishing the rank and file in certain regiments, I authorise you t[o] reduction as it may seem to you most e[x]pedient within the maximum limit of 9,000 men. I also authorise you to effect a portion of the reduction, if you desire it, by breaking up [t]he cadres in the Bengal army, to which your Excellency refers in your Minute of 3rd Octo[b]er 1870." The tenor of that letter was, that the Secretary of State held to his plan of leaving the European officers alone, and reducing native officers and men, and he said that if the Gover[n]ment of India pleased, they might break up certain cadres in the Bengal native army. That army the Government of India had repeatedly urged was by no means in excess; in fact, they [h]ad stated that it was no more than was wanted, and that it was very hard we [s]hould, in protect the entire frontier fr[om] Cachar, up to Peshawur. The[y] that the several corps were [a]t minimum, and that they [c]ould not bear further reduction of rank. [T]he Secretary of State. [T]he correspondence ended in a [l]etter from the Government of India, [d]ated the paragraph of their letter, dated [t]he 6th of "We believe that a very [l]arge number of regiments will [h]ereafter is inevitable. On this very [i]mportant point, Mr. Ellis, dissented from the [o]pinion, in so far as it did not reduce the [a]rmy sufficiently. It will be impossible [t]o maintain for any lengthened period to [d]raw from India for the support of a force [w]hich is declared by the highest authority [i]n the Presidency" (that is Madras) "to be [m]ore than the wants of the province, and which, from its [e]xpense, and from the nature of the races of [w]hom it is recruited, is known to this Government to be unsuitable for a reserve for the [A]rmy army of India." That is as regards the Native infantry and cavalry. Then, as regards the artillery, the Government of India replied separately, in a letter dated the 18th of October [1]870, in which they say, "We are convinced that we have an excess of batteries of horse artillery; and we have the testimony of every officer of experience that the batteries themselves are inefficiently manned. On a full review we desire, therefore, to submit to your Grace that 14 batteries of horse and field artillery may be reduced; and we desire to recommend to your Grace the adoption of Statement No. [2], showing a reduction of two brigades of horse artillery and six batteries of that arm, and of two brigades of field artillery with eight batteries." That is, it was four brigades, consisting of 14 batteries, which they proposed to reduce. "The savings are estimated at about 23 lacs of rupees per annum, but this does not include cost of [r]emounts or first purchase of stores, &c., which his Excellency the Commander in Chief estimates at [a]bout four lacs per annum additional."

1299. *Chairman.*] What is the Parliamentary reference to the Paper from which you are reading?—No. 467, of 1871. Then, in another letter, dated the 6th of April 1870, a Minute by [t]he General the Honourable Sir Henry Durand was sent home with this remark: "In Sir H. Durand's Minute, allusion is made to the excessive proportion of field officers attached to a given brigade of Royal Artillery which last year [c]ame from England; and on the 1st of April there appear to have been three field officers of

Sir *C. E. Trevelyan*, K.C.B.

7 March 1873.

ery at Barrackpore with only two field ies; three field officers at Allahabad with ield and one garrison battery; four field s at Lucknow with three batteries; three officers at Meerut with four batteries; two officers at Umballa with two batteries; three officers at Mecan Meer with two batteries; four field officers at Peshawur with four ries. A very similar state of affairs prevails here in India." I wish to point out one of onsequences of the brigade system, as it is l. In the real organisation of the artillery nit is the battery, of course; but of late s it has been customary to combine a certain ber of batteries in what is called a brigade. s very little real existence, because, after he distribution is, not by brigades, but by ries; still one effect of this new plan of des is to bring about an excessive numof field officers, because there must be a de staff, and so on. The next thing that place about the excessive force of artilin India was that the Duke of Argyle sent e Government of India a long letter from Horse Guards, dated the 9th of February , signed by the Military Secretary, General er, in which, besides various military reasons aintaining the artillery at its existing force, Royal Highness called attention to several sman-like considerations of Indian policy h induced him to think that it was advisable tain the existing force of artillery in India. letter was forwarded by the Secretary of for War to the Secretary of State for India ut any comment; and it was forwarded by ecretary of State for India to the Governof India, with this comment: "It is imble not to attach much weight to this opinion, he subject being one of such grave import- I consider it desirable, before taking any er steps in the matter, to place your Goment in possession of his Royal Highness's s." Then the Government of India sent ng rejoinder in a letter dated the 14th ecember 1870, from which I will read only short extract. "It seems to us perfectly rrantable that we should retain a system of nisation in a regiment by which we keep at us stations two or three field officers with lutely no duty for them to perform, save of most nominal kind, and yet, if one of these officers is taken for employment" (that is, any other employment in arsenals or gunder manufactories, or anything else), "or if aptain detached is promoted to lieutenant nel, another lieutenant colonel is created to the place with the regiment of the officer , when with the regiment, was not wanted. ppears that ten colonels and nine lieutenant nels are now seconded, and though we do not ose that they should all be removed at once the seconded list, we do trust that measures be taken to absorb all these seconded officers he course of the next few years, by which ving of some two lacs per annum will be ted." I have a right to give an opinion what is called the seconding arrangement, se it is one of the first things I had to do I was appointed to the Treasury in January . It was settled between the Treasury the Marquess of Anglesea, who was then ter General of the Ordnance; and it arose the necessity of employing officers belonging he scientific corps as inspectors of railways r the Board of Trade, and for other civil duties of that sort; but it never was intended to be applied in this wholesale way to the ordinary service of the army. I have observed for several years past that this seconding arrangement has had an extensive application given to it, which was never contemplated when it was originally formed; and it is one source of unnecessary expenditure, not only in India, but, as I believe, elsewhere.

1300. Sir *G. Balfour.*] Before you leave this question I wish to call your attention to this very important fact, that Papers have been laid before Parliament in which General Adye, an artillery officer, has strongly advocated the abrogation of the brigade system, which has been resisted by other parties. I mention this, because on a former occasion you referred to the artillery officers not being anxious to be economical?—I talked about the present race of Engineer officers not being economical.

1301. Amongst these papers you will observe some which show that the Government at home did effect reduction of two regiments of European infantry, and two regiments of European cavalry have been withdrawn from India in consequence of this correspondence?—I have only followed the main stream of the correspondence in the papers I have referred to. The recommendation of the Government of India was to reduce four regiments of European cavalry and seven regiments of European infantry, and to strengthen the remainder, which would have been a further saving of 300,000 *l.* a year, without taking into account non-effective charges.

1302. I draw your attention merely to the fact that reductions have been effected, and more can be effected?—There is no question about it. Then the Secretary of State's ultimatum about the Artillery is contained in his letter to the Government of India, of the 9th of March 1871, in which he authorises that "one Horse Artillery and one garrison brigade should be broken up; that the force in India should be reduced by five batteries of Horse Artillery, and three of garrison Artillery, certain additions being made to the strength of the remaining batteries of those two descriptions;" so that, instead of four brigades, consisting of 12 batteries, being withdrawn, as recommended by the Government of India, the correspondence ended by two brigades, consisting of eight batteries, being withdrawn.

1303. All these reductions had reference to the reduction of what I would call the Imperial portion of the army in India?—The Artillery belongs entirely to the Imperial portion. The 12 regiments which the Government of India proposed to reduce were all native regiments.

1304. This correspondence of the War Office had reference to the Imperial army?—The correspondence, so far as it related to artillery, had entire reference to the European army.

1305. I will now call your attention to a statement made with reference to a portion of Indian expenditure, purely Indian, which is contained at page 59 of the same Blue Book. "I must reiterate that as the staff-corps system was imposed upon the Government of India contrary to the late Lord Canning's views, the Government of India, which will have to contend against this source of military financial embarrassment, is in no degree responsible for its creation. As an incubus calculated to be an effective conterpoise to military economy, it is a difficulty which, though it will weigh heavily upon, did certainly not originate with, the Government or its advisers,

Sir *C. E. Trevelyan*, K.C.B.

7 March 1873.

visers, but was forced upon them by the Home authorities." That is dated the 7th of September 1869, and is signed by Sir Henry Durand. You have read that statement?—Yes.

1306. Then I would call your attention again to a fact that is stated at page 171 of the same Blue Book (476 of 1871), in a Minute of Sir H. Durand, dated Simla, 16th October 1869, as follows: "The result is, that the 3,312 officers at present cost above seven lacs more than the 4,513 did formerly, and actually cost 60,60,960 rupees, or 606,096 *l.* more than the same number would have cost in 1856. We have therefore the singular result, as regards the officers of the Indian Army, that though they have been reduced in the interval between 1856 and 1869 by 25 per cent., their average cost has increased more than 1,800 rupees each, or a total of above 60 lacs;" have you read that?—Yes.

1307. You are aware, therefore, that one of the great causes of the increase of the military expenditure in India has been the formation of the staff corps, which has resulted in an increase of military expenditure approximating to nearly the extent of 606,096 *l.* according to the above statement of Sir H. Durand?—I would not say that it is solely owing to the formation of the staff corps, although I think that the staff corps was formed prematurely, and that it would have been more economical, and generally more advisable, to have accepted the whole mass of unemployed officers as a temporary burden, and to have let them go on according to their existing scale of promotion according to the existing cadres, employing them as far as possible, and making the most of them until they had been to a great extent used up, and then the time would have come for a comprehensive new arrangement on the principle of the staff corps.

1308. *Chairman.*] You do not object to the staff corps, but to the conditions under which it was formed?—Yes; that is to say, something analogous to the staff corps must have been formed sooner or later.

1309. Sir *G. Balfour.*] Then the fact of having formed a body of officers rising to rank without any fixed establishment as to numbers, has ended in a most serious drain upon the Indian finances?—Very serious indeed; a drain arising, not from the formation of the body of officers, but from their having been formed without the usual limitations as to promotion.

1310. *Chairman.*] Without the usual limitation that there were services for them to perform?—Without the usual limitation of a fixed establishment, with promotion only to vacancies in that establishment. That is a principle of the public service; you form the best judgment you can what the work to be done is, and then you form an establishment of officers, civil or military, suited to the work, with promotion only as vacancies occur.

1311. Do you know whether this arrangement, which resulted so disastrously, arose from the Civil Administration of India allowing these matters to be arranged by military advice, placing the matter in the hands of military officers to settle?—I think so; I am sure that if they had referred the matter to the British Treasury, the fallacy would have been pointed out at once.

1312. Do you think that any three competent civilians examining this question, could have recommended what the military officers recommended?—I am confident that no three civilians trained to administration could have recommended such an arrangement.

1313. Sir *G. Balfour.*] Are you not that both General Jameson and myself s and earnestly advised the Government o in May 1860, not to enter upon this da course of establishing a staff corps. I w read the advice submitted to the Governn India, in our Report, No. 6, of 6th Ma (*vide* Parliamentary Paper, 240, of 5t 1863), as follows:—"Para. 4. Careful o tion and inquiry have led us to the conc that the formation of a separate corps of for the staff, necessarily requiring li promotion distinct from the other branc the army, and probably entailing special sion for increased pay, rewards for service retiring pensions, would at present involv complications, arising from various cause most undoubtedly lead to a great incr military expenditure. Owing to the non ence of a separate staff corps in the Royal s no rules for guidance in the formation of corps for the Indian service could be draw thence; neither do the regulations in re the staff corps of the French army, in wh system of advancement from the ranks prevails, appear to us capable of adaptio Indian army without considerable chang constitution?"—Yes, I am quite aware o those experienced officers strongly advis Government not to enter at all upon the tion of a staff corps, at any rate at that tin

1314. And have not these words almost prophetic of the results which have take consequent upon the Government having f its own course?—No doubt, the result pr has taken place, I should say, in a larg more decisive manner than even the themselves anticipated.

1315. Is it not the fact that the staff co mainly formed on a correspondence bet military officer and Sir Charles Wood; tha by private communcations between them th idea of a staff corps was first created?—Y first trace of it on any official records tha been published is a letter from an Indian n officer, who was on leave in England, ad to the Secretary of State. Very soon a Committee was appointed, consisting of Indi English officers, and they seemed, judgin their Report, to accept this extraordinar principle as a matter of course; it is just alluded to in a single line:—"Promotion staff corps is to be governed by length of s only."

1316. As a matter of fact, did you no that Sir George Jameson was equally as a to effect reductions of military expendit any civilian could possibly be?—Indeed he he was a true public servant; and I very desire to be allowed to qualify the opinion I gave about military officers. I have acte numerous military officers, at the time of the measures for the relief of the Irish Famine on many other occasions, both in England a India; and, when properly employed and l after, I have always found them very econo the regimental officers especially, in ma detail, are habitually economical; but it is a thing to set down military officers to determ future prospects of themselves, their con and their entire profession.

1317. Is it not just to say that the two military economists of the day, the Duke of lington and Lord William Bentinck, wer

t should not be carried?—But it does w the money for railways and canals, there is a difficulty in providing the out of current revenue, but owing to a distinction between the beneficial cha- of different classes of public works. The liture of late years in India, which has more than any other for a loan, was the sum to be expended upon the barracks; r that the Government of India deter- not to borrow; whereas they go on bor- from year to year much smaller sums for on public works, to the entire derange- the finances, and the entire relaxation of es to economy.

I do not see how you can say that the and canals have not been made out of money, because they could not have been ut of revenue; but if they had been so or it is quite clear that there would have thing for anything else?—It would not een possible to provide both for the barracks r the canals out of borrowed capital; but millions had been borrowed for barracks, atever might have been necessary, and economy had been observed, the whole of igation works might have been paid for out rent revenue. The railways I take to be a art; the most ordinary railway, any a very short railway, necessarily comes the head of borrowed money and drawing ital.

It seems to me that if you dispense with erion of direct remunerative returns, you guide whatever to regulate your borrow- r; you differ from that?—I differ from nd I totally distrust the criterion. In fact, st beneficial and most wasteful works which een undertaken of late years, in reference h there has been the greatest waste of all, ne of these so-called reproductive works, the Navigation, the Saone Works, and so

. All that that points to is the necessity cising far greater discrimination and caution adoption of the works, is it not?—I think ts to far greater discrimination and caution rmining what the cases are in which we draw upon our capital at all. Whatever ject may be, it ought to be a large, distinct, efined object, which is not capable of being up with the ordinary expenditure of the ment, and it ought to be so large that it be provided for out of current income.

. *Chairman.*] But I think you added the on, to which I presume you still adhere, ought to be earmarked and kept out of the y current revenue and expenditure?—Yes, y so; that is what I meant to indicate, that ld be something which can be clearly dis- hable from the current administration, the income and expenditure. I think that tances in which the Government of Eng- as borrowed money in the last 30 years found all of them to answer to that de- n.

. Sir *C. Wingfield.*] Now, with regard r plan of decentralisation, I gather that ould let the Government of India, the e Government, take certain sources of e, such as customs, salt, opium, post office, egraphs, which are paid by the empire at and out of these the Supreme Government is the Army, debt, diplomacy, home charges, opium, salt, telegraphs, post office charges, military works, and the deficit on railway interest?—Yes.

1412. And if these sources of revenue do not suffice to meet the charges, it is to draw for the balance rateably upon the local governments?—Yes; I meant, as a rule, rateably on their revenues.

1413. The local Governments then, out of what is left to them, are to defray the expenses of their civil establishments?—Yes.

1414. And the balance, whatever remains, they may spend in works of utility in their provinces?—Yes.

1415. I want first to know about the cost of civil administration. You would not, I apprehend, leave the local governments the power to fix at their discretion the cost of the local administration; you would leave it to the Supreme Government to determine what the rate of salaries should be, and the total amount, otherwise great inequality might arise?—I have already expressed my opinion that that power ought to be reserved to the Supreme Government, because, as was instanced in the case of the Government of Bombay, any one of the eight local administrations of India, by raising the standard of remuneration for its civil or military officers above the average of the other Governments, might disorganise the whole.

1416. Then with regard to expenditure on works of utility, would you allow the local Governments the fullest discretion to determine on what works they pleased, and to spend money at their discretion upon them?—I would, so long as they kept within their current income. I consider that they understand the wants of their respective provinces far better than the Supreme Government or the Department of Public Works.

1417. You do not think, then, that the present system, which requires the previous sanction of the Supreme Government for the execution of any work exceeding a certain sum, is a good one?—It forms part of the present arrangements; you cannot detach it from the present arrangements; so long as the finances of India are centralised at Calcutta, the Supreme Government must retain the power of checking the expenditure upon works.

1418. But I will explain my meaning simply by putting it in this way; you do not think it is necessary that they should obtain previously the sanction of the Supreme Government to their selection of works?—I think not; of course in making such a great change as this, everything would have to be considered: and it is possible that some harbours, for instance, might be reserved as being of Imperial importance, and beyond the power of any local government, though I do not think even that would occur. My belief is, that Bengal, Madras, and Bombay, which are the three maritime Governments, would be able out of their revenue, or if not from their revenue, from their credit, to do all that is necessary in the way of harbour works.

1419. Do you think a local government is as sure to exercise a sound judgment in the selection of works as the Supreme Government; are not local governments more apt to be swayed by their subordinates, and more likely to be carried away by particular fancies, without regard to the wants of the Empire at large; do you think that they have the same wide interests in view that

Sir *C. E. Trevelyan*, K.C.B.

13 March 1873.

the Supreme Government would have?—As between the two, I prefer the judgment of the local governments; I think it is more to be trusted. In the Madras Presidency, for instance, the local government, the governor and his councillors and secretaries knew perfectly well what the works were that were required for Madras purposes; and so in Bengal; whereas the Central Government, acting through the great centralised department of Public Works, makes tremendous mistakes. For instance, the local Government of Bengal never would have undertaken the Saone Works nor would it have undertaken the Orissa Works on anything like the scale on which they have been commenced; and I am quite sure that the Madras Government would not have undertaken that long canal.

1420. On the other hand, we may say, may we not, that the Supreme Government would probably never have, of its own initiative, bought the Elphinstone Land Company?—Nor would the Bombay Government, if they had had to buy it out of their own revenue. And I must remark, in reference to the discussion about the gauges, that these speculative items of the Saone speculation, the Orissa speculation, the Canning Town and South Eastern Railway speculation, the Elphinstone Land speculation, which have involved great waste, and need not have been undertaken at all, would not only have paid for the extra expenditure of the standard gauge on these two railways, the Peshawur, and the Moultan and Kotri Railways, but would have defrayed the entire cost of both railways.

1421. I will not go into that; but what I am afraid of is, that if the control of the Supreme Government were removed, there would be no coherence or uniformity in the plans of the different governments; one government would be all for metalled roads, another for tramways, and a third for railways or canals; one government would pursue a system entirely opposed to that of the governor of the neighbouring province; in fact, I fear it would be on a great scale, what one used to see on a small scale, when the expenditure of the local road funds was entirely at the discretion of the collector of each district; one collector of an engineering turn spent everything in making a bridge on to a great river; one spent it in making a road up to a neighbouring district, which the collector of that neighbouring district would not carry out; and so great was this evil felt to be, that the powers of the collectors were curtailed, and the Commissioner of the division was placed at the head of the Public Works, to ensure uniformity. On a greater scale that seems likely to be the result of leaving the local governments to their discretion as to the selection of public works?—I do not entertain that apprehension. In the cases to which you have referred there was an individual officer, the local administrative officer; and when the expenditure of a sum of money, probably out of local funds, locally applicable, depends upon a single individual, it is subject to all the chances and risks of the ignorance, and error, and fancy, of that individual. But the case here is quite different. This is the case of a government; the governor is sometimes the least influential element; he has his executive councillors, who are the most experienced, and altogether, generally, the ablest public officers in the province. Then, under the system supposed, he would have his provincial council; and he would be held in check by all those fur and by the local press, and the local co in a way far beyond any check that applied to the Supreme Government, through the Department of Public Then I hold that these local governor far better what they want than the S Government does; and if they are spendin own money, that will make them careful. even if the work is done in a different one province from what it is in another, sider that, on the whole, that is an adv I have already said that it is a decided tage that experiments in administratio be tried in different ways.

1422. *Chairman.*] Have you observe travels through India, that the authori lectors, in reference to making roads, considerable extent resulted in the very good roads round European statio the Europeans drive in their carriages, all the rest of the roads entirely neglec Whether the rest of the roads are negle not, there are certain to be good roads rou station; no doubt about that.

1423. Did you observe a great distinctio reference to the roads where the Europea munity drives and all other roads?—Ye roads where the European community t morning and evening drive are sure to be as for the others, it is as it happens. I co that this is the result of personal gove every collector is a little despot. O mankind think first of number one; wh they had representative district councils, would be different altogether; the whol would then be represented.

1424. Sir *C. Wingfield.*] The Governm the North Western Provinces, the Punjau Oude, have no representative councils, th entirely in the hands of a single man, ar not?—But they ought to have represe councils, in my opinion.

1425. You were just talking about gaug all events you would not allow the differen governments, would you, to adopt what they liked for their railways?—No; I already suggested that the general super of the railway system in India should remai the Supreme Government.

1426. You may have seen another rul was laid down with regard to the expendit the Government of India; and that is, t the amount borrowed annually for railway canals by the sum that can be spared an out of the revenues to meet the charg interest; and as the receipts from existing increase, and the aggregate charge for i diminishes, to bring forward new loans, s keep the annual charge for interest wi certain amount; do you consider that a principle?—I consider that is a totally fall test. Who can say what the future po India to meet charges of interest will be that the whole matter must depend up uncertain estimate; and sanguine persons are interested in particular works, wou likely to form a more liberal estimate power of the Exchequer to provide for t ture payment of interest than others would

1427. But that is evidently not what is me that passage, because they go on to say, "B to enter into schemes of railway extension w considering the financial results, but trust

th of the Indian revenue to meet the for interest, is a course which cannot be y discussed by those responsible for the of the country;" surely that lays down d principle?—Of course the exercise of ing powers must always be limited by the f paying interest; but to be of any use ng more must be intended than merely t any given time, could be paid.

. That means that you are to regulate rrowing each year by the amount which n spare for interest on the aggregate of loans on which you have to pay ?—It is a false standard; it tends to un- borrowing. The amount borrowed, not ar to year, but on grand, urgent occasions, be limited entirely by the urgency of sion, whereas this rule supposes a con- bit of borrowing; it implies that it would ifiable to borrow to any extent, provided fficient revenue was forthcoming to pay rest.

But perhaps I did not sufficiently ex- at the borrowing here spoken of is simply ways or canals, not for anything else. principle that is to regulate the ex- e from borrowed money on railways, appears to me that if the Govern- ep within that they will avoid incurring which they cannot pay out of revenue, ch, if they could not pay it out of revenue, uld have to raise loans to pay?—I do not the applicability of the rule properly un- l and within proper limits. To justify ng, two things are necessary; first, that k should be an urgent one; next, that the should exist of paying the interest. those conditions meet then borrowing is le.

Now it has often been said that India heap capital; that has been a sort of that has been put forth; but if we look rates at which other nations borrow, it o me that India gets cheaper capital than er country?—Yes; that is owing to the ce placed in the Anglo-Indian adminis- but the rate at which individuals borrow that is, the ordinary market rate of where the same confidence is not placed, y different.

. But have you not often heard the remark 'Why do people go and lend their money or that bankrupt Government in Egypt key or South America, and they will not to India?" But it seems to me that they it in preference to India, because when o lend it to those countries they lend it to the Government, or for the construction ays, on which interest is guaranteed, or h valuable concessions are given?—Yes; such is the confidence felt in the English stration of India that the Government has iculty in obtaining capital on moderate whether for railways or for other purposes. is wanted is, that the surplus capital of d, the great annual increment of the of England, should flow in due proportion a for carrying on private undertakings, of its all going to the United States and countries.

2. Probably if India possessed mineral , you would find as much money go to nes there as does now to America?—Well, one of the few points on which India is deficient. She has plenty of iron of first-rate quality, and coal, but nothing else.

1433. Now, I want to ask some questions with reference to your plan of local councils. I think you proposed a local council for each Government, and also a subordinate local council for each district?—Yes.

1434. I will deal now merely with the councils for each Government; you would have a certain number of members Europeans, would you not?—Well, that as it may be.

1435. When I say Europeans, I mean either persons settled in commerce or officers; you would allow a certain official element, would you not?—What is new in my proposals is that the councils of the different provinces should be re-constituted on a representative principle by selection. In many cases the representatives selected for particular districts would be Europeans; in the Madras Presidency I am sure they would.

1436. Would you have a certain portion nominative, or would you have the whole representative?—I would have the whole of the districts of the province represented by persons selected by the Government for the purpose. I would not restrict the representatives to Europeans, or natives, or East Indians; but simply just as it may be, whoever happens to be the best informed and most mature person in each district, and who possesses in the highest degree the confidence of the people of the district. There are two or three districts in the Madras Presidency, which I have in my mind, where Europeans would certainly be selected. Then I would add to the council, so constituted, a strong official element. There would would be the Governor's Executive Councillors, and a certain number of others selected, as at present, from the most distinguished servants of the Government, and from independent persons of eminence, whether European or native.

1437. Will you just give me an idea of what proportion you think the nominative members should bear to the representative members?—Perhaps a third.

1438. You have heard it, I daresay, contended for by some persons who have given attention to this subject, that these councils should be purely native, because, if the official European element is at all in the council, the freedom of discussion will be checked; do you agree with that?—I do not agree with it at all. The natives in every part of India, and especially in the three old Presidencies, speak their minds with great freedom.

1439. But then you will admit, that on that point there is a great difference between the freedom and independence of feeling on the part of the inhabitants of the three old Presidency towns, and the upper part of India?—No doubt there is; but in every case the out-turn will be suitable to the circumstances. In the three old Presidencies the natives are more advanced in modern ideas, and they will co-operate with us more fully in our plans, and will understand them better. In the Upper Provinces, where the natives are less advanced, they will be more dependent upon us, which is as it should be.

1440. Would you give these councils an entire discretion in the matter of local taxation; that is to say, would you leave to them entirely the decision as to what taxes should be levied?—

Sir *C. E. Trevelyan*, K.C.B.

11 March 1873.

Yes, subject to the veto of the Provincial Governor and the Governor General.

1441. But suppose they decide not to levy a tax, that in fact they refused to provide funds which the Government thinks are required, would you recognise their right to do that?—The eight Provinces of the Empire would have duties to perform as well as privileges to enjoy, and one of their most important duties would be to provide their quota towards the general expenditure of the Empire.

1442. But I did not understand that you meant to give it any voice in Imperial expenditure; I thought it was in reference to local taxation only?—But you are asking now, as I understand, whether they might, if they pleased, drop the land revenue, for instance.

1443. No; I started on the assumption that their powers are only powers of taxing for local purposes? — Subject to the veto of their own Governor and of the Governor General, I would give them full power of taxation, always taking care that, in their dealing with the taxes, they do not break down the general revenue and disintegrate the Empire.

1444. For instance, it might certainly be assumed that, if there were a local council of the composition that you describe, such taxes as were passed by the Bombay Legislature, namely, a tax on the non agricultural rural population, or such a tax as the one on feasts or on marriages, would not be passed by any freely chosen representative body?—They certainly would not have been passed; and that is a striking example of the advantage of calling the natives to our councils.

1445. And very possibly, if the Government should recommend them an unobjectionable tax in itself, they may say, "We will not burden the people of this province; this sum of money must be provided for by a reduction of expenditure in some other item;" you would not interfere with their decision in that matter?—No.

1446. You would give them independence, subject to veto on any measure they may pass?—Yes, it would be their own affair.

1447. On the last occasion you seemed to think that I was not quite accurate in the position which I took up, when I said that in a permanently settled province, or in a temporarily settled province, the position towards the proprietors of those agriculturalists who are not proprietors of land, but are simply tenants, is precisely the same; that precisely the same law prevails with regard to the powers of a landlord to raise rent in Bengal and in the North Western Provinces; and, therefore, my argument was that whereas the cultivators of the soil are in precisely the same position in the North Western Provinces as they are in Bengal, the permanent settlement or limitation of the demand on the proprietors is in no way a benefit to the cultivators of the soil. You seemed to doubt that, and I have referred to papers, and I find that what I stated is perfectly correct?—I assume that the existing law, however general it may be, does not nullify the rights of underholders who are entitled to pay a fixed rent, or a fixed proportion of the rent; and that being so, those underholders would be in the same relative position under a permanent settlement as under a temporary settlement, and they would share in full proportion in the benefit of a permanent settlement, *i.e.*, in the limitation of the demand of the Govern the land.

1448. *Chairman.*] I wish to point ou the answer you have given you have d may be called begging the question, bec use the expression that they are "enti hold against the superior landlord?—T be no question about it.

1449. The only question really is their right to hold against the landlord has not been diminished by positive law case or the other. If they are entitled, in the same position, of course?—The question that there are very large nu underholders who are entitled to hold rents or fixed proportions of the gene and extraordinary pains have been tak years to protect them. A permanent s should provide for the security of ever persons who can be properly called pro whether over-proprietors or under-pro Tenants-at-will, of course, hold by a p tenure.

1450. Mr. *Dickinson.*] With referen question of the permanent settlement, stand you to advocate a permanent se that is to say, a permanent fixture of revenue?—Yes.

1451. Also to advocate a permanent tion of the land revenue?—No, that is a question. I never advocated that. was in favour of it. I think it was a except within narrow limits, for house and gardens, and so forth.

1452. But now, in regard to the sale or uncultivated lands, do not you advoc complete sale of those without any reserv revenue to Government?—By waste la generally meant the mountainous forest which are applicable to the cultivation or coffee, because a rich piece of uncu land in the plains adjoining the cultiva belongs to another category. Now, eve gards these waste lands, I think that th which was adopted at Madras is pre namely, to sell them to the highest subject to a fixed annual quit rent. I very undesirable to anticipate our in break down the resources of the future.

1453. Now, to meet the case of the de tion of money, could you suggest any m which, although the land revenue is fixed might be an accretion to it in future years, value of money is diminished?—No do might be done on the principle of our Tithe Act by a corn rent, but I wou advise that. I think it would detract fr chief virtue of a permanent settlement, n the feeling of security which it would through the country, and I rely upon the g improvement of the country arising fro arrangement to compensate any possibl from a further depreciation of the currenc

1454. You could only compensate for th by further taxation in some form or oth Yes, in some form or other, either by an in of the existing taxes, or by new taxes. A ciation of the currency and the rise of which is coincident with it (in fact, it i form which it takes), however, always leads existing taxes being more productive. our expenditure has increased of late ye India on the one hand, on the other the have become much more productive.

1455.

…t, according to your arrangement, …ity of the land revenue would be …there would be no increase of land …No, except so far as the lands are …ultivated. I would confine the limi… the land revenue to those districts …e been fully cultivated, so that we …ll have what has been the principal … increase, in fact, the only source of … of the land revenue, the increase of …n. The reason why the land revenue …ased so much of late years in the Madras …y and elsewhere, has been entirely … the increase of cultivation, because, in …ave lowered our rates.

…You have alluded to the surpluses of …rent local governments. Is there any …t all of ascertaining even approximately … the surplus of any of the local govern… …nder the present system?—Yes, it may …rtained. I ascertained it for the Madras …ency when I was at Madras.

…7. The army, for instance, in the accounts …ided into four different charges; I think, …ainst the Government of India, one against …vernment of Madras, one against the Bom… …overnment, and the fourth against the … Government?—Yes. The truth is that …reponderating item of army expenditure … dislocates and confuses the accounts of the …nt provinces; it exists in such unequal …ions in the different provinces.

…. Bengal shows a surplus revenue of about …,000 *l.*, does it not?—£. 12,000,000.

…But then Bengal pays nothing to the … gets the credit of the whole six … opium?—Yes.

…engal gets the credit of the whole …nty of Calcutta under the present sys… … does as a matter of account.

…And the whole opium revenue?—Only …ter of account; for the revenue is not …engal.

…It is by that system of account that … makes itself the producer of 10,000,000 *l.* …s revenue?—To a considerable extent; …ter making every allowance, Bengal would …ve a considerable surplus.

…. If you took the 6,000,000 *l.* of opium …would that be the case?—She must have …are of the opium. The greater part of it, …st of it, is produced within the limits of …ngal.

…464. Then, to come back to my original ques…n, is it possible, by examination of the accounts …ow framed, to form anything like an approxi…te idea of what is or is not the financial con…ion of each of the eight Governments?—It …ght be done, but it would be necessary to take … pieces the existing accounts and put them …ether again on this new principle.

…1465. Then you would still have a necessarily …itrary division of the army charges, and of …se sources of revenue derived from customs, …d opium, and salt, and so on?—No; the divi…n of those branches of income and expenditure …uld not be really arbitrary, because they con…n the whole Empire. The customs, salt, and …ium revenue, on the one hand, and the army, … the other, concern the whole Empire; all the …ovinces contribute towards those three branches … income in proportions which it is difficult to …certain, and they all equally profit by the …penditure on the army.

1466. But the point I want to ascertain is, whether I or any other person, looking over the financial accounts as they are now furnished, can form the slightest idea of what is the financial condition as regards revenue or expenditure of any of the eight provinces taken separately?—You might take an example; you might take the Punjaub as the simplest case. The Punjaub at present is in large deficit, because it is charged with an undue proportion of the army expenditure.

1467. It is not chaged with the army at all?—It ought to be. Take Madras, then.

1468. Madras, Bombay, and the Government of India supply the army between them. The Government of India is thrown into a large deficit by reason of taking the whole charge of the Indian army; at least of the Bengal part of the Indian army?—I could work it out without much difficulty in regard to Madras; in fact, I did it; it is at the end of one of these Minutes. What would have to be done would be, to separate customs and salt (there is no opium at Madras), taking the rest of the revenue as properly applicable to the Madras Presidency; then to set against the remainder of the revenue the whole of the local expenditure; and then the balance would be surplus, subject only to the Madras allotment of the general expenditure for the army and the other services administered by the Central Government. That might be done without much difficulty.

1469. But then the accounts, as at present furnished, of 10,000,000 *l.* in round numbers, which is shown to be the surplus of the Bengal income, are absolutely fallacious?—Yes, they are fallacious, because a considerable part of that belongs to the North West Provinces. Some of the salt, and a large share of the opium and of the customs, belong to the North West Provinces and the countries beyond; the Punjaub, for instance.

1470. And, beyond that, there is no charge in the Bengal accounts at all for army expenditure?—No, not at present.

1471. I will take Madras, for instance; the Madras accounts show a surplus of 2,054,000 *l.*, but Madras is charged nearly 3,000,000 *l.* for the army, so that does not show a fair statement of Madras for its surplus; I am taking the account for 1870-71?—Exactly so. If that account were properly made out, it would show a much larger surplus for Madras, because Madras, out of her own revenue, provides for the military expenditure of the Burmese Provinces and the Central Provinces.

1472. Bombay, again, shows a surplus of 1,831,000 *l.*, and is charged 3,132,000 *l.* for the army; that again shows a false surplus?—I do not understand that, for Bombay has been sucking all the rest of India for years; it always has.

1473. Is not Bombay charged with spending more than its income, and yet these accounts show that it has produced a surplus of 1,831,000 *l.*?—I suppose it is the Malwa opium.

1474. The Malwa opium comes to two-and-a-half millions, but then the army is 3,132,000 *l.*; that is more than its share of the army?—Yes, it provides a contingent towards the general army of India; as long as I remember India, Bombay was always our financial difficulty. Even in Mr. Elphinstone's time, with all his admirable qualities, the Supreme Government constantly complained of the heavy drafts from Bombay, and of late years the evil has been revived in an intensified form.

Sir *C. E. Trevelyan*, K.C.B.

11 March 1873.

1475. *Chairman.*] Does Bombay pay more than the expense of the army occupying the Bombay Presidency?—Yes; there are Bombay troops occupying Rajpootanah and Malwa, Mhow and Nusseerabad.

1476. But those are military stations under the Bombay Presidency?—They have nothing to do with the Bombay Presidency; they belong to the Bengal Presidency.

1477. Are they not military stations under the Bombay Presidency?—Yes, they are military stations under the Bombay Presidency; that is to say, the Bombay Presidency provides a military force for doing the service of Rajpootanah and Malwa.

1478. The Bombay army does not extend beyond the southern part of Rajpootanah, does it?—It extends to the military stations of Nusseerabad, Ajmere, Neemuch, and Mhow or Indore.

1479. Mr. *Dickinson.*] While the fact is, as you say, the accounts as furnished to Parliament show that Bombay contributes a very large surplus to the general revenues of the country?—Well, I can only speak as to that after an examination of the accounts. I see that Bombay is credited with the Malwa opium revenue, which no more belongs to Bombay than it does to Madras.

1480. Who does the Malwa revenue belong to?—It belongs to India in general.

1481. Why?—Because it is not raised in the Government of Bombay.

1482. Nor is it in India?—It is raised in India as a general revenue for the service of the whole of Anglo-India.

1483. The Malwa opium is not raised in any part of Anglo-India?—No; but it is a mere accident that it pays the export duty at Bombay.

1484. By that accident it comes into Bombay's pocket?—No doubt it does, just as the large customs of the North West Provinces and the Punjaub come into the pocket of the Bengal Government.

1485. That is owing to local situation. It seems to me that if your proposition is right, the Malwa opium revenue does not belong to us at all, but it belongs to the Malwa people?—No; it must pass through our territory; and Malwa is under great obligations to us, and when we have taken the whole of the Malwa opium revenue, that is, the export duty upon the Malwa opium, in addition to the very small tributes which some of those Central India States pay, the balance of the account is still greatly in their favour.

1486. You object to the transit duties throughout India?—Yes.

1487. Through the Native States as well as the English States?—Yes. When I was a young man in India, the first notice I received from England of my transit duty report, was a letter to myself from Lord Ellenborough, who was then President of the Board of Control, asking my opinion, whether the arrangement for the abolition of the transit duties might not be extended to the Native States, and from that day to this it has been an object we have had in view.

1488. And has it been carried out?—No, only very partially.

1489. In the Native States the transit duty is more in the form, as far as we are concerned, of a custom duty than a transit duty, is it not?—It really is a transit duty. If [illegible] States levied the duty entirely accord[ing] own practice, they would take duty o[n] of the trade through their territories at [each] almost at every village.

1490. What I mean is this, that [when] goods are entering into a Native Sta[te] that State a right to put an import duty [on] and an export duty upon their own produ[ce] out?—No doubt they have a right.

1491. And is that the state of things [which] do we, in fact, allow them to exercise th[is] —Yes, we do. They have a full right [to] is part of the necessary resources [of] local governments. They are charged [with] entire expenses of administration, excep[t] as we protect their external frontiers, a[nd] are entirely at liberty to raise the ne[cessary] revenue either from land revenue, or cu[stoms] or excise, or in any other way they [think] proper.

1492. Is that in your opinion a desirable [state] of things to continue?—I think so. I a[ttach] great value to the element in the British I[ndian] Empire which the Native States afford, and i[f they] are to be maintained in their qualified ind[epen]dence, they must have the unrestricted pow[er] levying revenue; but these charges upo[n] general trade, the transit trade, are very [much] tionable, and it is extremely desirable to indu[ce] Native States to commute them, and effort[s have] been made for that purpose with more or le[ss] cess. As central independent India become[s] meated with railways it will become abs[olutely] necessary to see to this, and the rail[way] the practical solution.

1493. The point to which my ob[servations] were tending was this: ought there not to [be] as you have Native States in India someth[ing] the Zollverein in Germany, so that good[s] be able to pass through any of those [States] without paying?—Something of that sort [is] desirable, and will become absolutely ne[cessary] now that railways are introduced. A pr[inciple] the principle of the Zollverein, by which [duties] might be taken, once for all, on the frontier [of] Native State, and the produce divided a[mong] them in proportion to their general revenu[e] population, would be very desirable.

1494. You say, "on the frontier of the N[ative] States;" should it not be on the frontier of In[dia] —No, because there is a well defined custom[s] limit on the frontier of the Native States.

1495. But surely if you do deal with India [as] a whole frontier, goods coming in from the se[a] ought, on paying customs duty, to pass throug[h] the whole country without restriction?—No; we already have too small a proportion of the revenue of India; we are governing the whole of India, on the main point of military protection with the revenue of only about two-thirds of India. Therefore we cannot afford to give up any that we have got. But now that we are going to operate upon the large mass of Native States in the interior of the Continent, through our railways, it becomes absolutely necessary to make an arrangement on the principle of the Zollverein, that is, that instead of the train being pulled up at every village or small town, and a general search and a general collection taking place, the goods should pay once for all, and that the produce should be divided among the Native States interested.

1496. The[n]

n the same principle would apply to opium, would it not; the Malwa might levy his own tax?—Yes, he berty to do so, and I have no doubt xactly how he stands; happily the m is not produced only in his terri- took more than his customary dues ots, the cultivation would increase in uring States. Besides, as we hold oast, we can collect any export duty oper.

ould it not follow, in that state of the customs which we now receive ght to be the subject of division be- selves and the other Central States of o, I deny that.

am not now going to the question of s that we may have upon them, but hat particular claim goes, would not e result?—No, I deny that; I consider re in an Imperial position in India; we general guardians of India; we are with the principal expense of providing protection for the whole of India, in- that great mass of Native States; they ct in the same position as Bengal would were allowed to spend her large nominal without any charge for the army; and re I would not on any account disturb the g arrangement by which we collect the e custom duties for the whole of India, ep them ourselves. But when we come Native States, taken separately from our es, there I allow that something on the e of the Zollverein is necessary.

Now you have talked about our ruling with a view to self-government; what is t, in your idea, that the Native States should n in such a system; would they have any- y; would they form part of the general India?—The Native States would fol- wake in that as in other things.

That is if we drove them, I suppose?— hould not drive them; I will take the Jeypore as an example; he has already d a rudimentary parliament; in fact, onal ideas, in a rough sort of way, have in those States to a much greater ex- n is generally supposed. Lord Metcalfe y time, took the votes of the whole of the ocracy of Jeypore as to the appointment of egent; and as self-government is satisfac- y worked out in our provinces, the Native tes will, as a matter of course, follow their er.

501. In your decentralising system, ow somewhat the existing system in hat your idea; if England, for ing, after deducting the interes 50,000,000*l.* by Imperial taxa f of that by local taxation, t perial Government and th inistration, is that the uld regulate your dec ; our English syst nish a model f regards nt a rese glis ir

1502. You would give each province almost autonomy?—Almost autonomy; autonomy in every respect which was not inconsistent with the general interest. The local governments would represent local self-government, while the Supreme Government would represent the general interests.

1503. But surely by that plan you might have different laws of succession, for instance, in different parts of the Empire?—It would be for the Governor General to see that there was a general harmony between the laws of the Empire. In fact, he does so at this moment. The Madras and Bombay Councils have the power of passing laws quite inconsistent with each other, and the Government of Bengal also; but the Governor General sees that they are not unduly inconsistent; a liberal scope, however, is allowed.

1504. That is not the model of the United States, at all events; I rather want to get from you whether the model which you go upon is rather one of administration than one of actual government?—The truth is that I have not taken any one model as my rule, but I have worked this out on Indian and English principles. I have taken the principles of self-government and self-taxation and representation which prevail in England, and have applied them *mutatis mutandis* to India.

1505. Now take the Civil Service, for instance; would you have one service throughout India?—That I would have as at present, separate services for Bengal, Madras, and Bombay; and as the European Civil Service gradually contracts with the development of the native administrative element, it would become more and more manageable.

1506. In regard to the Customs Department, it would be entirely under the Supreme Government?—It would be supervised in a general way by the Supreme Government, but it would be entirely under the administration of the three maritime Governments.

1507. Would your Custom of the local government Government?—Of the

1508. And the *Pos* under the Supreme

1509. The pos appointed by t he is now.

1510. they h loc

Sir *C. E Trevelya* K.C.B.

Sir *C. E. Trevelyan*, K.C.B.

11 March 1873.

Europe; and the different provinces in India differ quite as much from each other in language and habit, and general circumstances, as the different nations of Europe do.

1515. Now I will take the Courts. Are not the High Courts of Bombay, Madras, and Calcutta, in your opinion, unnecessarily expensive?—I can answer for the High Court at Calcutta being unnecessarily expensive. There are far too many judges.

1516. And Madras too?—Yes, Madras too. I cannot speak so certainly about Bombay.

1517. As Bombay has the knack of doing things expensively, it probably is the same there?—I have no doubt it is; I should be surprised if it were not.

1518. Mr. *Beach.*] With reference to the reduction of the Madras army, is there not a strong impression that, considering their loyalty during the time of the Mutiny, they were hardly treated?—No; it was no loss to them to return to their homes; they are eminently domestic in their character, and I speak from positive experience. I arranged that large first reduction of the Madras army after the Mutiny with Sir Patrick Grant. Besides the Rifle Regiment, and the four extra regiments, and the two veteran battalions, and the large regiment of sapper militia, all which were disbanded, we reduced the strength of the 52 regular regiments of Madras Native Infantry from 1,000 privates to 700, and native officers in proportion, and we were prepared for some murmuring, but to our great surprise and delight we found that the Sepoys were only too glad to return to their homes with the money they had saved during the war, and the month's pay for every year's service which we gave them, and so it would be with any number of Madras regiments that might be reduced; the demand for agricultural labour is so great, and the profits of agriculture so high, that by far the best thing that [illegible] of people can do is to return to their homes to [illegible] agricultural pursuits.

[illegible]ive position of the European [illegible]consequence of that?—[illegible] about the European [illegible]d not keep up regi-[illegible]n for the officers, [illegible] years.

[illegible] remove the [illegible] an insti-[illegible]tainly [illegible] of

produce, indigo, opium, cotton, a[illegible] England is great as a manufactur[illegible] and they ought each to perform the[illegible] of each other. I think it an entire n[illegible] ing up such establishments in India [illegible] tories, and gun-carriage factories, [illegible] manufactories; and I doubt very [illegible] powder. The extraordinary cheapn[illegible] ward freight to India is an importan[illegible] the question.

1522. It was formerly intended [illegible] arsenal at the foot of St. Thomas's [illegible] think?—Yes; that belonged to a by[illegible] of things; that is an entire mistake. [illegible] there must be a proper magazine at [illegible] That should be secured by entrenchm[illegible] we are a great deal too expensive in [illegible] erecting fortifications.

1523. Supposing any redemption o[illegible] revenue were to take place, it ought [illegible] carried to the income of the year; it oug[illegible] to be applied to the payment of debt, [illegible] not?—Certainly, if it took place.

1524. Mr. *R. Fowler.*] I understood [illegible] express an opinion that for economy in I[illegible] must look to a reduction of the native a[illegible] Chiefly.

1525. Then you think that a very great [illegible] could be effected by reducing the numbers [illegible] native army?—Yes, a very large saving.

1526. And amalgamating the troops [illegible] three Presidencies?—Yes.

1527. You spoke in high terms of [illegible] Court of Directors, the excellence of whic[illegible] derstand you to attribute to the commerc[illegible] ment in it. You have, of course, conside[illegible] question, whether any similar element co[illegible] placed in the Council of India?—The [illegible] mercial element has got wrong of late [illegible] its relation to India. The Court of [illegible] had a mercantile origin, and they main[illegible] not their mercantile character, at any r[illegible] mercantile habits, to the last; and th[illegible] great following, a great connection am[illegible] cantile and monied people of all sorts [illegible] quite of late years they all belonged to t[illegible] themselves, and being perfectly inde[illegible] resting upon the Court of Proprietors, a[illegible] charged with the responsibility and ho[illegible] governing India, they stood up manfully [illegible] protection of India; so that then we had [illegible] mercantile and monied interest engaged for [illegible] protection of India incorporated in the Ho[illegible] Government of India. But now all that is at [illegible]d Manchester and the City (I am n[illegible] individually at all), I mean the gre[illegible]nd monied, and manufacturing, i[illegible] been, without meaning it, seein[illegible] make the most of India for the[illegible]

[illegible]ercial element has survive[illegible]s put on the Council. [illegible]ls, who retired in 186[illegible]e of that interest?—[illegible]

[illegible] whether a[illegible]at i[illegible]d?—[illegible]y wa[illegible] wa[illegible]

ree which will

more merchants
he Council?—No;
knowledge that the
ave seen so much evil
aggressive, exacting,
ntile and monied interest
a, that I would certainly
scope; I would give it no
, I mean that I would not add to
t power which it already exercises in this
erning country, further official power.

But the form it takes, I apprehend, now the commercial interest in Parliament e Government of India to spend money. ould not that be rather checked if the cial interest was represented in the l?—That is only a formal official way of it, that Parliament urges the Government ia to spend money. We have got much l that in England; England governs itself h the press, and through public opinion, rough private society, and through the r of the great manufacturing and mercantile ities of Manchester and Liverpool, and h the great monied people in the City, way which is not capable of very exact etrical description; they have already themselves too powerful for the benefit of and I certainly would not add to their by giving them an official status.

2. You expressed a high opinion of opium ource of revenue in India; do you not think the use of opium produces a great demotion among the Chinese and others who use Not more than gin or beer. I am not at all n that it is not the best stimulant, if used oderation. You may have observed that nation has some stimulant or other, and pposed by people who have studied the hat opium, from the influence it has in the imagination, acts beneficially upon ish unimaginative Tartar character.

. But is it not the fact that while the l men in this country are constantly in the f prescribing the use of spirits and wine, ever prescribe opium, except in cases of e illness?—Indeed they do. Mr. Wilber- or 30 years before he died, always had two three opium pills in his pocket, which he took ntervals.

1534. But he was always an invalid?—Yes; d opium is very extensively used in the case of ople in weak health. But, regarding opium as stimulent capable of great abuse, the Govern- ent of India does all it can to render opium arce and dear by levying the highest possible x upon it. The Anglo-Indian Government eals with opium on precisely the same principle s the English Government deals with intoxicating pirits.

1535. Do not you think that opium must be egarded as a precarious source of revenue; is ot there a great possibility of the Chinese cultivating it to an extent which will put an end o the large revenue that we derive from it?—No; because it does not depend upon the extent f the cultivation in China. The Bengal opium altogether of a superior quality to any that can e grown in China, so that whatever quantity ay be grown in China, those who can afford it ill still consume Bengal opium. There is the ame difference between Bengal and China opium as there is between fine claret and rough *vin du pays*.

1536. But do you attribute that to the climate, or to the mode of preparing it?—Mainly to the wonderful qualities of the soil and climate of India; the same cause that makes indigo, and jute, and shellac, and other things, what they are in India. There is a difference in the quality even of Bengal and Malwa opium, and each has its admirers in China.

1537. Then you do not think that it would be possible, owing to the climate of China, for the Chinese ever to produce as good an article as India does?—I think not; I think we may calculate with certainty upon a continuance of our opium revenue. It will vary from year to year like other commercial speculations, but in the main it is a thoroughly reliable source of revenue.

1538. Do you approve of the system in Behar and Benares, by which the Government becomes the cultivator of opium?—I have already put in papers which show my opinion on that point.

1539. The consumption of opium by the Chinese has very much increased since we furnished it to them, has it not?—No doubt it has, because trade has increased in China; the country has been opened. How far opium has been substituted for shamsoo, that fiery spirit which maddens people, and made such havoc with our troops in Northern China, it is difficult to say, but no doubt it has increased.

1540. One hundred years ago the consumption was very much smaller by the Chinese, was it not?—It was very much smaller; but if not opium, they have always consumed vast quantities of a coarse, injurious, fiery spirit.

1541. Sir *D. Wedderburn.*] I wish to ask you two or three questions about the employment of natives in the higher branches of the public service; I think you have a high opinion of the best class of natives?—Yes.

1542. You would prefer employing them in responsible offices to employing an inferior class of Europeans?—Certainly, to employing an inferior class of Europeans; but there are many valuable men in the subordinate branches of the public service, the uncovenanted service, whom we do not class as natives; there is the class of East Indians, namely, those of mixed blood, who are an extremely valuable class, combining many of the good qualities of Europeans and natives; and there are also many very valuable public servants among the Europeans who have gone to India without any regular appointment, who have taken their chance and risen in the uncovenanted service. But I think this entrance to the service should be very carefully guarded. There has been great abuse in that way. All sorts of young men who fail at the competitive examinations in this country, or who do not even venture to go into them, go out to India with recommendations, and they have been put into the police, and into the lower departments of the revenue as deputy collectors, to a far greater extent than is right. The proper way of correcting that, is by doing as we have done at Madras, establishing a good system of local competitive examinations; that will keep out these scapegraces.

1543. The best class of natives would be amply remunerated at a lower salary than that at which you could command the services even of second class Europeans, would they not?—Well, I will not go that length; but they would

Sir *C. E. Trevelyan*, K.C.B.

11 March 1873.

be amply remunerated by much less than we give to our covenanted civil servants; no doubt about that.

1544. Do not you consider that natives living in their own country, and with their cheap habits of life, would be very amply remunerated at a considerably lower salary than that for which you could command the services of an European in the covenanted service?—In order to secure a regular supply of the most highly qualified class of Europeans, or, to put it more generally, in order to secure the application of the superior governing power of England to India through that channel in the best possible manner, liberal salaries must be given. I am speaking of the covenanted service; when you go below that, I see no distinction. It is true that natives can live in their own country cheaper than foreigners, but, on the other hand, it is an object to us to attract to our service the highest class of natives, and they ought to be paid at least as much as any Europeans who may go out as adventurers for the chance of getting what they can.

1545. Do you not also consider that by employing these first class natives, who would not require to be paid more than the adventurers of whom you speak, we should gain, if not financially, certainly very greatly, in a political point of view?—We should gain every way; we should gain in security; we should gain in popularity; we should gain in economy; and then, if the matter is properly conducted, the two classes should hardly be set against each other, because the natives will be 50 to 1 to the Europeans if they are all subjected to the same tests.

1546. I suppose you would regard the establishment of Cooper Hill College as a mistaken act of policy, inasmuch as it tends to create a close service of European officers, and throws a considerable burden upon the finances of India?—It never occurred to me that such a college was necessary or desirable. I should not have proposed it myself, but I do not wish to pass a harsh judgment upon it.

1547. Do you not consider that, in engineering particularly, the natives have, in various periods of their history, shown great talent and skill?—They have shown great practical talent, and on the main point of all, that of irrigation, nothing can be better than the ancient irrigation works of the South of India; in fact, they have been a model to ourselves. Sir Arthur Cotton is merely an imitator on a grand scale, and with considerable personal genius, of the ancient native Indian engineers.

1548. Mr. *B. Cochrane.*] What date are you speaking of?—There is the great annicut on the Cauvery, which is an extraordinary work, something like Stonehenge, with the stones put close together in a row; it is a grand work. And then the whole country is covered with grand, beautiful tanks; there are multitudes of these tanks, as I mentioned, which have never been restored under our regime, and instead of beginning at the wrong end, and, making tremendously expensive canals, the expense of which must necessarily bear an excessive proportion to the income, it would have been far better to have contented ourselves with the humbler, but far more profitable work of restoring these ancient reservoirs.

1549. Sir *D. Wedderburn.*] About what period was the date of that work on the Cauvery of which you speak?—I doubt whether the origin of it is known; it is extremely ancient.

1550. I s[illegible] which have b[illegible] of the native[illegible] their model?—[illegible] been successful a[illegible] the one made by a P[illegible] Khan, who became [illegible] Delhi during Arungzeb[illegible] Jumna, and another ma[illegible] the east of the Jumna. Ou[illegible] cially, have been dead failures.

1551. Would you say, that among [illegible] improper burthens which have been [illegible] Indian finances, we might class a te[illegible] create sinecure offices for officials both[illegible] and in India?—On the whole the [illegible] difficulty has been successfully met. [illegible] difficulty which caused us most anxi[illegible] resettlement of the Government, and [illegible] greatest pains were taken to obviate [illegible] the whole, it has been met by the sim[illegible] dient of abolishing personal patronage [illegible] ing it entirely open and making it d[illegible] public competition; that has worked e[illegible] well; but still the old British jobbin[illegible] does creep in and show itself occasional[illegible] it ought not.

1552. Has there not been a tendenc[illegible] to create unnecessary offices?—Well, [illegible] the other day of an office which undou[illegible] unnecessary, which is, that an officer [illegible] appointed a permanent mehmandar; [illegible] entertainer of distinguished guests. N[illegible] cannot be necessary; and there is an ob[illegible] jection to it, which is, that the same perso[illegible] likely to be equally fit to entertain all [illegible] tinguished people who come from the [illegible] Asiatic countries. The old plan of selec[illegible] each party of distinguished guests the [illegible] who happens at the time to be best quali[illegible] entertaining them and showing them a[illegible] far better plan.

1553. Mr. *Fawcett.*] Assuming the g[illegible] bility of admitting the natives of India [illegible] to a share in the Government, what is the [illegible] way which you would adopt of attaining [illegible] first of all, with regard to the covenanted [illegible] —I would begin from the bottom. Fi[illegible] I would prescribe to all the local gov[illegible] that nobody should be admitted into [illegible] covenanted service, except by competitio[illegible] course, subject to the same exception as h[illegible] even our new system, which has worked so [illegible] is, like every other general rule, subject to ex[illegible] tion. When very special qualities are requ[illegible] for any very special duty, then, under prescr[illegible] public guarantees of recording the circumsta[illegible] and so forth, a special appointment is made, [illegible] that is contracting every year, and coming to [illegible] thing, and very little of it will be necessa[illegible] so that the first thing would be to secure [illegible] door to the public service by establishing [illegible] competitive system, that nobody, either na[illegible] or East Indian, or European, should enter [illegible] public service except by public competition, [illegible] that it should be given to the best. The [illegible] would begin working from the bottom as reg[illegible] appointments. Take the Customs, to begin w[illegible] Now, there is no doubt that every appointm[illegible] in the Customs, even the highest, might be v[illegible] properly filled by natives. I did appoint[illegible] East Indian Customs officer at Madras [illegible] appointed him deputy master, and I wo[illegible] have made him Customs master if the appoi[illegible]

ople of every race and creed appointed
bject to these checks.

Then I understand you would admit open competitive examinations to the nted service, those examinations being esume, in India, and that, having once mission to the service, you would allow occupy any position for which their ualified them?—Yes; that is the law. r the transfer of the Government that passed, and, strange to say, it was three years ago, but still we have not n it; why I cannot conceive.

Then, with regard to the covenanted how would you admit them more largely because the covenanted service is nomi- en to them, but, from the examinations ld in London, the natives are so unfairly pped that they are virtually excluded?— that arises, not from any deliberate exclu- the natives, but from the nature of things. as been governed from England, and by , and must continue to be so to a certain ven supposing every possible local allowed, still England must continue e a preponderating influence over India. application must be given to this go- ower of England in some way or other; nsider that the Civil Service, in its old atronage, under the Court of Directors, in its new form of appointment by public tition, is really of the nature of a regulated el through which the superior governing r of England is applied to India; and I think s altogether a mistake to look to the cove- d service as a proper mode of bringing for- the natives. It is a piece of temporary inery which should gradually contract as the r, and more legitimate, and wholesome, local ve element extends.

556. But considering that lately it has been ved by the local examinations which have n conducted by the Universities of Oxford Cambridge, and also by the degree exa- ations which have been conducted by the don University, that there is no difficulty tever in carrying on examinations over the t distant parts of the world at one moment, that no suspicion of unfairness has arisen, t objection would there be to let the first ination for the Civil Service be held simul- ously at London, Calcutta, Bombay, and ras?—I think very great objection. There practical inherent difficulties, which I will enter into now; but I think that there is a very grave and solid objection as regards the best interests of the natives themselves. Observe that the young men who are obtained by competitive examination, after all, are only raw material; they have been tried and proved in reference to certain qualities, but still it is a speculation how they will turn out; for the competitive system fails in applying a satisfactory moral test to the inner man; it cannot be done; that must be the result of actual experience. Now, the natives, especially the Bengalees, are exceedingly quick; they have a wonderful power of imitation, of learning up, and their intellects are very quick and vivacious; consequently they would be likely to be extremely successful in the examinations, and it would probably result in a large proportion of young Bengalees entering the covenanted Civil Service. Well, I think that that would risk, in fact, it would destroy, the whole thing. When it came to actual practical work, to those higher qualities which especially belong to government, to the power of governing men, they would fail to a great extent, and entire discredit would be thrown upon the thing. Therefore I think that the plan which I have recommended is much safer and better for the natives themselves. They will be admitted into the uncovenanted service in their own country with great freedom and in large numbers; and then they will undergo a process of natural selection. Those who turn out well, who have the qualities for higher office, will attain to higher office; those who have not those qualities, will either drop through or remain behind. I consider that very much better, both for the country at large and for the persons employed.

1557. But putting yourself for a moment in the position of a native of India, may he not very fairly urge this: "A solemn promise was given to me by the Queen of England, that I should be placed in a position of perfect equality; a law has been passed which declares that I, as a native, if I have the requisite ability, ought to be admitted to the Civil Service; that promise of the Queen has been entirely disregarded; that law has become a dead letter; and how long may I have to wait for that time, when you, Sir Charles Trevelyan, say the natives ought to be admitted to the highest positions; what security have you to give me that what has taken place in the past will not take place in the future"?—I consider that that solemn pledge did not imply any guarantee of any particular mode of admitting the natives. Now, if, as I suppose, to admit them at once to the superior covenanted service by competitive examination carried on simultaneously in England and in the different parts of India, would not be for the benefit of India, would not, in fact, be for the benefit of the natives themselves; then I consider that the good faith of this country is not in the least compromised.

1558. You slightly misunderstand me; I am not for a moment contending that the holding of examinations in India would be a better plan of admitting natives to the Civil Service, than the plan which you advocate; on the contrary, I will assume that your plan, if it could be carried out, would be better than the plan that I have suggested; but supposing that your plan is perfect, and would realise all the great results that you expect from it, what security have the natives, considering the promises which have been

Sir *C. E. Trevelyan*, K.C.B.

11 March 1873.

been give them, that your plan will be carried out?—Their only security is our good faith and sense of justice.

1559. But we have pledged our word already, by a law and by a proclamation; have we not?—We could not pledge our word more solemnly than we have; any additional promise we might give would only throw discredit on the past. The time of promising has passed; the time of acting has come; if we delay much longer to act upon our promises, no doubt the natives will think that we have been deceiving and mocking them.

1560. What disadvantage would there be in the plan which I suggest; supposing you said that the natives, after attaining success in the first examination, should spend two or three years in England when they had passed a second or third examination, and then the proper authorities would have just as good an opportunity of judging of their moral qualities as they have of judging of the moral qualities of the other successful competitors?—I think that in itself it is undesirable to give any young men an absolute privilege of employment for life. There is a disadvantage in it, even in reference to our own carefully selected and trained covenanted civil servants; but there is no help for that; we cannot do without them. As regards the natives it is different; we have a much more suitable mode of initiating the natives into the Indian Civil Service, and then we can select those who (not by the result of an examination, which, after all, only raises a presumption of qualification, but by actual experience) we can say are the best and fittest, and promote them to the higher appointments. And observe that the plan which you propose, while it would give some additional authority and dignity to the covenanted service, would utterly destroy the uncovenanted service.

1561. But the argument which you have advanced against giving employment to natives in the covenanted service, if it was open to them, applies, so far as I understand, to admitting them to the uncovenanted service; you suppose there that they are admitted by open competition?—Yes; but the thing would be much more manageable; the commencing salaries would be lower, and being appointed by competition in their own country, it would be easier to get rid of them, if they proved not to be possessed of the qualities which fit men for responsible employment.

1562. But do not you think that until we place them in a position of greater equality, with reference to the covenanted service, nothing will remove from the minds of the natives the impression that they are suffering some injustice, because we throw open to them the ill-paid uncovenanted service; but with reference to the well-paid covenanted service, we so arrange that the natives are excluded from it?—I do not agree with that. No doubt hitherto we have so arranged the appointments to the covenanted service as to exclude the natives. But, on the other hand, we have given solemn pledges, and passed solemn laws, to do otherwise; and, if we only begin to act upon our laws and our pledges, the natives will soon see that we are endeavouring to fulfil our promises in the best possible manner, and that a new road has been opened to them. Hitherto there has been no alternative offered; whereas, if the plan which I advocate is honestly and freely acted upon, and they see the Customs, Excise, and Stamps manned entirely by natives, and the natives ap-

ppointed to
Revenue and
become quite
sagacious enoug
problem.

1563. I presume,
you think that the
Government of India t
the solemn pledges and
this time you say they have

1568. With regard to the opinion which y
have expressed, that the people would be l
impatient of local taxation, how can you reconci
that opinion with what has lately occurred
Bengal with regard to Mr. George Campbel
Municipal Taxation Bill; did not the very pr
posal of that measure, authorising the impositi
of certain local taxation, excite such a gre
amount of discontent that Lord Northbroo
although, I believe, approving of the measure
principle, felt it necessary to veto it?—Well,
was novel in Bengal. In Bengal there is a ve
peculiar state of society; the province has be
le

Sir *C. E. Trevelyan*, K.C.B.

11 March 1873.

h to itself; it has been very loosely as been altogether in the hands of dars of our creation, and the ob- ctive communities of local traders; rt of India where municipal go- s made least progress, for the ancient stitutions of the country, the village , were destroyed by the permanent and nothing has been put in their eas, in the North Western Provinces, , and Bombay, and to a great extent the ancient municipal institutions ed, and have been built upon by the f more regular symmetrical munici- ording to our modern English notions, vers very well. One municipality, s been established in Bengal, which extremely well, which is that of Cal- en, too, the measure was too large; it ch of a novelty; it was too sweeping. gh the measure has for the time been it forms a very important part of the of the country; and when Mr. Camp- it forward again in an amended form, more limited form, the people of Bengal ch better prepared for it than they are

But your plan of centralisation rests oes it not, on the idea that at the time as carred out India would have some presentative institutions; it would not carry it out without those, would it?— hings must go *pari passu* unquestion-

For instance, if at the present time, any more representative institutions has, to refer to Bombay, the Governors ay would not be spending their money, pending the money of the people of are unrepresented, and therefore be no check imposed on extrava- questionably. The plan which I ed is a machine compacted of many the whole of the parts must be sepa- structed and fitted together. I consider ppening of the Civil Service to the the manner I propose is a very im- art of it. It will be a most valuable hem, that now we are not only going bout promoting them, but are really o do the thing.

. You have expressed the opinion that the c Works, as at present organised, is a er of centralisation, and that its monstrosity wn in inefficiency, and in extravagance?—

72. You are probably aware that this de- nent has proposed to spend no less a sum 70,000,000 *l.* of the money of the people of in railways and canals?—Yes.

73. And, if your description is an accurate of the defects of this department, you must ider that this large expenditure will be ex- ely mischievous, and ought to be checked? rtainly. I would check it by taking the artment of Public Works to pieces, and local- it.

74. And until you have done that you would very effectual restraint upon their spending more money, I presume?—Yes. Then, in- of the Department of Public Works having limited credit on the purse of the whole of , each of the eight Governments would have dit only for spending its own money. Of course, separate provision must be made for carrying out the railways; I would do that through private companies.

1575. You have expressed an opinion as to the great desirability of attracting a portion of that surplus English capital which now flows into almost every country in the world except India. Do you think that there is any chance of any considerable amount being attracted to India as long as the Government undertakes industrial works which in other countries are carried out by private enterprise?—No; I think that that is an absolute bar to any extensive introduction of British enterprise into India. It is elbowed out; there is no room for it at all; and therefore it would be one of the greatest of the incidental advantages of the decentralisation of the Government of India and the localising the works of India, that it would enable us to make a fresh start as regards the introduction of British enterprise; for as for railways, I am perfectly convinced that there is no country in the world where railways would be more profitable if they were carefully and cheaply made, as private companies would make them for their own benefit; the Government, of course, might give any necessary help; there are plenty of ways of doing that; either by subsidies, lump sums, as Lord Elgin proposed, or by what I think would be, perhaps, better at first, namely, a limited guarantee, guaranteeing the interest on a certain sum, and that everything above that the shareholders must find.

1576. In fact, your opinion is, that the centralisation which has particularly exhibited itself in the Public Works Department has elbowed out private enterprise and English capital to a great extent in India?—Yes, I am of that opinion.

1577. You expressed the opinion, did you not, as long ago, I think, as 1865, that one of the great lessons which the English Government in India had to learn was, that it was far beyond the power of any Government to supply a worthy industrial outfit for such a country as India, and that meant the Government undertaking to supply the industrial plant of the country, instead of leaving it to private enterprise?—Yes; I was very much struck with the analogy of Ireland after the famine. After we had saved the lives of the people of Ireland we thought that we were going, by a hop, skip, and a jump, to make the country self-supporting and reproductive; the common saying was that if the resources of Ireland were properly developed, there would be an ample subsistence for the whole 8,000,000; and so we set to work with our arterial drainage works, the opposite process to the Indian plan, but very much on that scale, and open to exactly the same objection, that they were far too grand and too expensive. That went on for two or three years, but happily we were spending our own money in Ireland, and not the money of the people of India, and so it soon came to an end, and the whole thing collapsed. The improvement of India, like that of Ireland and England, must, in the main, be the gradual result, not of the single agency and single fund of the Government, but of the multiform agency and unlimited resources of private enterprise, stimulated by private interest, and checked by private sagacity and thrift.

1578. You have devoted a good deal of attention, I think, to that subject which throws perplexity and confusion over the whole of Indian

Sir *C. E. Trevelyan*, K.C.B.

11 March 1873.

finance apparently, namely, cash balances?—Yes; I have paid a great deal of attention to that. I have worked at it.

1579. Do not you think that until they are properly explained, it is impossible for anyone here to form an opinion of the exact financial position of India?—What is called "debt," which is a great deal more than the debt owing by the Government on the regular loans, including, as it does, every possible obligation of the Government of India to everybody and everywhere, is a very confusing element indeed; but we know a great deal more about it than we did.

1580. Of what elements are these cash balances composed, in your opinion?—The cash balances are the *omnium gatherum* of every sort of administration, public and local, and, to a considerable extent, of private people. Banking has not gone very far in India; and besides the actual balance of the revenue in cash, the treasuries contain every conceivable sort of deposit, deposits of prize money, deposits due to the service funds, and a very large item of judicial deposits answering to the vast accumulated trust funds of the courts of law and equity here, and all sorts of things.

1581. *Chairman.*] May not the cash balances be described with sufficient precision, as representing all the obligations of the Treasury on current accounts, which have not been carried to funded debt, and they also represent all the operations of the Treasury in the administration of the finances within the year, including advances and repayments?—Yes, that is so. It is impossible, in India, to make a clean balance sheet as we do in England; here it is merely the income and expenditure.

1582. But, as I say, it represents, in addition to the administration of the income and expenditure for the year, including advances and repayments, the open accounts between the Treasury and any person claiming upon the Government, which have not been made the subject of a funded debt?—Yes.

1583. Mr. *Fawcett.*] But the cash balances partly consist, do they not, or may consist, of unexpended loans?—Certainly.

1584. Let us suppose that the cash balances in one year are 20,000,000 *l.*; we notice next year that they are 18,000,000 *l.*; in the meantime, during that year, there is apparently a surplus of 1,000,000 *l.* Now, it is quite possible that that surplus is purely a fictitious one, that it may have been got entirely by taking from the cash balances 2,000,000 *l.* of the unexpended loan. When you say that there is a surplus of 1,000,000 *l.*, or any sum in a particular year, the meaning which you wish to convey by saying that there is a surplus, is this: that the ordinary revenue has exceeded the ordinary income by 1,000,000 *l.*; but if that excess has been obtained by spending a loan, it has really been obtained by borrowing money, and therefore I am correct in saying that the surplus is purely a fictitious one?—Certainly, that is one way of putting the objection to the chronic system of loans, the annual loans that we have now entered upon; in fact, it is a reproduction of the old system of open loans under the company in a worse form; that is one form of putting the objection.

1585. But is there anything to prevent this being done with regard to the finances of India. A certain sum may be borrowed, we will say 4,000,000 *l.* for barracks only; 2,000,0 may be spent; the other 2,000,000 into the cash balances; the cash bal reduced, and you may exhibit to t you have got a surplus of 2,000,00 if the accounts were properly sta 2,000,000 *l.* surplus would have been have been obtained by getting 2,000,0 a loan which was intended to build ba No; I think the loans go to swell balances, because the annual Budget E income and expenditure shows so fa genuine comparison of income and ture.

1586. But you have once, I believe, these cash balances as a kind of *omnium g* a portion of them no doubt are unexpend therefore, if you take so much out of balances, if you take it out for the cur penses of the year, you are taking a p the unexpended loans, and therefore really providing for the current expen the year by borrowed money?—No, I do that; the annual Budget professes to sh I believe does show, as far as it can be a a real balance of current income and cur penditure within the year, and so no part income can be said to be taken from the of former loans out of the Treasury. T sequence of the unexpended loans is, th go to swell the cash balances; they c confuse the accounts also.

1587. But are you quite certain as t taking the accounts for any year, could yo tively state, looking at those accounts, t portion of the current income came out cash balances?—That is another thing.

1588. Then, am I not correct in saying, a portion of the current income comes ou cash balances, the cash balances being *gatherum*, you dip your hand into a which you are certain to pull a portio expended loan, and; therefore, the curr of the year is not supplied out of ordinary but partly out of borrowed money?—I d that length; but this I must admit, th you come to the expenditure, the fact drawing your expenditure from two entir ferent sources, one current income from and the other the unexpended portion of p loans, has a great tendency to confuse th counts, and is extremely objectionable. If would allow me I would make a general rem about the cash balances. I consider that the fusion in which the cash balances are invol or rather (for "cash balances" does not describe state of things; the proper word is the techn Anglo-Indian financial word "debt") the confu in which that part of our financial administra which comes under "debt" is involved, is chro and is the necessary consequence of our atten ing too much. India, with its eight Gov ments, and other complicated relations, is far vast to be administered as a single financial o ation, and we never shall get that part of finances right as long as we attempt to do whole of the finance from Calcutta. The c way to get it right will be to decentralise finances, and then it will become manageable reference to each Government. Madras know what its assets and liabilities are, and be able to make a clear account.

1589. *Chairman.*] Do you think that thi the real difference between the two cases,

Sir *C. E. Trevelyan*, K.C.B.

11 March 1873.

the finance account, the balance is a statement of the income and for the year, and it also contains l the account of the Exchequer but it does not contain any of the of the Crown, or of the Government own, which are carried on through the England, and which are Bank of Eng- unts on behalf of the Crown of various and Departments; but in India, from method of the Treasury, standing in of the Bank of England, in relation to l administration, the Treasury Account both the Administration Account and ces of Account, which in this country by the Bank of England?—That is a correct view. The Indian Exchequer, tly magnified scale, is what our English r would be if the whole of the judicial and a great variety of other deposit formed part of the Exchequer Account. merely another example of the task that undertaken, of administering India y from a single centre, being too vast perly performed.

Mr. *Fawcett.*] But supposing that the continues of administering the finances from Calcutta, would it not be highly to have the various elements of which h balances are composed more separated ch other; something might be done in ection, might it not?—No doubt; but we f us been working at that, and breaking s against it; and we have made some but the subject is so impracticable that e satisfactorily dealt with; the machine ind too complex, composed of too in- ty of parts to be properly compact; aken to pieces, and we must have hines.

hink you have expressed the opinion, ot, that the cash balances at present d are very much too large in amount? consider that, with the present facili- ected with banks, and railways, and rrency, from 10 to 12 millions are

They have been up as high as 24 mil- ve they not?—They have been upwards llions a good deal.

3. That represents a very considerable loss dia?—Certainly.

94. Almost as much as was realised last year e income tax net?—Yes.

95. You referred just now to the very low of interest at which India could borrow ey, and you attributed it to one cause, namely, he confidence that there is in the security Government. But do not you think that ther cause partly operates, namely, that there n impression that England is to a certain ent responsible for these loans?—No; I do think that they reason it out in that way. y naturally consider the English *régime* as ually one; England has such a tremendous e in India, that everybody, European and ive, feels quite sure that she will do her very t to keep things straight.

596. But you, I suppose, agree in the opinion if by any chance India could not pay her , the English revenues would be in no way onsible for the interest?—Certainly, that is case.

597. You think that that cannot be too

explicitly stated, I presume?—I think that the prevalence of any such idea as you refer to is greatly to be deprecated as leading to a feeling of relaxation in the administration of the finances of India. It would throw a wet blanket on economy, just as the system of loans and the income tax does.

1598. And you also think, do you not, that it is desirable for English investors that that fact should be stated to them as distinctly as possible?—Yes, it cannot be stated too strongly.

1599. You enumerated many unjust charges which have been thrown upon the Indian revenues. I will not examine you on those again; but I wish to ask you whether your attention has been directed to the charges which were thrown upon India in consequence of the Abyssinian War, and to the expenses which she will have to bear in consequence of the present expedition to Zanzibar?—I do not know what the arrangement is in reference to Zanzibar. India is partly in fault; I suppose if India was an independent power, we should, at least, exercise some diplomatic influence in reference to the Cutch bunyans, who are the principal agents in carrying on the slave trade at Zanzibar. I will not give any opinion, however, on a case the circumstances of which I am ignorant of. As regards Abyssinia, I have formed an opinion. The Abyssinian War arose out of an Imperial sentiment affecting the whole British Empire; and in much greater degree, in my opinion, our European and American relations than our Indian relations. As far as India only was concerned, although it may be harsh to say so, I do not think it mattered much whether the prisoners were released or not. In fact, the people of India know nothing about Abyssinia; they consider it as one of the regions of the world that they know nothing about.

1600. In fact, India was in no way more concerned with our expedition to Abyssinia than were Australia and Canada, and that the only reason why we did not make similar demands on Australia and Canada to help to pay the expenses of that war was, that we knew perfectly well that they would indignantly scout such a proposal; they would not listen to it for a moment, would they?—Well, I am bound as an honest man, to say that I see no real difference. India had nothing to do with the proceedings which brought about the Abyssinian War, and was not much concerned with the result.

1601. Has your attention been directed to this fact, that very often in the financial accounts of India a very large item is put down for Miscellaneous Receipts, and that when you examine into those miscellaneous receipts you find that they are obtained by the appropriation of various funds, or the money resulting from the sale of waste lands, which funds and which money ought to be considered as capital?—You are referring to the service funds, I presume?

1602. The Civil Service Annuity Funds, and those other funds?—The Government took over the capital of those funds, and made itself responsible for their liabilities. What it does, I believe, is to appropriate the capital of the funds from year to year, in paying the liabilities.

1603. They have put down the funds, have they not, as an ordinary receipt of income; therefore they spend the capital and have to pay the annuities afterwards?—I am afraid that that is what it really amounts to. The way in which they

Sir *C. E. Trevelyan*, K.C.B.

11 March 1873.

they state it, is that they pay the liabilities, the pensions, out of capital as far as it will go, and after that they will come out of revenue; but the fact is, I believe, that the funds have been appropriated as revenue, subject to the liabilities.

1604. And with regard to the sale of waste lands a still stronger thing has been done; the money there has been appropriated as ordinary income against the express orders of a Government regulation, has it not?—I was sorry to hear that, because the instructions originally given were perfectly correct, namely, that as the sums derived from the sale of waste lands formed part of the capital of the country, they should be entirely appropriated to the liquidation of capital charges, namely, to the payment of debt; and I took the first step to act upon those instructions. In my first financial statement, on the 30th April 1863, I made the following observations on this subject:—"The Government has the advantage of having three *real* Sinking Funds. The first of these is the proceeds of the sale of waste lands and of the redemption of fixed rent-charges, both of which, according to the instructions of the Secretary of State, are to be applied to the payment of debt. As the same principle is applicable to all sums derived from the sale of real property, yielding, or capable of yielding, revenue, the local financial officers have been directed to make returns of the sums available for investment on this comprehensive footing. No investments have yet been made from this Fund." But in my next financial statement, made on the 7th April 1864, I reported the following item as part of a sum of 12,105,003*l.* paid off at home and in India, whereby the net annual charge for interest had been reduced by half a million:—"Government securities purchased out of the proceeds of the sale of waste lands and confiscated estates, 100,000*l.*" This was the result of the returns which had been called for in the previous financial statement. All this was done according to the instructions under which the Government of India was then acting, so I suppose those instructions have been altered. The instructions were very precise and very correct. They were given by Lord Halifax, then Sir Charles Wood, and they formed part of the original instructions for disposing of waste lands.

1605. *Chairman.*] But if you were borrowing money, and in that same year paying off debt by the sale of lands with one hand, that would only involve borrowing so much more money with the other; the borrowing was to make up the deficiency of the year?—No doubt. This new practice of annual loans puts every department of our finance completely out of joint; it destroys all real comparison; but nevertheless I think that the old landmarks of finance ought to be preserved, as far as possible, for the sake of the future, because we shall more easily return to them.

1606. Mr. *Fawcett.*] But with regard to the observation of the Chairman, there is this important difference, is there not. Suppose the finances of India are represented as being in this position: borrowed money, two millions; ordinary income from the year, 50 millions; that would be one way of stating it; but suppose that when you look more narrowly into it you find that that 50 millions which is stated as ordinary income was composed of two elements, one 48 millions arising from ordinary

now, five millions, would be over
revenue, and with this large amoun
we should have required scarcely
at all in India?—No, I do not s
certainly should not have realised
the whole 20 millions, for two
the first place, the great breakin
lands and the other improvement
led to that great increase of priv
from the land, would not have t
nearly to the same extent; and in the
to whatever extent it might have t
we should not have collected it from
nearly so closely as the zemindars do;
we should have lost the great exception
of wealth of all sorts, which distinguish
from the other provinces of the Empire;
should also have lost the remarkable, I w
say contentedness, because there has been
deal of discontent among the ryots; b
should have lost the great advantage i
secure and cheap government of the pro
which we have derived from the circumsta
there being such a very large proprietary
including all the sub-holders, on more o
permanent tenures.

1609. But according to your expressi
that answer, that the revenue is obtained
closely under the permanent settlement
these ryot cultivators, it would seem that
now have less liberal landlords than if the B
Government had been their landlord?—
that is a fact; but when we make new pe
nent settlements we shall see to that, and
the benefit of the limitation of the revenu
the actual holders, under whatever form o
prietorship.

1610. But is not this the fact, that la
creases in value from two reasons: it incr
in real value as the population and wealth o
cou

country increases, and it increases in monetary value with the depreciation in the value of the precious metals? — Yes, both those causes operate.

1611. Both those causes have been acting, are acting at the present time, and are likely to act very powerfully in India; and if the Government permanently settled the land, they would, by the permanent settlement, lose the entire advantage of the two elements of increase?—Yes, that is true, except so far as the taxes become more productive owing to the increase of wealth.

1612. And the only way, if you have a permanent settlement at all, of meeting this disadvantage, would be, and that would only of course ...ly do it, to adopt some arrangement so ...ould be a fixed portion of the produce, ...ount of the money rent should be ... the value of the agricultural pro..., that would meet the case. In fact, ...upon corn rents, like the tithes. That ...done, but I should not advocate it.

...Then, you not advocating it, you are ...to recommend that the Government (of ...u attribute other advantages to it) ...rifice by the permanent settlement the ... advantages which arise from the in...he value of land, that arising from the ...creasing in population and wealth, and ...arising from the depreciation in the ...metals?—Yes; but I have been so ...shed that I should like to say a few ...ny own behalf; I will be as brief as I ... ancient original system of Indian ...enue was actual division of the crops. ...were not allowed to be removed until ...ue had been paid, that revenue consist... actual share, the "Governor's share," ... hissa; the grain was put in heaps, ...hmen were placed on behalf of the ...officers over the heaps, and they were ...ivided. That is the rudest form of ...the system, and it was open to all the ... of the tithe system ten times over, ...was not merely the tenth, but it was ...even a half; and there is an old native ... proverb which expresses it exactly, ...útái;" "bhatái" signifying division, ..." plunder. Very soon we began to ...t; we began with annual settlements; ...nt on to triennial; then to quinquen... last we came to decennial settlements; ...ecennial settlements, we have got up to ...ettlements. Now, exactly in the pro... which the length of the tenure has been ... has the principle of property been ...nd the general benefits have been in ...n; but I conceive that, although, by ...on with the past, we consider the 30 ...ase a great thing, yet it falls greatly ... what is wanted, and would land us in a ...poor and unsatisfactory state of society. It ...be compared to what England would be if ...were a country of tenant farmers. But I will ...e a case which has a closer correspondence to ... India is under this 30 years' settlement. ... the estates in the North of Ireland of the ...city companies. They have a great deal in ...on with the 30 years' village and ryotwar ...ment. The small farmers are very com...le, and, according to their standard, they live very satisfactorily, but it is a poor state of society. There are no gentry; the class which here in England does the public business of the country, which represents the high education of the country, which furnishes, or ought to furnish, a model of refinement, and conduct, and public spirit, is entirely wanting, and cannot arise; they cannot be created; the elements do not exist for their creation. Now India, under a 30 years' settlement, is what Ireland would be if the whole of it were laid out in Mercers', or Drapers', or Fishmongers' estates; I think that is a very unsatisfactory state of things. I consider that the mere economical public works view is a very small part of the question. No doubt the gentry of England, the landed proprietors, do make all the more substantial improvements. They build good farm houses, and keep up the gates; and now they are in the way of building good cottages, and they promote public works of all sorts. A class capable of performing all those functions, materal and moral, in India never can arise under the 30 years' settlement. If we stop at the 30 years' settlement it is equivalent to putting an effectual barrier to the growth of the public improvement, and of the moral and intellectual civilisation and refinement of the country.

Sir *C. E. Trevelyan*, K.C.B.

11 March 1873.

1614. Sir *Stafford Northcote.*] Have you ever considered the desirableness of forming any sort of fund that might be loaned out like our Irish loan fund, or otherwise, to public bodies, to secure the carrying on of improvements?—Yes; I am familiar with the working of the Public Works Loan Fund in England and Ireland. It has been very judiciously and frugally administered, and although rather anomalous, on the whole has been productive of advantage. Lord Mayo commenced something of the same sort through the municipalities. I believe he had more extended views. He was familiar with the working of the system in Ireland. The English system was borrowed from Ireland, where it has done much good. Ireland approaches nearer to India, and Lord Mayo commenced making loans direct out of the Treasury to the Calcutta and other municipalities.

1615. I should like to ask you whether this could be done; whether, considering the uncertainty of the opium return, a certain maximum might be taken for the opium revenue, and the Budget framed accordingly, and that then any surplus which might arise over and above that estimated maximum might be carried to form a fund which should be available for loaning out in this way?—I am against dealing with the opium revenue in that way. I think it would only add one more complication to what is already sufficiently complex. And I am against fixed assignments of revenue. They are always either too much or too little. If they are too much, they lead to extravagance; if they are too little, then the object is not properly attained. I think that it is better that the opium revenue, whatever it may be, should go in part liquidation of the expenses of the Central Government, and that whatever it may be proper to appropriate in loans to municipalities or public companies, or anybody else, should be dealt with in a direct public manner, under a serious responsibility. It is a very delicate and rather hazardous kind of finance, and requires a great deal of looking after.

Friday, 14*th March* 1873.

MEMBERS PRESENT:

Mr. Ayrton.
Sir George Balfour.
Mr. Beach.
Mr Bourke.
Mr. Baillie Cochrane.
Mr. Cross.
Mr. Grant Duff.
Mr. Eastwick.
Mr. Fawcett.
Lord Edmond Fitzmaurice.
Mr. Lyttelton.
Mr. John Benjamin Smith.
Sir David Wedderburn.
Sir Charles Wingfield.

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

Sir CHARLES EDWARD TREVELYAN, K.C.B., re-called; and further Examined.

Sir *C. E. Trevelyan*, K.C.B.

14 March 1873.

1616. *Chairman.*] I THINK you wish to give some further explanation of your view respecting the new Engineering College?—Yes; the new Engineering College is a necessary corollary and consequence of a consolidated, concentrated, Public Works Department for the whole of India. For, as the Central Government has undertaken to execute the whole of the works required for every part of India, including railway and irrigation works, a regular supply of qualified officers of works must be provided, and this cannot be done, first, without making them a privileged service, endowed with immovability, like the old covenanted civil service; and secondly, without providing for their proper instruction and training. This would not be necessary if the Public Works Department were decentralised, for scope would then be given to the independent engineers, a most valuable class, which has already been firmly established in India by the guaranteed railway works. India would then become more than ever a favourite field for them. Then, I wish to observe that this consolidated, concentrated, department of public works has been endowed with independence of the civil authorities, forming a sort of *imperium in imperio*, which is not the case with the covenanted civil service; and it has also been vested with compulsory powers of forcing the ryots to take the water at a fixed price, and, in the Punjab, of forcing them to labour on the works.

1617. Do you also wish to give some further explanation with reference to the appointments made in this country in connection with railway and irrigation works?—Yes; in reference to home appointments in connection with the vast *personnel* and *matériel* required for the support of this system, especially in reference to the construction of new railways. The outbreak of Indian patronage, which was so carefully guarded against on the occasion of the transfer of the Government to the Crown, has thus begun to take place under a new form; the two principal officers of public works of my time, one at the head of the whole department, the other at the head of the accounts of the department, are already established in the receipt of Indian allowances at home; one, I believe, as
veyor of *matériel* and machinery for th
and other works, and the other as p
the Engineering College. And let
that as the demand for new railways
works increases, the necessity for
officers at home, whether belonging to t
Indian service or not, will increase.
fact, a foundation has been laid for an
extension of Indian patronage in this
which is the worst form of Indian patro

1618. There is another point on
think, you desire to offer some further
namely, the reconstitution of the offic
superintendence of Indian affairs in this
—Yes. I was asked as to the appoi
secretaries under the Secretary of St
place of the Council. The type wou
be that of the present under-secretarie
of the official permanent secretaries
from the clerks of the India Office;
would be taken, for the most part, fro
of the entire class of superior India
councillors, secretaries to the differen
ments of India, and so forth; and as t
receive a full salary, they would be e
give up their whole time to their pub
and would be superannuated at a suita

1619. You also wished, I think, to
thing to your evidence, with referen
relation of balances of unexpended loa
estimates and accounts?—Yes. The
borrowing which has been recommence
very important bearing upon the annual es
and accounts. The annual estimates of rev
and expenditure, no doubt, can still be prec
and symmetrically made out, quite irrespective
the loans, whatever the influence of these loa
upon the actual result of the operations of
year may turn out to be; in fact, a clean
mated balance can always be shown. The
culty does not arise at that early stage; but
we come to the expenditure, the matter bec
extremely serious. It is impossible to ear
the money drawn into such a vortex as t
the Department of Public Works in Indi
new footing; indeed, it is a principle o

accounts, that money should not be allocated to a particular branch of a department, but that it should be generally available; because, if allocated to this, that, or the other branch, stagnant balances necessarily accumulate in various quarters, and a great loss of interest, and hazard of the public money arises; in fact, the monies paid over to the Accounts Department of the Public Works must be generally available for public works of all sorts, whether irrigation or railway works, or roads, or barracks, or anything else. So that the position is, that this vast department is credited with large balances of former loans in the Treasury, upon which it can draw, I suppose, at discretion. Now, judging from my experience of practical finance, I should say that it would be simply impossible to maintain a check over a great department under those circumstances, and that a distinctive account of the expenditure of the public money allocated to those classes of works which were not provided for borrowed money, as distinguished from those which were provided for by borrowed money, could not be furnished in sufficient time to be of any practical value as a check.

1620. You would, in fact, assimilate the administration of the Indian finance to that of the English in paying the expenditure for works in the year as part of the service of the year, though it may be shown in the estimates under separate heads as it is in our estimates; yet it is all to be paid out of the current receipts of the year?—That is a fundamental principle of practical finance. Public finance, like everything else, must have well-marked limits in order that it may be properly controlled; and the English principle that the supplies of the year, for all purposes, shall be for services falling for payment within the year, is an indispensable principle, and we know, from a large experience of English finance, that public expenditure cannot be controlled on any other condition.

1621. Perhaps I might ask this, to make it more clear to the Committee: you would treat, as I understand, any work for which a loan has to be raised in the way that our finance has treated the purchase of the telegraphs, which did not enter into the financial operation of the year, but are kept as a separate account and met as the exigencies of the purchases require by raising the money by loan under the Act for that purpose; assuming that the Administration has come to the conclusion that it is right that any particular service should be met by borrowed money and not as part of the ordinary finances of the year?—Exactly so; so far as it becomes necessary to provide for any particular work by loan, it ought to be kept entirely as a thing apart; a separate account altogether, quite independent of the ordinary operations of the year.

1622. To go back further, the same thing was done with regard, if I recollect right, to the indemnity for the West Indian slaves, where a large expenditure was met by loans, and the whole account was kept quite separate from the current financial operations of the year?—Yes, and the same on several occasions of votes for extraordinary expenses of the China wars, the Caffre wars, and the New Zealand war, within my experience, and the Irish relief, and so forth.

1623. Mr. *Grant Duff*.] You will be glad, I think, to correct your evidence upon one important point when the facts are re-called to your mind. You have illustrated the greater care and frugality of the East India Company, by telling us that its Directors would never have gone along with the Home Government into that contract by which India has been saddled with a heavy annual payment on account of the Red Sea Cable which failed. Of course you would take a different view of the subject if I reminded you that it was the East India Company, which through its Directors made that, as you think, imprudent contract, and not any Secretary of State?—Then my recollection has failed me.

1624. Will you kindly look at that letter (*handing a letter to the Witness*)?—I see the date is 28th July 1858; we were then in the agony of the Revolution.

1625. Perhaps I had better read the letter for greater clearness; it is from Mr. Dickinson to the Secretary of the India Board: "East India House, 28th July 1858.—Sir, I am desired to acknowledge the receipt of your letter, dated the 21st instant, transmitting, for the consideration of the Court of Directors of the East India Company, a copy of a Minute by the Lords Commissioners of the Treasury, on the measures which they have decided to take in view to the establishment of telegraphic communication between Alexandria and Kurrachee; and I am commanded to state, in reply, that after considering the terms of the contract, which the Lords Commissioners of the Treasury are prepared to enter into with the Red Sea Telegraph Company, the Court will offer no objections thereto. The Court presume that as the liabilities involved in the guarantee will be equally shared between the Government of the United Kingdom and that of India, the selection of one of the *ex-officio* Directors provided under Clause 9 for the supervision of the affairs of the Telegraph Company will be left to the Indian authorities. I have, &c., *J. B. Dickinson*," who succeeded Sir James Melvill?—It appears from that letter that the practical management of the affair was conducted by Her Majesty's Government.

1626. The Court of Directors entirely acquiesced in all the proceedings of the Treasury with regard to this contract; it was entirely done by the Court of Directors; the only reservation which they made was with regard to the appointment of one of the *ex-officio* Directors, that I think is clear from the letter. I will read another letter which will show you that they protested against the action of the Treasury with regard to appointing both of these *ex-officio* Directors from the English side, but that protest was overruled in the days of the Company, and before the Secretary of State in Council came into existence: "The Chairman and Deputy Chairman of the East India Company to Lord Stanley.—East India House, 26th August 1858. My Lord, having laid before the Court of Directors of the East India Company the letter from the Lords Commissioners of Her Majesty's Treasury, regarding the appointment from the office of their Lordships of the two *ex-officio* Directors of Red Sea Telegraph Company (a copy of which is enclosed herewith), we are requested by the Court to state, in reference to their opinion upon the subject expressed in Mr. Dickinson's letter of the 28th ultimo, and also in Sir James Melvill's letter of the 26th of February 1857, that they have received this communication with some surprise. The Court understood that the objection of having two *ex-officio* Directors was that the

Sir *C. E. Trevelyan*, K.C.B.

14 March 1873.

interests both of India and of this country, whose revenues are pledged to the same extent for the guarantee, should be equally represented at the Board of the Telegraph Company; and they were induced to propose that the appointment of one should be left in the hands of the Indian authorities, as the opportunity would then have been afforded of securing the services of gentlemen who could bring to bear upon the proceedings of the Telegraph Company the knowledge and experience which they have derived from their connection with telegraphic business in different departments of the State, a public advantage, which is now lost by the selection of two gentlemen from the same office. If the Lords Commissioners of the Treasury do not concur in this view, the Court requests us to state that it is in their opinion undesirable to incur the expense of two appointments," and that is signed, "F. Currie, Wm. J. Eastwick." Then I would ask upon that, this question, the view of the Court herein set forth, was overruled, was it not, by the Treasury, as the views of the Court had often been overruled before?—That transaction had escaped me. I disclaim any personal responsibility at all for the arrangement. I had nothing to do with it at all; it was a transaction of the patronage department of the Treasury, and the nature of the transaction was making two appointments instead of one; and I think as far as it goes, it indicates that the management of Indian affairs would have been safer in Indian hands.

1627. There is no question about that; but you misunderstood altogether the object of my question; I want merely to show that this transaction about the Red Sea Cable was carried out entirely, from first to last, in the days of the Court of Directors, and not in the days of the Secretary of State in Council; that is my whole point; you told us that the Court of Directors, being more careful and frugal than the Secretary of State in Council, would not have gone into this, as you consider, imprudent contract, with reference to the Red Sea Cable; but I show you that it was the Court of Directors who did go into it?—It seems to me that this was a foretaste of a great deal more that came afterwards. It must be remembered that the Mutiny had been raging since the beginning of the previous year, and the first effect of it was to produce a great collapse of the power of the East India Company, and the Queen's Government had it pretty much its own way at this period, and it seems that the transaction was entirely managed by the Queen's Government.

1628. Pardon me, it was entirely managed by the Queen's Government acting with the Court of Directors of the East India Company?—Acting without them, it would appear from the correspondence.

1629. *Chairman.*] The evidence given by you had reference to what may be called the English influence on Indian affairs, consequent, as we understood it then, on the appointment of the Secretary of State for India in Council, as compared with influence when we had a Court of Directors responsible to their Court of Proprietors, and as an illustration of this you gave this case. It took place so very shortly before the transfer, that I was equally under the impression with you that Lord Stanley acted as Secretary of State for India in Council in that transaction; but it appears to have been just before the Act was passed, and therefore he acted as President of the Board of Control in that transaction in communication with the Court of Directors under the old system; and the honourable Member was asking you these questions to call your attention to that fact. Though it may be an illustration of English influence, it is not an illustration of English influence in consequence of the establishment of the Secretary of State for India in Council?—Then, officially, it was under the Company, but substantially it was under the *régime* of the Queen's Government, because the Company had fallen into a state of great disparagement at that time, and the Queen's Government had it all its own way. In fact, the Company died without a struggle, and it was then a surrender of its breath. I still maintain that this is a just illustration of my observation to the Committee.

1630. Mr. *Grant Duff.*] What I want to ask is this: was this transaction, or was it not, carried out by the Court of Directors?—It seems to have been carried out when they were in a moribund state, in their last agony.

1631. But it was carried out by the Court of Directors, and not by the Secretary of State in Council?—The terms of the contract were settled by the Treasury, while the Court of Directors still had an official existence.

1632. *Chairman.*] It is quite clear that the contract was made by the Court of Directors, and that immediately after the contract was made the form of Government was changed, and then the further proceedings took place?—The contract seems to have been made by the Treasury, and its breakdown was certainly [illegible] Queen's Government. Why the contra[illegible] not held to their contract I never cou[illegible] stand.

1633. Mr. *Grant Duff.*] Let us ju[illegible] stand each other. India's whole connec[illegible] the transaction ceased with the acti[illegible] Court of Directors; after that it was [illegible] by the Treasury; is not that so? the [illegible] of State in Council had nothing whate[illegible] with it?—I am not prepared to say tha[illegible] ever the Treasury did in reference [illegible] of every kind, especially in any matter [illegible] affecting the vital current interests of [illegible] done in communication, first with the [illegible] Directors and the President of the [illegible] Control, and after they came to an e[illegible] munication with the Secretary of Stat[illegible]

1634. But the whole contract, and [illegible] which caused the loss, was done and s[illegible] fore the Secretary of State in Council [illegible] existence at all; was not that so?—[illegible] came into existence officially; but th[illegible] tration of the contract, and the final b[illegible] took place under the Secretary of State[illegible]

1635. That is to say, the cable broke [illegible] the time of the Secretary of State. Is that [illegible] you mean?—Rather the contract broke, or, to speak more correctly, was allowed to be broken. I never could understand why that Company, having contracted to make a cable to India, was not held to its contract.

1636. Then do you mean to say that there was any miscarriage whatsoever in this matter of the Red Sea Telegraph caused by any Secretary of State in Council?—I think, if the matter were examined into, it would be found that the non-performance of the contract, and the rather protracted series of transactions connected with that non-performance and the final exemption of

of the contractors from the performance of their contract, took place under the Secretary of State.

1637. *Chairman.*] I wish to call your attention to the Papers which were laid upon the tables of the House on the 25th of August 1860, No. 597, from which it appears that on the 27th of August 1858 the Red Sea Telegraph Company, in continuation of the tranactions which have already been brought under your notice by the questions put to you by the Honourable Member the Under Secretary of State for India, addressed a letter to the Secretary of the Treasury, in which they stated the steps that they had taken to raise their capital, and the proposed kind of telegraph wire that they desired to lay down, and they stated in their letter, in continuation, that they submitted a copy of the draft contract which they proposed to enter into with Messrs. Newall & Company. Then they explained the nature of that contract, and it appeared that they had made it without inviting any tenders from other contractors, and they added, "The measures which have been taken by the Directors during their progress have met with the concurrence of the official directors, but it would, nevertheless, be highly satisfactory to the Board to learn that their proceedings are approved of by her Majesty's Government. The Directors would solicit the Lords Commissioners of her Majesty's Treasury to cause the necessary steps to be taken for completing the agreement between the Government and the Directors of the Company with respect to the guarantee," which was only to take effect when the preliminaries were settled. Then it appears that the Act of Parliament for transferring the Government from the Court of Directors and the Board of Control to the Secretary of State for India in Council came into operation on the 1st of September 1858. It further appears that the Treasury, on the 8th of September, forwarded that letter to the Secretary of State for India in Council, the change having then come into operation, and that the Secretary of State for India in Council, on the 23rd of September 1858, through Mr. James Cosmo Melvill, who was then acting as Under Secretary of State for India, expressed himself thus: "I am commanded to express the satisfaction of Lord Stanley, that the aid guaranteed by Government has enabled the directors to raise the necessary capital"; and then it goes on to state, "With regard to the proposed arrangements for executing the work, Lord Stanley is not aware of the reasons which induced the directors of the telegraph company to enter into a contract for the cable without resorting to the system of competition;" and he makes some further comment, and then he makes one comment with regard to the description of cable, and expresses a doubt whether the Atlantic Cable was the most desirable; and adds, "Having perused the proposed agreement with the contractors, the only observations with regard to its terms, which I am desired to make, are, that it would be desirable to modify the first clause, so as to oblige the contractors to keep the cable in working order, for one month at least, from the date of the first message passing through it; and that Clause 4 should be made quite clear upon the power of the telegraph company to test, as well as inspect, the cable and its component parts in all stages of its manufacture." That letter was written to the Treasury by the Secretary of State for India in Council, and thereupon the Treasury, on the 23rd September 1858, sent a letter to the directors of the Red Sea Telegraph Company to this effect: "I am desired by the Lords Commissioners of Her Majesty's Treasury to transmit the enclosed copy of a letter from the Secretary of State in Council, relating to the Red Sea Telegraph, and I am to request that you will furnish my Lords with any observations which you may have to offer thereon." Consequent on that, the Red Sea Telegraph Company sent a further communication, and then you from the Treasury, on the 30th September 1858, wrote to the Red Sea Telegraph Company, "I am desired by the Lords Commissioners of Her Majesty's Treasury to signify to you their Lordships' approval of your proceedings, as detailed in your report of the 27th ultimo, and to state, that they have maturely considered the question of providing ships for laying down the cable, and have come to the conclusion that the course proposed by you will, on the whole, be most advantageous. Their Lordships are accordingly pleased to authorise you to proceed at once to carry out your contract with Messrs. Newall, according to the terms submitted for the completion of the whole line to Kurrachee." That was on the 30th of September 1858, and the contract was entered into on the 23rd of October 1858 with Messrs. Newall by the Telegraph Company for the laying down of the telegraph; and after that you have told us what happened. Now with these facts and dates before you, I am anxious to ask you whether you would wish in any way to modify the answers that you formerly gave when you illustrated your opinion that the stock dealing influence had exercised an influence over the Secretary of State for India in Council, which they would not have exercised over the Court of Directors?—No, I do not wish to modify that opinion. The extracts you have read show that these transactions were conducted by the Treasury and the Secretary of State. In calling attention to that new stock-dealing influence, or rather to the increased power which that influence has shown since the transfer of the Government of India to Her Majesty, I did not depend on an individual instance, but on a series of instances, in fact on a large induction.

1638. I believe you wish to offer an explanation to the Committee in reference to an answer given by you as to the conduct of the Government of Bombay?—On a former day's evidence I was unduly pressed in Questions, to give an opinion upon the course which the Secretary of State ought to have taken in reference to a contemporary officer, namely, Sir Bartle Frere, the Governor of Bombay. I had expressed the opinion that the Secretary of State ought to have brought the Government of Bombay back under control; and in reply to further questions, I said that he ought to have done whatever was necessary to bring the Government of Bombay under control; but I was pressed, even beyond that, to express my opinion whether, if it was necessary that the Governor of Bombay should be recalled in order to bring the Government of Bombay under control, he ought to be recalled, and I was forced to say that he ought. It seems to me that in forcing that expression of opinion from me upon a contemporary public officer, I was unduly pressed.

1639. Mr. *Grant Duff.*] You also stated that

Sir *C. E. Trevelyan*, K.C.B.

14 March 1873.

the result of the Red Sea Cable contract was to entail a perpetual charge on the revenues of India of 27,000 *l.* a year?—£. 25,000, I thought it was.

1640. I think you will find, will you not, that the charge is one of 18,027 *l.* per annum for 46 years, not perpetual, commencing with 1862; is not that so?—It may be so; it is impossible to bear in one's mind the details of these innumerable transactions.

1641. At the commencement of your reply to Question 1282, you said "That from that time," the period referred to being the middle of 1859, "two conflicting policies prevailed in India;" one, the policy advocated by you of reduction of expenditure; the other, which was the favourite at Calcutta and in England, increase of taxation; did you intend to convey to the Committee that the policy of reduction of expenditure was not the policy of the Government of India, and of the Secretary of State?—It was more the policy of the Secretary of State than of the Government of India, because the Secretary of State sent out repeated directions to reduce expenditure; but into the transactions of the Government of India it entered in such small proportion that it cannot be considered to have been their policy. I show in some of my contemporary Minutes that the reduction of military expenditure proposed by Mr. Wilson was perfectly insignificant, that it was less even than what we had already effected, that is, had arranged for effecting, in the Madras Presidency alone.

1642. But in several parts of your evidence you referred to the Military Finance Commission, which was appointed by Lord Canning in June 1859 for the express purpose of ascertaining what reduction could be made in the military expenditure, and what plan could be adopted to reduce and keep down that expenditure; and in reply to Question 1282 (page 119), you quoted passages from a Minute of the 20th March 1860, in which you referred to recent positive orders of the Secretary of State for the reduction of the Army; have you not, in that evidence, given proof of the determination of the Government of India, and of the Secretary of State, to reduce the military expenditure to the fullest extent consistent with the security of the empire?—So far as regards the Secretary of State, I have already admitted that the reduction of expenditure formed a prominent part of the instructions issued by him. As regards the Government of India, so far as the appointment of the Military Finance Commission was concerned, I also admit it: and the Military Finance Commission, with the active co-operation of the Madras Government, did accomplish a great work of reduction in the Madras Presidency; but after that Commission went to Bengal the whole thing was hung up and remained in a state of suspense until Mr. Laing was appointed Finance Minister.

1643. Would you not say that the Secretary of State had done his very utmost to enforce the reduction of expenditure?—I do not think that I am competent to give a decided opinion on such a point. All I can say is, that on the face of his Despatches he certainly repeatedly enjoined reduction of expenditure. I think, seeing that there was such an enormous amount of extraordinary expenditure in progress in India, and that nothing was done to reduce it, some further steps might have been taken to hasten proceedings.

1644. Would it have been possible to use much stronger language than he used in his Despatch of the 18th of August 1859: "It is not, however, to an increase of the revenues of India, but to an early and large reduction of the expense, that I look for attaining the indispensable object of bringing the expenditure of India within the income;" and then, after referring to the military expenditure, Sir Charles Wood closes his Despatch by saying, "You may rely upon the cordial support of Her Majesty's Government in any measures which you may decide upon for effecting the indispensable reductions of expenditure; and I cannot too strongly impress upon you the necessity of early and vigorous action for this object?"—Yes; those are very suitable injunctions.

1645. Are you aware that the Governor General in Council sent to the Secretary of State a Despatch, on the 17th April 1860, respecting some of the views you have brought under the notice of the Committee, which was as follows: "But the main point in Sir Charles Trevelyan's Minute is a direct inference that, having two courses open to us for re-adjusting the national balance-sheet, the one a diminution of expenditure, the other an increase of income by the imposition of new taxes, we have deliberately adopted the latter, and rejected the former, as a mere matter of choice; he draws a contrast between the advantages of the one plan and the sacrifices of the other, so obvious to anyone that they need not have been stated, unless they were intended as a means of bringing popular odium upon the Government in connection with the unfounded inference that we had gratuitously preferred new taxes to reduction of expenditure, and on this erroneous and groundless assumption, he strongly deprecates any new taxes, because he has always been of opinion that this financial crisis might be satisfactorily met by reduction of expenditure only, combined with such obvious administrative improvements, whereby both our civil and military establishments would be rendered more effective, and the existing taxes would be more fully collected." Sir Charles Trevelyan's Minute shows that he had carefully studied the Financial Statement made to the Legislative Council, in which our views were stated in great detail, and it would appear impossible that he should not have observed that the plan of the Government was to rely, on the one hand upon a vigorous and unsparing reduction of expenditure, and on the other, upon increased sources of revenue, to make both ends meet. It was stated that we fully admitted that in our endeavours to restore the equilibrium between income and expenditure, our first duty was to use every effort to reduce all expenditure to the lowest point consistent with security and good government, and to make all those administrative reforms which are so essential in order to secure economy; and again, we will do our best to reduce expenditure, and to improve administration; but when all that is done it will not be enough." When a subordinate Government undertook to oppose the measures of the Supreme Government for increasing our revenues, on the ground that the deficit could be met by a reduction of expenditure only, we had a right to expect that they would be prepared with calculations and facts to sustain their views with clear and precise deductions; but so far from this, it did not appear from Sir Charles Trevelyan's

yan's Minute that he was even aware of the extent of the deficit to be made good, at least he never once alludes to the sum, nor to any specific means of dealing with it. In short, that Minute was only an able essay upon general administrative reforms, good in principle, and well worthy of attention, but altogether inadequate for the emergency with which we had to deal. The main argument that ran through it was, that a result had been attained at one time might be attained at another, without any consideration of the totally different circumstances of the case. There was perhaps, one exception to this observation. The Governor referred to his Minute of the 28th of May, which had been communicated to our Government, in which he showed that large savings in military expenditure were in progress in the South of India;" to which he had also referred in his Minute of the 10th of June, as a reason why a tobacco duty should not be imposed. But unfortunately to this, the single tangible point of important reduction, we were unable to attach any importance. The communication of the 28th of May contained a detailed statement of the military savings said to be in progress, and an Estimate of the Madras Military Expenditure for the current year 1859-60, then just commenced, which amounted to 2,782,000 *l.* But in the meantime, that is, about the month of October, a proposal had come up from the Madras Government for the establishment of a permanent European Force as being necessary for Madras, the cost of which would have been greater than any force heretofore maintained at any time in that Presidency, but which was disallowed. And again, just at the time we were considering these questions, in the month of January, in all their bearings, we received from the Military Financial Commission, who had visited Madras the preceding month, a memorandum, in which, in reference to the alleged reductions in the month of May last year, they report as follows: "It is true that in a letter to the Government of India, No. 1951, of the 1st of June 1859, the statement therein enclosed showed the estimated expenditure for 1859-60, reduced to 2,78,27,648 rupees, by the operation of immediate and prospective reductions in the various branches of the service, including the commissariat, ordnance, and camp equipage; but so far from this minimum being attained, the Estimate for 1859-60 amounts to the very large sum of 430 lacs" (4,300,000 *l.*). This Commission has since reported to us that, upon their arrival in December, they found that not one of the reductions which in May were said to be in progress, had taken place; and when, pointing out the great discrepancy, they were unable to obtain any satisfactory explanation of the cause. Again, upon referring to the Accountant General's books, we found that, in place of 2,782,000 *l.*, the actual expenditure of the year stood at the sum quoted by the Finance Commission of 4,300,000 *l.*; and further, upon looking closely into all the accounts for the civil expenditure (that is, expenditure other than military), we found that for Madras alone it showed an increase upon the preceding year of 398,324 *l.*" That is an extract from a letter written by the Government of India? — That Despatch raises the whole question of the policy and conduct of the Government of India, and my own policy and conduct, which were the subject of a voluminous contemporary correspondence, and every one of those allegations was fully answered. It was shown, for instance, in my Minute dated on the 1st May 1860, that the view taken in this Despatch of the Madras military expenditure was founded upon a complete misapprehension. The actual facts are clearly explained in the report of the Military Finance Commission, dated on the 30th April 1860, which has been more than once alluded to. But there is one point in that statement which is very essential and very prominent, namely, whether the Government of India relied in any substantial degree upon reduction of expenditure. Now, on that point, I beg leave to read a short extract from the Minute to which I have already referred, dated the 1st of May 1860: "The circumstance that Mr. Wilson, with all the information before him, put down the expected saving of military expenditure for the whole of India, for 1860-61, at only 1,700,000 *l.*, stamped the Budget with an unreal character. He now admits" (I am using his words) "that we may further reduce the military expenditure in the course of next year by a little over 800,000 *l.*, making the entire reductions of the year upwards of 2,500,000 *l.*" Information of which I am in possession, enables me to state that the military expenditure of the Madras and Bombay Presidencies alone may be reduced within the present financial year by upwards of 2,000,000 *l.* sterling; and that before the end of the following year it may be brought down another million;" and then I went on to point out the enormous field of reduction which the great Bengal Military Presidency presented.

Tuesday, 18*th March* 1873.

MEMBERS PRESENT:

Mr. Ayrton.	Mr. Eastwick.
Sir George Balfour.	Mr. Fawcett.
Mr. Beach.	Lord Edmond Fitzmaurice.
Mr. Birley.	Mr. Lyttelton.
Mr. Bourke.	Mr. M'Clure.
Mr. Cross.	Sir Stafford Northcote.
Mr. Beckett Denison.	Mr. John Benjamin Smith.
Mr. Grant Duff.	Sir David Wedderburn.

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

Mr. EDWARD FRANCIS HARRISON and Mr. EDWARD GAY, called in; and Examined.

Mr. *E. F. Harrison* and Mr. *E. Gay.*
18 March 1873.

1646. (To Mr. *Harrison.*) WILL you state what office you hold in India?—I hold the office of Comptroller General to the Government of India.

1647. (To Mr. *Gay.*) Will you state what office you hold?—That of Deputy Comptroller General.

1648. (To Mr. *Harrison.*) When the subject of town duties was under the consideration of the Government about the year 1833, can you state what was the general view taken of them at that time?—I find, from the Report on Town Duties made to the Government of India in October 1833, that they are described in these terms: "The town duties, as well as the inland customs, are the remains of the barbarous system of universal taxation which was prevalent under the native Governments. Under the old system these duties were levied in every town and large village from every article of trade and consumption. We confined their collection to large towns and to a limited number of articles; and so far an improvement took place. But the same mistake was made here as in the case of the inland customs. In return for the comparative freedom which had been given, it was considered fair that the remaining articles should be taxed higher than they were before. Hence our town duties pressed more severely upon the trade of the country than those which were levied under the native Governments. A very light tax, such as used to be demanded, might not be sufficient to divert the course of trade from its usual channels, but a heavy one like that now levied must necessarily do so. For instance, two great staples of internal trade, ghee and tobacco, are charged as high as 10 per cent. Although the native Governments were not sufficiently enlightened to see the advantage of giving up internal duties altogether, yet their practice shows that they were acquainted with the principle that, in order to prevent these duties from seriously obstructing the freedom of exchange between different parts of the country, they must be very light. Being accustomed to the evil, long experience seems to have taught them the natural mode of mitigating it; while we, on the contrary, with every desire to alleviate the inconveniences of the system, have applied remedies, which have in some respects only aggravated the evils of it. It is to be hoped that the time has now arrived for this scheme of finance to be altogether abandoned; and this is what I earnestly recommend, if the other interests of Government will admit of it."

1649. Passing from that period to the more recent period of 1861, when the subject was further considered, you know that the town duties were at that period generally abolished?—Yes; I am aware that in Bengal the abolition of the town duties followed soon after the date of the report from which I have quoted.

1650. Now, passing to 1861; can you state what was the condition or the nature of the duties then imposed of a similar character, that is to say of a local character?—About the time mentioned, 1861, the Government of India seriously entertained the idea of giving to the provincial governments powers of local taxation, combined with local budgets, and a greater share of financial control. Definite form and expression was first given to this intention in the financial statement made by Mr. Laing, in April 1861. Mr. Laing then said, "India has two great wants, irrigation and communication; I do not mean grand schemes only, which strike the imagination, so much as village roads, village tanks and water cuts, which enable every rood of ground to grow its crop and send it to market." He stated that the Government were most anxious to encour[illegible] works, and therefore, instead of simply cu[illegible] the imperial allotment to the local governm[illegible] they held this language: "Take what we are [illegible] to give you, and for the residue take certain powers of local taxation, and raise it yourselves." He then said, that there are certain subjects which can be dealt with far better by local than by imperial taxation, and instanced tobacco; he said that the discussion on this subject last year, and the returns from the various local governments, proved distinctly that there was no scheme of uniform and imperial taxation, applicable alike to all India, short of a Government monopoly, to which there are grave objections, under which we could hope to obtain any considerable revenue. In one province, he said, the system of land

tenure

tenure makes an acreage tax difficult; in another the vicinity of a Native State throws impediments in the way of an excise; in a third the general cottage cultivation makes licenses at anything beyond a nominal rate almost impracticable. But many of these provinces could raise a considerable revenue without sensible pressure from tobacco if left to deal with it in their own way, and under a system which might vary in case of need so as to suit the peculiar circumstances of each district. He then proposed that the local governments should take the subject of tobacco, making what they could of it for local roads and canals, instead of receiving the allotment which the Government of India might wish to give them, but might be unable to afford from the imperial budget. In further explanation of what the Government had in view at that time, he said that by enacting local budgets the Government hoped not merely to meet a temporary difficulty, but to inaugurate a permanent improvement. It had long, he said, been a standing complaint with other Presidencies and Provinces that they were deprived of their fair share of self-government, and kept in a state of humiliating dependence upon Calcutta. He considered that as the power of the purse was the ultimate power, and so long as the local governments were absolutely subservient to Calcutta in financial matters, it was evident they could have no real independence; but if, without in any way sacrificing the unity of the Empire and imperial control in imperial matters, they could have local Budgets, their position would be altered, and the Governments of India then proposed to give them not only powers of local taxation, but possibly to credit them with a liberal share of reductions of expenditure which they might be able to make on the estimates of the general Budget, and it was thought that each Government would then have a direct interest in economy in order to increase the fund applicable to local works. It was, obvious, he said, that such a system of local Budgets would harmonise extremely well with what he wished to see adopted, local legislative councils at the Presidencies. He considered that nothing could be more useful than that the details of a local Budget, such as that of Madras or Bombay, should be submitted to the intelligent scrutiny of a council comprising both experienced officials and picked representatives of the mercantile and native communities. He also thought that the scheme would greatly foster the growth of municipal institutions, and, what is still more important, of the spirit of local self-help and self-guidance. In consequence of this, in the Estimates of the year 1861-62, provision was made for [redacted]000 *l.* of the expenditure being transferred to [redacted]gets. This arrangement proved to be [redacted]e; the means for giving it effect had not [redacted]tured, and the event showed that in[redacted] of an estimated surplus of about 240,000 *l.*, the accounts for the year 1861-62 closed with a deficit of 150,000 *l.* In the statement that Mr. Laing made to the Governor General's Council in the following year, he said: "As regards Public Works, it was intended that 500,000 *l.* should be transferred to local budgets, and provided for by local taxation. This intention has not been carried out for a very obvious reason, namely, that new constitutions having been given to the three Presidencies, it would have been manifestly improper to anticipate the action of the local legislative councils in a matter which is so peculiarly their province. I am as strongly as ever in favour of the principle of local taxation for local objects. In fact, if this great Empire is ever to have the roads, the schools, the local police, and other instruments of civilization which a flourishing country ought to possess, it is simply impossible that the Imperial Government can find either the money or the management." Accordingly, in the arrangements then made, he added 250,000 *l.* to the general estimates, to be spent on communications under the control of the local governments. Instead of throwing a portion of the expenditure upon local resources to the extent of 500,000 *l.*, a portion of the imperial resources, to the extent of 250,000 *l.*, was put at the disposal of the local governments.

1651. In varying amounts?—I have not the details. A large proportion was assigned for the construction of cotton roads.

1652. Do I rightly understand you that the Supreme Government granted that to the local governments to be spent in certain works?—That is so.

1653. Sir *S. Northcote.*] And the Supreme Government decided what the works were to be?—Yes; and controlled them. From this time the subject constantly received the attention of the Governments in India, and in several instances cesses were imposed by local administrations, with the approval of the Government of India, for meeting local expenses, principally of the town police, district roads and primary schools.

1654. *Chairman.*] Was there any general resolution of the Government on the subject?—There was a resolution of the Government of India, dated the 31st August 1864, which recited that as the income tax would expire on the 31st of the following July, it became necessary for them to consider the necessity of either renewing the income tax or of imposing new taxes, or of transferring to local funds a portion of the charge which was at that time included in the Imperial Budget. They determined to take steps for returning to what was considered the ancient principle of the Indian police, and observed, that "The ancient police system of India was strictly municipal; both in town and country the chowkeedars were appointed and paid by the people." "There are few parts of India in which the inhabitants of villages and small towns do not provide their own chowkeedars, either by direct payments to them in money or kind, or by a commuted allowance included in the land revenue assessment." They recited the partial attempt to require municipal towns to support their police in the Act 26 of 1850, followed by Act 3 of 1864, of the Lieutenant Governor of Bengal in Council, providing for a definition by the Lieutenant Governor of the limits of towns or villages brought within the scope of the Act, and authorising the imposition of a general rate upon the annual value of houses, not to exceed 7½ per cent., and enacting that the municipal commissioners appointed under the Act should out of the annual rate set apart a sum sufficient for the maintenance of the police officers appointed under Act 20 of 1856, "provided that the number of police officers to be so maintained shall not exceed the proportion of one police officer to 25 houses." They then referred to measures, which had been taken also in 1856, for throwing a portion of the cost of the police force in the towns of Calcutta, Madras,

Mr. *E. F. Harrison* and Mr. *E. Gay.*

18 March 1873.

and Bombay upon local resources. They came to the conclusion that the cost of municipal police ought invariably to be the first charge upon the municipal fund after the expenses of collection, and laid down the principle that the people of each town should be left as far as possible to determine the manner in which the requisite sum should be raised; that the ordinary and most simple mode is a rate upon the annual value of houses, buildings, and lands; that a license tax upon trades and professions is not without its advantages, provided it is moderate; that a tax upon carriages and horses is suitable to large capitals. Town duties, they say, are very effective for raising money; they existed under the native *régime* under the name of chungi or handful, implying that everything that passed had to pay a small contribution; and in some parts of India such duties are more popular than direct taxes of any kind. They considered that if confined to things consumed in the town, without interfering with the transit trade, they would be only open to the objection that they fall in undue proportion on the poor. But they said that after a full trial of this tax in Bengal and the North Western Provinces, it was abolished in 1835, as being alike injurious to the general trade, and to the towns immediately affected, and as not being capable of effectual remedy by any contrivances of bonded warehouses or drawbacks. They also recite that town duties have been lately re-established as a municipal tax; in many places in the North Western Provinces, Oude, and the Punjaub, and that the old vice of interference with the general trade, immediately reappeared with the additional aggravation that the public at large were mulcted for the advantage of local interests. They remark that the town duties abolished in 1835 were levied only on eight articles of local consumption, but that there appeared to be no limit to the number of articles upon which they were exacted after they had been revived by a municipal tax. It was then said that there were 197 articles upon which town duties are levied in Zillah Seetapore in Oude. The multiplication of petty exactions it was said was open to great objection; the tax ought to be confined to a few articles of local consumption, such as ghee, firewood, fruit, vegetables, fowls, eggs, and animals for slaughter. The tax was considered applicable only to places containing a considerable population. As to the operation of the municipal bodies, it should be established, they say, as a principle throughout British India that although the number and grades of the municipal police must be fixed with the sanction of the local Governments, the wishes of municipal bodies should, as far as possible, be consulted in all that relates to their number.

1655. Can you give the opinion of the local Goverments on the subject of the working of these town duties?—Yes. I may refer to the opinions expressed by the Lieutenant Governor of the North Western Provinces in the Administration Report for 1870-71, in which very special attention has been given to this subject. In the North Western Provinces, the octroi system of taxation for towns was legalised by Act 6 of 1868, which authorised the imposition of this tax on all articles, the only condition being that the articles are imported for consumption or use within the limits of the town which levies the tax. Further restrictions have, however, been imposed, confining the levy of the impost until quite recently to the following articles: 1st. Articles of food or drink for men or animals; 2nd. Animals for slaughter; 3rd. Articles used for fuel, for lighting, and for washing; 4th. Articles used in the construction of buildings; 5th. Drugs, gums, spices, and perfumes; and 6th. Tobacco.

1656. Before this Act could be put in force in the North Western Provinces, was it necessary for the Governor, or any authority, to issue an order, or had every town the right, at its own option, to put the Act in force?—I will mention the procedure in the North Western Provinces in regard to this.

1657. Mr. *Fawcett.*] Is this Act in force now?—It is; and the octroi duties under it have lately been further extended, so as to include piece goods and metals, which are a very productive source of income.

1658. *Chairman.*] How is the Act to be put in force; it was put in force by an order of the Lieutenant Governor, was it not?—Yes.

1659. Can you state generally by whose authority, and under what conditions, the Act was to be applied to particular places?—This Act cannot be enforced until the schedule of rates has been submitted for the approval of the Government, when it is thoroughly scrutinised and checked before publication. Where the duty appears excessive, reduction is suggested, and in extreme cases insisted on.

1660. Mr. *Bourke.*] Does "Government" there mean local Government?—The local Government.

1661. *Chairman.*] But before the Act could be applied at all to any towns, is it necessary that any preliminary steps should be taken to proclaim it?—That is so. The body administering this Act in any town is appointed by the Lieutenant Governor, or more frequently, with his approval, by election.

1662. Do you know whether this Act which you quoted came into operation with the authority of the Governor General, or was it necessary to get the previous assent of the Secretary of State for India in Council?—Every Act of the Governor General in Council takes effect on the personal assent of the Governor General being given to it.

1663. But is it not liable to be rescinded by the Secretary of State for India?—I am aware that that is so.

1664. Mr. *Bourke.*] I want to ask whether that Act can be applied only to places where there are municipalities, or may it be applied to any part that the local Government thinks right?—A municipality can be constituted by the authority of the Lieutenant Governor in any town.

1665. But that Act cannot be applied where there is a municipality?—No.

1666. *Chairman.*] What was the opinion of the Lieutenant Governor of the North Western Provinces upon this mode of taxation?—The Lieutenant Governor, Sir William Muir, states that there are two main objections to a duty of this character. First, that the pressure is felt mostly by the poorer classes, who are least able to bear it; and the second objection is, that unless very zealously watched, it is liable to degenerate into a transit duty. In answer to the first objection he says that, "any tax which falls on the necessaries of life must add to the difficulties of those who have to struggle for a bare subsistence, and is to be deprecated; but in India,

India, where the poor so largely predominate, it is impossible to avoid some pressure, and the only remedy is to see that the pressure be reduced to a minimum. With this object grain, the staple food of the people, is usually taxed not higher than 1½ per cent., and the duty on luxuries even is kept within the limits of 5 per cent. *ad valorem.*" He then states that every schedule of rates is previously, as I mentioned just now, submitted for the approval of the Government, and is thoroughly scrutinised and checked before publication. Sometimes a reduction is suggested; sometimes a reduction is insisted on; further, that head-loads of grain and other articles are exempt from taxation in almost all municipalities.

1667. Mr. *Fawcett.*] Who gives this answer?—This is the answer of the Lieutenant Governor to what he understands to be the objections felt. Lastly, he says, in times of scarcity and dearth, grain is altogether exempted. The second objection, the liability of this kind of duty to operate as a transit duty, is met by the remark that the removal of this objection "is made an essential condition of the continuation of the tax in every municipality in the province," and the checks are described as these: "First every municipality is bound to submit, in detail, a Budget of anticipated income from all sources, receipts from octroi being subdivided into the eight classes specified above" (the six I have mentioned, and, in addition, piece goods and metals). "An estimate is framed of what the local consumption should be, with reference to the population, and if the anticipated receipts seem excessive, the Committee are directed to justify, or cut down, the estimate. When the expenditure reports are received, the actuals are similarly checked, and explanation is called for wherever the incidence appears to have been too high. The average consumption of the two main articles of food, grain and sugar, is believed to be about seven maunds and 15 seers per annum" (that is about 606 lbs.), "respectively, per head of population, and if the receipts represent a consumption which falls at a rate materially higher or lower than this, the matter attracts immediate attention." "Secondly, goods declared by the importer to be intended for immediate exportation are admitted under a free pass, which holds good for periods varying from 24 to 48 hours. Thirdly, bonded warehouses are provided for the storage of goods declared to be in transit, though not for immediate exportation. It is optional with traders to use these on payment of a small charge, or to pay the duty and claim a drawback afterwards. Lastly, refunds [redacted]ed on any goods which have paid duty [redacted]t more than 1 rupee, and which are sub[redacted] exported, without limit as to the time [redacted]ation." I might, perhaps, mention here, in connection with this subject, that the incidence of this tax per head of population as estimated in the North West Provinces generally, seems to have varied very greatly, from *Rs.* 2. 2 *a.* per head to 3 annas per head.

1668. *Chairman.*] Do you know whether, under the ancient *régime*, this extravagant system of setting up a custom house and bonded warehouses existed, or whether they imposed so light a duty that it did not require all those incidents to carry it out?—I cannot say.

1669. Have you anything more to add with regard to the view of the Lieutenant Governor of the North Western Provinces?—The Lieutenant Governor has expressed his opinion on one point to which the attention of the Committee may perhaps be drawn later, as to the comparative merits of the system of farming this tax and collecting it direct. In the North Western Provinces the system is to collect it direct; in the Central Provinces, which adjoin, the system is to farm it. His opinion is decidedly against the farming of the town duties, on the ground that it is apprehended that contractors and their servants would be more apt than a regularly constituted service to practice petty extortions at the barriers.

1670. It is handing over to them, in fact, all the necessary powers to enforce the payment of taxes?—Yes; it is remarked that any refund that might be demanded from a contractor, would be looked upon by him as so much clear loss.

1671. Now, will you be good enough to state to the Committee what change was made in 1870 with regard to the local taxation?—The Government of India recorded a Resolution on the 14th of December 1870, giving full effect to the objects which had been considered desirable in 1861. The effect of this measure is described in the following words: "The Government of India is accordingly pleased to make over to the Governments, under certain conditions to be presently set forth, the following departments of the Administration in which they may be supposed to take special interest; and to grant permanently, from the Imperial revenue, for these services, the sum of 4,688,711 *l.*, being less by 330,801 *l.* only than the assignments made for the same services in 1870-71." These departments are Jails, Registration, Police, Education, Medical Services (except "Medical Establishments"), by which is meant mainly the salaries of the civil surgeons of the Government, Printing, Roads, Miscellaneous Public Improvements, and Civil Buildings. The sum of 4,688,711 *l.* is distributed in fixed proportions to the several provinces. It is laid down that "these assignments will not be classified in the financial statement and in the Imperial estimates and accounts, but will appear under a single new head, 'Provincial Services.'"

1672. It might be convenient if you were to give the Committee the general views expressed by the Government, for carrying out this system in paragraphs 18, 19, 20, and 21 of the Despatch; that gives the exact scheme propounded then?—Each local Government was to publish its own yearly estimates and accounts in the local gazette, together with a financial exposition (which, it was said, should, where possible, be made before the local Legislative Council), analagous to that annually made in the Legislative Council of the Governor General. The several estimates and accounts would be compiled, and a general statement for all India published as a supplement to the Imperial estimates and accounts. In preparing these estimates, each Government would have to consider how any deficiency in the ways and means for its "Provincial Services" could most conveniently be supplied. The financial control thus to be entrusted to the local Governments was to be exercised, subject to certain conditions. The first of these prescribed that, the previous sanction of the Government of India should be necessary to the creation of new appointments, or the addition to the pay and allowances of any officer exceeding 300 *l.* a year,

Mr. *E. F. Harrison* and Mr. *E. Gay*.

18 March 1873.

and also that no class or grade of officers was to be created or abolished without previous sanction, and no addition made to the pay and allowances of any individual, or class of officers that would lead to increase in the pay of public servants doing duty in the same provinces whose pay is charged to the Imperial revenues. It was also a condition that no money should be removed from the public treasuries for investment; and, further, that no services rendered to other departments at the charge of the departments made over to the control of the local governments were to be diminished. It was further a condition that the rules of the Supreme Government in respect to leave of absence and absentee and superannuation allowances were to be observed; and that returns, accounts, and estimates were to be submitted to the Supreme Government in such forms as might be prescribed. Subject to these general restrictions, the Governments would henceforth enjoy full liberty in the expenditure of the funds appropriated to provincial services.

1673. Have you there Appendix A, giving assignments to be made for provincial services, according to the resolution of the Government of India, 14th of December 1870, in a tabular statement, at page 123?—I have the Table of assignments, but they have undergone some alteration.

1674. Do you mean that the figures were corrected afterwards? — Some further small allowances and grants have been made.

1675. We had better take that as the assignment that was made at that time, had we not?—Yes; this Table shows the basis of the arrangement.

1676. In accordance with the resolution which you have just read, was an assignment made of various sums of money, and to what amount? — The total assignment was: — In Oude, 206,948*l.*; in the Central Provinces, 261,263*l.*; in Burmah, 275,332*l.*; in Bengal, 1,168,592*l.*; in the North Western Provinces, 640,792*l.*; in the Punjaub, 516,221*l.*; in Madras, 739,488*l.*; and in Bombay, 880,075*l.*; making a total of 4,688,711*l.*

1677. Can you furnish the Committee with an estimate of the mode in which those figures were arrived at, and put that in as an appendix?—Such a statement will be found in Appendix A of the Resolution of the 14th December 1870, which I understand is being printed for the use of the Committee.

1678. Have you anything further to add as to the general operations of the Supreme Government in carrying out this new policy?—The principle on which these amounts were arrived at should, perhaps, be mentioned. They are based upon the assignments made for these services in the Estimates for the year 1870-71.

1679. Those amounts the Government of India had before them in the preparation of that estimate when they assumed the superintendence of this expenditure?—That is so. On the basis of that estimate, a proportion of the sum, 350,000*l.*, which it was proposed to throw upon the local governments, was deducted rateably from the total estimate for those services for 1870-71, and the difference assigned, making the total figure which I have given.

1680. That deduction was intended to be a *pro ratâ* retrenchment of expenditure out of imperial funds?—Yes.

1681. Leaving them to supplement any deficiency that might arise in consequence from local funds?—From local funds, or by retrenchment in the expenditure for those services.

1682. Is there anything further which you have to add respecting the general policy of the Government of India in connection with local taxation?—I might explain the view expressed by Lord Mayo, who inaugurated these measures, expressed on the occasion of the consideration in Council of a Bill for local rates in Oude. I am reading from the proceedings of the Legislative Department on 18th of March 1871. Lord Mayo said, "It would be wasting the time of the Council were I to discuss the various objections that exist to the larger measures to which I have referred; suffice it to say that it can be shown that, for the present, all the main objects that have been generally desired will be attained by the present measure, and that, without any dangerous interference with our general financial system, without weakening or straining our national credit, without imperilling a single important branch of imperial revenue, or rendering it less difficult than it was before to fulfil all our national engagements of finance, defence, and administration, we shall be able to attain to almost all the desired ends, and achieve everything that is really beneficial. We selected then at once for our operations those heads of expenditure, the local character of which cannot be doubted; those heads concerning which so much has been said, namely, civil buildings, roads, education, jails, police, registration, medical services, and printing. I am not prepared to say that there may not be other branches of administration which it might be judicious hereafter to deal with in the same way. I give no opinion on the subject. There are considerable and weighty objections with regard to some; but for all practical purposes (that is to say, if our intention and desire is to give to the local Governments substantial power over the administration of the matters which in the highest degree affect the particular interests of their Governments and of their people), we have done all that for the present is necessary." "It is intended by the Supreme Government, and I think that there should be no doubt on this point, that that sum should, for some time at all events, be a fixed sum. It is impossible to prophesy or say at present what can be done in the far future; but I should be misleading the local governments if I were not to say that it is our opinion that these sums are now fixed at an amount which cannot be exceeded for at least a number of years. I think it desirable that this should be perfectly understood, because one of our objects is the attainment of as great an amount of financial [illegible] as is possible. We believe that, in justice to other public claims, which are certain hereafter to be made on imperial revenue, in view of increased charges for the payment of interest and other objects, we cannot, without recourse to large additional imperial taxation, increase this sum as now fixed to any very considerable amount. We know that if it is necessary, the sums which have been hitherto allotted for this purpose can be increased by local taxation, in a manner much less burdensome, and much less offensive to the people than they could be by imperial taxation. If it is necessary or desirable to spend money, that money must come from some source. It is possible that the wants

wants of the local governments may increase, and I dare say they will; but if they do, we believe, after the most mature consideration, that these wants can better be supplied within the limits of the provinces themselves, than they can be by adding to the imperial taxation of the Empire, and the general burdens of the people."

1683. Now, having done with the general views of the Government, can you state what has been done with reference to local taxation in the several provinces, beginning with Oude?—In Oude there has been, since the first settlement of the land revenue, a 2½ per cent. cess on the amount which was fixed as the Government revenue; it is 1¼ per cent. on gross rental, added to the Government demand, and realised in the same way as the Government land revenue, the proceeds to be applied to the construction and maintenance of roads, education, and district postal communication in these proportions; 1 per cent. was to be applied to district roads; 1 per cent. to education, and one-fourth of 1 per cent. to the district post, and a quarter per cent. was left unappropriated. This cess is levied on lands which are exempt from land revenue, as well as on lands which pay it. The land revenue of Oude is, at the present time, about 1,360,000 *l.* and the 2½ per cent. cess realised in 1871–72, 32,479 *l.* This amount may be said to represent the local taxation up to 1871, chargeable on land in Oude.

1684. But you will observe that this is so nearly 2½ per cent. upon the whole land revenue, that there does not appear to have been any property in Oude exempted from land revenue, or if so, it does not appear to have contributed to the tax?—The amount which I gave as the land revenue I think must have been stated above the actual realisation. I took the figure which is stated roundly from a speech made in the Council of the Governor General by Sir John Strachey. The actual amount of ordinary land revenue realised in 1871–72, was 1,313,861 *l.*

1685. Even then it would be quite 2½ per cent.?—To come to particulars, if you look at this account in my hand, you will see the exact calculation arithmetically and precisely. One per cent. on the actual ordinary land revenue in the year 1870-71 would be 13,210 *l.*; the amount actually realised was 13,910 *l.*, so that it was somewhat in excess; the explanation being that the excess is owing to collections from land, revenue free, or partially free; but the variation is of no great importance. The amount of the incidence seems to be less than three farthings per unit of the population. It appears to [redacted]lered that this cess does not fall upon [redacted]culturists, but upon the landowners of [redacted]ince.

[redacted]. Can you explain whether this appropri[redacted]of the several per-centages is made by the Government of Oude over the whole province according to its discretion, or does each subdistrict receive its one per cent. for the purpose of distributing it in its own limits?—There was no strict appropriation in the Oude province of the proceeds to the district in which it was raised, but the principle of appropriating in proportion to the sum contributed by each district was kept in view. There was no separate account.

1687. Each district has no control over the money raised, but it is entirely at the disposal of the Lieutenant Governor?—That is so; and he allots it with reference to the realisations in each district.

1688. Then, is there any other local taxation in Oude?—A small sum appears in the account under the head of "Local Police," or "Village Chowkeedars," with regard to which it is, perhaps, necessary to give some explanation as to how small it is. The fact is, that a very small proportion of the charge for the maintenance of the rural police appears in any way in the accounts of the Government. In Oude the numbers of the rural police are estimated at 31,679, and their cost is given at 91,864 *l.* Each man is supposed to watch over, on the average, about three-fourths of a square mile and 382 persons. These chowkeedars are maintained at the expense of the landholders. They are usually paid by a small grant in land, three acres and 20 perches in extent, and of a quality which will fetch a rent of 24 rupees per annum. If land of this quality is not granted the landholder is compelled to make up the amount in cash, or to resort to a cash payment of 36 rupees a year, paid through the deputy commissioner, and levied with the Government revenue.

1689. The expenditure is arranged between the landholder and the police, and does not come into the accounts of the Government?—That is so.

1690. What is the next head of local expenditure in Oude?—In a complete notice of these local funds, it is necessary to mention some which are in no sense taxation; they are as follows: tolls on ferries applicable to improvements in the communications. Some part of the tolls, no doubt, is a tax upon the use of the ferries, but such part is quite indistinguishable from what is paid as an accommodation for the service. The gross amount realised is 12,247 *l.*

1691. Does this go into the general funds of Oude?—There is a separate account kept of the proceeds of these ferries, and they are assigned by the Chief Commissioner of Oude, at his discretion, for the improvement of communications in the province.

1692. But each ferry is not the subject of a separate account of receipt and expenditure, so as to apply the receipts to the particular ferry?—No, the first charge upon the receipts of each ferry is for the maintenance of the effective service of such ferry.

1693. What is the next head of expenditure?—Then there is an item of receipts from public buildings and lands, 9,469 *l.*, and the small sum of 105 *l.* for the sale of Government lands in cantonments. The character of these receipts, perhaps, wants a little explanation: they are what is known throughout the North Western Provinces and Oude as the Nuzool Fund. It consists for the most part of lands, shops, and gardens, the property of the former rulers of the country. It also includes, in some cases, property which was confiscated for rebellion. These Crown lands, as one might perhaps call them, are under the management of a Local Agency Committee, regulated by Regulation 19 of 1810. The system has been in force for many years, and has assumed some little importance in the North Western Provinces and Oude, the proceeds being applied primarily to the care and conservation of the buildings and gardens themselves, and next to a variety of local improvements, such as station gardens, libraries, museums, and so forth. In Oude they are very

Mr. *E. F. Harrison.* and Mr. *E. Gay.*

18 March 1873.

generally made over to the municipalities in the town in which they are situated. The account then includes an item of 3,159 *l.*, consisting of voluntary contributions for dispensaries, which are of course in no way raised from taxation and interest on the endowment of the King's Hospital, an establishment in existence in the Province of Oude before it became a British province, and which has been maintained by our Government. There are a few miscellaneous receipts from the sale of fruit and flowers in cantonments, and so forth, making the total miscellaneous receipts of this character, including tolls, 42,631 *l.*

1694. You mean ferry-tolls?—Yes.

1695. Is there any municipal receipt and expenditure in Oude?—To come to the municipal receipts in Oude, there are 14 municipal towns; in some papers the number has been stated at 17, but I can only find 14 towns which have municipal institutions with powers of taxation under Act 15 of 1867. These powers are given in very general terms, but they are subject in every respect to the sanction of the Chief Commissioner.

1696. Mr. *J. B. Smith.*] Did those powers of local taxation exist under the Native Government?—I do not think I am in a position to say.

1697. *Chairman.*] What is the amount levied by some of the municipalities?—The total amount levied by these municipalities is 39,244 *l.*, and this is classified in this way: There is received by rates on houses 1,789 *l.*; by a tax on trades in Lucknow, which has recently been given up, 109 *l.*; and by octroi duties (I am speaking of the accounts for 1870-71), there is a small sum of 162 *l.* on piece goods and metals, the regulation making them subject to this duty having been brought into operation just before the close of the year; on food and necessaries, 22,154 *l.*; on other merchandise, 3,326 *l.*; on cattle not for slaughter, 46 *l.* Then other taxes, including the income-tax, at Lucknow at one pie in the rupee, that is about a half per cent. on incomes over 1,000 rupees, a tax which has since been discontinued, 2,874 *l.* There are other sources of municipal income, including about 5,000 *l.* transferred from local funds, amounting to 8,784 *l.*, making a total of 39,244 *l.*

1698. When you say transferred from local funds, do you mean local funds of the old province of Oude?—I mean the proceeds of Government lands within towns; they amount to about 5,000 *l.*, which is made over to the municipal bodies.

1699. Mr. *Fawcett.*] Those receipts are gross, not net, of course?—They are gross.

1700. *Chairman.*] Can you give us any general information respecting the mode in which this municipal taxation is spent; to what purposes it is applied?—Speaking generally, the cost of collection amounts to 12½ per cent.; 25 per cent. of the expenditure was incurred on police; 20 per cent. on conservancy; 10 per cent. on the construction of public buildings, and 10 per cent. on repairs; the balance on charitable institutions, town schools, and gardens. Under the Act constituting these municipalities, the police is made a first charge on the funds, and the committee are then required to keep roads, drains, and tanks cleansed and repaired, and streets may be watered and lighted, and they may also construct streets, drains, and tanks; and schools are also a permissible form of expenditure. The powers of taxation given by the Act are in the most general terms; every committee may, with the previous sanction of the Lieutenant Governor, define the persons or property within the town to be taxed for the purposes of the Act, the amount or rate of the taxes to be imposed, and may impose such taxes.

1701. You are speaking of the Act passed by the Governor General of India in Council to provide for the levy of rates on land in Oude?—Yes; No. 15 of 1867, the Punjaub Municipal Committee's Act, which was extended to Oude.

1702. Then there was a subsequent Act passed in 1871, was there not?—That is a subject which it was proposed to leave till after we had gone through the provinces, and have come to the general addition made to taxation in connexion with the measures of 1871.

1703. What is the total sum then levied upon the province of Oude by local taxation?—The cess on the land I have stated at 32,479 *l.*, and these various receipts, which are not taxation, may be taken at 37,631 *l.*, and the income of the municipalities at 39,244 *l.*, making a total of 109,354 *l.*

1704. Now we may proceed to the Central Provinces; what has been the amount raised there for local purposes?—In the Central Provinces there are rates existing which also date from the settlement of the provinces. The rates chargeable on land in addition to the land revenue demand, are three in number. There is for roads a rate which varies from 1 to 3 per cent. on the Government demand for land revenue, which produced in that year, 1871–72, 13,671 *l.*

1705. You mean varying from 1 to 3 per cent. in different places, I suppose?—It appears to be so; the produce is equal to about 2 per cent., and that is the general rate. Then for the maintenance of village schools, there is a rate, also a varying rate, from 1 to 3 per cent., which produced in the same year 12,65[illegible] *l.*; and for the maintenance of the district post, there is a half per cent. rate, which produced 3,247 *l.*; the total charge on the land of these general rates being 29,569 *l.* Then in the Central Provinces there is a special tax, the pandhri tax, which is at present a graduated duty on trades and professions, and is considered to be equivalent to an income tax on the poorer classes. It included incomes down to 75 rupees annually, but the minimum of taxable income has lately been raised to 100 rupees. This tax is an old Mahratta tax on all the non-agricultural classes, with certain exceptions. It was in existence when the Nagpore Province lapsed to the British Government, and was continued. Under the Mahrattas it was a tax extremely unequal, and very severe, reaching down to the lowest incomes. So[illegible] justment of the tax took place after the [illegible] became a part of British India, and [illegible] to partake more of the nature of an [illegible] tax on the trading classes. In the Saugur and Nerbudda territories, which form the northern part of the province, constituting the Jubulpore and Nerbudda divisions the pandhri tax was remitted by the Government of the North Western Provinces so long as the administration of these districts was carried on from Agra. The cause of the removal of the tax was the inequality of its incidence, and the arbitrary exemption of certain classes. In 1867 the tax was entirely remodelled by an Act of the Indian legislature, and the pandhri became a pure income tax on persons whose incomes were derived

derived from any other source than agriculture. It was made applicable to the whole of the Central Provinces, the lowest limit of income subject to the tax being fixed at 75 rupees, the highest rate of assessment allowed in any case being at 2 per cent., and the maximum amount any income could be taxed at, being limited to 500 rupees. Persons assessable to income tax were made exempt from the pandhri tax. The number of persons in 1870-71 paying the pandhri tax, was 281,114. In the early years of the administration of Nagpore as a British Province, this tax was taken for general or imperial purposes, and in 1868-69 the Government of India gave up one half of it for disposal by the local administration to the Chief Commissioner, and in the year 1870-71 the whole of it was surrendered. More recently, the Chief Commissioner has raised the lowest range of the tax from incomes of 75 rupees to incomes of 100 rupees a year. This lowest class of tax payers contributed only half a rupee individually. The tax was considered to press somewhat hardly upon them, and the effect of raising the minimum was to reduce the number of tax payers from 281,114 to 143,330, relieving very nearly half the number from the impost.

1706. Do you know what the effect of the exemption was in the amount of receipts?—The lower class contributed a fixed sum of half a rupee; the relief must, therefore, have been about 70,000 rupees.

1707. Is that the whole extent of the local taxation in the Central Provinces?—The cesses on the land revenue and this pandhri tax, taken together, amount to 50,831 *l.* These constitute the only general local taxes throughout the province.

1708. Do you know at all whether there is any tax upon houses in the Central Provinces?—Perhaps I may take them in order. The charges that I have mentioned come to about 1½ *d.* per unit of population. Then I may, perhaps, mention, while on the charges on land, that, as in Oude, there is a small charge, in special cases, for the maintenance of village watchmen, where the landholders omit their duty in regard to the maintenance of them. Generally speaking, these village watchmen are maintained without the intervention of the Government. Then there is also a charge for the payment of village accountants; but this again is hardly for any direct purpose of the Government at all. The villages are bound to keep up the village accountants, and it is only when they fail in their duty that the Government steps in and adds, in these particular cases, a 5 per cent. rate to the general land revenue demand. [redacted]nt realised in this way in the year [redacted]s 11,068 *l.*, which would seem to show [redacted]t two-fifths of the land was subject to [redacted] In addition to these charges upon land, there is realised in the Central Provinces by tolls on roads and ferries, 6,180 *l.*; from Government houses and lands in the towns, 1,195 *l.*; and the sum of 56 *l.* for the sale of Government land in towns.

1709. What do these miscellaneous receipts amount to?—To 10,393 *l.* altogether for the province.

1710. Is that the whole of the local taxation, with the exception of the municipal?—That is so. Then we come to the municipal income.

1711. What is the nature of the municipal taxation?—The total received from municipal taxes in towns where the system is in force, is 55,246 *l.* This is divided by the Chief Commissioner, partly by estimate, in this manner: raised by rates on private houses, 2,208 *l.*; by the octroi duty on piece goods and metals, 30,092 *l.*; on food and necessaries, 11,812 *l.*; on other merchandise, 3,791 *l.*; on cattle, 1,136 *l.*; other taxes, including market dues, 4,677 *l.*; and other sources of income, 1,530 *l.* The division, it is explained, is as good an estimate as can be made, for the octroi duty being farmed, no exact account is available. The total of these various provincial receipts that I have mentioned, amounts for the province to 127,652 *l.*

1712-13. Can you state how many towns or places are under the municipal system in the Central Provinces?—Sixty-eight towns and places.

1714. Can you give a summary of the expenditure of the receipts?—The general expenditure of the municipalities is as follows: Charges for collection, 2,819 *l.*; for Police, 8,821 *l.*; for Local Improvements, 27,334 *l.*; for Conservancy, 11,244 *l.*; for Schools and Dispensaries, 3,786 *l.*, and for Miscellaneous unenumerated objects, 3,698 *l.*

1715. Will you now explain to the Committee the local revenue of British Burmah?—In British Burmah, since the year 1865, a cess of 5 per cent. has been added to the land revenue demand, and to some of the miscellaneous sources of revenue that are classed with land revenue, of which the principal item is Fisheries. The amount realised in this way in the year 1871-72 was 19,390 *l.* The 5 per cent. cess is apportioned in this way: 1 per cent. is assigned for roads; 2¾ per cent. is for the village watch or police; 1 per cent for schools, and a quarter per cent. for district postal communication. Out of the total sum it is estimated that seven-eighths falls on land and one-eighth on the fisheries. This amount is nearly equal to one and seven-eighths of a penny per unit of the population, taking the population at 2,500,000, which is the estimate formed at the present time. In addition to this there are in Burmah ferry-tolls which give 2,833 *l.*; there are about 40 towns in British Burmah that have municipal funds with a population of 534,000.

1716. What is the amount of the municipal funds?—The total amount is 50,096 *l.*

1717. By what taxes is that obtained?—The two principal items are, first, a tax on houses and on land occupied by houses. This produces 17,453 *l.* The rates and mode of assessment are somewhat peculiar to the Burmah Province. In towns in which the assessment, in lieu of the capitation tax, is levied, there is one pie per square foot of all land covered by buildings, levied as a municipal tax; one-twelfth of one anna for every square superficial foot of ground occupied by houses. In other towns the municipal tax is assessed in a different manner, according to a Burmese method, according to the number of posts in the frontage of every house; the highest class of house is that which has seven posts for its frontage, and which pays about ten rupees a year, down to the sixth class of houses with only two posts in the frontage, which pay half a rupee a year. All houses in those parts of British Burmah are wooden houses built on posts. There is another peculiarity, quite a specialty, in these Burmah towns, that they, all of them, have a central, covered-in market-place.

Mr. *E. F. Harrison* and Mr. *E. Gay*.

18 March 1873.

They produce an income of 13,274 *l.* The rent of stalls in the municipal market-place is considered to be a very good form of indirect tax, approaching an octroi duty without any of its evils. It is the custom of the Burmese to have one large bazaar or market place wherein is sold every variety of article in cloths, crockery, hardware, grains, condiments, vegetables, and fish. The Government has, from the municipal funds, constructed large, airy, well-drained, and well-ordered markets, which are really a comfort and an advantage to the people. The rents derived from the stall-keepers far more than pay for the necessary establishments; they are a legitimate source of the revenue of the municipality. The receipts in 1862-63 were 6,868 *l.*; they have since that time largely increased, being, as I have mentioned, for the latest year, 13,274 *l.*

1718. Mr. *J. B. Smith.*] Is that increase owing to an increase in the rate of charge per stall?—I think it is an increase in the number of markets; these have been extended to many towns. There is no notice of any increase in the rate of charge.

1719. *Chairman.*] Is the octroi levied in addition in these towns?—No; they have no octroi in Burmah.

1720. What is the total of the receipts?—I have mentioned the only two important items, except perhaps the sale of town lands. In British Burmah, our Government, on the annexation of the province, assumed the proprietorship, the right of disposal of the whole lands of the town.

1721. You mean the whole unoccupied lands?—Even the occupied as well. In Rangoon, the whole was re-surveyed and re-laid out, consideration was given to those in possession of sites; but the entire town was re-laid out, and a large sum realised by the sale of the lands; and this was held applicable to permanent works connected with the town drainage and improvements.

1722. Do you know what is done with the municipal funds; what services they perform?—The objects are the same as in the other provinces: police and conservancy.

1723. What is the local taxation in Bengal?—In Bengal there is no general cess on the land revenue for local purposes, such as obtains in other provinces that have been mentioned. In certain recently-settled estates, 1 per cent. was added to the land revenue demand, to form what was known as a 1 per cent. road fund; and in one district in Bengal, the district of Shahabad, which adjoins the frontier of the North Western Provinces, there has been, from the time of the permanent settlement, a 1 per cent. cess, in addition to the land revenue, for the purpose of road-making. The receipts in Shahabad amount to about half of the sum received on this account at the present time, which is 3,750 *l.*, taking the estimate for the year 1871–72. Then there is also a fund raised by a charge upon land, not of general application, for the maintenance of the district post, which produces 24,722 *l.* In Bengal, by Regulation 20 of 1817, the landholders were required, in fulfilment of an obligation that had always been recognised, to keep up district postal lines between the police stations and the magistrates' courts. The zemindars appointed and paid the runners who were employed. As a rule the authorities had no concern with the nomination or the payment of these district postal runners, but the system in some parts of Bengal became irregular, and to provide for the better execution of this service, Act 8 of 1862 of the Bengal Council was passed. The object of this Act was to enable the magistrate of each district to organise the service on an efficient footing. It gave him control over the establishments, and it empowered him to raise the funds necessary for the maintenance of these establishments from all zemindars, farmers and other persons paying revenue direct to the Government in respect of lands situated within the district. The magistrate was required to fix and apportion rateably on or before the last day of December, subject to the approval and revision of the Commissioner, the total sum necessary for the next ensuing year for the efficient service of the post in his district. The Act in no way interferes with the imperial postal regulations. In this way the amount which is raised in each district is liable to variation from year to year, but it is a charge upon the land.

1724. What is the extent of that?—The total of that is 24,722 *l.* Then to make up the total of what may be considered as the local taxation in Bengal, there is a trifling item, more a matter of curiosity than anything else, of 18 *l.*, the Mutarafa tax of the Shahabad district.

1725. The last remnant of the ancient taxation?—It seems to have been the last remnant, and it is noticed, I think, in Mr. Campbell's Administration Report as a matter of some curiosity. It appears that a few villages were transferred from Shahabad to the neighbouring district of Ghazeepore, and were afterwards re-transferred to Shahabad, and that the Mutarafa tax was abolished in Shahabad after the first, and in Ghazeepore after the second transfer.

1726. And they slipped out of the general abolition?—That appears to have been the case.

1727. Are there any tolls collected in Bengal?—There are tolls in Bengal amounting to 130,178 *l.*

1728. What are those tolls collected from?—There are three principal categories. The first are the ferry funds, which are subdivided into those on local and general roads; there is no real difference in the application; they are levied under the authority of Regulation 7 of 18[illegible]9, and produced 53,957 *l.*, of which a part is acknowledged to be a tax upon those who use the ferries. Then an important item are the canal and Nuddea river tolls. They are special canals in the neighbourhood of Calcutta. The river on which Calcutta is situated would, but for these canals, be shut off from the Ganges to the north during great part of the year by the difficulty of navigation, and shut off entirely from the district, except by the dangerous and passage near the mouth of the river; canals connect the river at Calcutta, both north and south of the town, with the Sunderbun channels which intersect in every direction the country to the eastward, and which communicate with the eastern, and north-eastern, and northern districts of Bengal.

1729. Do you know whether the tolls are paid by the boats, or on the merchandise?—They are paid by measurement on the boats, I think.

1730. I mean, is it a classified toll, like the tolls on railway goods, or a toll on the mere tonnage of the boats?—My recollection (and I have very often paid it) is that, certainly in passenger boats,

boats, it is by the tonnage of the boat; the boat is measured.

1731. Are there any other local receipts?—I may mention, perhaps, the amount realised from these canal tolls, including Nuddea rivers, which are of the same character, for keeping the navigation open. The amount estimated in 1871–72 was 67,651 *l.* Then there is, on certain district roads, a toll levied which produces 8,570 *l.*, making a total from this source of 130,178 *l.* In addition to these, there are various receipts of a local character, which enter into the account of local funds, but, perhaps, ought not to be included.

1732. They are not included as taxation?—They are, really, not of the character of taxation at all; part consists of the interest of endowments in the hands of the Government, and so forth; but to make a complete account, I have added them. They amount to 31,000 *l.*

1733. What is the nature and extent of the municipal revenue?—Including the Calcutta municipality, which is by far the larger portion of the whole, the total municipal income is 434,340 *l.* The income of the Calcutta municipality alone is 273,127 *l.*

1734. Do you know how many other towns or places are constituted municipalities?—There are 187 municipalities constituted, under different Acts, having a total population of 3,363,633.

1735. From what sources are these funds derived as to Calcutta?—In Calcutta, house property is subject to charges for municipal purposes, which amount to 17½ or 18 per cent. on the annual rental.

1736. Is that by a per-centage assessment?—That is so; there is a rate levied for general purposes of the municipality of 9 per cent.; there is a rate for lighting of 2 per cent.; there is a police rate of 2½ per cent.; it is stated at 2 per cent. in Mr. Campbell's Report, and has possibly been reduced, but the rate, so far as my information goes, is 2½ per cent.; and a water rate, which is either 4½ or 5 per cent.; making from 17½ to 18 per cent. of the total charge. Of this it is considered that rather more than 10 per cent. falls upon the owner, and rather less than 8 per cent. upon the occupier. In addition to this, there is a license tax upon trades and professions, yielding about the same as a 2½ per cent. rate upon houses; and a license tax upon carriages, which yields about the same as a 1 per cent. upon house property; and a license tax on carts, which yields about the same as a half per cent. rate upon houses. The further receipts in the accounts of the municipality are considered to be matters of account, the income derived from [illegible]tion being taken at 250,000 *l.* Then of the [illegible] of this, I may mention the principal [illegible] interest on the municipal debt, takes [illegible]00 *l.*, and a sum which is set aside from [illegible]ome to a sinking fund, to about 11,000 *l.*, and the general establishment charges and expenses of collecting, commission, and general charges, 27,800 *l.*; roads, 25,000 *l.*; conservancy, 16,000 *l.*; lighting, 23,000 *l.*; waterworks, 24,300 *l.*; and the interest on the special debt for waterworks, including sinking fund, 31,200 *l.*; and the police charges, 25,600 *l.* Those are the most important items of the expenditure. That leaves, I think, something like 50,000 *l.* unclassified. Then the position of the Calcutta municipality, as to their debt, is this: there is current at the present time a debt of 55 lacs of rupees, on debentures at 6 per cent., and a debt of 52 lacs of rupees to the Government of India, for the water supply of Calcutta, at 4 per cent.; a further debt of 3 lacs of rupees to the Government of India for the construction of a municipal market, at 5 per cent.; making the debt to the public 55 lacs, and a debt to the Government of 55 lacs, 110 lacs in all, of which the half is at 6, and the greater part of the other half at 4 per cent. Their further borrowing powers, including an advance of 3 lacs of rupees from the Government, amount to 29½ lacs of rupees, which will be required for the completion or extension of the waterworks, and for the completion of the municipal market, and for drainage extensions. This will make their total debt 140 lacs, or 1,400,000 *l.*

1737. In other towns what is the nature of the receipt?—With the exception of a few of the suburban towns, it consists almost entirely of a house tax from occupiers.

1738. Is there no octroi levied in Bengal?—No, none whatever. The principal receipts are derived from rates on houses, buildings, and lands, at different per-centages of the rental in different municipalities; the maximum fixed by the Act 3 of 1864 being 7½ per cent. on the annual rental, except in one town, that of Dacca, where 10 per cent. is allowed, but has not been imposed.

1739. On what objects are these taxes spent?—The tax is devoted entirely to the purposes of police and conservancy within the municipality.

1740. When you say conservancy, do you mean the roads of the town?—Street cleaning; and it includes lighting; but I think there is very little expenditure on that.

1741. Does it include maintenance of the roads and repairs?—Yes; repairs and cleansing.

1742. Then in Bengal there is at present no local education rate, or other such rate?—Nothing up to this point of time. The measures that have been taken in 1871, and later, require separate notice.

1743. What is the total levy, including municipality, on Bengal?—The total, including Calcutta, which is not on the Government books in any way, is 624,080 *l.*

1744. Have you an account with regard to the North Western Provinces of the local revenue?—In the North Western Provinces there is a road cess at the rate of one per cent., which produced, in the year 1870-71, 44,130 *l.* Since that time the system has been changed. Then there is an educational cess of one per cent., which produced, in the same year, 35,037 *l.*

1745. Is that levied on the land revenue; one per cent. on the land revenue?—That is so; but this educational cess is not compulsory in the Benares Province, and the receipts, therefore, are unequal to the cess at the same rate for roads. Then for district postal purposes, there is ¼ per cent. cess, which realised in that year 8,247 *l.* These cesses, as we shall have occasion to notice when we come to the measures following the Resolution of 1870, have been all put upon a different footing. Then in the North Western Provinces the system of payment for the village watch, is different from those which we have been noticing. There is, at the present time, a cess which varies in its incidence from 4 to 6 per cent., and realises 181,240 *l.* for the maintenance of the village watch in the North Western Provinces. This service was made a charge upon the land in the settlement; it, however, bore no definite pro-

Mr. *E. F. Harrison* and Mr. *E. Gay.*

18 March 1873.

portion to the land revenue. A pay of 3 rupees a month is assigned to each watchman under the old settlement arrangements. In many of the districts a somewhat different system has been made recently, by which a general cess, amounting to 7¾ per cent., is levied monthly for this purpose. In regard to this, I may give this account of the local taxation in the North Western Provinces. The majority of the province is temporarily settled, but a portion not conterminous with the Benares division, but commonly known as the Benares Province, was permanently settled toward the close of the last century. This portion contributes about one-seventh of the revenue of the whole of the North West Province. In it the landholders, besides their permanent land revenue, paid a cess of 1 per cent. for roads, and ½ per cent. for postal arrangements, and provided for the entertainment of the village police. The general rule in the North Western Provinces had been to give the village police either land or a money wage, and to pay the same road and postal cesses above described, with the addition in the later assessed districts of a school cess of 1 per cent. on the land revenue. Where a new assessment had been framed, the local cesses had been fixed at 10 per cent. on the revenue, or 5 per cent. on the assumed rental; this being to cover roads, schools, post, village police, and general improvements. The rates chargeable on lands, excluding the village accountant's cess, amount to 268,654 *l.*; that is about a rate of 2 *d.* per unit of the population. The maintenance of the village accountants, which is not considered as a Government obligation so much as one resting on the community; a payment for service rendered to the village community, and not to the Government. The services, no doubt, are of value to the Government, but the cess seems not to be looked upon as a demand of the Government; and in Oude and in the Central Provinces, as we have seen, these accountants are maintained by the villagers without any payment, for them appearing in the public accounts. In the North Western Provinces, a cess, at the rate of 3 per cent on the rental, is included in the settlement for the payment of the village accountants, and produced, in 1870-71, 161,000 *l.* Then there is a tax on stage carriages, which produced the small sum of 81 *l.*, and the rest are cantonment and municipal funds raised by octroi duties and duties on houses, on professions, carriages, and horses, fishing licenses, licenses on trades, slaughter-houses, and so on.

1746. Do you know whether those octroi duties are levied on the principle you have stated, of limiting them to certain heads or classes of commodities?—Yes.

1747. Are there any municipal institutions in the North Western Provinces?—The municipal institutions in the North Western Provinces are applicable to a population of 1,959,000 persons.

1748. In how many towns or places?—Sixty-eight towns.

1749. Can you state what taxes they levy?—I should mention that there are, in addition, 276 petty towns, having an average assessment of 122 *l.* to provide for their proper watch and ward.

1750. But can you tell us how the funds are raised?—There is raised by taxation, in the 68 municipalities, 121,316 *l.*, and by rent of Government lands and houses in the towns, 6,900 *l.*, and miscellaneous receipts, 37,000 *l.*, making a total of 165,000 *l.*

1751. But is there not an octroi besides the special taxes?—Of the total receipts, 104,000 *l.* are derived from octroi; 7,496 *l.* from the tax on houses; 8,780 *l.* from the tax on professions; and 922 *l.* from a tax on carriages, making a total income from taxation of 121,000 *l.*, and a total income of 165,000 *l.* The octroi duty is levied on the articles which I have mentioned earlier.

1752. What is the total of all the taxes levied in the towns, including the octroi and other taxes?—It is taken at 165,000 *l.* in the municipalities, and 33,721 *l.* in the smaller towns.

1753. Do you know whether these municipalities each receive their own taxes and disburse them?—That is so strictly.

1754. So that they are not taken into the general fund?—No; the accounts of the receipts of each municipality are kept strictly apart, and they are administered by a body of townspeople appointed by the Government.

1755. With regard to the special cesses that you have described, are they received and expended locally, or are they received by the Government of the North Western Provinces, and then distributed as they think fit; I mean the cesses in addition to the land revenue?—Until recently, when these cesses have been put on a somewhat new footing, there has been no obligation on the part of the Lieutenant Governor to apply the road or education cess specially, but it has been allotted with reference to the districts in which it is raised.

1756. What is the total amount levied in the North Western Provinces from local funds?—The total that I have mentioned is 628,943 *l.* for the year 1870-71.

1757. Mr. *Eastwick.*] I think you stated that the expense of collection in Oude was 12½ per cent.; surely that is very high, is it not?—It does appear to be high.

1758. You did not mention what the collection was in the other provinces?—I think the cost is stated of general management, but perhaps not so as to make it quite clear. The cost is stated in a general account of the expenditure of the municipalities in the North Western Provinces, where there is a heading of Sudder Establishment and a head of Collection. Whether the account of charges for collection truly represents the entire expense, or whether some portion of the establishment ought to be taken in order to arrive at the true expense, I am not in a position to say. I can give the proportion which the charges which are allotted in the account to Collection bear to the whole.

1759. But you are not certain what comes under that head?—I suppose that probably [illegible] of the general establishment must [illegible] any fair estimate of the cost of colle[illegible] taxes. It is explained by the Chief Co[illegible] of Oude that in some cases the per-ce[illegible] collection is much too high, but that this is owing to the necessity of maintaining proportionately large establishments to make the collections in some towns, which are, to all intents and purposes, little more than large open villages. The inference he draws is that octroi is not a proper tax to be had recourse to in such cases; but he adds, there can be no question that it is, of all others, the most acceptable to the people, and that every effort will be made to reduce the cost of collection within reasonable limits.

1760. You said that there was no general cess in Bengal?—There has not been any until quite recently.

recently. I proposed to take up the consideration of the effect of recent measures after explaining the earlier system.

1761. Could you just mention the date at which there have been complaints, or at which a cess has been imposed?—The Act is known as the Bengal Road Cess Act of 1871, but it has not any immediate effect. The objections to it are, of course, entirely in anticipation of its effects.

1762. It has not been levied then?—It has not been levied.

1763. I think you said, did you not, that the capitation tax in Burmah was allowed to be assessed in another way; that it was not taken in the municipalities as a capitation tax?—Yes. I mentioned that the assessment for municipal purposes is levied in a different way in those parts of British Burmah in which the capitation tax is in use. In some towns a land assessment is taken of 1½ pie per square foot on the area covered by buildings, and three rupees an acre on all occupied land not so covered. In the town of Rangoon, very considerable objection was made on the part of the European residents to being made subject to a capitation tax at all, and their feelings on the subject were accommodated by the Chief Commissioner by the imposition of a tax on houses, which amounted to about five times the amount of the capitation tax.

1764. The capitation tax is only 1 rupee, is it not, or is it 3 rupees a head?—It varies. The rates differ somewhat in different parts of British Burmah. In the Province of Pegu, generally married men pay 5 rupees a year, and unmarried men 2½ rupees. In some parts the rates are as low as 2 rupees for married men, and 1 rupee for unmarried men.

1765. It has always been levied very easily without complaint on the part of the natives, has it not?—I have always understood that it is quite acceptable to the people of British Burmah.

1766. And have the Europeans made complaints of it to the Government?—I am not aware of any complaints having been carried further than to the Chief Commissioner of British Burmah.

1767. You are not apprehensive of those complaints spreading to the natives, and rendering them discontented about it?—I believe there has been no complaint for a number of years.

1768. It has been settled for some time, you mean?—For many years now; 10 years at least.

1769. That system of taking the cesses by stalls rented in bazars, which you have mentioned, might be usefully extended to other parts of India, you think, perhaps?—They are very popular in Burmah.

1770. Is there any intention of abolishing that [illegible]rafa you spoke of?—I have heard of [illegible]n.

[illegible]ir *G. Balfour.*] I see charges in the [illegible]unts upon these local funds which appear to belong to the military charges. For instance, there are two items in this last year accounts, one account of military police, one of 12,292 *l.*, under the Government of India, and one of 1,668 *l.* under the Government of Poonah; can you explain how these two items come with the Civil charges?—The larger sum represents the cost of the Mhairwarra police battalion, the smaller that of the Poonah cantonment police.

1772. No doubt it is, but it is put down to Civil expenditure. Are you aware that all these charges refer to the Military Department?—The Mhairwarra local battalion, consisting of mairs reclaimed from predatory habits, did loyal service during the mutiny, and was guaranteed the advantages of troops of the line. It was reorganised in 1871, and the Government then directed that the charge, which had for several years previously been included with the police charges of the North West Provinces, should be treated as a charge of the Rajpootana agency.

1773. You will see another item, under the same head of Bengal, for Sylhet and Cachar frontier forces; perhaps you will look that up. In the previous year's accounts I observed several of those charges set down to a larger amount than I see in these accounts?—The Sylhet and Cachar frontier force, and Chittagong frontier force, were organised for frontier duty, including the punishment of outrages by hill tribes. An addition was made to the Chittagong frontier force in connection with the Lushai expedition, in the police operations connected with which this force took part. These frontier forces are not organised in the same way as the Mhariwarra battalion.

1774. Pephaps you will kindly look into that matter; I could not ascertain from my examination whether that Mhairwarra battalion was a military charge or a civil charge?—The charge for several years past has been considered as a civil charge. In the accounts for 1871–72 it appears under police in the first column of the account of police receipts and charges.

1775. *Sir D. Wedderburn.*] The province of Oude, both as regards the nature of the country and the character of the people, is nearly identical with the North Western Provinces, by which it is almost surrounded. What are the special advantages of maintaining a separate administration in Oude?—I think the form which the administration of Oude holds at the present time is rather due to its history than to the extent of the province, or to the character of the population. At the same time there is something special in the relations between the agriculturists and the great landowners of Oude, to which there is probably no parallel in the North Western Provinces. The object of absorbing the Oude Provinces into the Government of the North Western Provinces has often, I am quite aware, been thought desirable. A suggestion to this effect was made by the Lieutenant Governor of the North Western Provinces on economical grounds in the month of December last. I am not aware of any of the reasons which render the retention of the present form of administration necessary.

1776. Is not it the fact that the district of Ajmere was lately transferred from the Government of the North Western Provinces to the Government of India?—That is so.

1777. What was the reason of that?—I am not aware of the reason.

1778. Mr. *Fawcett.*] I noticed that you stated that one of the objects to which the revenue derived from local taxation was devoted was building, did you not?—Yes.

1779. I suppose, for instance, the buildings which are occupied by the Civil Government officers, the local governors, for example, would have to be defrayed out of this fund?—Yes; they were not connected with the previously existing provincial or local funds; but the civil buildings form part of those branches of expenditure which are in future to be provided out of the fixed

Mr. *E. F. Harrison* and Mr. *E. Gay*.

18 March 1873.

grant to be made to the local government, as part of the general provincial service scheme.

1780. For instance the house of a Provincial Governor will in future be paid for out of local taxation?—That I understand to be the case.

1781. For instance, to take an example, the 155,000 *l.* which was spent on building the Governor of Bombay a country house, would have to be supplied, if a similar transaction took place, out of local taxation?—That is so.

1782. Then, as I understand, the scheme of appropriating fixed sums to imperial revenue and letting local purposes be supplied out of local taxation, what it virtually does is this: it says to the local governors, "We will give you so much; if there is any deficiency you must get it in some way or another out of the numerous local taxes which you possess?"—Yes.

1783. But then, as I understand, in certain portions of expenditure the local governments are in no way effectually controlled by the Central Government; they can spend, cannot they, up to certain amounts?—Yes, for these objects.

1784. Then it transfers the absolute power to the local governor of spending what he likes and raising the necessary taxation to supply it?—That is so. The view taken by the Government of India as to the way in which this additional responsibility would be undertaken and exercised by the local governments is expressed in a paragraph of the resolution of December 1870. I had better, perhaps, also read the previous paragraph, as it is very short: "Subject to these general restrictions, the Governments will henceforth enjoy full liberty in the expenditure of the funds appropriated to 'Provincial Services.' It must, however, be understood that in thus divesting himself of control, the Governor General in Council divests himself also, to a large extent, of his former responsibility. If responsibility for expenditure is retained control cannot be renounced. The Governor General in Council delegates to the local governments this large additional share of administrative power without hesitation or distrust, believing that it will be exercised with wisdom, liberality, and prudence."

1785. It is clear, is it not, from that paragraph, that the central Government delegates to the local Governments the primary responsibility of expenditure, and of obtaining the necessary revenue to meet that expenditure?—That is so, subject, however, in regard to any form of taxation, to the control of the Governor General.

1786. Now, to take an example of what may be the effect of that; suppose the Governor of Madras emulating the example which was set to him by the Governor of Bombay, took it into his head to spend 155,000 *l.* in building for himself a country house, there is nothing to check him as far as I can understand; and as long as he selected one of the numerous local taxes, or some of them, with which he is allowed to obtain local revenue, he could provide the requisite sum out of local taxation?—The Governor of Madras, of course, acts under the sense of responsibility imposed by this system.

1787. I am not saying that the Governor of Madras would be likely to do it; but I say if he wished to do, what we know was done by the Governor of Bombay, he would be able to do exactly what I have described; is not that so?—Personally he would not be able to do so, for it would be necessary that he should carry his council with him in the matter; the Governor of Madras is not independent of his council.

1788. But if the Governor of Madras could talk over, or persuade his council, in the same way as the Governor of Bombay, we may presume, persuaded his council, he could do then what I suggested, could he not?—I think so; the responsibility would rest with the Governor in Council.

1789. What kind of limitation is there placed upon the power of the various municipalities to borrow; you have said that the municipality of Calcutta owes, at the present time, about 1,100,000 *l.*, and they have incurred debt to the extent of 290,000 *l.* more; what is the nature of the limitation placed upon the power of borrowing?—It is a limitation by law.

1790. But not by a uniform law?—No; their authority to borrow rests upon legislative sanction.

1791. *Chairman.*] Can you refer us to the general character of that sanction?—The Act of the Council of the Government of Bengal, under which the borrowing powers of the justices are now limited, is Act No. 1 of 1872, which I have not got with me.

1792. Mr. *Fawcett.*] Is there a special Act passed for every municipality to regulate the amount which they can borrow, because I presume it is not a special privilege enjoyed by Calcutta; the municipality of Bombay, for instance, may borrow, and has borrowed?—Bombay can borrow, and has borrowed. The early history of the obligations of Bombay I am not immediately acquainted with; but it could at present contract no loan without the sanction of the Governor General in Council; of that I am confident.

1793. Can the municipality of Madras borrow?—The general course which has been followed of late years has been for the Government of India to advance to these municipalities such sums as it has been considered proper to raise on their credit for the construction of works for the supply of water or drainage, and which they have been unable to meet from their income. In this way a loan has been made to the Madras municipality.

1794. But then there are those two descriptions, as shown in Calcutta; a public loan and a loan advanced to the municipality by the Government; are both those loans placed in exactly the same position; does the municipality go through exactly the same process to obtain them?—Yes; I think there is no distinction at that stage.

1795. How many municipalities at the present time in India are in debt?—Of the municipalities which have received loans from the Government of India, I believe this to be a complete statement; it was true two years since, and I am not aware of any additions since; but I could supply the omission if there is any. There [illegible] loan to Port Canning, which must be considered as money lost; and then comes Calcutta.

1796. How much for Calcutta?—Calcutta, at the present time, is 55 lacs of rupees in debt to the Government; 52 for water supply, and 3 lacs for the construction of a market. For Kurrachee a loan of 63,000 *l.*, or 6 lacs 30,000 rupees, was sanctioned for the water supply.

1797. As you go through them, would you, if you could, mention the rate of interest at which the sums have been lent; are they all lent at 4 per cent.?—Four and 5 per cent.

1798. The Calcutta one was at 4 per cent., was

was it not?—The Calcutta one was at 4, the Kurrachee one was at 4, the one at Madras for the same object was at 4. Then for all these there is provision made for a sinking fund. Then there are some smaller ones, Ootacamund, Kumaon, and Ajmere; and I am aware also of one or two other loans. The municipality of Surat, for example, has a loan, the greater part of which, if not the whole, I think, has now been discharged. That was for street improvements, and was probably compensated by the increase in the value of the property adjoining.

1799. Then have the Government lent nothing to Bombay?—In the year 1869 a loan of 15 lacs was sanctioned at 5 per cent.; that was for the payment of the general debts of the municipality at that time; and there were two other loans of a special character, one for the waterworks, and one which appears to have been for a temporary purpose; but these, I think, have all been consolidated. I shall be prepared to give full information with regard to this when we speak of the general position of the municipality of Bombay.

1800. Perhaps you would also bring an account of the amount of their public loans, as well as what they owe to the Government?—Yes.

1801. With regard to Calcutta, you stated that they pay 6 per cent. for the loans which they have raised from the public, and only 4 per cent. to the Government; therefore the Government, out of the general revenues of India, virtually make a present to the Calcutta people of 2 per cent., do they not?—Not so; the Government, I conceive, does make a present, so to say, to the people of Calcutta of the difference between 4 per cent., which they receive, and the rate which they are themselves obliged to pay to raise these funds on the credit of the Government. At the time that these loans were made, that charge was taken to be 5 per cent., and it was admitted and considered that the Government was making a present to the municipality at the rate of 1 per cent. on the amount of the debt. As a matter of fact, the Government, if it were desirous of raising money at the present time on loan, would not have to pay so high a charge as 5 per cent., and, in fact, the 4 per cent. loans of the Government are at the present time at a premium in the market.

1802. Yes; but admitting that, if the municipality of Calcutta cannot, because its security is not so good as that of the Government, borrow money at less than 6 per cent., and if the Government lends that municipality on that security money at 4 per cent., it obviously makes the municipality a present of 2 per cent.?—The municipality benefit by the gift or loan of the Government credit; but the Government does not necessarily lose.

1803. But it runs the risk of not being paid, which risk is estimated in the public money market at 2 per cent.?—It may be looked on in that light.

1804. But is not that the only light in which it can be looked upon; I do not say whether they ever will lose anything, but that is the only proper way of looking at it, is it not?—I think it is a perfectly correct way of looking at it.

1805. You have given us eight classes of local taxes which may be imposed in Oude; am I not correct in saying that if you look through those classes, it gives the local authority of Oude (and the same remark applies to other parts of India) the power to levy taxation upon every article which is consumed, upon every article which is worn, upon every article which comes into the construction of a house; in fact, upon every single commodity that is used by man?—It certainly does, in principle.

1806. Then where are the limitations?—The limitations are by express declaration, and the Government of India have declared the following articles exempt from duty: first articles liable to customs duty, and imported into India by sea, otherwise than articles included in classes 7 and 8, that is to say, piece goods and metals; secondly, salt; third, opium; fourth, fermented or spirituous liquors manufactured in India, and drugs liable to excise or abkari duty; and fifth, goods *bonâ fide* the property of the Government.

1807. Then my description is perfectly correct, that now every single article which can feed a man, which can warm a man, or which can be used by man in India, is liable to local taxation, or may have local taxation imposed upon it, except those articles from which Imperial taxation happens to be raised?—That is so where the municipal acts are applied.

Friday, 21st March 1873.

Mr. Ayrton.	Mr. Grant Duff.
Sir George Balfour.	Mr. Eastwick.
Sir Thomas Bazley.	Mr. Fawcett.
Mr. Beach.	Mr. Robert Fowler.
Mr. Birley.	Mr. Hermon.
Mr. Bourke.	Mr. Lyttelton.
Mr. Candlish.	Mr. John Benjamin Smith.
Mr. Baillie Cochrane.	Sir David Wedderburn.
Mr. Beckett Denison.	Sir Charles Wingfield.
Mr. Dickinson.	

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

Mr. EDWARD FRANCIS HARRISON and Mr. EDWARD GAY, re-called; and further Examined.

Mr. *E. F. Harrison* and Mr. *E. Gay.*

21 March 1873.

1808. (To Mr. *Harrison*).] WILL you be good enough to inform the Committee of the nature and extent of the local taxation in the Punjab?—The position of the Punjab in regard to local taxation in the year 1870–71 was as follows: There was a cess of 1 per cent. imposed on the land revenue at the time of the first settlement of the province, for the construction and maintenance of roads, and in most cases there was a further cess of 1 per cent. to be applied to education.

1809. In what year was that?—It was made at the time of the first settlement, which was not in the same year in every district; it followed the acquisition of the province.

1810. Beginning in what year?—The settlement, I think, began in 1849. On the revision of the settlements, which took place in different years in different districts in the province, the 1 per cent. cess for roads was doubled, and a half per cent. was added for the maintenance of the district post. In some districts voluntary additions were made to the rate for education. In 1870-71 the receipts were as follows: For the road cess, 29,632 *l.*; for the education cess, 22,634 *l.*; and for the district post, 6,064 *l.*, making a total of 58,330 *l.* The ordinary land revenue for the year was 1,189,635 *l.* The population is estimated at 19,000,000, and the incidence of the cesses may be said to be about ¾ *d.* per unit of the population. There was a trifling sum of 58 *l.* from stage carriage licenses.

1811. Has that arrangement continued which was made as regards the land up to the present time?—I propose to follow out a little later in my evidence the changes recently made.

1812. Were there any other taxes levied before the recent changes?—There were others of a municipal character. In cantonments there was raised locally 8,772 *l.*; and with regard to the municipalities, 324 in number, of which 127 are constituted under Act 15 of 1867, two under an earlier Act, and 195 minor ones, in which minor places a small sum is raised to pay for the watch and ward, the estimated taxation for 1872–73 is 159,180 *l.*, of which nearly 153,000 *l.* consist of octroi duties.

1813. Do you know under what conditions the octroi duties were levied?—The octroi duties were levied on the same principle generally as explained in the Province of Oude; but in the year 1868 it was somewhat restricted in the Punjaub by being confined to specified arti[illegible]s, and by the exemption of all articles which [illegible] paid Customs duty. In January 1871 thes[illegible] relaxations were in a measure withdrawn, and piece goods and metals which had formerly been exempted from town duties were added to the list.

1814. Can you state at all the number of articles which were subject to taxation under these various lists?—No, I have made some inquiry, but have been unable to find any full account of the articles subject to duty. The general classification I gave on the last occasion.

1815. But can you state the per-centage; was it an *ad valorem* duty, or do you know whether it was a specific duty on different articles, by weight or measure?—It is generally an *ad valorem* duty. The principle upon which the rates were fixed in the North Western Provinces (and I have not the information separ[illegible] the Punjaub) was to make the rate l[illegible] so as not to exceed 1½ per cent. on n[illegible] of life, and 5 per cent. on luxuri[illegible] rates in the Punjaub on grain vary from [illegible] per cent. *ad valorem*, or if paid by weight, from 2 to 8 pies per maund of 82 lbs., 8 pies being two-thirds of an anna. In some districts in the Punjaub it appears that a duty on loads is preferred, in which case it is paid at 3 pies, the fourth of the anna per coolie load. The Punjaub Government appears to entertain an objection to the levy of the duty on grain in an *ad valorem* rate, and has pointed out to municipal committees that under this system the tax increases in pressure in proportion as the price of food rises, whereas it should be relaxed in times of scarcity; and that it is preferable to levy the tax

tax on quantities, or to fix an average rate for the purpose of the duty. Then on animals for slaughter, articles for fuel, drugs and spices, as well as piece goods and metals, it is levied *ad valorem*, the rate on piece goods and metals being restricted to 1½ per cent. As a general principle, the municipal committees in the Punjaub have been enjoined to make the tax press more heavily upon luxuries, such as tobacco, than upon necessaries.

1816. To what purposes are these municipal taxes applied?—For the maintenance of the town police, the drainage and conservancy of the town, the maintenance and construction of town roads, and for public improvements in which markets and water supply are included; and for the support of charitable institutions about a 14th of the income appears to be appropriated, and a comparatively small sum for education. The charitable purposes include dispensaries and poorhouses. The amount applied to educational purposes is about 1-28th of the total income.

1817. Are there any other local cesses?—In addition to these there are the lumberdar's cess of 5 per cent. on the land revenue, and the village accountant cess, the first yielding 110,000*l.*, and the village accountant cess, 85,000 *l.*; and a cess for rural police, estimated to yield 65,000 *l.*

1818. That does not appear in the Government accounts?—They are not general, and do not appear in the Government accounts.

1819. It is sanctioned directly between the landholders and the persons whom they employ?—That is so.

1820. What is the total amount of that local taxation, excluding the payment to the chief people of the village?—The total of the general cesses, including the municipal income, may be taken at 217,500 *l.*

1821. Is there included in that any special taxation in cantonments different from the municipalities?—No, that is not included. If I include what is realised in cantonments, the total will be about 226,000 *l.*

[redacted]at is the nature of the taxation in [redacted]ents?—It is of the same character [redacted]ns, which are not under military [redacted]reater part of it consists of octroi [redacted]

[redacted]do not observe that there is any [redacted]ny kind of house tax?—The house [redacted]unjaub is quite exceptional; but at [redacted]nd at the Hill stations there is a [redacted] and it was proposed some time [redacted]ose a house tax at Lahore, but [redacted]ion was considerable, and the con[redacted]tion of this measure was deferred. The [redacted]sent Lieutenant Governor of the Punjaub appears to doubt the policy of a house tax in the native towns.

1824. Mr. *J. B. Smith.*] Is the house tax levied upon natives as well as Europeans?—Yes.

1825. And is that so in Burmah?—Yes.

1826. *Chairman.*] Are not the stations chiefly or largely occupied by Europeans, where the house tax is actually levied?—As to the Hill stations that is very much the case; but the native houses at the Hill stations are also liable; they are not exempted.

1827. Can you state the amount levied in house tax at those stations?—No, it is not stated. Perhaps I should explain, with reference to an answer which I just gave, that there is a house tax in Burmah which is levied upon Europeans in place of the capitation tax, which is paid by the natives; but there is also a municipal house tax which is paid equally by natives and Europeans.

1828. Mr. *J. B. Smith.*] But the capitation tax ceased when the house tax was made, did it not?—No, only in those cases to which I have referred.

1829. Then the capitation tax is levied on natives, and the house tax on Europeans?—Yes.

1830. The capitation tax is retained for the natives in the same town, is it?—Yes, I understand that to be so.

1831. And only Europeans are charged with the house tax?—I find I am mistaken; the Revenue Rules for British Burmah, which I have before me, show that a house or land assessment, in lieu of capitation tax, is levied in a few towns only, and that where so levied, it is paid both by natives and Europeans.

1832. *Chairman.*] Will you give an account of the local taxation in Madras?—In Madras in 1870-71 there was a road cess under Act 3 of 1866, which produced 192,627 *l.* This was levied at a rate not exceeding half an anna in the rupee on the annual rent value of the land. The cess then made was in substitution for any previously existing road cesses.

1833. Sir *C. Wingfield.*] What per-centage would that be; about 3 per cent., would it not?—Three and one-eighth per cent. The annual rent value of land was defined for the purposes of this Act in all ryotwarri lands to be the amount of the Government revenue, with the addition of the water rent, and in other lands the rent paid by tenants to the landholders was taken as the annual value of the land; where there was no money rent, the survey assessment was accepted. Then there was in Madras a partial education cess under Act 6 of 1863, which Act legalised certain arrangements which had been established voluntarily in the Delta talooks of the Godavery district, but the Act allowed any other town or village to apply for the establishment of schools under this Act, so that it became of more general application. Under this, a committee was to be appointed consisting partly of officials of the Education Department, who were to act in consultation with the inhabitants, and subject to the approval of Government the committee might levy taxes or duties which were not defined in their character, and it might, subject to the approval of the director of public instruction, manage the schools. The produce of the education cess was 4,479 *l.* Then there were also partial cesses to provide for village services, which were regulated by Act 4 of 1864. The object of this Act is described in these terms: "That whereas by an immemorial usage of the country certain fees in money and kind are payable by the people towards the maintenance of the village officers in the revenue and police departments," and so on. The cess for this purpose was to be fixed from time to time by the local government, but was limited to one anna in the rupee, 6¼ per cent. of the assessment and water rate. All lands were subject to the rate whether liable to land revenue or not. This Act has only been applied in four districts of the Presidency. It yielded in 1870-71, 160,032 *l.* Then there is an irrigation cess, which in three

Mr. *E. F. Harrison* and Mr. *E. Gay*.

21 March 1873.

districts is voluntarily paid by the ryots in place of customary labour, which they are under obligation to render, for the purpose of repairing irrigation channels.

1834. *Chairman.*] Is that the whole of the local taxation?—That is the whole of the local taxation, exclusive of municipal.

1835. And what is the amount of that; I do not know whether you gave us all the sums levied for the different cesses?—I gave the separate amounts, except the partial education cess, which produced 2,545 *l.* The total is 359,683 *l.*

1836. Then as to the municipalities in the Madras Presidency, what have you to state?—First, as to the position of the municipality of the town of Madras, the income is 52,570 *l.*, which is raised principally from a rate on houses which produces 23,964 *l.* Then a tax upon trades yields 9,025 *l.*; liquor licenses produce 1,172 *l.*; a tax on carriages produces 3,774 *l.*; a tax on carts, 1,305 *l.*; and tolls, 4,813 *l.*

1837. What do you suppose that the tolls are for, are they for markets?—In regard to the tolls, I find their character described in a Paper which I have before me. It appears to be in the nature of an octroi duty on articles entering the town.

1838. Will you give us the description?—This description is not given in regard to the municipality of Madras; but, no doubt, it is applicable equally to it. It is said in regard to the tolls in the Madras Presidency, that "this form of taxation prevails in all but four municipalities, and the revenue realised thereby is in excess of that produced by any other tax. This is a comparatively popular impost, and many municipalities are anxious to have their tolls increased and their other burdens lightened. The reason, of course, is not difficult to find, as tolls fall only on those entering municipal limits, and the residents are thus only indirectly affected by them; but at the same time mercantile interests are well represented on the municipal boards, and from the almost universal absence of complaint the Government think that the municipal tolls do not injuriously affect the traffic of the country to any appreciable extent. The necessity of keeping down the rates of toll on account of the through traffic has been duly impressed upon all municipalities, and is fully understood even by many of those who desire the enhancement of the present rates. At Tinnevelly a loop line of road has been constructed round the southern portion of the town to enable the through traffic to pass on untolled."

1839. Can you give us information as to the mode in which the shop tax is levied?—No.

1840. Is this sum spent generally in the municipal administration of Madras?—Out of the income which I have described, the principal expense is for conservancy, 12,950 *l.*, the remainder consists of the general expenses for collection, the lighting, the repairs of roads and watering.

1841. Will you proceed to the other municipalities, the smaller towns; what was the total taxation levied in them?—In other towns the number to which the system applies being 46, the total taxation amounts to 76,693 *l.*, falling under one of the following five categories; either a rate on houses not to exceed 7½ per cent., or a tax on trades and professions which varies from 1 rupee to 100 rupees; a tax on carriages and horses and other animals, varying from 4 annas to 9 rupees half-yearly; and a registration fee of 2 rupees half-yearly on all carts, and tolls on carriages, carts, and animals entering the limits of the municipality, varying from 1 anna to 1 rupee. Then fees are also allowed to be charged for the use of markets, and cart stands.

1842. Is this income applied generally to municipal purposes?—This is applied to the same purposes that I have already mentioned, with the addition of education, on which expenditure is permissible.

1843. Do you mean that it is permissible in these municipalities, but not in the town of Madras?—It was so until recently; but by Act No. 5 of 1871 of the Madras Government, the Madras municipality is empowered to expend money for educational purposes, that is, for the construction and repair of schoolhouses and the maintenance of schools, either in whole or in part; also for the construction and repair of hospitals and dispensaries, and some other purposes.

1844. Do you know whether there is a house tax in the minor municipalities in the rest of the Madras Presidency?—Universally the house tax is enforced in all municipalities without any exception, and the collection of it is considered to have been unattended with difficulty. The highest incidence is found at Ootacamund, where, of course, there are a large number of English residents. Leaving the hill stations out of consideration, the highest incidence is 8 annas and 2 pies per head of the population; that is at Cochin, where there is a considerable mercantile community.

1845. Do you know whether there is a house tax levied in the villages in Madras, or is it part of the land revenue?—There is none separate from the land revenue, certainly.

1846. Is that the whole local taxation at Madras?—That, I think, represents the whole.

1847. Do these municipalities regulate the nature of the tax, and the appropriation of it, or is it regulated by the Governor in Council, or the collector in the district?—The Act under which the municipalities are regulated, Act 3 of 1871, provides for the appointment of Commissioners, who are appointed by the Governor in Council; they must be not less than three in number, and must be resident or c[arry on] business within the town to whic[h the Act] applies. The collector of the distri[ct] revenue officer in charge of the su[b-division] which the district is placed, are ad[ditional] Commissioners.

1848. But can they act upon their [own] rity, or must they have the sancti[on] Governor in Council, or of the collect[or] management of the finances?—An a[nnual] mate of the expenditure must be su[bmitted] the Governor in Council, and, subj[ect to] order of the Government on such estimate, [they] are permitted to apply the proceeds of the ta[xa]tion to the purposes for which the funds ar[e] raised under the Act. The Act also provides for an annual audit of the accounts by such person, and in such manner as the Governor in Council shall direct.

1849. Then that completes your view of the local taxation of Madras?—That is so.

1850. Will you explain to the Committee the nature of the local taxation in the Presidency of Bombay?—In Bombay the only local tax which comes upon the books of the Government, existing before 1871, was the cess for roads and education, which produced in 1871–72, 242,272 *l.* This cess was imposed in the year 1863 without any

any legislative sanction, but it met with no opposition. The question of imposing such a cess had been discussed, and it had generally met with approval for many years previously. It was made legal by Act 3 of 1869, which gave retrospective sanction to all previous collections. Under this Act committees are formed in every district, and in every talooka or subdivision of a district, to manage the funds.

1851. Is the administration to this fund left entirely to the inhabitants of the talook, or is it administered by the collector?—The collector takes an influential part in directing the management of it, but there is in every instance a committee, which must consist of at least eight members, of whom at least one-half must be non-official. The cess is divided into two parts, two-thirds being reserved for expenditure on roads, and one-third for expenditure on education, and, under the Act, the whole amount must be expended in the talooka or subdivision of the district in which it is raised. The rate is one anna in the rupee on the land revenue, or on the money payable to Government by a farmer of land, or sayer revenue.

1852. Sir *C. Wingfield.*] About 6 per cent?—Six and a quarter per cent.

1853. This cess was in addition to a previously existing cess for roads?—No, I think not.

1854. Did the settlement then that had been made in Bombay not include a cess on roads?—No; the original settlements did not. In many cases this cess was included in the revision of the settlement.

1855. And in many cases this cess was imposed after the settlement had been concluded?—Yes, I think so.

1856. And complaints were made that it was a breach of faith; are you aware of that?—I was not aware of that.

1857. *Chairman.*] Did I rightly understand you to say, that the one anna was in addition to the sayer revenue, or was deducted from it by the Government?—In addition to the amount demanded from the farmers of land or sayer revenue.

1858. Is that also locally distributed?—Yes.

1859. Sir *C. Wingfield.*] You are not aware that Sir John Lawrence and Lord Halifax both said, that to impose a cess on the Bombay landowners after you had concluded a settlement engagement with them to pay a certain amount on their land, a cess demanding more would be a breach of faith; that it was open to the Government to do that when the land came on for re-settlement, but that to do it during the currency of the settlement was a breach of faith?—No.

1860. *Chairman.*] Perhaps you are not aware that the Act under which the settlement was made expressly provides that the Government shall be at liberty to make any further taxation in addition?—No; I have not gone into those questions with regard to Bombay.

1861. *Chairman.*] You have been speaking with reference to the rural districts, but with reference to the towns are there any municipal bodies in the Presidency?—I may take first of all the town of Bombay, which is on a different footing from the others. For the city of Bombay there is an estimated total income for the current year of 323,346 *l.* This is made up by rates on houses and for water lighting and police of 161,522 *l.*, and duties and licenses, 79,960 *l.*

1862. Do you know what licenses those are?—Yes; I have the particulars; the first are town duties, 50,200 *l.*

1863. What sort of town duties?—Those are not further described. It includes duties on articles brought into the town for consumption. In addition there are licenses on tobacco, 14,040 *l.*; liquor licenses, 14,650 *l.*, and conveyance licenses 1,070 *l.*

1864. Have you any description of the articles of consumption taxed?—The only information that I have in regard to the position of the Bombay municipality is contained in their Budget for the current year 1873, and in regard to this particular there is only this remark, that "if at the beginning of 1873 the new corporation decides to impose the higher duties appointed by the new Act on sugar, ghee and metals the whole proposed expenditure will be balanced." Therefore these duties include duties upon sugar, ghee and metals.

1865. Do you know at all how the duties are collected in Bombay; are they collected by the custom house, and is there a drawback on taking them out of the town again; what arrangement is there to prevent that duty being converted into a transit duty through Bombay?—The town duties appear to be collected by a commission on their amount, but in what mode I am not aware.

1866. Are there any other duties levied in Bombay in towns?—There is a conservancy cess which produces 20,392 *l.*

1867. How is that levied?—That is a rate upon houses.

1868. In addition to the house tax?—Yes, that is so.

1869. What are the rest of the taxes levied in Bombay?—There is a wheel tax which produces 22,126 *l.*; that is upon carts and carriages. The market receipts amount to 21,160 *l.*, and there are unclassified receipts from fines, fees, savings, stalls and water meters, aggregating 18,186 *l.*

1870. Does that make up the total?—That makes up the total 323,346 *l.*

1871. Can you say generally how that is spent?—The general superintendence assessment and collection amount to 25,326 *l.* Police and Fire Engines account for 36,041 *l.* Then the Public Health Department, which includes the markets, slaughter-houses, cemeteries, conservancy, registration accounts for 102,071 *l.* Then the public works, which includes the lighting, watering and repair of roads, repairs of buildings, street improvements, water-works and drainage account for 87,025 *l.* Then the non-effective and miscellaneous charges account for 78,433 *l.* The greater part is the interest on debt, and the amount chargeable for sinking fund.

1872. Can you state how much that is?—£74,496.

1873. On what capital amount?—The capital amount of their debt is stated on this account as 513,800 *l.*; but I find some allowance must be made from this.

1874. Is it about 500,000 *l.*—No, I think that that would give an incorrect idea. This does not include the obligation of the municipality to the Government for the Vehar Waterworks imposed under legislative enactment, which amounts to about 36 lacs; and it also includes the total amount of a debt of 15 lacs contracted from the Government of which about one-third has been discharged; the arrangement having been that they were to pay an annual sum of which a por-

Mr. *E. F. Harrison* and Mr. *E. Gay.*

21 March 1873.

tion has gone in reduction of the principal and a portion has been appropriated annually by the Government as interest. They have stated the whole sum as the amount of their debt, and you must take off about 5 lacs from that. I think if we add 32 to 51 it will represent their obligation at the present time; that will be about 83 lacs.

1875. Mr. *Fawcett.*] Is that the debt to the Government?—That is the debt to the public and the Government; it includes the amount due to the public on debentures 17 lacs, 38,000 rupees and the remainder is to the Government.

1876. *Chairman.*] Is this taxation administered by a board appointed by the Government, or by the magistrates, or by what authority?—By the bench of magistrates for the town of Bombay.

1877. Are there other municipalities in the Bombay Presidency?—Of other municipalities there were at the commencement of the year 1871-2, 201; many of these are small, and the number on that footing was to be reduced. The position of these is not obtainable from the public accounts, but they are all required by the law under which they act to publish their accounts. I have examined 162 of these, from which I find the taxation 108,000 *l.* and other receipts 30,893 *l.*, making with the opening balance a total of about 181,000 *l.*, the charges being 145,984 *l.* The general objects which are met from these funds are the making and repairing, cleaning, lighting and watching the public streets, roads and drains, not for the provision of town police; but a later Act, Act 1 of 1871, throws the police charges on the municipality, provided that such charges do not amount to more than 20 per cent. of the municipal income. The taxation is raised by assessment or town duties, or otherwise. I have taken as an example the position of one or two of the larger municipalities; and in the town of Poonah I find that there was realized by the sale of right of collecting import duties (for the import duties were farmed), 9,130 *l.*, and by house tax, only 743 *l.* In Surat, another large town of the Presidency, the town duties realized 14,440 *l.*, and there is no house tax.

1878. Mr. *Candlish.*] The average taxation is not more than 700 *l.* a year for each municipality?—It would be about that. The ones that I have mentioned are much the largest, they are very important towns.

1879. *Chairman.*] Is that the whole source of the municipal taxation?—The town duties in all cases are the most important sources of income.

1880. Can you give a description in these cases of the nature of the town duties?—In Surat they are described as duties on sugar, ghee, butter, toddy, including tolls and a wheel tax.

1881. Do you know whether this applies merely to the commodities introduced into Surat for the consumption of the town, or would it be upon all commodities entering the town; do you know whether there is any system of drawback if they go out of the town again?—I believe it applies to all articles entering the town; but that, as elsewhere, the duty is refunded on goods leaving the town.

1882. What is the application of the municipal taxation in the district that you have described?—It is for roads and conservancy; for making, repairing, cleaning, lighting, and watching the public streets and roads, and construction of drains, and also for police.

1883. Is any of it applied to education?—No; in Bombay provision is otherwise made for education; no part of the municipal revenue is so applied.

1884. Can the municipalities in Bombay levy these taxes without the sanction of the collectors or the Governor in Council?—The collector in every case exercises a leading influence upon the acts of the municipality; he is officially at the head of each one, and his principal officers are also officially members of the commission within their respective jurisdictions.

1885. But is the formal sanction of the Governor in Council required to any tax or any alteration in the rate of a tax?—The Act provides that the Commissioners shall be appointed by the Government; and provision is made for the submission of the estimates to the Government, and for the publication of an abstract of the accounts of their income and expenditure.

1886. That is for each year?—For each year.

1887. But you do not know whether the ordinance or rule for collecting the tax is issued with the formal sanction of the Governor in Council?—I believe that to be the case, but I have not got the authority?—I am not sure on that point.

1888. What is the Act?—No. 26, of 1850, is the first regulating Act: it was originally passed to amend an Act relating to Bengal, and was made applicable to the other Presidencies. The Bombay Act, No. 1, of 1871, also affects the point.

1889. Have you anything further to add with reference to the Presidency of Bombay?—I think not.

1890. Mr. *Fawcett.*] On what authority are these loans raised by the town of Bombay and other municipalities?—In the case of the most important loan, that connected with the works for the supply of water to Bombay, the Vehar Waterworks, there was a special Act, No. 13 of 1863, of the Bombay Government, which defined the responsibility of the municipality to the Government, and defined the instalments under which the loan was to be repaid. The work had originally been undertaken and completed by the Government without the intervention of the municipal body. Then of further loans, there is a loan of 15 lacs, which was made to the Bombay municipality by the Government of India, at an interest of 5 per cent.; this is also regulated by an Act of the Bombay Government, Act No. 3, of 1870, which also regulated the instalments in which the principal and interest were to be paid.

1891. Then both of these Acts which you refer to were Acts of the Bombay Governm[illegible] not Acts of the central Government?—T[illegible] were nominally; but the Bombay Governm[illegible] had the approval and authority of the Gove[illegible]ment of India through every stage of the proceedings.

1892. Mr. *Fowler.*] Do you mean the Home Government?—No; of the general Government of India in Calcutta.

1893. Mr. *Fawcett.*] But as I understand, both of these loans were contracted before the new decentralisation scheme, as it is called, came into operation?—That is so.

1894. But now I want to know what will take place in the future; suppose that in any town, we will take the town of Bombay, in regard to the local charges which now it will have to provide

vide money for the local taxation of the year plus the grant from the Imperial Exchequer is not enough to meet the expenditure, will the authorities of the town of Bombay be able to borrow to make up the deficiency?—They are not, and will not be permitted to borrow money without the previous sanction of the Government of India.

1895. But what is the clause or the regulation which forbids their doing so?—There is no reference to this special point in the general arrangement made in what was called the decentralisation scheme.

1896. Then what I understand your answer to be, is that the Government of India carries out this great scheme of what they call decentralisation, which gives the local authorities in various places the power to levy almost an infinite number of taxes, and they take no security whatever about the incurring of debt?—The Government of India would not permit the incurring of debt under these circumstances.

1897. I want to know why would they not; what proof have we that they would not; is there anything in the regulations to show it?—I only express my own opinion.

1898. But what I wish to bring out is this, that this scheme, elaborated, we have been told, with great care, contains no reference whatever to the incurring of debt?—No, that is not a point provided for in it.

1899. Do you not think it is a very grave omission?—I think it would have found a proper place in it.

1900. Then, as far as we know, when for instance we receive accounts which describe the Imperial expenditure of the country, and also the budgets which we are told describe the local expenditure, we have no security that side by side with this local expenditure there is not growing up a great number of local debts?—The act of borrowing is not one of those for which authority is given in any of the Acts regulating municipalities.

1901. It is not given; but what I want to bring out is, that I cannot understand that it is forbidden; it is not forbidden, is it?—No, it is not forbidden.

1902. Then can you tell whether it has been exercised or not?—There is only one instance that I am at all aware of in which it has been exercised, the loan was of a temporary character, contracted perhaps under somewhat exceptional circumstances. The municipality of Surat, contracted a loan, the amount of which, I think (I speak from recollection), was 30,000*l*. It was entirely a local arrangement, and I believe that whole amount has since been discharged. It for the purpose of a considerable improvement in the roads, which gave the Commissioners means of repaying the debt from the improved value of the new frontage acquired; and with that exception I am not aware of any debt that has not been previously sanctioned by the Government of India.

1903. But without inquiring now whether the purposes for which the loan was raised are desirable or not, it does distinctly appear from this instance, that it is possible for a municipality to borrow money without obtaining the sanction of the Government of India, because I understand from you that it has been done in this case?—No doubt it is possible, but it is an unauthorised act.

1904. And you are not certain; you simply speak from your private impressions, but you cannot state upon any official documents that what has been done at Surat has not been done in other places?—I think it very improbable that it should have been done without my knowledge.

1905. But if it has been done once at Surat; have any steps been taken by the Government to prevent its being done again at that place, or the same thing being done in other places?—I am not aware that it has attracted the attention of the Government of India. It has attracted my own attention on an examination of the abstract of accounts of this town, which are published in the official Gazette of the Bombay Presidency.

1906. Then it attracted your attention, but the fact that although the management of local finance is handed over to the municipalities, a municipality has borrowed without obtaining any authority from the Government of India has not attracted the notice of that Government as far as you are aware?—That is so.

1907. Mr. *Candlish.*] Can you say whether that local borrowing without central sanction would affect the security of the creditors?—I should say that it would affect the security of the creditors.

1908. Have you any knowledge on the point?—No, that is only my opinion if the debt is unsanctioned by the Government.

1909. There would be no obligation to repay it?—There could be no obligation on the part of the Government to guarantee it. Such an obligation might possibly be considered to arise in the case of a loan raised with the full approval of the Government.

1910. Is the Government liable for those local loans if they sanction them?—No, I consider not.

1911. Mr. *Fawcett.*] I suppose, of course, that certain security was given in the case of this loan that was raised at Surat; I suppose the security was given of the local taxes?—That I am unable to say.

1912. You do not know the conditions under which it was raised?—I do not know the persons from whom it was obtained, or the conditions under which it was obtained.

1913. Now what would take place under this decentralisation scheme, supposing that a certain sum of money had been spent by the local authorities, and the local taxation of the year, plus the grant obtained from the Imperial Exchequer, was not sufficient to meet the outlay, how would the deficiency be met?—It must be met, I think, in one of two ways, or would be met in one of two ways, either by a reduction in the scheme of expenses of the municipality, or by additional taxation in some shape upon the town.

1914. But supposing in any one year, we will say from a commercial panic, or from any other circumstance, the local taxes did not yield as much as they were expected to yield, and supposing there was a deficiency, how would it be met in that case?—I think it is impossible to say.

1915. By a loan, I suppose?—No, I think that no municipality could practically contract debt in ordinary circumstances without the previous approval and sanction of the Government.

1916. But still, once you say you know that that has been done?—That is so. I look upon that as an exception to the ordinary rule.

Mr. *E. F. Harrison* and Mr. *E. Gay*.

21 March 1873.

1917. When was this loan at Surat contracted?—It is now several years past, I think.

1918. Before the decentralisation scheme was in operation?—That is so.

1919. Therefore you have no experience of what might be done under the decentralisation scheme?—I have none.

1920. In order to give people in India and in this country an idea as to the financial position of the various municipalities, is any security taken that with the local budgets there should also be published a statement of the indebtedness of the various municipalities?—No; but I should perhaps qualify this by the explanation, that a statement of the loans made by Government to municipalities has been made public for the last two or three years with the annual financial statement, which has been made in Calcutta.

1921. That I understand; but this annual financial statement which is intended to give a correct view, not only of the imperial finance of India, but is intended in future to give the people correct views of the local finance, will not contain any account of the indebtedness of the various municipalities, so far as their indebtedness has been incurred to private individuals, and not to the Government?—No, no provision has been made.

1922. Therefore without such a provision I think it must be obvious to you that it is impossible to obtain a correct view of the financial position of a municipality, because we cannot know to what extent that municipality is in debt?—That is so.

1923. Sir *D. Wedderburn*.] These municipal councils as at present constituted cannot be said to be in any way representative of those who contribute to the municipal funds, can they?—I think in Bombay in no respect, as the Act gives the Government power to nominate all the members.

1924. *Chairman*.] Can you give the Committee a general idea of the Acts that have been passed by the several local councils to give effect to the policy that was established in 1871?—I will take the Province of Oude, which comes first in order. In that province, Act No. 17 of 1871 was passed by the Governor General in Council. In the Provincial Services Scheme the amount that was left to be provided locally in Oude was 15,500 *l*. In order to meet this, and at the same time to provide funds for what were considered as much needed roads, the Chief Commissioner proposed in effect, that the existing cess on lands should be doubled. This intention was carried out by Act No. 17 of 1871, which gave power to impose a rate on the annual value of land of 1¼ per cent.

1925. Sir *C. Wingfield*.] In addition to what had been before imposed?—In addition to what existed before; 1¼ per cent. on the annual value is considered to be 2½ on the land revenue, making the total charge on land revenue about 5 per cent. The Act provided that the proceeds should go to a general provincial fund, from which assignments were to be made to districts of sums not less than the assessment on the lands of the district. It was provided that unexpended assignments should lapse at the end of the year to the general fund, and there was no provision made for the re-assignment of such balances to the districts in which they were raised. The Act will also be found to contain a provision for the annual publication of an abstract of the accounts. The objects upon which the funds were to be expended are, first, roads; secondly, schools; both school buildings and the maintenance of schools; and then hospitals, markets, tanks, and other works of utility calculated to promote the public health, comfort, or convenience.

1926. *Chairman*.] Is the power under this Act vested in the Chief Commissioner to levy this rate?—The Act provides that the Chief Commissioner may impose this rate upon every estate.

1927. Not exceeding the amount that you have specified?—Not exceeding the amount that I have named.

1928. Sir *C. Wingfield*.] It was double the former rate?—It is in effect double the former rate.

1929. *Chairman*.] And is he to assign the proceeds of this rate to be spent in particular districts?—The amount to be assigned to each district is not to be less than the sum raised from the district.

1930. But he has authority to constitute the district?—That is so.

1931. And is there to be any local authority established in the district to administer the fund when he has assigned it?—The Act directs that the Chief Commissioner shall appoint in each district a committee to consist of not less than six persons, which committee is to assist in determining how the funds shall be applied, and to supervise and control the expenditure. As to the composition of this committee, not less than one-half shall be persons who are not in the service of Government, and who must be resident or proprietors in the district.

1932. Mr. *Candlish*.] But not elected by the taxpayers?—No; appointed by the Chief Commissioner.

1933. *Chairman*.] Have you anything further to add in reference to this legislation for Oude?—In regard to the necessity for imposing fresh taxation on the land in Oude, I may quote the opinion of the Chief Commissioner, expressed in a letter addressed in February 1871, to the Government of India. In referring to the amount which it was proposed that Oude should make up in this arrangement, it was said, "It may be hoped that a portion may be met by a reduced expenditure. But after going through, with the Accountant General, the Budget estimates of the coming year, the Chief Commissioner has been forced to the conclusion, that but a small portion of the deficit can be met from this source, at any rate during the ensuing year. Whatever the surplus eventually be, the most legitimate [illegible] the most profitable channel in which [illegible] divert it will be communications. What [illegible] most urgently wants, and what local officers [illegible] ported by their landholders, most frequently [illegible] on the local government are roads. In a fertile grain producing country like Oude, each facility added to the transit of its produce is a direct addition to its wealth, and an enormous benefit to less productive provinces. To meet this demand for roads, the local funds are completely overstrained; already landholders have proposed certain lines of road which, so soon as funds permit, it is intended to carry out. And the Chief Commissioner has determined to devote the greater portion of such surplus as is available from the proceeds of the new rate, to measures of improvement which, to double or treble the extent which is

is now possible, will at once yield the most direct return, and will most benefit other provinces." On the question as to whether the additional taxation which was considered necessary should be thrown upon the land, that view was supported by special considerations. In illustration of this, in a report of the proceedings of the Governor General in Council in the legislative department, in considering this Oude Local Rates Bill, I find this representation of the rapid improvement of the annual value of landed property. It is said, "In the Bulandshahar district of the North Western Provinces, settlement operations have been in progress for some time past. About five years ago the assessment was completed, the proper amount of the land revenue was determined to be 123,000 *l.* a year. The Lieutenant Governor subsequently ordered a special inquiry to be made, and the conclusion arrived at by Sir William Muir, than whom there can be no higher authority, is that, although the sum of 123,000 *l.* really represented only five years ago, an amount equal to 50 per cent. of the rental, so great and so rapid has been the increase in the value of landed property, that it is now equal to only about 35 per cent. In other words, the annual rental of the private proprietors has increased 15 per cent. in five years." "This," it is said, "is a good example of the process going on over almost the whole of India. We have spent, and are spending millions of money on canals, and roads, and railways. Other branches of industry have doubtless benefited, but no industry has derived from this vast outlay anything like the benefit which has been derived by the proprietors and occupants of the land. By the extension of canals, by the improvement of railway and other communications, and the opening out of new and profitable markets, an enormous increase has taken place in the value of agricultural produce, and the additional value which has been given to the land, has been given at the expense of the State, without the expenditure of any capital or labour on the part of the proprietors of the land. Such facts as these show in my opinion conclusively, that the land ought to bear the main portion of the charges which have to be incurred for further extensions of roads and similar improvements. In throwing such charges upon the land, we are not really imposing on the land a fresh burden. We are only recovering the cost of a small portion of the vast benefit which we have conferred upon the land."

1934. Mr. *J. B. Smith.*] What is that document which you have been reading from?—This is from a speech made in the Governor General's Council by Mr. Strachey, on the 10th of March 1871. This additional cess was estimated to produce 32,000 *l.* The result in the year 1871–72 has been greater; it is between 36,000 *l.* and 37,000 *l.* that has been actually realised. That is all I have to say in regard to Oude, except that, as was mentioned the other day, in towns, owing to the addition of piece goods and metals to the articles liable to town duties there has been a considerable increase in the octroi duty, these articles returning about one-sixth of the whole.

1935. *Chairman.*] There is no Act for the Central Provinces, I think?—No. In the Central Provinces the amount to be made up is 19,600 *l.* The Chief Commissioner entertained a strong objection to putting any additional charge upon the land, which is expressed in these terms, "Colonel Keatinge would earnestly deprecate raising the funds required by an increase to the road cess, both as a matter of principle and on the score of expediency." "Colonel Keatinge accepts fully the conclusions announced by the Government of India that cesses are separate from, and additional to, the land tax, that the limitation of the Government demand on the latter does not preclude the after-imposition of the former, and this, whether the person to be rated had or had not notice of their liability. But the case of these provinces is that we have assessed the cesses, we have limited our right to raise them for the term of settlement, and have discounted the 'obligation attaching both by reason and custom to the owners and occupiers of land,' to keep up internal communication." And on the score of expediency the Chief Commissioner notices that "he finds there has been of late a considerable emigration from the Nagpore Province into the Berars and perhaps into the Hyderabad State proper. This of itself points to the necessity for staying our hands. It may be that advantages of more remunerative employment or of prices, are the inducement which take people to Berar, and not the weight of the Central Provinces taxation, and this indeed is Colonel Keatinge's own view; but be the cause what it may, the fact remains that there is emigration, and that, situated as these Provinces are, loss of population is loss of resource of every kind."

1936. Sir *C. Wingfield.*] Are you acquainted with a minute by Sir William Muir, in which he dissented from the principle of treating cesses as liable to increase, while the Government demand was fixed?—No, I am not.

1937. *Chairman.*] What was the result of this communication that you have read?—The Chief Commissioner desired to rely mainly on the Pandharee tax existing in those Provinces to meet the deficiency; and when the minimum limit of incomes liable to income tax was raised from 500 to 750 rupees, the Pandharee tax was made applicable to incomes within those limits that were not derived from agricultural sources. At the same time he proposed to raise 5,000 *l.* by tolls on the northern and eastern roads. These tolls in 1871–2 did not produce this amount; they produced only 3,840 *l.* And in other respects this part of his arrangements was not considered successful; the damage done to the roads by the carts using them was found to be greater than the amount of toll that they paid. This is owing to the very peculiar description of narrow wheeled cart which is in use in a part of that Province. As expressing the Chief Commissioner's view as to the position which this Province occupies at the present time, I might perhaps put in an extract from a portion of the Administration Report for 1871–72, which will probably shortly be received. He says, "The only fear is for the future. The departments which have been completely provincialised; gaols, police, education, public works, are amongst those in which increase of expenditure is almost certain to become necessary as population increases, and the country generally progresses. The plan of making over to provincial governments allotments fixed once and for all for the support and maintenance of these departments, makes it incumbent on provincial governments to provide the funds required to satisfy the greater demands of the future. This can only be done by new taxation unles

Mr. *E. F. Harrison* and Mr. *E. Gay.*

21 March 1873.

unless there are provincial taxes already existing, the revenue from which admits of natural expansion. In the Central Provinces the only provincial tax is the Pandhri, and it is impossible to look upon it as such a tax. There are then difficulties ahead which cannot be ignored. But it may be thought that the present attempt at decentralising the financial administration of the Empire, so as to give local governments a greater interest in the development of the resources of the country has only been an experiment which, if successful, will be followed by a greater measure that will allow to local governments a share in the natural increase of revenue derived from those sources which have as yet been reserved as purely imperial. Some move in this direction seems almost necessary to the proper development of the system which has been introduced, for if it were to stop short at the point it has at present reached, it would be wanting in completeness, and we would be resting content with a half result."

1938. Does it not strike you as a remarkable circumstance that the Government of India having declared its inability to levy the income tax below the very large limit of 100 *l.* a year has re-arranged the finances so as to impose upon the Commissioner of the Central Provinces the duty of levying an income tax upon people with 10 *l.* a year?—It seems to have grown out of the previously existing state of things in these provinces, in which the people had been accustomed to a tax, or duty, which very nearly resembled an income tax, and which had from time immemorial been applicable to incomes of the very lowest class.

1939. But then if that were so, what truth was there in the representation that it was impossible in India to levy the income tax upon people with small incomes?—It appears to have been a very much easier thing to do so in this province, than possibly it might be in other provinces.

1940. But as I understand that extract which you have read, that which was an exception, and which might have been removed in order to relieve the inhabitants of this province of a severe taxation, to which no other people of India were liable, has now been made by the Government of India a necessity, and the only resource by which this policy is to be carried out, and therefore instead of their being relieved of taxes and placed on the same level with the other inhabitants of India, it is now made absolutely necessary; it is striking, is it not?—It is.

1941. Mr. *Bourke.*] Is the machinery for collecting the income tax under the local administrators the same as the machinery used for collecting the income tax under Imperial assessment?—I think that the machinery for the collection of the income tax varies so considerably in the different provinces of India, that one can hardly make that comparison; but it would be much the same.

1942. *Chairman.*] What has been done in British Burmah to carry out the policy of 1871?—In British Burmah the position is this, that in the general scheme of the 14th of December 1870, the amount that fell to this province to contribute was 19,199 *l.*; but this amount was remitted by the Government of India, without however any increase being made to the burden thrown on other provinces. No fresh taxation of any kind has occured in British Burmah.

1943. Why was British Burmah exempted from making its contribution?—It appears to have been done on consideration of the somewhat special position of this province. The Province of Burmah is a young and growing province which has contributed more to the general revenues, in proportion to its population, than any other, while at the same time the charges for civil establishments have been kept very low, and the funds assigned for education have been trifling. In consideration of these circumstances, the Chief Commissioner has urged upon the Government of India that the system of assignments should in the case of this province be so modified that it should receive back a portion of its increasing revenues, or, if this was impracticable, that some relief from taxation should be given to the population. The form of relief which it was suggested should be given was that the normal rate of the capitation tax, which in 1860 was raised from being four rupees for married, and two rupees for unmarried men, to five rupees and 2½ rupees, should be reduced in the case of married men to four rupees. It was further suggested that agriculturists cultivating more than 10 acres of land should be exempted from the capitation tax. There has thus been no additional taxation in British Burmah; but in respect of municipal taxation the Chief Commissioner contemplates the imposition of a municipal tax principally, as it would seem from his explanations, in respect of the towns of Rangoon and Akyab.

1944. Those are largely frequented by Europeans for general commerce?—That is so.

1945. Will you state what has been done in carrying out the arrangements of 1871 with regard to Bengal?—There the sum to be made good in connection with the measure of 1871 is 87,591 *l.* The measure which has been adopted in this province is embodied in Act No. 10 of 1871, the District Road Cess Act. The general character of the provisions of this Act is as follows: All land is held liable to the cess. The limit of taxation fixed by the Act is 3⅛th per cent on the annual value which is explained to be the cultivator's rent. Of this cess one-half is to be paid by the occupier, but the holder is held in the first instance to be liable for the entire amount.

1946. Mr. *Fawcett.*] What is the meaning of "holder"?—The use of the term "landlord" is avoided, and it is "landholder."

1947. It very often takes place in Bengal that the land is sublet four or five times; whom do they mean by the holder, the original owner, or the person who occupies it?—The procedure for distributing this charge in the Act is somewhat elaborate.

1948. And very complicated?—Somewhat complicated. In regard to the application of the funds arising from it, they are to be applicable to the construction and maintenance of roads, bridges, and canals, but excluding canals for irrigation; the amount is to be spent in the district, and is to be administered by a local body. Measures have been taken for introducing the Act into 19 districts, with a population of about 29,000,000, for 1873–74; it is estimated that if fully enforced at maximum rates the yield will be 170,000 *l.*

1949. *Chairman.*] Have you ascertained in whom the power of fixing the exact amount to be levied is vested?—The assessment depends very

very much upon the valuation, which the Act provides shall be made by the collector.

1950. Is the rate a varying rate, and if so, who directs the amount of the rate?—As to collection, the amount is to be paid with the revenue.

1951. But is the amount a fixed rate under this Act, without reference to circumstances; is it to be absolutely fixed, or is it to be varied with the circumstances?—The local body to administer the funds raised under the Act is to determine the work to be undertaken, and to strike a rate for the year to meet the necessary expenditure on the whole immovable property of the district.

1952. And how are these local bodies to be constituted; do you find in the Act that the Lieutenant Governor is either to appoint them or to cause them to be elected under such rules in reference to qualification as he may prescribe, for a period not exceeding two years?—Yes.

1953. And that in addition to any members elected or appointed, the Governor shall have power to direct any persons holding particular offices to be *ex officio* members?—Yes, that is the case.

1954. Is this expenditure exclusively confined to the making of roads under this Act?—Communications; roads, bridges, and canals.

1955. Is there any other mode of assessment than an assessment of land; does it include houses as well?—It applies to all immovable property, houses, mines, and land. There are special provisions in the Act.

1956. But is there a special schedule of taxation for houses?—Yes.

1957. "Dwelling houses not less than 100 rupees but less than 500, to pay a yearly cess of 1 rupee; not less than 500 but less than 1,000 rupees, to pay 3 rupees; not less than 1,000 rupees but less than 2,000, to pay *Rs.* 4. 8.; 2,000 rupees and upwards to pay 3 rupees for every 1,000 rupees or part thereof of estimated present value; shops and buildings used for purposes of trade, whose estimated present value is more than 25 rupees and less than 100 rupees, to pay a yearly tax of 1 rupee;" is that the scheme of taxation for houses?—Yes.

1958. Do you know whether anything has been done under that Act?—Measures have been taken to proceed with the valuation, and the preliminaries necessary for the assessment are not yet completed. It is estimated that perhaps 6 lacs of rupees may be collected under the Act during the latter half of the year 1873–74, and that the expense of collection falling due may be about 2 lacs of rupees; that high rate being of course in consequence of the expenses of the preliminary valuations.

1959. But have you an estimate there of the prospective amount for the whole year?—It is estimated that the Act if fully in force at the maximum rates, would yield 170,000 *l.*; that is in 19 districts of the Province to which it is to be made applicable in the coming year.

1960. Has any attempt been made to levy an additional tax in the towns?—The Lieutenant Governor of Bengal desired to throw upon the municipalities the obligation to make and maintain district roads passing through their boundaries, and he also desired to connect with municipal institutions measures for the spread of education, and advantage seems to have been taken of the occasion to consolidate the whole legislation relating to municipalities in Bengal. This intention was embodied in an Act which was passed by the Legislative Council of the Lieutenant Governor, under which municipalities were to be authorised to spend municipal funds in the support in part of superior schools, and power was taken for compelling them to aid elementary vernacular schools. The Bill also provided for the creation of municipalities in rural districts. This Act did not take effect, having been disallowed by the Governor General. The main reason assigned by the Viceroy in refusing his assent to this Bill, was the increase in municipal taxation which it involved.

Mr. *E. F. Harrison* and Mr. *E. Gay*.

21 March 1873.

1961. What was the nature of that municipal taxation to be levied under the Act?—I think that it is perhaps not very easy to say. As far as I am enabled to judge, it does not really confer powers of taxation which could not have been exercised independently of it, but the whole scope of the Bill seemed to involve the necessity for an increase of taxation.

1962. It was not that new taxes are specifically levied under the Act, but that the services to be performed under the Act would hence require an addition to the existing scheme of taxation?—That appears to me to have been the view of the Governor General.

1963. Mr. *Fawcett.*] In Mr. Campbell's Municipal Act, which has just been vetoed, there is a long schedule of taxes that might be imposed, is there not?—Yes, but it seems to me, notwithstanding that these provisions were rather for the legalisation and the regulation of taxes which might have been imposed under previously existing Acts. The Viceroy's disapproval of the Act was also directed to the powers conferred by the Bill on the Government to compel municipalities to aid elementary education, and further to the application of municipal funds to the relief of the poor. Doubt was also expressed as to the policy of some other provisions of the Bill.

1964. *Chairman.*] Will you state what has been done in the North Western Provinces with reference to the arrangements for carrying out the policy of 1871?—In these provinces in the arrangement of 1871, the sum of 48,030 *l.* was left to be made up from local sources; but the Lieutenant Governor in consideration that the expenditure during the past year had been extremely reduced, owing to financial pressure; and that an increase was necessary beyond the amount forming the basis of that calculation to the extent of about 56,000 *l.*, of which the greater part was considered necessary for public works, namely, 20,000 *l.* on roads, and 30,000 *l.* on civil buildings, estimated the sum that had to be provided at 102,000 *l.* I have already mentioned, that in the recent revision of the settlement in the North Western Provinces, a cess of 10 per cent. on the land revenue was imposed in lieu of several cesses previously in force; but this had only been done in the case of each district as it came up for detailed re-settlement, a process that might occupy a very long time before it was fully carried out. It was then decided to extend the new cess to all districts whose term of settlement had expired, without waiting for the re-settlement in detail. The increase expected from this source was 60,000 *l.*

1965. Was that a 5 per cent. increase?—That is so. Then there remained the permanently settled districts which it was considered ought to contribute their proportion to what was required

Mr. *E. F. Harrison* and Mr. *E. Gay.*

21 March 1873.

for this purpose. An acreage cess of two annas on the acre was imposed.

1966. Mr. *Fawcett.*] Upon whom?—The rate was to be payable by the landlord, who is authorised under the Act to recover from the tenants one-half of the rate assessed on the land.

1967. *Chairman.*] With regard to the estates the settlement of which has not expired, has the Governor a special power to fix any particular tax upon them in the cess?—No, the settlement has expired in every district but one, the district of Banda; it will not expire there until next year. This acreage rate was considered to be a light charge, the average value of the land being taken, as I understand, at 3 rupees an acre.

1968. In what manner was this cess to be expended under the Act?—For the following purposes: construction and maintenance of roads and communications, maintenance of police and district post, the construction of school-houses and maintenance of schools, the construction and maintenance of hospitals, dispensaries, lunatic asylums, markets, wells and tanks, and generally for local works likely to promote the health, comfort, or convenience of the people.

1969. At whose discretion was the cess to be so applied; is it not the Lieutenant Governor, under Clause 10?—The Lieutenant Governor may assign an amount to the district, and no work can be undertaken without his sanction; and if the money assigned is not expended, it goes back into the general fund, and is not necessarily re-assigned to the same district.

1970. Is there any limit on his discretion as to assigning the amount to each district?—The Lieutenant Governor is required under the Act to assign to each district an amount which shall not be less than the total sum levied under this Act in such district.

1971. Then by whom is the expenditure to be regulated; by a local committee, is it not?—The Lieutent Governor is required to appoint in each district a committee to consist of not less than six persons, who are entrusted with the duty of determining how the amount raised under the Act shall be applied, and supervising and controlling the amount. The functions and authority of this committee are to be defined from time to time by the Lieutenant Governor.

1972. Will you state what arrangement was made in the Punjaub for carrying out the arrangements of 1871?—In this province the amount to be made up under the scheme of 1871 was 39,000 *l.* The local government appear to have considered that in addition to this a further sum was required for public works than would be available from existing resources, and that it would be necessary to authorise local taxation to meet a deficiency of 62,427 *l.* To provide for this and for further requirements in communications and for the execution of civil buildings, Act 20 of 1871 was passed. This Act imposes a cess of $3\frac{1}{8}$th per cent. on the annual value of land, such cess to be divided equitably between the landlord and tenant. This cess was in addition to those previously existing; but where the road cess of 1 per cent. had been raised to 2 per cent. under a revised settlement, the local government remitted the addition. Allowing for this circumstance, the net produce of the Act was estimated to amount to 110,000 *l.* The general conditions are similar to those in the other provinces.

1973. Has anything been done under this Act, do you know; have you got an estimate of what was raised under this Act, and also under the Act for the North West Provinces?—In the North West Provinces the new local cess under the Act for those provinces has produced in 1871-72 the sum of 300,256 *l.*, the acreage cess 28,805 *l.* In the Punjaub the produce of this cess, which I stated just now was estimated at 110,000 *l.* in the year 1871-72 proved to be 118,062 *l.* It was even closer to the estimate, for the 110,000 *l.* was the net produce, and the 118,000 *l.* gross.

1974. What has been done to carry out the arrangement of 1871 at Madras?—In this province the amount to be made up under the arrangement of 1871 is 55,428 *l.* This was met by the Act of the Madras Government, No. 4 of 1871, under which a rate of 1 anna in the rupee, or $6\frac{1}{4}$ per cent. on the annual rent value of land was provided. The rate was estimated to produce 342,800 *l.* It supersedes the road and educational cess of which mention has been already made, and which produced 197,106 *l.*, the difference being about 145,000 *l.* The same Act, the Local Funds Act, No. 4 of 1871, authorised a house tax, but only where a school with a grant in aid exists. It also authorises tolls on animals and carriages.

1975. Will you be good enough to state the nature of the house tax?—The tax on houses is divided into classes. For the purposes of this Act, houses are classed under five divisions, the first class being subject to a tax of 5 rupees a year; the second being subject to 3 rupees; the third to 2 rupees; the fourth, 1 rupee; the fifth to half a rupee; and the sixth to a quarter of a rupee. Those are maximum rates.

1976. Do you know how the houses are classified?—No.

1977. Is there any other tax imposed by this Act?—In addition to the tax on land and houses, the Act authorises the levy of tolls.

1978. On what principle are the tolls to be levied; if you have the schedule there, perhaps you will read it?—Tolls under the Act may be levied upon carriages, carts, or animals passing along the road within the circle, at rates which are not to exceed the rates which are scheduled; four-wheeled carriages, 8 annas; two-wheeled carriages, 4 annas; jatka, hackery on springs, or cart drawn by men, buffaloes, bullocks, horses, ponies, asses, or mules, laden, 4 annas; if not laden, 2 annas; buffalo or bullock laden, 1 anna; an elephant, 1 rupee; and a camel, 4 annas.

1979. Is this in the year?—On each occasion, I should understand.

1980. On each occasion of entering Madras?—I should understand so; they are maximum ra[illegible] you observe.

1981. Was there any other Act passed wi[illegible] reference to local taxation at Madras?—There was one in connection with this, namely, the Madras Towns' Improvement Act, No. 3 of 1871; and in regard to the Madras municipality, I should mention the extension of the objects that may be charged to municipal funds, authorised by Act No. 5 of 1871.

1982. This Act applies to the municipalities?—Yes; Act No. 5 to the Madras municipality; Act No. 3 to the smaller towns.

1983. And the other Act applies to taxes through the Presidency?—Yes; Act No. 4, the Madras Local Funds' Act, is of general application throughout the Presidency.

1984. Do

1984. Do you know whether, under this Act, the taxes levied in each district are to be spent within the district?—Yes, that is so.

1985. What has been done in the Bombay Presidency in consequence of the arrangements of 1871?—In the Bombay Presidency there is no taxation at present which was not paid in 1870-71. In the arrangements of 1871 the amount of deficiency in the allotment was 65,965 *l.* To meet this deficiency, Act No. 2 of 1871, was passed.

1986. What is the taxation imposed by that Act?—The object was to impose duties upon the non-agricultural classes in the Bombay Presidency. The City of Bombay was exempted from the operation of the tax, but, at the same time, the grant for police charges was withdrawn by the Government, throwing that amount of charge, about 10,000 *l.*, upon the municipality. Also persons paying cess on the land revenue were exempted. After allowing these exemptions, every person being the head of a household, or occupier of a separate tenement, was to be assessed in one of three classes. The first class was to pay an amount not to exceed 6 rupees; the second class not to exceed three rupees; and the third class not to exceed 1½ rupees, under rules which the Act empowered the local government to make.

1987. Mr. *Fawcett.*] Is this Act still in operation?—It is not. The tax was levied in the year 1871-72, but in the current year, the year 1872-73, action was stayed, and I understand that the Government of Bombay has given directions that no estimate in the provincial budget for 1873-74 shall be made as regards the non-agricultural cess.

1988. *Chairman.*] How do people get into these classes?—It will not be found in the Act, but in the rules passed by the Government under the authority of the Act. First, as to the classification, under the rules, the first class is to include all persons where the gross annual income, however derived, shall amount to 500 rupees. Class 2 includes all those whose incomes are between 100 and 500; and Class 3 all whose incomes, however derived, shall not amount to 100 rupees. The maximum assessment authorised by this Act, No. 2 of 1871, was not fully enforced. In place of that classification, a somewhat modified arrangement was put in force, by which incomes exceeding 500 rupees paid 6 rupees; incomes from 250 to 500, 3 rupees; from 100 to 250, 1½ rupees; and incomes between 50 and 100 rupees, half a rupee.

1989. And under 100 were they exempted?—Under 50.

1990. Have you any estimate of the amount that this tax produced?—The total amount collected in the year 1871–72 was 53,509 *l.*, of which I may notice that the second class yielded the largest amount.

1991. Then here we have again an instance of an income tax being levied to make up this amount on the very classes that are exempted from the general income tax levied by the Government of India?—That is so.

1992. Then it seems that the effect of this scheme of finance is this, that the Governor General of India relieves himself of the duty and responsibility of collecting this 350,000 *l.* of taxes, and to accomplish that, he has subjected every person almost throughout India to a readjustment of taxation, whether landowner or professional man, or occupier, or living in any other way?—The Governor General threw upon the local governments of India the duty of readjusting the burden of taxation to that extent.

1993. That duty seems to have driven the local governments to disturb the taxation of every individual throughout India who could be laid hold of to pay any kind of tax?—Not throughout India; the action of the local governments having been different in different provinces.

1994. But still everybody seems in some way or other to have had his taxation disturbed?—In the case of two provinces, smaller provinces it is true, there is no alteration.

1995. Burmah, which is one of those cases, is not really part of India?—No, but the Central Provinces are.

1996. Mr. *Fawcett.*] The Chief Commissioner referred, did he not, to people migrating from the Central Provinces under British rule into a native state, Hyderabad?—Yes, to the assigned districts.

1997. In those assigned districts of course they would not be subjected to all these new taxes, with which the people of India have been threatened?—These assigned districts are under the British administration.

1998. But the decentralisation scheme, for instance, does not apply to them?—No it does not apply to them.

1999. Therefore I am correct in saying that they migrate to a district where they are not threatened with all the new taxes which have been threatened by this decentralisation scheme on the rest of India?—The reason for migration is considered to be for the purpose of obtaining remunerative employment.

2000. But how does it come to pass if India has so much profited by British rule, that employment is more remunerative in those districts which are not subjected to our fiscal system?—In that particular part of India, the most remunerative agricultural employment is that connected with the cultivation of cotton, and the people will naturally go to those parts where the soil is best suited for that cultivation; but in addition to that, I apprehend that employment in mining or special large works in progress, may account for part of this emigration.

2001. But can you quote any opinion to show that the natural resources of these assigned districts to which you say the people are migrating, are greater than those of the districts from which they are migrating?—I have mentioned already the opinion of the Chief Commissioner of the Central Provinces, to which I may again refer. This was the expression of the Chief Commissioner: "It may be that advantages of more remunerative employment or of prices are the inducement which take people to Berar, and not the weight of the Central Provinces taxation; and this indeed is Colonel Keatinge's own view."

2002. But it does not say in that document, as far as I can ascertain from you, and you do not hold the opinion, that that remunerative employment which is referred to in the quotation which you have just read, depends upon those districts to which the migration takes place possessing superior natural resources?—No, I do not think that I can give an opinion upon that point.

2003. It may be quite compatible with the idea that the employment is more remunerative, because industry in those districts is not threat-

Mr. *E. F. Harrison* and Mr. *E. Gay*.

21 March 1873.

ened and harassed by all these new fiscal schemes and all this new taxation?—I think that there is no reason for assigning the fact to that cause.

2004. But the fact takes place without any explanation of it, except that the position of the labourer is better in those districts than it is in the provinces which are more directly under our Government?—It has obviously excited the apprehension of the Chief Commissioner that there may be causes connected with the system of taxation in the Nagpore province, which may possibly be considered to have led to this emigration.

2005. But still the migration is a fact which cannot be disputed; it is admitted there?—It seems to be admitted.

2006. But what is going on at the place that you describe, or that is described by the Commissioner, is going on, is it not, in many other parts of India?—No, I think not.

2007. Can you state that positively, I mean to ask whether it is an impression, or have you looked into the matter?—I am quite aware of a very large influx of population that is constantly occurring from the native states in the neighbourhood of our possessions in British Burmah, where there is a constant accession to the popution from immigration.

2008. But that case that you have mentioned affords a very striking corroboration of the point which I was wishing to bring out, because you remember that you have already referred to the fact that in British Burmah no new taxation has been imposed, in consequence of the decentralisation scheme?—That is so; but at the same time I have also stated that the weight of taxation in British Burmah exceeds that of any other province under the British Government.

2009. But that is not the point; the rest of India now, in consequence of this decentralisation scheme, is threatened with a vague amount of an indefinite taxation, which it is impossible for any one to measure; and although the actual amount of taxation imposed in Burmah may be as great or greater than it is in other parts of India, Burmah is really more favourably situated if this threatened increase of taxation does not hang over her; is not that the case?—I do not perceive that Burmah has any immunity from the prospect of future burdens in comparison with any other province.

2010. But no new taxation has been imposed upon Burmah up to the present time?—No.

2011. But in other parts of India, as you admitted last time under this scheme of local taxation, there is not a single article of food or a single article of clothing, or a single commodity, which is of human use, which may not be subjected to taxation?—That is so with regard to commodities for use in towns.

2012. You are aware that certain reports were published some years ago from some of the leading officials in India, in which they described, did they not, that considerable migration was going on from some parts of India into native states?—Yes, but I do not think I can follow the subject out.

2013. You would rather not express an opinion whether that migration has discontinued, or whether it has been the case in the central provinces it has increased?—I do not know as a fact.

2014. Could you give a list of the new taxes that were scheduled in the Municipal Bill of Mr. George Campbell, which Lord Northbrook has just vetoed?—I will furnish that.

2015. This non-agricultural cess which has been imposed in Bombay you admit to be in the nature of an income tax; it is a tax really levied on incomes?—It is so.

2016. At the very time when the Central Government of India was taking great credit to itself for remitting the tax on all incomes of less than 75 *l.* a year, and afterwards 100 *l.* a year, they were allowing the local authorities to impose an income tax in Bombay on incomes as low as 5 *l.* a year?—Yes; but the weight of this tax was smaller than the general tax which was being levied at the same time.

2017. But as I understand, 1½ rupees can be taken from incomes of the third class, and in the first instance no lower limit was placed to those incomes, therefore you might have had a tax of 1½ rupees taken from an income of 20 rupees a year, and if that had been the case, that would have been an income tax of no less than 7½ per cent., which is as high an income tax as ever was imposed by the Government of India in India?—That is so as the law left the point, but that is not so under the rules of the Government, framed under the authority of the Act for carrying out the purposes of the Act.

2018. But now 1½ rupees is levied or can be levied according to the Act from an income of 50 rupees a year, and that represents an income tax of 3 per cent., which is about equal to the rate of income tax which is now imposed by the Government of India?—But this rate never was imposed.

2019. But if it never was imposed, is not a gratuitous amount of mischief done to the people of India if they are wantonly, as it were, threatened with onerous taxation which is never imposed upon them; would it not produce alarm?—It is certainly the case that the law provided for the imposition of a tax at a higher rate than was eventually levied.

2020. Then this Act has simply been suspended, it has not been repealed, and therefore a labourer, say in Bombay, who is only earning 2 rupees a month, feels that some day, or indeed at any moment, he may have, according to the existing law, an income tax imposed upon him of 3 per cent.?—It is true that the Act has not been repealed.

2021. It is as if an Act was allowed to continue in operation in England which told every agricultural labourer, or the poorest man in the country, that at any moment he may be liable to an income tax of something like 8 *d.* in the £.?—That liability exists.

2022. Now you admit that, with regard to these cesses, the utmost amount of complexity is involved in their levying, do you not?—That may be so, but there is not unnecessary complexity. The Act that proposed to deal with these questions dealt with a large variety of subjects, and required, no doubt, very complex arrangements.

2023. Now, with regard to the cultivators in Bengal, a cess has been imposed, one-half of which is levied upon the cultivator and one-half is levied upon the holder?—That is so.

2024. And then there is a provision in the Act saying that the holder shall not recoup himself at the expense of the cultivator for the cess that is imposed upon him?—I think it is the other

other way, that the holder shall recoup himself, to a limited extent, a limited proportion.

2025. Is that proportion defined?—One-half.

2026. Then, if that is the case, it comes to just the same thing as if three-fourths of the cess was levied upon the cultivator, and one quarter upon the holder, does it not?—No; the holder is liable for the whole, and is empowered to recover one-half from those who may hold under him.

2027. But then would it not be more simple at once to levy it direct from those from whom it can be recovered; what has been the object of that arrangement?—I presume facility in the realisation. It arises from the principle having been adopted of determining the full amount to be assessed upon the land, and then proceeding to distribute it between the different interests in the land.

2028. You have referred to an opinion which has been expressed by the Commissioner of the Central Provinces, and to other high authorities, who state very positively their belief that the amount spent locally will increase, and therefore a greater amount will in future have to be provided by local taxation?—That is the opinion of some of the officers at the head of the local administrations.

2029. And, therefore, if that is the case, one of two things must occur, either more and more articles must be made liable to taxation, or the rates at which the cesses are imposed must be increased?—It is not confined to those alternatives; the suggestion on the part of officers who have held this view and expressed themselves in this way is, that further contributions should be made in some shape from the future increase of the general revenue.

2030. That supposes that there will be an increase in the Imperial revenue which can be spared?—It does, of course.

2031. But it loses sight of this fact, that there are quite as many, or as I should venture to say, a great many more, causes in operation which are likely to increase the imperial expenditure then there are to increase the imperial revenue?—Not that, I think; it supposes an ordinary growth of imperial revenue. If the cost of the principal civil establishments is thrown upon local resources, what remains as imperial is the interest on the debt, which should not increase from the causes to which you refer; and the expenditure on the army, which is not necessarily a growing one.

2032. But the very same causes which increase local expenditure would operate powerfully, would they not, to increase the expenditure of the army, namely, through all materials and [illegible]ges becoming dearer in India?—No doubt, so [illegible] as that cause operates.

2033. That will be the case with reference to every item of expenditure, except the interest on the debt?—That is a very important one.

2034. How much do you estimate the interest of the debt at, roughly; the debt represents about 100 millions, does it not?—The interest may be taken at about 5,000,000*l*.

2035. That is only about 10 per cent. of the whole expenditure?—Yes.

2036. Therefore, without discussing the theoretical point, this increase in local expenditure, which many high authorities in India anticipate, will have to be provided for either by local taxation or by imperial funds; and if it is provided for by loca taxation, many fresh articles which are not now taxed must be taxed, or the existing cesses on the land must be increased?—It must be met from one of those two sources, or by burdens on some other interest.

2037. Sir *D. Wedderburn.*] With regard to those questions which you were asked about the emigration from the Central Provinces into Berar, I should like to ask if your attention has been called to a statement in this Report on the Moral and Material Progress of India, lately presented to the House, that "For some years past the population of the Nagpore and Bandara districts have been migrating in considerable numbers to the province of Berar, a rough census taken in 1870 showing, that since November 1866 their numbers had decreased by 35,000, or about 9 per cent., while Berar was under native rule the contrary was the case, and it is only since that province came under British management, and especially since the cotton crisis led to a development of its great resources, and to an enormous increase of cultivation, that the people have gradually been returning to their own country?"—My attention has not been drawn to that; and it seems to have a very important bearing on the point.

2038. It goes on to say that, "Other causes moreover have of late years given an impulse to the movement. A succession of bad harvests raised the price of food; the completion of the Nagpore Railway, and the slackening of road works, led to a smaller demand for labour." And then further on it says, "The good harvest of the year under review, on the other hand, had the effect of bringing back many of the labouring class, and when the Report closed, it appeared that emigration to any considerable extent had ceased"?—My attention has not been drawn to that; I was speaking merely from the information derived from the Central Provinces, the account which you have read, has been probably given by the officer entrusted with the administration of the Berar districts. The Chief Commissioner of Nagpore is not the same officer that administers the Berar districts, which are under British management, and the Chief Commissioner of Nagpore writing from his point of view, observes that a number of people have emigrated from the districts under his jurisdiction to the neighbouring districts of Berar, which are also under British management, but are not within his jurisdiction; and finding this fact, he states what appears to him to be the reasons for it. From the explanation which we have just heard, it would seem to be the view of the officer who administers the assigned districts of Berar, that this emigration is in fact a return of the population that originally belonged to the Berar districts to their own homes, in consequence of the transfer of Berar from native to British administration.

2039. You said, in answer to a question just now, that you did not consider the municipal council in Bombay to be in any way representative of those who bear the municipal burthens; did you imply by that answer that in other cases they were to be considered as representative?—In some cases provision is made either for an election or for a permissive election; how far it has been acted upon I do not know; but in the Bombay Act it appeared that they who were appointed by the Government became the governing body. If appointed, I think, however independent of the Government they may be,

Mr. *E. F. Harrison* and Mr. *E. Gay*.

21 March 1873.

they cannot be considered as in any true sense representative.

2040. And you are not aware whether in other cases they have been elected?—No, I am not personally aware of any real election. I believe that experiments have been made.

2041. Mr. *Beach*.] More than one-fourth of the amount required for educational purposes is collected by an educational cess, is it not?—I do not think that I could state the proportion immediately, without a comparison, of the produce of these cesses with the total outlay for education; but it is a very considerable proportion.

2042. It is the exact amount in the province of Oude?—Yes, in Oude the proportion is somewhat more than one-fourth.

2043. And not very different in the other provinces?—I see that it is not widely different in the Central Provinces and British Burmah.

2044. About half the amount required for the educational cess is allocated from the Imperial revenue, is it not?—The proportion is greater than you mention.

2045. Is about the same proportion observed in the other items of local expenditure?—I think it would be very difficult to make that comparison.

2046. Sir *C. Wingfield*.] I think you said, in answer to Question 1745, that in the North Western Provinces the rate of 3 per cent. in the rental, which is levied for the payment of the village accountants, does not appear in the local fund account; does it appear in the accounts, or does it not?—It does appear in the accounts in certain cases, where it is levied through the Government agency. The fact appears to be this: the village accountants' fund is raised by a cess of 3 per cent. on the rental; that is in the old settlements. In four districts, the districts of Benares, Bijnour, Ghazepore, and Moradabad, there is no cess, the matter being left to the landholders; in Kumaon it is otherwise provided for by what is called the Sadabart endowment; but where raised through the action of the Government, it does appear in the account.

2047. You are aware, I dare say, or you have heard, that the people if left to themselves would never think of raising a rate of 3 per cent. to remunerate these accountants?—I think it is very probable that they would provide for the service in some other way.

2048. And although this is said to be a service performed to the inhabitants and owners of the villages, and which the owners of the villages ought to be very ready to pay, for practically you know that the levy of the cess for the payment of these accounts is a highly unpopular thing, and that people do appreciate very highly the liberty that is allowed them in Oude, of providing what remuneration they please for that service?—That is not a point on which I have had opportunities of forming an opinion of my own.

Tuesday, 25th March 1873.

MEMBERS PRESENT:

Mr. Ayrton.	Mr. Eastwick.
Sir George Balfour.	Sir James Elphinstone.
Mr. Campbell Bannerman.	Mr. Fawcett.
Sir Thomas Bazley.	Lord Edmond Fitzmaurice.
Mr. Beach.	Mr. Robert Fowler.
Mr. Bourke.	Mr. Hermon.
Mr. Candlish.	Mr. Lyttelton.
Mr. Cross.	Mr. John Benjamin Smith.
Mr. Dickinson.	Sir David Wedderburn.
Mr. Grant Duff.	Sir Charles Wingfield.

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

Sir CHARLES JOHN WINGFIELD, K.C.S.I., C.B. (a Member of the Committee); Examined.

Sir *C. J. Wingfield*, M.P.

25 March 1873.

2049. *Chairman.*] WHAT were the offices that you held in India?—Different offices in the Civil Service. The last office I held was that of Chief Commissioner of Oude.

2050. Will you explain to the Committee what steps were taken to impose local cesses in Oude?—Perhaps I had better state, first, the instructions which were given before the settlement was commenced for the levy of cesses in Oude. I will read two paragraphs of those instructions. They refer to the levy of the Government revenue and cesses. The first is this; "The average gross rental [of an estate] having been determined after careful consideration of the capabilities of the estate, both present and prospective, and after duly weighing the circumstances which may influence the value of the staple product of the district, the [Government] demand will be fixed at the proportion of 51¼ per cent. [of the rental] as hereafter explained." Then some instructions are given with regard to the police fund and the fund for the payment of village accountants, and it was decided that the Government should not interfere in any way with them, but that those functionaries should continue to be remunerated as they have been from time immemorial by the voluntary payments of the villagers. For the police the villagers were required to set aside [illegible]e acres of land besides their customary dues; [illegible]he reason which I gave then for not inter[illegible]g with the payment of the village accountants [illegible]s, that the substitution of a cash salary, is [illegible]xtremely distasteful to the people themselves, and that I would prefer to see the village accountants continue to be remunerated as they had been from time immemorial. Then with regard to the other funds, namely, the road, school, and district post (those were the only three remaining funds to be dealt with), the instructions were these: "There remain the road, school and district post funds. Of these the road fund only has as yet been levied in Oude;" that is, under the temporary settlement made on the occupation of the province. "The levy of any cesses in addition to the Government demand proper is viewed with great suspicion by the people, who regard them as exactions to which no limit can be assigned, and by far the preferable course, in the Chief Commissioner's opinion, is to include all cesses in the Government demand, and to set aside, from the general revenues thus raised, a fixed proportion for specific objects. The people greatly prefer this course, as they then consider that the State, by devoting a portion of its revenue to the maintenance of institutions calculated to confer great public benefits, is performing its proper functions, towards which they should not be called on to contribute. The Chief Commissioner has therefore with the consent of the Government of India determined to fix the Government demand at 51¼ per cent. of the average gross rental, and of this sum 50 per cent. will be credited to the Imperial Government, and 1¼ per cent. will remain at the disposal of the local government, to be devoted to the purposes marginally noted." It should be stated 1¼ over and above the 50, because 1¼ on every 50 rupees of the Government revenue is 2½ per cent. Those were the instructions. Now my object was to give the proprietors of land security that their cesses would not be raised during the currency of the settlement, that is, for 30 years. When the assessment of an estate is fixed, a contract is drawn up, signed by the proprietors and by the Government officer, in which the terms are defined and the payment is fixed. Now, as the demand of the State was here fixed for 30 years, and the cesses were included in that demand, the cesses were also fixed for 30 years; and to raise them before the termination of the contract is, in my opinion, to modify the terms of that contract. I am aware that before the Act of 1871, which authorised the levy of 2½ per cent. additional from the proprietors of land, was passed, the consent of the talookdars (who are the great landed proprietors of Oude, like the zemindars of Bengal) to double the cesses, that is, to pay an additional cess of 2½ per cent., was obtained; but I also know very well that such consent is never voluntarily given. It is obtained through administrative influence, and it is given because they feel themselves helpless, and from the fear of provoking

Sir *C. J. Wingfield*, M.P.

25 March 1873.

ing worse measures by resisting a request put to them in that way by the Chief Commissioner. And I also think that it is not a dignified thing for one party to a contract, and that the stronger party, to ask the other and weaker party to agree to a modification of the terms of the contract to his disadvantage; but, even assuming that the consent of the talookdars or great landowners was voluntarily given to the doubling of the cesses, still one-third of the soil of Oude is owned by peasant proprietors, and their consent was never asked; so that the terms of the contract were modified without the slightest reference to them, at the pleasure of the Government. Now, with regard to the views which I have stated with reference to the cesses, that the imposition of additional cesses after a settlement had been concluded, was excessively obnoxious to the people, who regarded it as a departure from engagements, they are views which many men of experience had been led to entertain by the mutinies; I for one. People who were fugitives during the mutinies, like myself, often heard many things which in other times would never have reached their ears, and I did know that the practice which had grown up in the upper provinces after the settlement, of getting the people by what was called their voluntary consent to pay an education cess, or some cess of that kind, which was not in their settlement engagements, was excessively unpopular, and was regarded as a breach of the contract entered into. I was so very much impressed with that, that I wished to give the landowners of Oude a security that the amount of cesses fixed at the settlement, should not be exceeded during the currency of that settlement.

2051. Did you make any remonstrance to the Government on this subject?—Yes, in England, long after I had left India. When I saw that this Act had passed, doubling the cesses, I extracted the passages which I have read to the Committee, and stated the views which I have now expressed to the Committee, and communicated them to the India Office. At this moment I cannot exactly recollect whether I sent it to the Secretary of State or to Sir Robert Montgomery, with a request that he would bring it before the council; one or the other I certainly did.

2052. Did you get any acknowledgment of the receipt of the paper?—No.

2053. Or do you know what has become of it?—No. That is all I have to say on the subject of the raising of the local cesses in Oude. There is one other point which I should like to refer to. In the examination of Mr. Harrison I said that the imposing of a road cess in Bombay after the settlement had been concluded, had been disapproved of by Sir Charles Wood, and declared by Sir John Lawrence to be a breach of faith. I took that from a Parliamentary Return, and I have referred to it now, and I find that it is a minute of Sir Frederick Halliday with regard to the imposition of local cesses on the landholders under the permanent settlement in Bengal. I am not going to refer to that question, but an argument had been drawn from the imposition of a cess in Bombay, and Sir Frederick Halliday meets that argument in this way. He refers to a cess in the district of Behar in which the zemindars voluntarily agreed at the time of the permanent settlement to pay a ½ per cent. for roads, and he also refers to the zemindars in Benares having been persuaded to agree to a special cess for education. He says, "In Madras no special cess is levied but by the voluntary act of the people. In all the other provinces named (but one) the cess is imposed," (he refers there to the road cess) "but only at the time of making the settlement, and never after it is made, as it is now proposed to do in Bengal. The knowledge that the cess is to be imposed, notoriously affects the amount of the Government share when the settlement bargain comes to be made, and whatever is taken from the zemindars is taken with their written consent. In Bombay, the only exception to this practice, the rule of making a cess before and not after the settlement, was very strictly prescribed by the Government of India and by the Secretary of State, Sir Charles Wood; and Sir John Lawrence went so far as to record his opinion that to levy under a cess after the settlement had been made (the very thing now proposed in Bengal), would be looked upon as a 'breach of faith.' Somehow or other, notwithstanding this, the Government of Bombay passed an Act last year, apparently, if not actually, in opposition to these pointed instructions." This minute was written May 1870, and therefore "last year" would be 1869. "It is the only part of India in which such a thing has been attempted, and it has not been long enough in operation to show whether the people there will fulfil Lord Lawrence's expectations by denouncing it as a breach of faith." Well, there have been many complaints of it. The Right honourable Chairman said the other day that the Bombay Act under which the settlement was being made, sanctioned the levy of this cess after the settlement.

2054. That it would sanction it?—The Act under which the settlement was made might have sanctioned the levy of a cess at the time of the settlement; but they apparently in Bombay had more than half concluded the settlement before they thought of levying this cess; then they thought that it was an omission, and they determined to levy it; and so they brought in this Act of 1869 to authorise the levy of it, although an engagement had been concluded under which the people were bound to pay only a certain sum for a term of years.

2055. You have made use of the expression that the settlement for 30 years is a contract between Government and the person on whom the assessment is made; but do you consider that that is a contract in the proper sense of the word "contract," or do you consider that it is the act of a Government regulating public impositions upon the individual taxpayer?—You take an engagement from him to pay that amount punctually, and so it is a contract on his p[art] because you hold him to it in this way: if a [land]owner complains that the calamities of the s[eason] have destroyed his crop, you do not let him [off] payment on that account; you say, "You a[re] bound for a term of years to pay this punctually, and you must make up the deficit of a bad season by the surplus of a good one."

2056. But is not the land assessment in India a branch of the public revenue levied on a particular form of property?—Yes; but the amount becomes a question of engagement and specific contract. The liability to pay some land revenue of course is not a matter of contract, but the amount is.

2057. Is not the amount prescribed by the Government Commissioner merely the amount of that particular tax fixed by the Government for a certain

a certain period; not a contract, but the execution of a public imposition?—It is so far regarded as a contract, that nobody has ever asserted that you can increase the demand fixed in the engagement.

2058. Is not the demand that is so fixed the limitation of the land revenue as a particular branch of revenue?—No doubt it is a limitation of the Government demand.

2059. But a limitation of the Government demand for a particular branch of the revenue, namely, the imposition upon the land for the purposes of the State generally?—Yes.

2060. Is not a road cess a different branch of revenue levied for another and a different purpose?—Yes; but in the case that I have given you of Oude, it is incorporated in the Government demand.

2061. Then do I rightly understand you that your view is that the Government have entered into an engagement on one side that there should be no kind of charge whatever on the land, and that they have on the other hand accepted any duty or responsibility to do anything in relation to the land; or do you consider that they are by that arrangement exempted, or rather almost prohibited from doing anything in relation to the land?—No; because in the case of the settlement of Oude they did fix the cesses for certain local purposes at the time of settlement.

2062. In that case their duty would be prescribed within the limits of the cess?—Yes.

2063. Then do you hold that they are not at liberty to perform any duty in relation to the land beyond the amount of that cess?—I certainly think that the maintenance of the public faith is of far more importance than getting additional funds for any purposes whatever.

2064. And is it your opinion that if there are no roads to enable the occupants or owners of the land to remove the surplus produce, the Government has put itself into such a position that by no contrivance can the inhabitants be relieved of that difficulty? — The Government advisedly thought that 2½ per cent. would provide all the roads that were needed for the wants of the districts; and it must be borne in mind that it was the act of the Government, by its decentralisation scheme, by which they reduced the grants to the local Governments on the aggregate by 350,000 *l.* and by 15,000 *l.* for Oude, which created a deficiency.

2065. But under the native Governments, was it the practice, in addition to the collection of the land revenue, if works of a local character had to be carried out, to have them carried out by forced labour?—Speaking to the best of my knowledge, I do not think that the native Governments ever carried out what I may call district works of purely local utility. If they wanted to build a palace, or a great bridge over a river, they would use forced labour, no doubt; I do not mean unremunerated labour, but they would compel labour.

2066. But so far as they had some local works carried out, was it not the practice to have those carried out by forced labour at unremunerative rates, imposing a considerable burden upon the inhabitants of the district?—I think it is very likely that they did not get the full remuneration; but they must have been kept alive while they were doing the works. But then I do not think that what the native Governments did is any authority for us, because there is no enormity which you cannot justify by reference to native usage; and if we could do nothing better than reproduce the native model of government, I do not see what right we have in India at all.

Sir *C. J. Wingfield*, M.P.

25 March 1873.

2067. For the purpose of ascertaining the nature of the land revenue as compared with any special taxes for the purpose of improving the districts for the benefit of the landowners, I understand your view to be, that although the majority of the landowners of a district may wish works of local improvement to be carried on for the local improvement of the district, the Government by its proceedings, especially those which you have brought before the Committee, has reduced itself to a state of utter impossibility, and made the inhabitants share that impossibility of doing any good in the country?—There would be nothing to prevent the landholders subscribing among themselves to have a road made and asking the collector to make it; but I say that the Government deliberately said, only 10 years ago, that a cess of 2½ per cent. would suffice for local purposes, and they gave a distinct assurance to the people that that would be the limit of the cesses throughout the term of the settlement, and I do not think that they ought to raise it during the term of settlement.

2068. Then it is your view now that nothing can be done except by spontaneous benevolence on the part of the inhabitants, each person assessing himself to the extent he likes?—Yes, during the term of settlement.

2069. Is it your opinion that the proceedings of the Government in this respect have been politic or impolitic, that they have been beneficial or injurious to the general welfare of the country?—I think decidedly injurious; because to shake public faith, to make the people think that the Government is grasping and overreaching, and does not abide by its deliberate engagements, must be injurious.

2070. You think perhaps that it would have shown more foresight if the Government had intimated at the time the possibility or reserved the possibility of levying rates for carrying out works for the benefit of the inhabitants?—Perhaps if the Government had foreseen this difficulty, they might have reserved their right to levy cesses apart from land revenue, but at the same time that is a right which must be exercised with very great caution, because it is absurd to limit the assessment on the land for land revenue, and then to retain power to put on cesses to any extent, because for all practical purposes that amounts to an increased demand from the land. Whether you assess 100 acres of a man's land and take payment from him as owner of those 100 acres, or whether you put a cess or cesses upon him as owner of those 100 acres, it comes to the same thing. In either case the demand is from this land.

2071. Is not the difference this, that in the one case the demand of the Central Government may be defrayed wholly beyond the view of the person assessed, whereas in the other case the limit of the assessment is the cost of the work that is to be done for his benefit, and therefore the thing regulates itself?—No; because these cesses have been imposed not with reference to the means of the man assessed, but with reference to the value of the land which he holds; and on that he pays a separate land revenue demand.

2072. But if the money is to be paid exclusively for the benefit of his district in making roads, canals, or irrigation works for his district, surely

Sir *C. J. Wingfield*, M.P.

25 March 1873.

surely that is a sufficient limit to the demand?—I do not see how that imposes any limit, because the ideas of improvement may be so very large. Certainly some rulers would have no scruple in taking any amount of money from the people for what they consider such beneficial objects.

2073. Do you think that they could be trusted with the power?—Most certainly not; and that is why I disapprove of the decentralisation scheme, because it puts the local governments more under a direct motive to screw as much as they can out of the people; and I know by experience what crochets and fancies local governors have.

2074. You think that, having regard to their permanent connection with the people over whom they rule, it is not desirable that the local governments should have the power which is given under this decentralisation scheme?—Certainly not, if the Government of India interposes no check, or places no restriction on their power of levying local rates; I think it would be most dangerous.

2075. Do you think it would have been a better policy if the Government had continued its responsibilities with regard to the taxation of the people, and had either assigned a fixed sum to the local governors to spend in their districts in local administration; or, as the other alternative, if they had left them the local taxes generally, and required them to remit to the imperial treasury a certain sum out of them?—I do not think the plan of giving them fixed assignments altogether a good one, because it offers no inducement to economy, and those who asked most would get most; but I approve of the plan of Sir Charles Trevelyan, to leave the local governments whatever surplus remains after defraying imperial expenditure and civil establishments.

2076. Without giving them any power to levy taxes?—They should have no power to levy taxes without the consent of the Supreme Government.

2077. That is to say, the responsibility of levying the taxes should be the responsibility of the Supreme Government, and the local governments should be left to make their economies in the best mode of administration out of the taxes levied in their district?—Yes; and if they had the spending of that surplus they would have a motive for economy. As it is, if an economical ruler saved money by reducing his establishment, he did not get the benefit of it; it would go to supply the demands of some extravagant province.

2078. Mr. *Bourke.*] With regard to the communication which you made to the India Office, in that communication did you apply any of your great local knowledge and experience in the province of Oude to the question as to whether the 2½ per cent. local cess that was imposed by the Act several years ago was sufficient, in your opinion, to carry out the local requirements of the country in regard to communication, roads, and so on?—No; but what I say is, you made, deliberately and advisedly, an agreement and stipulation, and, whatever the inconvenience might be, you are bound by it for the term of the settlement.

2079. You only, in fact, turned your attention to the question of what you considered to be the breach of faith?—Yes; because I have always held that the most important point to be attended to in our connection with India is, that we should preserve our character for strict observance of our promises; and I believe that in the earlier times of our history it was to the reputation that we acquired for this scrupulous adherence to our pledged word, that we mainly owe the establishment of our Indian Empire.

2080. Mr. *Cross.*] And you think that no expediency ought to induce us under any circumstances to break that faith?—Certainly.

2081. Mr. *Fawcett.*] The breach of faith which you describe I understand to be analogous to this: in this country the Crown has certain lands; the rents of those lands are devoted to the general revenues of the country; if the Crown promises a tenant to let the land on lease for 30 years, and, in addition to the fixed rent for 30 years, said, "I will charge you a certain sum for improvements, and I will charge you no more than that sum," and if afterwards the latter sum for improvements were arbitrarily doubled, you would consider that in that case there would be a very great breach of faith?—Certainly.

2082. And that is a case analogous to what has taken place in India, is it not?—Yes.

2083. And it is a breach of faith which would be just as bad as it would be if a private landowner disregarded the covenant of a lease, and charged a greater rent than the lease authorised him to levy, and then in those cases the tenant would undoubtedly have a remedy in a court of law?—Yes.

2084. And you, I suppose, agree with the opinion that there is really no difference in the breaking of a promise, whether the land is owned and let to a cultivator by the State, or whether the land is owned by a private individual and let by him to the cultivator?—No, certainly not; in the one case a man has a remedy, but in the other case he has none.

2085. Therefore it is all the more important, having no remedy, as he has no security except a moral one, that that moral right should be sacredly protected to him?—Yes; on that point there is a very remarkable passage in a speech of Mr. Fitzjames Stephen, lately legal member of the Governor General's Council. Having obtained the consent of the talookdars to increase the cesses, not the consent of the peasant proprietors, then they pass an Act to legalise this doubling of the cess. Now, of course the Legislature has the power to do that; you cannot dispute the legality; but, as Mr. Stephen said when he was meeting the argument that Lord Cornwallis, in making the permanent settlement of Bengal, had assumed a power of binding his successors, which he did not possess, and meeting also the argument that the permanent settlement of Bengal should be repealed, "It may be affirmed with perfect truth that your Lordship and the Council have the legal power to repeal the Regulation of 1793, which embodies the permanent settlement system, just as you have the legal power to do a vast number of other things, good or bad; but whether you have the moral right to do it is a separate question, which requires independent consideration. In considering the question of the moral right of the Government to alter the arrangements made at the permanent settlement, it appears to me that the leading consideration to be kept in view is as follows: we are not a representative government; with every wish on the part of every member of the Government to use his powers for the benefit of those whose interests they

they affect, it is impossible not to feel at every turn how great are the differences between the governors and the governed, and how supremely important it is for all parties that, whatever else the people of the country may feel about their rulers, they should feel perfect confidence in their good faith, and in their scrupulous observance of their promises. A really representative government may deal with the pledges of their predecessors in a very different way from a government like ours."

2086. *Chairman.*] Do you recognise in this preamble of the Regulation relating to the land revenue in Bombay, and in the clause that I will read to you, a clear definition of what the land revenue in India is. This is the Regulation of 1827, under which the land revenue is assessed in Bombay: "Whereas it is expedient with a view to the protection of the rights of the State, and of individuals, that the principles on which the public revenue is assessed, and its realisation secured and effected, should be made, knowing that authorised receipts on account of revenue should be regularly and correctly recorded, and unauthorised exactions promptly punished; and the powers and responsibility of subordinate revenue officers, of farmers, and of superior holders of land should be defined." Then it goes on to other details, and then the Regulation contains this declaration, "All land, whether applied to agricultural or other purposes, shall be liable to the payment of land revenue to government, according to the established principles which govern the assessment of that description of land to which it belongs, except such as may be proved to be either wholly or partially exempt from the payment of land revenue, under any of the provisions contained in Chapters IX. and X. of this Regulation: Provided, however, that nothing contained in the preceding clause, or in the enactments therein cited, shall be understood to affect the right of government to assess to the public revenue all lands, under whatever title they may be held, whenever and so long as the exigencies of the state may render such assessment necessary." Do you consider that with that definition of the land revenue, and that declaration, an assessment made under this Act could be held in any way to prevent the Government passing a law, if it were necessary, to make roads and bridges in the country, to levy a contribution from the land for payment of the expense of those roads and bridges?—The best proof that that was not alone sufficient was, that they brought in an Act to enable them to levy the cesses afterwards in 1869.

2087. Was not that the legislative mode of exercising the power of the Government in the same way that this regulation was made. It was not a question of the right of the Government?—The practice has always been, as was pointed out in Sir Frederick Halliday's Minute, to fix cesses at the time the settlement is made, when they are engaged for, with the rest of the revenue, and it has always been thought that you cannot levy a cess during the currency of the settlement after these engagements are concluded.

2088. Has not the difficulty arisen from the want of a reasonable foresight on the part of the administration of the Government of India in not declaring to the community the proper nature and conditions of the land revenue and the assessments under it, so as to prevent these questions arising, and which, in point of fact, were perfectly well foreseen by reasonable persons at the time that the assessment was made?—No; I think the right principle was always regarded as being that cesses should be fixed at the time when the land revenue is fixed; because if the Government of India in former times were to have laid down such a principle as this: "We fix your land revenue, but we reserve to ourselves perfect freedom to impose what amount of cesses we like," that would have neutralised all the benefit of the limitation of the demand, because there was no limit to be assigned to these cesses. When the permanent settlement of Bengal was made, the Government repudiated, on their own part, what were called the irregular exactions above the Government demand, and they ordered the zemindars to discontinue their irregular exactions from their tenants. In fact, it is the limitation of the Government demand that creates property in land. If the Government can take the whole rental, there is no property left. Property in land in India entirely depends on the moderation of the Government demand.

Sir *C. J. Wingfield*, M.P.

25 March 1873.

2089. Mr. *Fawcett.*] The 30 years' settlement, in fact, becomes a meaningless farce, if, after you have made a 30 years' settlement, you can impose new cesses on the land simply at the free will of the Government?—So it has always appeared to me.

2090. And, according to this action which the Government has taken, the peasant proprietors in Oude have no security whatever, that if the exigencies of the Government increase, they may not find cess after cess to any amount imposed?—Certainly, none.

2091. So that, actually, in this indirect way, although the rent of the land was fixed by a 30 years' settlement, there is no reason why it should not be doubled?—None but the moderation of the Government of the day; their ideas of moderation, that is to say.

2092. And those vary from time to time?—Yes.

2093. And as far as the cultivators of India are concerned, they have no security with recent transactions before them, that these cesses on their lands will be in any way limited simply to carry out improvements on their lands, because cesses on the land have been imposed for education, have they not?—Part of the amount has, I have no doubt.

2094. And there is nothing whatever under this new decentralisation scheme, is there, to prevent these cesses on the land being devoted to any one of the purposes which have to be defrayed out of local taxation?—I should not like to answer that question without looking at the Act. The Act, I think, does contain some provisions saying what objects are to have a prior claim.

2095. Yes, prior claims; but still some of those that have the prior claim, are not by any means confined to the improvements in the land. For instance, great as the advantage of education may be, education does not directly carry out landed improvements?—I think the Act says that the bulk of it is to go to making roads; but, at all events, that is discretionary.

2096. You could not, for instance, assure a peasant cultivator in Oude, if this system is sanctioned, but what he might find that cesses were imposed on him for a great variety of purposes unconnected directly with effecting improvements in the land?—Certainly, that is the case. Sanitation, for instance, is one of the things; they may

Sir *C. J. Wingfield*, M.P.

25 March 1873.

may take to filling up the cesspools in every village, or something of that kind.

2097. And, as far as I understand, a cess might be imposed on land for the sake of carrying out higher education, might it not?—I do not see anything in principle to prevent it, having once admitted the principle that you can impose cesses *ad libitum*.

2098. As I understand you, if it had not been for this decentralization scheme, which virtually deprives the local governments of 350,000 *l.* which before they had been accustomed to receive, a great part of the necessity of imposing this new cess in Oude would not have existed, would it?—No; I understand that the decentralization scheme is made the plea, and it has reduced the grant in Oude by 15,000 *l.* And in the Decentralization Order you will find it is particularly mentioned that the deficit must be made good by the local governments, and they refer to the local taxation that either has been or is now being introduced, and Oude is mentioned as one of the provinces in which it is being introduced to supply this deficit.

2099. Therefore I understand that you agree with the view which I believe was brought forward by the Chairman on the last occasion, that the Imperial Government, in order to relieve themselves from the responsibility of raising 350,000 *l.* by imperial taxation, imposed this necessity on the local governments, and the result of that necessity has been that all kinds of new cesses and other taxes have been imposed which have caused great alarm throughout India. And these new cesses, so far as your opinion is concerned, make our Government have to bear the charge of breach of faith towards the people of India?—Yes, wherever cesses have been imposed subsequent to the conclusion of the settlement engagements during the currency of those engagements. In fact the early part of the question which you have put to me, is identical with the question which I put to Sir Charles Trevelyan when I asked him whether it was not the act of the Government of India that has led to this creation of new cesses for local taxation.

2100. Sir *D. Wedderburn.*] I understand you to disapprove of the present decentralization system which hands over to the local governments the control of certain special services, and assigns to them permanent fixed grants from the Imperial revenue, leaving the balance, if any, to be met by local taxation?—I do not disapprove of their making over those services to the local governments, but to their reducing the grant for those services and then telling the local governments, "You must raise the balance somehow or other as you can." And it is worth noticing that those special services (I think seven in number) which the Government made over, are precisely the very services in which increase of expenditure would be called for—so that the Goveanment of India not only rid themselves immediately of a burden of 350,000 *l.*, but prospectively of a very much larger burden, because they are services that grow with the growth of the population.

2101. But you would approve of handing over the control of those services, if the local governments had an interest in economising, and were able themselves to reap the full benefit of that economy, by having the control over certain branches of local revenue?—I think that practically a great deal more fuss has been made of this decentralization order than it was worth, because what was it practically? Those services were not nominally under the control of the local government, that is to say, you had to put them into a budget and send them up to the Government of India for sanction. Henceforth the local governments will submit their estimates for these services as before; but they will be able, within the limits of the fixed assignment from the Imperial revenues for these services, to transfer funds from one head of service to another, whereas formerly to do this, they had to obtain the sanction of the Government of India. But practically to obtain this sanction was little more than a form; there is not much in it that I can see.

2102. *Chairman.*] There seems to be a great deal in it according to your view, but not of good?—I mean not much increase of independent control given by it. The amount of independent control given to the local governments by this scheme is not so great as it appears, because getting the sanction of the Government of India was a mere form before.

2103. Sir *D. Wedderburn.*] Nor have the local government any direct interest in economy; they do not reap the benefit?—In these services they do, if indeed any retrenchments in them are possible, but any other retrenchments that can be effected in the general administration, they do not get.

2104. Mr. *Beach.*] As there is no limit to the amount that may be raised in future by local taxation, that creates a feeling of uncertainty in your opinion?—I cannot imagine anything more calculated to disturb the public mind and make people uncertain what the future may produce, than the principle of novel and incessant taxation at the mere discretionary will of the Government; because the legislature after all is composed of Government nominees, and mainly of Government servants.

2105. What would be the interpretation in the minds of the natives which would be attributed to the term used in the Act "Exigencies of the State"?—Any pretext that the State likes to put forward, I should think.

2106. Would it be ordinary purposes or in time of war?—I should think they would attach the widest signification to it to make it cover anything.

2107. Mr. *Dickinson.*] This local cess is only intended to meet local expenditure?—Yes. Local expenditure; not imperial.

2108. As I understand, in districts where there is a local expenditure, the local authority raise the local revenue to meet that expenditure, education, roads, and so on?—That they raise at present, and all these different new taxes are for local purposes.

2109. Then the local expenditure limits the local taxation?—I suppose that they will not raise more money than they want to spend, if you mean that; except that they might try and set by money for some specific object at a future time.

2110. Local expenditure, then, limits local taxation?—Yes.

2111. Local expenditure is dependent on the local will, is it not?—That is to say, if you have representative bodies of ratepayers; but I am not aware that representative bodies of ratepayers have been formed yet.

2112. But in all municipalities and districts where there is this local taxation and local expenditure there is a local body to control the

the expenditure, is there not?—I am not prepared to say how far the formation of local bodies has gone yet; but, to the best of my belief none are representative yet. These local boards are composed of Government nominees, and I fancy the European officer, the collector of the district, is the paramount man in them, the man whose will really directs and rules everything. That was so in the rural districts. In some of the larger towns there are municipalities, but in the districts, the district funds were in the hands of what was called the local committee, which local committee was nominated by the Government, and the collector was at the head of it, and for all practical purposes he had his own way.

2113. If that local committee fairly represented the local opinion, you would then have a fair limit on local expenditure and taxation, would you not?—If that local committee fairly represented public opinion, they might possibly not levy any taxes at all.

2114. That would then be the limit of expenditure and of taxation?—At present it is entirely in the hands of the Government.

2115. The main objection you entertain, as I understand, is rather to the constitution of the spending body than to the system of allowing extra taxes to go upon land for local purposes?—It is the difference between the owners of land or other property voluntarily taxing themselves having a tax imposed upon them by executive authority, or legislative, which, constituted as the legislature is, is in their view much the same as executive authority.

2116. Taking, for instance, a municipality like that of Bombay, there I suppose you would consider that there ought to be a sufficient check on expenditure to justify the power of local taxation?—I do not know; I have heard that there were complaints against the Municipal Commissioner two or three years ago, of the way in which he had committed the municipality to debt. There was a great stir in the papers about it. I do not think that the municipality of Bombay is representative. The justices of the peace are the municipality, I think.

2117. Sir *G. Balfour.*] You have expressed opinions, and permit me to say very sound opinions, with regard to the importance of keeping good faith with the people of India. I would ask you also with regard to moderation in taxation, your opinion as regards the great importance of moderation in taxation as regards our military expenditure?—That is very important.

2118. With regard to levying cesses, there is no more difficulty as a matter of account in assigning the proportion of the general Imperial revenue for local expenditure, than there is in collecting it separately for separate heads?—No, there is no more difficulty in it of course. The object of the Government of India, as I understand in this decentralisation scheme, was to relieve themselves of the burden of supplying a certain amount of money, by throwing that burden on the local government.

2119. Then, practically, it is simply nothing more than levying additional taxation?—Most decidedly that has been the effect. In fact the exemption of incomes from assessment to the Imperial income tax, and the lowering of the Imperial income tax, while it has relieved a few, has subjected the many to new taxation. In fact it has brought hundreds of thousands under taxation who never paid income tax before. The honourable Member for Brighton was, I think, asking on the last occasion about this tax on the non-agricultural rural population in the Bombay Presidency, and referring to some notes which I have, which I extracted from the debates in the Bombay Legislative Council, I find that when the Act was under discussion it was estimated that it would bring 700,000 people under taxation. Now I do not think that when the Imperial income tax was at its lowest, that is to say, going down to the lowest scale of incomes, when it reached incomes of 200 rupees, much more than 1,000,000 of people were brought under taxation to the income tax; and here is one tax alone in Bombay which is estimated to bring 700,000 people under it.

2120. You also mentioned the importance of moderation in taxation, with regard to making the holding of land valuable to the people who hold it?—Yes, I think that property in land in India depends on that.

2121. Then you are, perhaps, confirmed in that opinion; I mention to you that in the Madras Presidency, millions of acres were left uncultivated in consequence of the excesses in the land-tax?—I have read a great deal about the Madras land revenue settlements in the Fifth Report of the House of Commons of 1812, and the Minutes of Sir Thomas Munro, and of other Madras officials. It was moderation in the demand, lowering the demand, that restored the prosperity of that country. All property in land has been nearly annihilated under the Mahomedan rule.

2122. It was computed that when Lord Harris lowered the cess, in one district alone upwards of 60,000 acres were brought under cultivation?—I can well believe it.

2123. With regard to the employment of people in carrying out public works, I may mention to you that the people of the Madras Presidency most heartily and willingly gave their labour for making all irrigation works. These works were immediately beneficial to the land, and they turned out in hundreds, and received remuneration, only at a very low rate. That would be an instance where people would willing contribute labour and time for carrying on their own public works?—Yes; and in some parts of the country where a cheap native system of irrigation could be carried on from streams running out of the hills, I have known the people there to come to the European officer, and say, "Help us to make an irrigation work from this point to that point," and they would give their labour.

2124. But you are aware that in the Madras Presidency the thousands of tanks upon which the fertility of Madras entirely depended, were almost entirely supported and kept up by the voluntary labour of the people?—I dare say that was so.

2125. Mr. *Candlish.*] As a matter of fact, will the increase of 2½ per cent. in the cesses add to the value of the land by making roads and bridges?—I can hardly say that it would appreciably add to the value of the land; I do not say that the money will not be well spent.

2126. Would not any increase of intercommunication tend to the value of the land to which roads pass?—If you assume a country destitute of roads, and then immediately make some, of course the effect will be very remarkably felt. But the country was very well supplied with roads. Additional funds would, no doubt, improve them;

Sir *C. J. Wingfield*, M.P.

25 March 1873.

them; but the communications were at such a point that any very sensible increase in the value of land from improving them, was not to be expected.

2127. Would the improvements which this expenditure would effect, give an increased value to the land?—I should think hardly appreciable.

2128. Would you regard the money as wasted?—No; I do not say that it is wasted, because it is always better to have a very good road than a moderately good road, and additional convenience would be secured; but as to saying that it would have a direct effect on the value of the land, I do not think that things were at that point, that any very large advance in the value of land was to be expected by spending 2½ per cent. more upon roads.

2129. Better roads would give facility of intercourse, and would cheapen intercourse, would they not?—As a general principle that is so, but that is very much modified by local circumstances. No less an authority than Sir Charles Metcalfe said that the native road was as good a road as the country people wanted.

2130. That would not apply to bridges?—No.

2131. If bridges are an improvement, would not the people get value for that increased cess?—The money would be well laid out, but my objection is to the principle.

2132. I am asking you as to the matter of fact; do you think that they would get value for the increased cess paid?—I think that is a matter which might have been left to the people themselves; I think they are very good judges of what improves the value of their land.

2133. Are there any other instances in which the cesses have been similarly increased, in addition to Oude?—Yes, in the North Western Provinces they have levied a cess on the owners of land, an additional cess for roads and other purposes. In the Punjaub they have done the same.

2134. Is there a universal objection to this increase?—I should think, certainly, because I never knew a landholder in India like to pay more than he was bound to pay; I never knew any man voluntarily consent to pay one farthing more than he was bound by his engagement to pay; I know that what was called their voluntary consent was a mere farce; it was a demand made by a man who had a thousand means of annoying another, upon that other to agree to the proposals that he made to him.

2135. Sir *T. Bazley.*] When you speak of the value of property in Oude, do you mean the ownership of the Talookdars, or of the people?—I mean anybody who is a proprietor of land; I draw no distinction between the Talookdar and the peasant proprietor, I mean the owners, what we should call in England the fee-simple owners.

2136. Are not the Talookdars the chief owners?—The Talookdars are the men who have very great estates, who were treated separately as Talookdars by the Government. This is the only difference; the Talookdar is a great proprietor.

2137. Did the village system ever prevail in Oude?—Yes, as it did in the North Western Provinces. Under these Talookdars there may be village proprietors owning the village lands.

2138. Still, if the villagers are under subjection to the Talookdars, they have a superior claim, have they not?—But where there are village proprietors under a Talookdar, the amount payable by the village proprietors to the Talookdar is fixed by the officers of Government.

2139. *Chairman.*] When you use the words "village proprietors," do you mean proprietors of the whole village?—I mean the owners of the soil; they may have tenants under them.

2140. Do you mean the owner of land in the village, or the owner of the whole village?—The owner of land; of the whole village, or part of the land in the village. When I use the term "proprietor," I mean it as distinct from "tenant"; the owner of the land, and not the man who pays rent to the owner of the land.

2141. "Talook" is properly an aggregation of villages, is it not?—Yes.

2142. Sir *T. Bazley.*] Then the villagers sometimes have to pay as it were double rents; they have first to labour upon the land that they occupy, and at the same time to contribute the sum exacted by the Talookdar?—But he can make no undue exactions, because his demand from each village, where the land belongs to the village proprietors, is fixed at settlement. I think we have already gone into all this question; it is going into the nature of the landed tenures of Oude, which is a very long thing, which we have already considered. It is an intricate question where you have two properties in the land, an upper and an inferior.

2143. I will only trouble you with one question; which is the most beneficial to the people, the independent ownership of land by the people, or the ownership by the Talookdar who rents it to the people?—Where there is complete independent ownership under the Talookdar, which is often the case, the amount payable by the independent owners to the Talookdar is fixed by the Government, and cannot be exceeded. He is merely in that case a channel for the payment of the Government revenue, with a certain allowance to himself, which is also fixed; so that it is much the same to the village owners whether they pay to the Talookdar, or whether they pay to the Government.

2144. Mr. *J. B. Smith.*] Did I rightly understand you to say, that the forced labour which was common before this increased taxation was made has been abandoned?—It was abandoned, but they passed a Canal Act in the Punjaub the other day, in which they authorised the use of forced labour for the repairs of canals.

2145. I am speaking of Oude; what is the case there?—It was always abandoned under our system; we never had recourse to forced labour, except in the way of pressing carriage for troops, that right was always reserved.

2146. Was it not the custom in Oude to force labour to make roads?—By the common law of India it is held to be a duty of the village proprietors to keep village roads in repair, and it would be necessary for that to be done constantly. I have no doubt, in Oude, when the king, or any great man, made his progresses through the country, the zemindars were all ordered to put the roads in good repair.

2147. That was a custom of the country?—Yes.

2148. That custom has since been abolished?—We consider that the road cess that has been imposed is in lieu of the obligation to repair roads. The obligation is commuted into a money payment.

2149. Then, in this new settlement, there was no clause abolishing forced labour, if it was found necessary

necessary?—Putting in a clause to abolish forced labour would be like forbidding any act that is notoriously forbidden. It has always been contrary to our principles to have anything like forced labour.

2150. But there was nothing in the new settlement which prevented the employment of forced labour, if it became necessary, was there?—Well, I should say that the whole principle and practice of our Government prohibited forced labour.

2151. But we are speaking now, not generally, but of Oude?—But when we bring a country under British rule, we apply British principles to its administratjon.

2152. Even if you apply British principles in abolishing forced labour, may you not, instead of that, apply British principles in levying a cess for roads which were formerly made by forced labour?—So we did levy a cess, and we fixed it at a certain amount.

2153. Is there any reasonable ground to complain of this cess, it being for the benefit of those from whom it is collected?—There are no grounds for complaining of the cess levied at the time of the settlement, under the settlement engagements. The ground of complaint is against arbitrarily doubling that cess; that is to say, taking twice as much as was agreed upon.

2154. But although they take more than was agreed upon, they abolish forced labour?—The British Government might just as well claim credit for not having continued slavery in provinces where domestic slavery was in force, as for abolishing forced labour.

2155. Is there any analogy between the two cases?—I think so; both are repugnant to the principles of British administration.

2156. I suppose you are aware that it is not long ago since there was forced labour upon the roads in this country?—Well, I never heard of it.

2157. The tenants were obliged to send men for a certain period to repair the roads; and that in this country has been abolished, and in lieu of that we have levied highway rates. Is there anything unjust in doing the same thing in India, these highways being for the benefit of those who have to pay the rates?—My position has been not that there is an injustice in levying a road cess, but that having agreed to levy a certain amount of road cess for a given time, you ought not then, of your own motion, to go and break that engagement by levying a larger amount than you undertook to levy.

2158. Was it levied for the purpose of road cess only?—So much road cess, so much other cess; three cesses. I read out in the extract. That is the simple point that I am contending for; when you have made a compact you ought to abide by the compact. You regret perhaps that you did not levy more, that you did not provide for a larger contribution than you did. Very well, you must wait till the settlement has expired, and you come to renew it, before you can increase it.

2159. But as I understand it, the contract was that you should levy a certain cess, and you had also the right of employing forced labour?—I do not see that you had a right of employing forced labour. At all events, as to the obligation by the common law of India on landowners to repair roads, you commuted that for a money payment; I only want you to abide by that money payment.

2160. How would you prove that that was commuted by a money payment?—Because it was. I mean to say that that was the object of levying a road cess. The right to levy or the principle of levying a road cess was, that landowners were bound under native usage to repair roads.

2161. Lord *E. Fitzmaurice.*] Your objection then is to the increase and not to the levy itself?—Certainly, when the settlement expires and you come to make new engagements, if you think that the amount fixed at the last settlement is not enough, then propose double or treble, and if the zemindars agree, there is no objection.

2162. Are your present remarks applying only to Oude?—They apply equally to the North Western Provinces and to the Punjaub, where similarly they have imposed additional cesses on the landowners for roads; wherever, in short, the settlement engagements have been departed from.

2163. Then your remarks, in fact, apply to those three Provinces that you have mentioned; but do they apply also to Bengal?—That is a larger question, which I should hardly like to commit myself to an opinion upon. It has been a very controverted question. You have the highest authorities, who have given their opinion both ways; but Mr. Stephen supported the levy of cesses in Bengal, and said that it was not contrary to the permanent settlement on this ground, that the permanent settlement left the question of cesses entirely untouched. That is his ground; nobody thought of cesses in those days; nobody thought of education or district post, or anything of that kind; and therefore, he said, you cannot suppose that they precluded themselves from dealing with such questions at a subsequent time. But in these Provinces, the North Western Province, the Punjaub and Oude, the question of cesses was dealt with, and provided for. It is the breaking of this engagement by adding to the cesses that I complain of.

2164. You mentioned just now a sort of consent that was got from some of the owners to this addition; what form did that consent take?—The Talookdars have an association, what they call the British Indian Association, in Oude, and they had a meeting of the association, and they signified their consent to doubling the cesses; but, as I say, of course that was not done voluntarily.

2165. I understood you also to say that it was only the consent of the large proprietors, that is to say the Talookdars?—Certainly; the others were never asked.

2166. The small proprietors were never consulted at all, and so far as they were concerned it was perfectly arbitrary?—Yes.

2167. Mr. *Lyttelton.*] The word local is quite arbitrarily used in India, is it not; it may apply to areas as large as Oude or Bengal?—Yes; the term "Local Government," applies to each separate government.

2168. There is no analogy in that use of it, with our idea of local taxation?—No; our local taxation implies self-government and self-taxation, I think.

2169. Here it always applies to areas extremely limited in extent, whereas in India it may apply to Bengal?—Yes, but then the taxation in each district would be levied separately per district, and spent separately per district.

2170. Was not the road cess in Oude levied for

Sir *C. J. Wingfield*, M.P.

25 March 1873.

the whole of Oude?—No; it was always the practice to let each district spend whatever it contributed as road fund.

2171. Of what extent were the districts?—They averaged, I suppose, about 120,000*l.* of land revenue apiece.

2172. Could the advantages derived from the road cess be brought home to the minds of the population in the same sense as they are in England?—I think that all classes of landholders acknowledge the benefit which has been produced by making good roads.

2173. Do you think that there is a difference in practice and in principle between adding to the land revenue for local purposes, and adding to it for Imperial purposes?—No; I do not see any difference at all; when you have once made your contract you are bound by that for the term. As I have said before, the reservation of that power to impose local cesses, may be so worked and used, as to take away all the value of the limitation of the demand on the land; I have known people who, I think, would abuse it.

2174. Do you think as far as its effect on the minds of the landholder is concerned, there is any difference between local and Imperial taxation?—Not the least.

2175. Mr. *Eastwick.*] When you sent up that Memorandum either to the Secretary of State, or to the India Office, to which you just now referred, what was your object I should like to ask; did you expect that they would withdraw this additional cess?—No, I did not expect that they would; but I thought it was due to myself, having given an assurance that that cess should not be increased during the term of settlement, to let the Secretary of State know that; and also I thought it was right that he should know the nature of what had been done.

2176. But I should like to ask whether you think it could have been withdrawn at that time, after our having imposed it; would it have been possible to have withdrawn it?—They had got the consent of the Talookdars, and they could always fall back upon that; but as regards the other people, whose consent was not asked, of course they might have withdrawn it.

2177. Do you think that it would have been politic to have withdrawn it?—I think it would have been politic to have withdrawn it there; and I think it would be politic to withdraw it in the Upper Provinces, and in the Punjaub, where they have done the same thing. And I say my view has always been that the first condition of our policy in India is to avoid giving the slightest colour to the imputation of not keeping our word.

2178. And you have said, I think more than once, that this decentralisation scheme was a scheme to relieve the Imperial Government of certain charges, and to throw the odium, if I may use that word, of raising certain taxation on the local governments, and to relieve the Imperial Government of it?—Yes, it seems to me so.

2179. Was it not also put forward as a part of the scheme, that in that way the local governments would have a wholesome responsibility, as they would have the means of spending their money upon local objects, and therefore they could exercise greater economy probably, and distribute the money more carefully than the Imperial Government, who had no local knowledge?—But I think there was a great deal of fallacy about that, because, as I was saying just now, the details of expenditure on provisional services, within the limits of the assignment for those services, were, before that, really left to the local governments; the only thing was that you had to get the formal sanction of the Government of India to your budget; but the Government of India, within my experience, at least, rarely interfered with the arrangements that you sent up. It was a mere form of getting their sanction.

2180. There were complaints as to the Bombay Government, were there not?—I will not say that it was a mere form in case of the Bombay Government, because we know that they did assume an extraordinary discretion in commencing expenditure on works before the sanction of the Government of India had been obtained, and thereby forcing its hands.

2181. I want to ask you now whether you do not think that some plan might be adopted similar to what Sir Charles Trevelyan proposed of having the punchi of the different collectors in the different districts, by which the local governments might be able, without any inconvenience or danger to the public, to raise larger sums, and at the same time to spend them more beneficially?—If you look at some questions which I put to Sir Charles Trevelyan, you will see that I quite agree in his view of representative bodies in each province (I have advocated it before), to whom there should be given, not merely a voice in the expenditure, but also in the raising of local taxes. And in fact, I would go so far, that I would leave them full discretion whether to impose a local tax or not. I would not let it be forced upon them by the Government.

2182. Then I would ask whether there is any necessity for imposing the cesses at all upon the land; whether it might not be advantageous to allow the local governments to raise the money that they require for these seven different objects and any other objects of a local nature in any way they choose; of course I cannot say what ways might be adopted, but I suppose taxation might be imposed in other ways without touching the land at all; and in that case the cultivator of the land would feel perfectly secure?—Yes, the effect of the decentralisation scheme has been, that the local governments have had recourse to the landowners to make up the sums that are wanted. They find it so very much easier to get money out of the landholders than they do out of anybody else, because the landholder is so very dependent on the forbearance of the local revenue officials. If he does not pay up his land revenue on the very day, a messenger may be sent to apprehend him and bring him to the office, and he can be annoyed in a thousand ways, and therefore these landholders cannot make any resistance. If you impose a tax on them, they may detest it; they may think it unjust, but their position in regard to their land, places them in such a state of dependence on the revenue officials that they submit without a murmur; and the local governments know very well that it is easier to get money out of them than out of anybody else.

2183. For that very reason, would it not be better to keep them perfectly secure and tranquil in their minds. We have this immense revenue coming in from the land; why should we not leave that safe, and the people who pay it satisfied, and if we are to raise additional taxation, raise it from other classes and in other ways?—I would not object to making the landowner contribute like any other person to any general tax. I object to his

his being singled out for local taxation; for instance, to an income tax, he, like every other holder of property, is justly liable.

2184. I think you said that these additional cesses are extending the income tax to a much lower class than those who were reached by the 203 rupees income tax?—Yes.

2185. Do you see anything objectionable in the immense masses of people who did not pay before, paying; for instance, the palanquin bearers, who make considerable sums of money sometimes, and whose wives have considerable ornaments?—I think it is a very dangerous thing to load the great masses of the people with taxation. It is very true that under native Governments they were liable to all sorts of capricious imposts; but then they expect something better from our Government than from native Governments, and a foreign rule must have some great advantages over a native Government, to be preferred to it; and our boast for years and years was that the lower classes were exempt from imposts under our rule, but we now are reverting to them.

2186. But I should like to ask you (because this is a very important matter) whether you do not think that the right principle of taxation is not to let any class entirely free; and whether, considering the enormous numbers of these lower classes, they might not contribute without at all inconveniencing themselves, sums of importance to the State?—But then the poorest classes are supposed in India to pay a larger share of taxation than the rich, because the poor man's consumption of salt is nearly as much as a rich man's. Then, if they dress in English cottons, they pay the duty on them. They also are the chief contributors to the excise revenue. That Bombay Bill for taxing the non-agricultural rural population went down, I believe, to incomes of 50 rupees. I think that that was cruel and most oppressive. I think that a man with an income of 50 rupees might very fairly not be subjected to direct taxation; indirect taxation he does pay already.

2187. Mr. *Candlish.*] Do you think that those landowners who have been subjected to this additional cess, have in any manner or degree received any equivalent?—Of course you cannot spend 30,000 *l.* more a year, or whatever the sum may be, on roads, without doing good by it.

2188. *Chairman.*] Would you recognise any distinction between a local rate levied as a local rate is levied in this country, and an Imperial addition to the land revenue levied under the Acts of the different Governments, which have been brought under our consideration?—Do you mean as far as its effect upon the people goes, as to whether one is more popular than the other?

2189. Or as regards the justice of levying it?—Do you mean between a local rate levied by the local Government, and one imposed by the Imperial Government?

Sir *C. J. Wingfield*, M.P.

25 March 1873.

2190. No, I mean a local rate, levied as local rates are levied in this country; that is to say, by the people in some form or other agreeing to assess themselves for purposes in which they themselves have an interest; would you recognise a rate so levied, and under such conditions, as something different from the Imperial rates that have been levied under the Acts of the different Governments?—Certainly. If the time comes (and possibly it may) when representative bodies in each district will levy rates of their own spontaneous will, I consider that it will be a very healthy state of things.

2191. You would not consider that a breach of faith, as regards what you call the contract for the land revenue?—Certainly not; because all classes, landholders and others, will be represented in those local bodies.

2192. I do not mean a rate levied by individual consent, but a rate levied by a majority?—If it is done by a representative body, that makes all the difference.

2193. Mr. *Beach.*] With reference to local taxation in England, are you not aware that there is a very large amount of it over which local Governments or local representative bodies have no control at all?—Yes; but is not that looked upon as an abuse, and is it not proposed to amend it?

2194. Is it not the case that it is at present as I say?—It may be so; but is not it the object of local financial boards to meet that?

2195. *Chairman.*] Is there in this country any local rate that is not levied by the locality, though it may be for the performance of a duty which has been imposed upon the locality by Parliament; all the local rates in this county are levied, are they not, by the locality, though they may be for expenses arising from the performance of a duty imposed by Parliament?—Here is a passage which just answers that question; a passage in a Despatch from the Duke of Argyll, of the 11th of January 1869. It was with reference to a Bill which he vetoed to compel the people of a district in which a canal had been made to pay a water rate, although they did not use the water; in fact, to pay for the water, although they did not use it; and he said, "Here the guarantee is to be extorted compulsorily; the inhabitants of a district are not to be asked beforehand whether they desire irrigation or not. The Government alone is to judge whether irrigation is desirable. There is little analogy between a plan like this and that under which county cesses are levied in England and Ireland; for those by whom the cess is imposed, besides being themselves cesspayers, represent, theoretically if not really, the great body of cesspayers, who are assumed consequently to have given their assent by proxy."

2196. That is what you may call representation by selection and not by election?—Yes.

Colonel WILLIAM ARDEN CROMMELIN, R.E., C.B., and Lieutenant Colonel JAMES JOHN M'LEOD INNES, R.E., called in; and Examined.

2197. *Chairman* (to Colonel *Innes*).] WILL you be good enough to state what office you hold in India?—Accountant General of the Public Works Department, and Deputy Secretary.

2198. I wish to call your attention to the answers to Questions 203 and 299, with reference to the sum of about 9,000,000 *l.*, which, according to the Papers presented, had been spent in the construction of Military Works from 1864-65 down to 1871-72, inclusive; can you now give the Committee an exact explanation in reference to that amount?—I cannot explain that exact amount, because it does not include that portion of the expenditure chargeable to the Bombay Special

Col. *W. A. Crommelin*, R.E., and Lieut. Col. *J. J. M'Leod Innes*, R.E.

Col. *W. A. Crommelin*, R.E. and Lieut. Col. *J. J. M'Leod Innes*, R.E.

25 March 1873.

Special Fund which was incurred after 1866–67, while our accounts do include that expenditure; and it includes expenditure in the Straits Settlements, which our accounts do not include.

2199. Will you state how you make up the amount?—£. 191,191 added to that make up our expenditure.

2200. What was that 191,000 *l.*?—A sum of more than 191,000 *l.* was expended from the Bombay Special Fund; and there is another sum, the deduction of which makes up the difference, which was spent in the Straits Settlements, of which we know nothing.

2201. But, subject to the modification, what is the sum that you have to deal with?—£.9,171,394 is the exact amount for that period.

2202. Now, can you give the Committee an explanation of the mode in which that money has been spent?—I could give the explanation of that amount, but the Papers which we had prepared include the expenditure for two years before that, and as you have also asked for information on other points, including the two previous years, we have prepared our returns accordingly.

2203. Will you give your view of the expenditure on military services, beginning with the year 1862–63, and carrying it down to 1870–71?—From the period from 1862-63 to 1870–71, both inclusive, the expenditure is in the total 9,311,957 *l.*

2204. Is this expenditure for the whole of India; the administration under the Government of India, is it not?—Yes.

2205. Can you give the various heads under which this expenditure has been made for military services?—First of all, on small works, costing under 250 *l.* each, 725,160 *l.* have been spent.

2206. What sort of works; are these minor works?—Every sort of work under the head of "Military;" they are all the works included under the heads, which I am now going to mention, that cost less than 250 *l.* each.

2207. Are those works of addition or of repairs?—Not of repairs; purely construction.

2208. It would represent small additions made to works?—No, they are small works which have nothing to say to the large works. If any small work appertains to a large work, it is charged in the accounts of that work.

2209. What is the next item?—The new barracks for Europeans in the plains, 2,592,205 *l.* Then the next item is improvements and additions to the old accommodation for Europeans in the plains; the amount expended in that is 1,920,737 *l.*

2210. Is there anything further for the barracks?—Barracks in the hills, new barracks, 222,484 *l.*, and old barracks, 149,020 *l.*

2211. These are additions and improvements?—Additions and improvements to the old accommodation for Europeans in the hills.

2212. What is the total expenditure for barracks on those four items?—£. 4,884,446.

2213. Can you state the expenditure under the same heads for 1871–72 for the barracks: what is the additional expenditure in the year 1871–72?—£. 371,856 in that one year on those four items.

2214. What is the next head of expenditure?—Fortified posts, 347,983 *l.*

2215. And what for the year 1871–72?—£. 31,648.

2216. Are these fortified posts the fortifications, or the fortified works round the barracks, or other fortifications?—They are distinct forts or defensive works; they do not include the works at Peshawur, for instance.

2217. What is the next general head?—The general work of cantonments, 389,828 *l.*

2218. And what for 1871–72?—£. 27,068.

2219. When you say general cantonment work, what are we to understand by that?—Roads in cantonments, wells, and drainage, and improvement of parade grounds, and every work of that kind that may be wanted in cantonments; gas works and water supply, for instance.

2220. What is the next item?—Temporary accommodation for Europeans, 188,787 *l.*, and in the year 1871–72 it was 1,871 *l.*

2221. What is the next item of expenditure?—Buildings for Ordnance and Commissariat purposes, 758,292 *l.*, and in the year 1871–72 it was 126,237 *l.*

2222. What is the next head?—Quarters for officers, 133,455 *l.*, and in the year 1871–72 it was 10,985 *l.*

2223. Is any rent paid for these quarters by the officers?—Yes, I believe so.

2224. What is the next item?—Shelter for native troops, 304,583 *l.*, and in 1871–72 it was 9,810 *l.*

2225. What is the next item?—Buildings for staff and general purposes (that includes the stud), 110,035 *l.*, and in 1871–72 it was 8,716 *l.*

2226. What is the next item?—Work connected with the Bhootan Campaign, 79,665 *l.*; there was nothing under that head in 1871–72.

2227. What is the next item?—Rest houses for European soldiers, 337,691 *l.*, and in the year 1871–72 it was 9,445 *l.*

2228. Are these built along the lines of communication?—They are generally at important railway stations.

2229. What is the next item?—Roads to the military stations in the hills, hill sanitaria for European troops, 78,857 *l.*, and in 1871–72 it was 38,279 *l.*

2230. But do you know what the cause of that very large expenditure in the last year was?—Two roads are being made; one to the station of Chuckrata, and one to the station of Raneekhet, new sanitaria in the North Western Provinces.

2231. What is the next item?—Works connected with the Navy, dockyard works in Calcutta and Bombay, 60,343 *l.*, and in 1871–72 it was 2,751 *l.*

2232. What is the next item?—Certain special and exceptional works, of which I have got a distinct list, 912,832 *l.*, and in 1871–72 it was 44,612 *l.*

2233. Can you give any general account of those special and exceptional works, and explain their character?—They include fortifications at Aden, the water supply at Aden, the harbour and town defences at Bombay, the Hog Island works, that is, for the hydraulic lift and defensive works there.

2234. Mr. *Fawcett.*] Why are the hydraulic lift and the defensive works classed together?—I was wrong in saying defensive works. They are the various works at Hog Island; there are six different works; I have a list of them.

2235. Mr. *Dickinson.*] What was the total cost of the Hog Island works?—To the end of 1871–72 it was 110,090 *l.*

2236. Is that the total from the beginning?—Yes.

2237. That

2237. That does not include the lift, does it?—No, not the lift.

2238. Mr. *Fawcett.*] What did the lift cost?—£. 236,000.

2239. (To Colonel *Crommelin.*) Why has this been included in the military works?—Because, I presume, it is connected with the ships for the transport service mainly.

2240. *Chairman.*] To lift them out of the water and clean the bottoms of them, and repair the bottoms?—Yes.

2241. Mr. *Fawcett.*] Is it in use now?—It has, I believe, just been completed. I have read a newspaper account of one corvette that has been satisfactorily raised and cleansed in one day.

2242. Sir *C. Wingfield.*] But I saw in the last number of the "Friend of India" that the lift has turned out an utter failure; you have not heard that?—The only newspaper report that I have seen (it is in one of the Bombay papers) speaks of the satisfactory raising of a corvette, its cleaning, and starting off to sea again in one day. "A 21 gun corvette, of 1,702 tons, has been successfully raised and cleansed in one day." (This is the newspaper report). "She would not have gone into dock for a fortnight, and would have been detained there for a month."

2243. Mr. *Dickinson.*] What did she pay for being cleansed?—That I cannot tell.

2244. Mr. *Candlish.*] There are graving docks at Suez, are there not?—I cannot speak as to them.

2245. *Chairman* (to Colonel *Innes*).] What is the next item?—The Lawrence Asylum at Ootacamund. There are three or four other small works; there are works connected with the arrangements at Umballa for the reception of the Ameer of Cabul.

2246. Mr. *Fawcett.*] Is that put down as a military work?—They involved preparations for a review and camp for him. Then a jetty at Rangoon, and a small sanatorium, a seaside sanatorium at Rairee, in the neighbourhood of Bombay; the soldiers' assembly rooms at Poonah; and the military buildings for the new Government House at Gunnesh Khind in the Bombay Presidency.

2247. How much is that last item?—£. 23,973.

2248. *Chairman.*] Can you state what is the average of this expenditure over this period?—For the 10 years the total is 10,059,051 *l.*, and the average would be 1,000,905 *l.*

2249. Mr. *Fawcett.*] May I ask whether you could give the yearly amounts, because I want to see whether it has increased?—Yes; I can give the amounts for each year.

2250. Will you have the kindness to do so?—The total cost in construction in 1862-63 was 379,133 *l.*, then 508,524 *l.*, then 643,695 *l.*, then 821,192 *l.*, then 1,322,129 *l.*, then 1,601,173 *l.*, then 1,938,379 *l.*, then 1,306,445 *l.*, then 791,287 *l.*; and for 1871-72 it was 747,094 *l.*

2251. (To Colonel *Crommelin.*) That shows that there has been a steady but a very great increase of this expenditure; in one year it is increased by sixfold, and even in the last year, when there seems to have been a temporary decrease, it is double what it was in 1862-63?—The expenditure in 1862-63 was before the commencement of the construction of the new buildings.

2252. Take 1863-64?—Still that was a very early period.

2253. Take 1864-65?—That also is almost too soon; the year 1865-66 should be taken.

2254. *Chairman.*] Then the construction of the barracks got into full force?—They were hardly in full force even then.

2255. Mr. *Fawcett.*] Are they in full force yet?—They have diminished since that time.

2256. But still they are increasing again; they went down; now they are going up again as far, as I understand?—No. In the year 1869-70, the expenditure was 1,306,000 *l.*, and in the year 1870-71 it was 791,000 *l.*, and there is still a further decrease in 1872.

2257. (To Colonel *Innes.*) But you do know 1872-73?—That is not over yet.

2258. (To Colonel *Crommelin.*) There is a charge of 23,000 *l.* for military works connected with the Government House near Bombay; do you know anything about that?—The works are as follows: lines with additional buildings for native cavalry escort; quarters for the band of his Excellency the Governor; guard-room and subsidiary buildings for native infantry guard; two blocks of Sycês quarters at Awund; latrines for body guard of his Excellency the Governor; bath-rooms and latrine for native infantry guard.

2259. To put it generally, accessories to add to the importance of the Governor of Bombay in India?—More correctly, the necessities of the establishment.

2260. But has the same amount of money been spent in Madras for the Governor of Madras, or for the Governor General, or for the Lieutenant Governor of Bengal?—Not of late days.

2261. But when this expenditure was returned, can it be shown from official documents that it was more necessary to spend this money upon the Government House at Bombay than it was at the Government House at Madras?—I am not aware that it can.

2262. Then this expenditure, which was sanctioned for Bombay, is one which was not sanctioned for the other Presidencies, and we have no evidence to show that it was in the least degree more requisite at Bombay than it was in the other Presidencies?—The works were for a new Government House, and therefore the expense was incurred.

2263. That is just the thing; one expense leads to another; this 23,000 *l.* is to be added to the 155,000 *l.* of which we have heard before?—It is an additional expense.

2264. So that really this country house for the Governor of Bombay, reckoning the furniture and all, has cost the people of India something like 200,000 *l.*?—The item I have here as the total cost of the Government House is 157,836 *l.*

2265. That does not include, as you are aware, the furniture; the 157,000 *l.* is simply construction?—I have nothing here to enable me to make any statement regarding the cost of the furniture.

2266. With regard to this enormous expenditure for a country house for a local governor, you are perhaps aware that it has been stated that the Government of India gave its consent to it in a weak moment, and no one is responsible for it?—The Government of Bombay is responsible for it.

2267. Primarily responsible, but would it not have been possible for the Central Government or the Secretary of State to have checked it or to

Col. *W. A. Crommelin*, R.E., C.B., and Lieut. Col. *J. J. M'Leod Innes*, R.E.

25 March 1873.

have stopped it?—In the only letter that I have upon the subject, the earliest entry on account of the work is stated to have appeared in the Budget of 1865-66, when its expected cost was set down at 35,500 *l.*

2268. Including military works and all?—Including everything, I presume. This sum appears to have been fixed upon rather with reference to the receipts available from the sale of the Dapooree estate (that was the former residence of the Governor) than to the ascertained requirement of the new building. On the 3rd of October 1867, the Government of Bombay forwarded estimates for the edifice, showing an amount of 96,018 *l.* It was stated at the same time, that the works had already progressed too far to render any stoppage possible, with a view to a material revision of the design. The extravagant scale of expenditure, and the grave irregularities of procedure were severely animadverted upon by the Government of India on the 3rd of January 1868.

2269. *Chairman.*] Was there any revised estimate sent in after that?—In the Bombay budget for 1870–71, the work was entered at 130,000 *l.*

2270. Was any remonstrance made upon that by the Government of India?—It is not stated here how often the Government of India interfered in the matter, but I have no doubt that it did frequently.

2271. When did it appear that the final expenditure of 157,000 *l.* was arrived at?—On the 21st of October 1871.

2272. Mr. *Candlish* (to Colonel *Innes*).] Is it finished now?—I believe it is nearly finished, if not quite.

2273. (To Colonel *Crommelin.*) Do you know when the military expenditure was resolved upon of 23,000 *l.*?—The chief part of the military expenditure occurred in 1866–67 and 1867-68.

2274. Do you know by whom it was determined that the military expenditure was needed, seeing that the residence itself is not more than three miles from the great military station of Poonah?—The works are for the special guards of the Governor himself; body guard and escort.

2275. *Chairman.*] Have you any statement of the cost that will be requisite to complete and furnish the building?—No, no further statement.

2276. Mr. *Fawcett.*] Then the expenditure has been going on two years since; we know the fact that 157,000 *l.* has been spent, exclusive of the military works; that 157,000 *l.* was given in 1871, was it not?—Yes; the expenditure was 157,000 *l.* up to the 31st of March 1871.

2277. Then the expenditure, since it was 157,000 *l.*, has been going on, and, according to your evidence, is still continuing in a slight degree?—In 1870–71 it was 16,698 *l.*

2278. Mr. *Candlish.*] That is included in the 157,000 *l.*?—Yes. (Colonel *Innes.*) There was no expenditure on the Government House in 1871–72.

2279. Mr. *Fawcett* (to Colonel *Crommelin*).] Then it is clear from your evidence that what took place is this, that the Government of Bombay suggested this expenditure, and the Central Government sanctioned it, is it not?—The Central Government have never sanctioned any estimates for the building; they have allowed the work to go on, but they have not been steadily in possession of the Estimates.

2280. The point that I want to get at is this: would it or not have been competent for the Central Government to have said this, "We consider that you, the Governor of Bombay, are well provided already with house accommodation; we think this is not a necessary expenditure, and we forbid you to incur it"?—They might have said so.

2281. And they did not, but instead of that they allowed an imperfect estimate to be sent to them, and that estimate of 35,000 *l.* has been exceeded already by 600 *l.* per cent.?—Yes; the estimate was exceeded to the extent already explained by me.

2282. Although they have sent repeated remonstrances, the only result of these remonstrances sent to the Government of Bombay is, that the Government of Bombay seems to have taken not the smallest notice of them, but the more constant and severe the remonstrances the more reckless and extravagant the expenditure?—Certainly; the Bombay Government carried on the work in spite of the remonstrances.

2283. Therefore this shows that on any kind of extravagance that the Governor of Bombay chooses to go in for, he can set the censure of the Central Government at nought, and take no further notice of it; they censure and censure, and more and more money is spent; that is what has taken place here?—That is what has occurred in this instance.

2284. Have we, then, any security that what has taken place here has not taken place in other instances, and will not occur again?—If the Government of India does not see fit to interfere.

2285. This house, which I understand is a country house, away from the Central Government House, is to cost 200,000 *l.*; are you aware how many houses the Governor of Bombay has?—I am not; one at Bombay, I think.

2286. He has two at Bombay. Now I want to ask you some questions about another large item of expenditure, namely, the hydraulic lift; who suggested that expenditure?—In 1866 there was a representation of a great want of dock accommodation at Bombay, from the Government of Bombay, and the plans which had been prepared for a floating iron dock were forwarded by the Bombay Government to the Government of India, with a request that they might meet with early attention.

2287. This hydraulic lift, as far as I understand, is to be used by ships of Her Majesty's Navy, and also by mercantile vessels, is it not?—Yes.

2288. Do you know what arrangement has been made, or whether any arrangement has been made at all, as to the appropriation of any fees which may be derived from the use of this lift?—I do not think that there is any information here precisely upon the point; the lift has barely been completed or at work, but I believe that arrangements are being made in Bombay for certain fees to be levied.

2289. But the lift, as I understand, has been made from the general revenues of India; this money, this 230,000 *l.*, has come out of the general revenues of India?—I do not know to what it has been charged; but the works that have been carried on in India have been made out of the general revenue.

2290. But do you know whether the Government will allow the fees which may be derived from

from the use of the lift to be appropriated by Bombay, or will require them to be handed over to the Central Government?—I cannot say what will be ordered upon the point; but I presume that it will be carried to the credit of the general revenue, there is no order passed.

2291. Do you know when this large expenditure was sanctioned, whether the Government of India attempted to obtain an estimate as to the probable return from it?—No, I do not.

2292. I suppose no such estimate was ever made?—I think not.

2293. Then they rushed into the expenditure blindfold; they allowed 230,000*l.* of public money to be spent in a semi-commercial undertaking, without taking the trouble to ascertain what would be the return from it?—There was a great want of dock accommodation, and therefore this hydraulic lift was ordered by the Secretary of State, because it was supposed to be the best method of meeting that want.

2294. But still, as a matter of prudence, considering the time that the finances of India have been in a very critical position, would it not have been prudent to have known what return it was likely to yield?—I am not aware whether such a calculation was made; I have no information about it.

2295. Are not the returns of this hydraulic lift to be made over to the Port Fund of Bombay?—I cannot say.

2296. I believe that the Government of Bombay pressed the Central Government to spend this money; it was provided by India generally, by people living in Burmah and other places, and the proceeds of the lift are going to be handed over to the municipality of Bombay?—I am unable to give information as to that.

2297. Sir *D. Wedderburn.*] Does not the sum of 23,000*l.* for such military works as you have described seem very exorbitant, considering the nature of such constructions in India?—The sums do seem to be large, but everything at Bombay is very expensive.

2298. This was at Gunnesh Khind?—I mean all about Bombay.

2299. Who was Governor of Bombay at the time that these works were undertaken?—Whoever was Governor in 1865-66.

2300. Sir John Lawrence was then Governor General?—Yes.

2301. Mr. *Campbell-Bannerman.*] Is it the case that a great part of the increased expenditure on barracks within the last 10 years is due to improved construction, in accordance with the recommendation of a Commission, over which Lord Stanley presided?—It is due to the necessity of providing for the large increased force which has come to the country since the Mutiny.

2302. But in addition to that, is not part of it also due to sanitary considerations?—Part of it, as I have already explained in my former evidence.

2303. Sir *J. Elphinstone.*] I understand that it is objected to the lift at Hog Island, that it has been paid for out of the revenues of India; do you think that that is an unfair charge upon the revenues of India?—I do not think that that is a point on which I can properly give any opinion.

2304. I merely wished, as a matter of opinion, to know whether a work of such extreme utility as the lift at Hog Island is not a legitimate charge upon the resources of the country?—That is not a question for settlement in my branch of the Public Works Department.

2305. Sir *G. Balfour.*] On the last occasion you were not able to give us distinct information as to whether the barrack accommodation was for rank and file, or for non-commissioned officers, rank and file, can you tell us now whether the statement of barracks that you have shows the number of non-commissioned officers, rank and file, or merely the number of rank and file?—The Occupation Report, to which I alluded, distinctly states that the warrant and non-commissioned officers are not included in the statement.

2306. To what extent of rank and file have you got barracks there?—In new double-storied barracks for unmarried men we have a completed accommodation for 6,621, and accommodation in progress for 4,780; total completed, or in progress, in new buildings, 11,401. In old buildings we have accommodation for 25,554 unmarried men; and as for the married men, we have completed accommodation, in buildings of all sorts, for 4,650, and in progress 351. The total completed and in progress is 41,956.

2307. That accommodation does not include the accommodation in the barracks in the Bombay and the Madras Presidencies?—It does not include the barrack accommodation in those two Presidencies.

2308. Have you that statement?—I have not.

2309. Then that statement is for rank and file?—As far as it can be ascertained, for rank and file only.

2310. Are you aware of the strength of the rank and file of the Indian Army?—I am not.

2311. (To Colonel *Innes.*) Can you give us a statement of the expenditure on barracks in the different localities in India; in how many divisions is the military expenditure?—I think I have 15 different heads and 12 provinces or divisions of the country.

2312. *Chairman.*] Have you an account showing the total expenditure under each of the heads classified for the several provinces up to 1871?—Yes (*handing in the same*, vide *Appendix*).

2313. Sir *G. Balfour.*] You stated the expenditure for native troops; have you any idea what the accommodation that has been provided for that expenditure is?—I can in a general way say what it is. I have not a special list.

2314. Perhaps you will fill up in a general manner in your Return the nature of the accommodation?—Yes; in Bengal I am aware that there is shelter for them at Shillong, and also for a regiment at Alipore; in the North Western Provinces and in the Punjaub, I believe, for Goorka regiments; in the hills mainly.

2315. But in addition to that you have provided native places for arms and for the hospitals?—Yes, all accommodation of that kind, specially for natives, is, I believe, included in this accommodation for native troops.

2316. Where shall we find the expenditure in the Straits Settlements?—That I do not know.

2317. You are aware that it was very heavy 10 years ago?—No, I know nothing about it; we have nothing to say to it.

2318. The expenditure in British Burmah is all provided for in your statement?—Yes.

2319. Can you hand in a statement of the expenditure on account of repairs?—Yes; in 1862-63 it was 197,788*l.*, and in the following years it was 195,565*l.*, 214,183*l.*, 243,110*l.* 203,542*l.*

Col. *W. A. Crommelin*, R.E., C.B., and Lieut. Col. *J. J. M'Leod Innes*, R.E.

25 March 1873.

203,542 *l.*, 232,939 *l.*, 249,397 *l.*, 203,705 *l.*, 201,710 *l.*; that last is for 1870–71, and for 1871–72 the amount is 231,327 *l.*

2320. Does any portion of your expenditure include barrack furniture?—None.

2321. You are aware that in the last year this expenditure has been transferred from the Military Department to the Public Works Department?—I am not aware of it, except from hearsay.

2322. Can you give us information as to the system on which the barrack furniture has been supplied to the troops?—It has not been supplied by the Engineer Department, but by the Commissariat Department. Whenever the Commissariat Department have felt themselves unable to supply those requirements, or when they have thought that the Public Works Department would be the most convenient agency, they have called on the Public Works Department to make or repair the furniture, and this has been carried out at contract rates fixed year by year.

2323. That has been going on for several years, has it not?—It has been going on for several years.

2324. For upwards of 10 years?—I cannot say how long; I think about 10 years.

2325. The Commissariat Department was practically the paymaster for the barrack furniture on account of the troops?—It was more than that; it was the responsible supplier, but it had the privilege of indenting upon the Public Works Department to help it.

2326. And the Public Works Department mainly carried out the work?—To a very great extent; not always.

2327. Does this expenditure on account of military works and repairs include the cost of the establishments and salaries?—No.

2328. Have we any means of arriving at a knowledge as to what the cost of the salaries and establishments was for the military works?—No, it is never divided off in that way. Establishments are paid and accounted for by localities. The way we arrange our work is in local divisions, and they, that is the establishment of a division, are employed on all the works of that division. In all military and civil buildings, in all ordinary public works, they are charged as the establishment of the division to which they belong, and their cost is not charged to the works.

2329. Could you give us any idea by how much the military works should be increased, if the cost of the whole establishment were rateably levied upon them?—Yes. I have got it for an average of years, and for three special years. I can say this, that the proportion of the whole cost of all the salaries to the whole outlay for the whole period from 1862–63 to the period 1870–71, has been 14·04 per cent. That includes all ranks from chief engineers of the highest grade down to the very lowest members of the establishment.

2330. *Chairman.*] That is on the whole outlay of 10,000,000 *l.*?—On more. Not only upon all military works, but on all ordinary expenditure, civil and military, and irrigation.

2331. Sir *G. Balfour.*] But considering that the amount expended on the whole public works, civil and military, has varied very considerably year by year, has the ratio of the establishments also varied?—It has varied very much; it has been very high in the years when the expenditure has been small, and has been low in the years when the expenditure has been greater. I can tell you what it has been in certain years. In the year 1862–63 the proportion of establishment was 17·36 per cent.; in the year 1868–69 it was only 12·21 per cent.; and in the year 1870–71, when the expenditure was reduced, and of course, establishment could not be reduced so rapidly, it was as much as 19·94 per cent.

2332. Could you state the absolute cost of the establishments in those three years?—No, I have not that here.

2333. We have the cost of the establishment given in this return before me; but in addition to that, there is expenditure for establishments in Public Works Extraordinary?—Yes.

2334. Did you include that?—No.

2335. Then that establishment for Public Works Extraordinary is exclusive of the others?—Yes, it is charged for separately, and is charged to those works; it is not charged in the same way as ordinary establishment in the general accounts.

2336. Then your per-centages are charged upon the expenditure for ordinary public works?—The whole of the ordinary public works of India.

2337. Mr. *Fawcett.*] But how can you separate the establishments in the two classes of public works?—They are kept separate in this way, that the extraordinary works are large works which have their own specific establishments; and the only establishments charged to them that are not thus employed solely for them, are the higher supervising establishments of the different provinces; and of these as fair a proportion as possible of the cost is added to the cost of the establishments which are specially employed upon those works.

2338. Take the secretariat, for instance, in the Public Works Department; a portion of that ought to be applied to Extraordinary Works, ought it not?—The Secretariat of India is not charged to the Public Works Department at all.

2339. I mean, for instance, the salaries of officials?—The salaries of officials that have anything to say to the Extraordinary Works are a portion of them charged to those works; it is divided off at the end of each year.

2340. Sir *G. Balfour.*] Does the secretariat, in the sense in which the honourable Member for Brighton referred to it, include the same kind of charges as the other secretariats?—Yes.

2341. Then is your salary and that of Colonel Crommelin included amongst the amounts upon which the per-centage is struck?—No; the Public Works Secretariat of India is not charged to the Public Works Department at all. The secretary to the Government of India, the deputy-secretaries to the Government of India, and the whole of that office are charged in the secretariat of India, and are not charged to any specific department.

2342. But the secretariat of the public works of India is much larger in proportion than the other secretariats, is it not?—That I cannot say. I have no means of judging.

2343. Mr. *Fawcett.*] The point that I want to get at is this: you have given a certain estimate of the expense of salaries proportioned to the whole outlay, but if the expense of the secretariat is not charged that per-centage would lead people to very erroneous conclusions?—The secretariat which is not charged is the secretariat of the Government of India. That would be a very small

small fraction of this amount; I fancy it would hardly affect more than the second place of decimals.

2344. You receive for instance a certain stipend, and other people like you, and one chief part of your work is in looking after the military public works and civil works, is it not?—Well, I have got to deal with the accounts of all public works in India.

2345. If public works were not being carried out it would not be necessary to employ you in that way, and your salary would be saved or you would be employed in some other way?—Certainly.

2346. Therefore it is correct, is it not, to charge the salaries of gentlemen in your position in estimating what is the expense of salaries proportioned to the outlay?—If a person inquires what have been the whole expenses of our department, meaning to include the salary of every person that has any connection with that department, and distinctly saying that that should be included, then of course ours should be included; but if we show in our accounts that the expenditure is distinctly exclusive of it, there is no misconception.

2347. What is the entry in the accounts that shows that?—Our accounts show the salaries and expenditure due to all the establishments of all the provinces and of every person connected with the Public Works Department except the Secretariat of India.

2348. Is that stated in the accounts; is it mentioned?—Distinctly; the accounts are by provinces, and they include every person that has got anything to say to the works of those provinces.

2349. I want you to read out to me the paragraph in the accounts which states that. It may be inferred from the accounts, perhaps, but is it so stated in any accounts presented before Parliament?—I have not got the financial accounts that are presented to Parliament with me.

2350. It does not appear to me now that it is stated in so many words in those administrative accounts; you simply have to infer it?—That is quite possible; I do not deal with those financial accounts which are rendered to the Houses of Parliament.

2351. But in giving that statement of the per-centage charges of salaries compared with the outlay, did you read that statement?—No; I mentioned that it was a memorandum of my own. I am giving this as my own personal evidence from my own personal knowledge, from a scrutiny of the accounts as to our outlay in India.

2352. Sir *G. Balfour.*] Would you look at the statement given in the Appendix of last year, at page 554, and see whether it bears out your statement?—That column is for "Establishment and other miscellaneous charges, tools, plant, stock, materials, &c." That covers a great deal more than our salaries; it includes a number of other kinds of charges. In the first place, the cost of all the ordinary tools and plant employed in the construction of the works, all contingent charges of every kind and sort, all travelling allowances and everything of that kind.

2353. Then the cost of military works which you have already given us is exclusive of all these various charges for tools, plant, and so on?—Entirely.

2354. Then have we any separate account of the amount of that stock and materials, tools, and plant?—Certainly; it has not arrived, but it is a distinct head of our account.

2355. Then the military expenditure has to be increased in proportion to the sum expended in tools, plant, and materials?—For military works, if they were exclusively so employed.

2356. But as we have no means of dividing that, we must take it proportionately to the sum expended?—Yes.

2357. *Chairman.*] You were asked a question with reference to the charge for the secretariat, whether it was in the expenditure for the work. Will you be good enough to look to the account of the expenditure on administration. You will find this item under the Government of India of Public Works Secretariat, 31,961 *l.* shown as a separate item?—It is quite clearly shown here in the accounts given to Parliament as a distinct item under the head of the Government of India. In the year 1870–71 this is 31,961 *l.*

2358. Sir *G. Balfour.*] That includes your salaries as well as all the establishments of the governor general?—Yes; and all the expenses of that office.

2359. Mr. *Fawcett.*] What was the whole expenditure that year?—The whole expenditure which we had to deal with included not only all our ordinary but our extraordinary expenditure. There was also our revenue, and the supervision of guaranteed railways, and of everything going on in the shape of public works. The total amount of public money that that establishment had to deal with, it is difficult to mention. All our own expenditure for that year was, I believe about 5,000,000 *l.* or 6,000,000 *l.*, it certainly was very much more than 3,000,000 *l.* But the Secretariat has to deal with matters ranging far beyond what is concerned with our own expenditure; for instance the guaranteed railways.

2360. *Chairman.*] For 1870–71 the total is 5,300,000 *l.* for public works, civil and military?—Besides that there is extraordinary expenditure, I think.

2361. No; this includes everything?—Our public works secretariat deals with the revenue and also with the guaranteed railways, and with all sorts of local funds.

2362. Sir *G. Balfour.*] Then, in addition to the Secretariat of the Government of India, we have the Public Works Secretariat of Madras and Bombay to add to the expenditure?—They are included under the head establishment in the Public Works Department; they are included in the establishments of Bombay and Madras, and similarly the establishment in Bengal, establishment in the North Western Provinces, and so on. They help to get at that per-centage of 14 per cent.

2363. Then you deal differently with the Secretariats of Madras, Bombay and Bengal, inasmuch as you include their charges in the amount on which the per-centage is struck?—They are included in the public works expenditure.

2364. (To Colonel *Crommelin.*) On the last occasion you gave an account of the average cost of three stations of barracks erected for European troops. Can you give us a more accurate and detailed statement of the cost of barracks per head, derived from the excellent accounts which Colonel Innes now has produced to us?—The differences are not sufficient to materially affect the rates that were then struck.

2365. In looking over the detailed statement of the expenditure on account of the accommodation for troops, I observed in the paper before me very specific statements of the number of men

Col. *W. A. Crommelin*, R.E., C.B., and Lieut. Col. *J.J. M'Leod Innes*, R.E.

25 March 1873.

and the cost. It would be an advantage if we could get more detailed accounts of the cost in different localities?—But the book you allude to does not give the information exactly. It is impossible to say how far the numbers of men, quoted in the several items, absolutely apply to the figures of expenditure.

2366. *Chairman* (to Colonel *Innes*).] Will you explain a little more to the Committee how you arrive at the 14 per cent. for the general charges?—I took, as a basis, the whole expenditure and ordinary cost of salaries for a given number of years.

2367. But would that give you the 14 per cent.?—Yes.

2368. Because, if we take for example the years of which we have the returns of miscellaneous charges, in the year 1871 they appear to be 1,000,000 *l.* out of a net expenditure on Public Works Ordinary (which includes, I believe, all the public works) of 3,910,000 *l.*, including the charges?—I do not know what those "miscellaneous charges" are.

2369. These are the sole miscellaneous charges here for "Establishment," which I presume is represented by establishment with all its subsidiary expenses?—Establishment with all its subsidiary expenses, instead of being 14 per cent. for the whole period, would be 16½ per cent. The word I used was "salaries" only; that was in reply to the question that Sir George Balfour asked me.

2370. If we take the accounts ending the 31st March 1871, the item here is establishment 1,013,000 *l.*; tools and plant, 78,419 *l.*; profit and loss, 7,071 *l.*; those are the three items extending over all India, including the Government of India?—In the years 1870–71 the proportion of the outlay under establishment to the whole outlay is as worked out by me 23·29.

2371. What is your gross sum?—I have not got those amounts at all here. I have answered these questions because I happen to have this paper with me; and this gives simply my own personal evidence.

2372. Mr. *Fawcett.*] Do your figures show that the charge has increased. You give 14 per cent. as the average?—That is the average of 10 years.

2373. But could you give the separate years, so as for us to see whether they have increased or not, because you have mentioned one year in which they were 23 per cent.?—I have no memorandum of that kind; but as I have mentioned before, I have three typical years, I may say; 1862-63, which was when everything, so to speak, was going on as of old; 1868–69, which was the year of maximum outlay, and of comparatively cheap establishment; and the year 1870–71, when the outlay was very little.

2374. *Chairman.*] Not very little, but smaller?—Was not the outlay very considerably reduced in that year? at any rate it was an expensive year as regards establishments.

2375. The whole expenditure in the other Return is 5,381,000 *l.* for 1870–71, and then the whole salaries and establishments is 945,000 *l.* according to this return; the two accounts that I have been putting before you do not seem to correspond?—No.

2376. Mr. *Fawcett.*] Will you give the percentages for the years you have mentioned?—All establishment charges, as my memorandum shows, in 1862-63 were 20·16; in 1868-69 they were 14·48; and in 1870–71 they were 23·29. And I will now give you salaries. 1862–63 they were 17·36; in 1868–69 they were 12·21; and 1870–71 they were 19·94.

2377. Therefore that shows that one of the arguments to be alleged against Government carrying on industrial works, is that if they have to diminish the outlay, the establishment expenses and the salaries remain pretty constant?—That certainly is an objection; and there is a counter objection, that if increased expenditure should suddenly be required, you always have not got the establishment wherewith to carry it on.

2378. *Chairman.*] The difference of the large total of 5,000,000 *l.* and the item appearing in the Government account, net, 3,900,000 *l.*, would appear to arise from the larger sum, including the deficit on the State railways paid to the railway companies?—I do not know those figures which you are referring to.

2379. You have not included in the expenditure on public works the deficit on the guaranteed railways, have you?—No.

2380. In making your estimate of the percentage of charge, you have not included the sum paid by Government on account of the guaranteed interest of railways?—No; this account has nothing to say to those. It refers to ordinary public works. This memorandum was not an abstract matter; it was prepared with reference to an analysis of our establishment charges, and it excluded sundry items. For instance, it excluded the cost of any such institution as the Roorkee College, and odds and ends of that kind, which have nothing to say to the analysis of the cost of establishment.

2381. Sir *G. Balfour.*] Is your figure struck upon the net or gross expenditure of public works?—Upon the gross ordinary expenditure on military works, civil buildings, roads, canals, and so on.

2382. Do you add the cost of establishment, tools, and plant, to the total outlay, and then strike the per-centage?—That is the per-centage upon the total outlay.

2383. *Chairman.*] That total outlay including the per-centage?—Yes; it is the per-centage upon the total outlay.

2384. Sir *G. Balfour.*] I understand that the Public Works Department are sending home from India more detailed information connected with these establishments?—Yes, a full statement.

2385. When that comes you can give us the actual amounts as well as the per-centages?—Certainly: I have merely on the occasion taken the opportunity of giving what information I can. I wish it to be understood that the figures involved here compare like with like: that they compare the establishment with the works which that establishment had to deal with.

2386. (To Colonel *Crommelin.*) Will you hand in that occupation statement of yours with regard to the barracks?—Yes (*handing in the same*).

Friday, 28th March 1873.

MEMBERS PRESENT:

Mr. Ayrton.	Mr. Cross.
Sir George Balfour.	Mr. Dickinson.
Sir Thomas Bazley.	Mr. Fawcett.
Mr. Beach.	Mr. Lyttelton.
Mr. Birley.	Sir Stafford Northcote.
Mr. Candlish.	Mr. John Benjamin Smith.
Mr. Baillie Cochrane.	Sir David Wedderburn.

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

Colonel WILLIAM ARDEN CROMMELIN, R.E., C.B.; Lieutenant Colonel JAMES JOHN M'LEOD INNES, R.E., re-called; and further Examined.

Col. *W. A. Crommelin*, R.E., C.B., and Lieut. Col. *J. J. M'Leod Innes*, R.E.

28 March 1873.

2387. *Chairman* (to Colonel *Crommelin*).] In the answer that you gave on the last occasion to the Question 2263, you were under the impression that the expenditure for the whole building on the new Government House for the Governor of Bombay at Gunnesh Khind did not include the charge for the quarters for the guard; have you ascertained whether that is correct?—I have ascertained that it did include the cost of the guard.

2388. Have you ascertained also clearly whether it did or did not include the cost of the furniture?—It did not include the cost of the furniture.

2389. You stated that this kind of expenditure might go on if no steps were taken by the Government of India to check it. Are you aware whether any such steps have, in fact, been taken, or have you ascertained that they have?—In answer to Question 2284, I simply said that it might go on "if the Government of India does not see fit to interfere." But the Government of India have taken measures, which Colonel Innes, perhaps, can explain better than I.

2390. (To Colonel *Innes*.) Will you be good enough to give that explanation to the Committee?—Since the expenditure was so incurred at Gunnesh Khind, two arrangements have been made by the Government of India which have materially altered their control over what goes on at Bombay. One is that the Accounts Department, and the officer who has charge of the accounts, have been brought under the Government of India, and report direct to the Accountant General to the Government of India everything that goes on in the shape of expenditure, and especially report everything that is unauthorised and improper. The other is that the officers of the Finance Department, the local accountants general, who alone can supply funds, have now been given means of knowing how the expenditure goes on, and if the money that is supplied is being improperly used, or is at all liable to be exceeded, they can stop the supplies.

2391. Sir *G. Balfour*.] I want to fix precisely on whom rests the responsibility for the expenditure on military works, and I will read to you the following instruction which was issued on the 16th of November 1860, in the Financial Department, No. 119, paragraph 26. It is to be understood by all the departments concerned, that as a general rule, and except in special cases of emergency, and in cases in which the Governor General in Council shall otherwise direct, all proposals in the Military, Political, or Financial Departments bearing on questions of military finance, and all proposals in the Public Works Department for expenditure (other than that on ordinary repairs) on military public works, shall be sent for opinion and report to the Military Finance Department before the orders of the Governor General in Council are taken upon them. That is a resolution which was written by Lord Canning himself. Now I want to know to what extent you can show how far the expenditure is controlled by the Military Department now, as compared with that date 1860, when that resolution was issued?—The control or scrutiny that the Military Department has over the expenditure which is incurred by the Public Works Department on its account, that is to say, on account of buildings, and so forth for it, takes place in two ways. First, that every design and estimate for every work connected with the Military Department has to be scrutinised and approved by some officer of the Military Department; who that officer or office is, depending on the magnitude of the expenditure involved. The other is that the Budget allotment for the year on military works is fully examined by the Military Department, and all the arrangements for its utilization are examined by the Military Department before it is sanctioned.

2392. And can you say of your own knowledge, that that examination has been continued to be made since 1860 up to the latest date?—Certainly.

2393. Then has all this large expenditure for military works been subjected to that examination which you speak of?—The actual expenditure, after it has been incurred, is susceptible of being overhauled by the Military Department, inasmuch as the accounts are sent to them, or are received by them in ordinary course, and can be overhauled by them to any extent that they choose. Whether they do examine them, is not a question

Col. *W. A. Crommelin*, R.E., C.B., and Lieut. Col. *J. J. M'Leod Innes*, R.E.

28 March 1873.

on which I can say anything positively. I believe they do so very fully.

2394. Within what time are you able to send your accounts of actual expenditure to the Military Department?—If the Military Department want to know the expenditure that occurs upon any building, or any one work, or any head of expenditure, it can always be given within about two months after that expenditure has been incurred. Our annual accounts of the whole year in full detail, are always ready to be seen by any person that wants to see them in two and a-half or three months after the close of the year, but they are not always published and closed perhaps, for a little later than that, in order to allow for any adjustments that may be required between the different departments of Government.

2395. But seeing that the English army of India has been very considerably increased by the change that has taken place in the large addition of European troops as compared with native troops, are you aware whether that expenditure on account of the military works has ever been subjected to review by the Military Department?—My impression and belief is that it is not only annually, but constantly being reviewed by the Military Department.

2396. The actual expenditure?—The actual expenditure. My belief arises from the constant references that are made to me to give information as to what the outlay has been in various ways on various works, and up to date under various heads.

2397. Although that expenditure on account of military works is inserted in your accounts, this expenditure virtually is entirely a military expenditure, in the sense that the estimates have been sanctioned by the Military Department and that the expenditure has been subjected to their examination?—In that it certainly is expenditure of the Military Department in the same way that all our expenditure, with the exception, I fancy, of railways, is overhauled by some other department, and requires to meet the approval of some other department.

2398. Considering that the expenditure on account of military works was up to 1866-67 invariably shown in the military expenditure, and seeing that the expenditure on military works is still shown in the Army Estimates of the Imperial Service, have you ever turned your attention to the propriety of showing, as a portion of the military expenditure, the sums expended on account of military works in the military estimates?—I have not turned my attention to the subject. It has been decided, and I know that it has been more thoroughly investigated than I have ever attempted to investigate it. It was last investigated, I believe, in 1864, when two gentlemen were sent out from here to examine into the system of accounts in India, and I believe it was then decided that whatever expenditure was incurred by any department should be considered as the expenditure of that department. Therefore any expenditure incurred by the Public Works Department, whether for military buildings, civil buildings, irrigation, or any other purpose, was to be recorded, kept, and accounted for as the expenditure of that department. Whether that is right or not right, is a matter of opinion. It is a matter on which I am not in any way qualified to give an authoritative opinion.

2399. Can you refer us to the papers wherein that opinion was expressed?—No, I cannot; but I am very certain that it was gone into at that time, and that was the decision.

2400. And you think that there was an actual report to that effect then?—Yes, I am confident that the principle was definitely laid down.

2401. Could you, as easily as you have furnished the Committee a statement of the expenditure for the construction of public works, furnish a detailed statement under the separate divisions of the repairs of these same works?—I could prepare a similar statement; but to do it I should have to go into every detail in this large book in my hand; I have done that for the works, and I could do it for the repairs; but to take out every single item that has been going on for 10 years, and allot it to its proper head, and so redistribute the expenditure, would be a great deal of labour.

2402. If the repairs on account of accommodation for the troops may be considered as nearly all, or wholly expended on account of European troops, this abstract which you have now got in your excellent accounts, would suffice?—I believe there is so little repair in any buildings for the shelter of troops, that that abstract would give you really the information which you want for all practical purposes.

2403-2415. *Chairman.*] Are you able now to give the statement of expenditure within the last few years on the Straits Settlements?—I can give the total outlay on military works in the Straits Settlements. The questions that I was asked on the last occasion were with reference to the construction only; I could not give that, but I can give the whole. During 1862-63, it was 9,134 *l.*, during 1863-64, it was 8,193 *l.*; during 1864-65, it was 4,790 *l.*; during 1865-66, it was 4,962 *l.*; and during 1866-67, it was 5,579 *l.*

Friday, 4th April 1873.

MEMBERS PRESENT:

Mr. Ayrton.	Mr. Eastwick.
Sir George Balfour.	Sir James Elphinstone.
Mr. Beach.	Mr. Fawcett.
Mr. Bourke.	Lord Edmond Fitzmaurice.
Mr. Baillie Cochrane.	Mr. Robert Fowler.
Mr. Cross.	Mr. Lyttelton.
Mr. Charles Dalrymple	Mr. John Benjamin Smith.
Mr. Dickinson.	Sir David Wedderburn.
Mr. Grant Duff.	Sir Charles Wingfield.

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

Mr. JAMES MACKENZIE MACLEAN, called in; and Examined.

2416. *Chairman.*] HAVE you resided in India?—I have been connected with India for over 13 years.

2417. What has been your occupation, and where have you been?—Journalist in Bombay.

2418. Have you in that position directed your attention to the administration of affairs in India?—I have.

2419. And have you formed any views upon [illegible]e policy that has recently been introduced with [illegible]erence to what is called decentralisation?—I [illegible] had occasion during the last two years to [illegible]y a great deal of attention to that policy and [illegible] its results in Bombay.

2420. If you desire to express your views on that subject, perhaps you will state them now?—I think that the cardinal defect of this policy is that it takes away what you may call the only available check in India on the ambition of subordinate officials. It is as true now, perhaps truer, than when Mr. Shore wrote it forty years ago, that the greatest curse of India is often a zealous official. In that country it is the interest of every governor of a province or a town, and of every ruler of a district, to magnify himself and the Government to which he belongs by spending as much money as possible; and the only check that you can apply in a country where there is no real representation of the people possible, is a check from above, the check of somebody devoid of all local predilections, and able to reduce the demands of different provinces to a proper proportion, and to keep them in due relation to one another.

2421. Do you think that spirit which you have described finds its way into the Council of the Local Governor, or into the mind of the Local Administration of the Province?—In Bombay, decidedly it has done so.

2422. Do you think that there has been too great a disposition to embark in novel enterprises?—Yes; there has been great zeal for expenditure, and very little desire for reduction in any way.

2423. Do you find that in the Presidency town, where I presume you have resided, there is a great disposition to stimulate the Governor and Council to embark in all kinds of undertakings?—On the part of individuals, perhaps; not on the part of the community.

Mr. *J. M. Maclean.*

4 April 1873.

2424. Then your observation applies more to those in the public service throughout the Presidency, each wishing to bring himself forward with new enterprises?—Yes.

2425. Do you think that that has been the main cause which has stimulated such large expenditure in the Presidency of Bombay?—Perhaps you will allow me to state what have been the actual results of the decentralisation policy in Bombay. The decentralisation minute was published about the end of 1870, and Sir Seymour Fitzgerald, the Governor of Bombay, in his budget speech of 5th April 1871, said the Government of India had left him with a deficit of 100,000 *l.*, which he must make good somehow. He did not attempt to do so by reducing expenditure, but he proposed to levy taxes to increase his revenue. He brought forward a tax on feasts, which was withdrawn afterwards; it was strongly objected to by the natives.

2426. Mr. *B. Cochrane.*] On what description of feasts?—Every kind; it would have included marriage ceremonies, and even religious ceremonies of some kinds, according to the native belief. But he succeeded in passing a measure for levying a tax, known as the non-agricultural cess, on the rural non-agricultural population, and also in fixing a contribution on the large and wealthy cities of the Presidency towards the general expenditure of the police. Now, with regard to this non-agricultural cess, the excuse given for levying it was, that there were a large class of people in the Mofussil who were not occupiers of land, and did not contribute to the land revenue, and whom, therefore, it was fair to tax; but the tax went down as low as incomes of 50 rupees a year; anyone who had 50 rupees a year of income was to pay a tax of eight annas; and the fee increased according as the income increased. This tax was introduced at a time when the Government of India was relieving all incomes of less than 750 rupees a year from the payment of Imperial income tax; so that, so far as regards this measure, the result of decentralisation in Bombay was to substitute an income

Mr. *J. M. Maclean.*
—
4 April 1873.

tax on incomes of 5 *l.* a year for an income tax on incomes of 75 *l.* a year.

2427. Sir *C. Wingfield.*] Will you mention what number of people it was estimated would be brought under taxation by this tax?—The tax was to produce four lacs of rupees. I do not know how many people were expected to pay it; but practically it was to hit everybody in the Mofussil who did not pay land tax; because I suppose there is no household in the country where there is not as much as 50 rupees earned in the course of the year.

2428. If you had the report of the debate in the Governor's council with you, I think you will see the number stated there?—I have not it with me to refer to.

2429. *Chairman.*] Do you know whether there was any feeling of satisfaction or dissatisfaction at these proceedings of the Government of Bombay amongst the community?—I cannot say that there was any feeling amongst the community, because the tax touched a class whom one seldom hears from directly; but I know that the district officers generally were strongly indignant at the tax being passed, and very many of them personally made representations to me of the extreme injustice which it inflicted on poor people, and of the discontent which it was creating all through the Presidency.

2430. Without wishing to penetrate the secrets of Indian journalism, I may perhaps ask whether you get any communications from natives in the interior, or do they come from persons in the public service, the few Europeans who are resident in the interior?—Almost always from Europeans; more come nowadays from natives than used to come from them.

2431. But are they the English educated natives of the public service, or independent natives?—Independent natives. I have had some communications about the assessment of the land tax from natives who could not speak English at all, in North Canara.

2432. Do you mean that they write to you in the vernacular?—No, they came up and employed an interpreter.

2433. But I mean, did you receive any written communications?—Very seldom anything of that kind.

2434. You do not keep any establishment to translate letters written to you?—No; we get translations from the native press regularly, but nothing else.

2435. And in the Presidency town are the communications that are made to you from Europeans exclusively, or do the natives communicate to you in the form of letters, and otherwise?—Natives communicate in Bombay very freely indeed upon all subjects. There is a very large class of educated natives there who take a great interest in public affairs.

2436. Are the educated class of natives English educated, that is people who read and write English?—Mostly.

2437. I presume that your journal circulates almost entirely amongst Europeans, and to some extent, also among the natives who read and write English?—Yes.

2438. The chief circulation is among the Europeans?—Yes.

2439. And among the public servants?—I do not know that.

2440. I mean except in Bombay town, and there it goes amongst all classes?—Yes.

2441. Mr. *Fowler.*] It is entirely published in English?—Yes.

2442. *Chairman.*] When you speak of a control being needed beyond the local government, do you mean the control of the Secretary of State here, or the control of the Government of India?—The control of the Government of India. I think the Government of India used to exercise a very careful supervision over the different provincial budgets, and the tendency was, as a rule, in favour of economy. By this decentralisation policy, they shifted responsibility on to the provincial governors, and became less anxious to control expenditure.

2443. Can you give the Committee any idea as to what is thought by the community of the governor transacting his business in the legislative council; do they consider that he is as much responsible as if he had no council, or do they consider the legislative council responsible for what is done?—I think the governor is generally held responsible.

2444. What part does the legislative council which actually passes the laws play, in the opinion of the public?—They consider that it is simply to give advice, and express opinions on any measure; but there is always a majority of officials to carry any measure.

2445. As officials, they are not bound to obey the governor's orders, are they?—No.

2446. Then, in point of fact, he cannot do anything affirmatively unless they choose to consent?—No.

2447. Therefore you could not hold a man responsible for a policy, could you, which he could not carry out?—Well, if the Governor of Bombay comes to the legislative council, and says, "Here is a deficit; I am bound to make good; you must pass these measures," I think that the responsibility rests mainly upon him. They must supply money in some way or another to carry on the public service.

2448. But with regard to measures which very often lead to expenditure, and which create a deficit, can the Legislative Council deal with them; do the public consider the Legislative Council in any way responsible for what they do, or do they put it all on the governor?—I do not know what measures the Legislative Council passes that create expenditure; they have no power over expenditure, as I understand by the Council's Act.

2449. But measures of administration lead, do they not, to expenditure; supposing, for instance, they passed a measure to inspect cotton all over the Presidency, would not that involve the Government in expenditure?—Yes, that would do so.

2450. Mr. *B. Cochrane.*] Do you know how much money was raised by this tax on feasts?—It was never passed into law; it was withdrawn.

2451. *Chairman.*] Have you any other point to state on the immediate effect of the decentralisation?—There is another thing which I wanted to call attention to, and that is this: in the old days there was an imperial grant made by the Government of India towards the cost of the police in Bombay, a grant of a lac of rupees a year. When this decentralisation policy was carried out, Sir Seymour Fitzgerald withdrew this grant from the police, and told the municipality of Bombay to raise the money, and pay the police themselves. This was in the middle of a financial year, when the municipality was already in difficulties,

ficulties, and the practical result was to throw on the municipality the responsibility and the odium of levying fresh local taxes on the people to supply the deficit created by the reduction of the imperial income tax.

2452. Has the municipality the power of reducing the police establishment?—No; that is fixed by the Government; they have only the duty of paying it.

2453. That is a case, therefore, in which the expense of local administration is incurred by the Government, and the mere payment reserved to the local administrators?—Yes; it was looked upon as very unjust in Bombay, because Calcutta and Madras, I believe, still receive these grants from the Imperial Government; but it was taken away from Bombay, and there were great complaints at that time of the state of the municipality. There is another point which I would notice about the policy of decentralisation; namely, that it stimulated very much the zeal of the district officers in Bombay to increase the assessments on the land. Of course the members of Committee are aware that the land in Bombay is mostly let out on 30 years leases; the settlement there is for 30 years; these leases began to fall in a year or two ago. The land had been let on very low terms indeed, with a very satisfactory result in the first settlement, and now that these leases are falling in, so great is the demand for money, I may say, at head quarters, that it creates a very unwholesome zeal in the officials of the Revenue Survey Department to get as much revenue as they possibly can, and to screw up the land assessment as high as possible. One instance last year occurred in the talook of Madeh, [illegible] the Deccan. It was re-assessed at an increase [illegible]0 per cent., in spite of the opinion expressed [illegible]e collector of the district that such an ad[illegible]ce might give rise to some discontent. I give that as an example of what I think is the tendency of the Bombay Revenue Survey to reverse the very wise and beneficial policy introduced by Sir George Wingate and others, of letting out the land there on the lowest possible rental, in order to secure an increase of cultivation, and to make the agricultural population contented with our rule.

2454. Was that land, which was so much increased, in a very favoured position with regard to the railway station, or otherwise?—The Great Indian Peninsula Railway passes near it; but the rule on which the revenue survey went was, that prices had increased so much of recent years, and therefore the land could bear such and such an increase of assessment. They did not take into account what it seems to me is evident, that prices have begun to fall very heavily in the last few years in Western India generally, especially the price of cotton, and all other agricultural produce. Rents in Bombay are falling very largely indeed, and prices generally; so that this increased assessment may be coincident with a very heavy fall in prices really; and there is no uniform rule at all about this re-assessment; the Government of Bombay may increase it to any extent by an arbitrary decree, as it were; they have simply to say that the land is to be re-assessed at so much, and it is done. The land revenue is never brought under the consideration of the Government; it is the greatest part of the revenue of India, and yet it is never formally discussed; the Local Government can do almost what they like with it at their own caprice.

2455. When you say that it is never brought under the consideration of the Government, what part of the Government do you mean?—The Legislature; there is no mention of it in the annual Budget.

2456. Have you had your attention drawn to the administration of the Department of Public Works in Bombay?—Yes; we have had a great deal to do with the Public Works Department in Bombay, and I think that the general feeling of the public there towards it is one of very deep distrust on account of its action of late years.

2457. To what particular action do you refer?—Especially to its management of the foreshore properties of the island of Bombay. All round Bombay there are low-lying foreshores which are open to reclamation in one form or another, and there have been very many schemes for forming docks and piers there for the accommodation of the trade. The Public Works Department began now, I suppose, some 15 years ago, granting concessions to enterprising men, who proposed to establish wharves, and to make basins, for the trade. There was the Colaba land given in that way, and the Elphinstone land; this went on for some years, and then there was the celebrated concession to the Back Bay Company in 1864, which provoked a great deal of discussion, and very strong attacks upon the Government for its land policy. The Government then changed its views, and said that it would keep the site of Moody Bay, which is alongside the Elphinstone land; there is a very valuable site for docks there.

2458. That is a site in front of the Fort town?—Yes, it is just in front of the passenger station of the Great Indian Peninsula Railway. The Government said that they would reclaim this themselves, and make docks there for the convenience of the trade. Some money was spent on the Moody Bay Estate from year to year; a great deal, about 400,000*l.*, has been spent upon it altogether; but about 1867 the Elphinstone Land Company, which had carried on its works with great vigour and energy, and really had constructed a very excellent work, was anxious to get money to go on with; the money was not very easily forthcoming in Bombay at that time, and the first suggestion was that Government should make a loan to the Company to go on with these works. I think General Strachey proposed after that that the Government should buy up all the foreshore of Bombay, on the ground that it was not a right thing to let private companies have such privileges. This idea germinated, and was taken up by Sir Seymour Fitzgerald, and afterwards by Lord Mayo, and in 1869 the Elphinstone Company's property was purchased by the State for about two millions of money.

2459. Are you sure it was as much as two millions of money?—It was 1,800,000*l.*

2460. Sir *C. Wingfield.*] At its par value?—At the par value of the shares. The shares were 1,000 rupees, and they had fallen at one time to 330 rupees, and the Government paid 1,000 rupees, the par value of each share.

2461. *Chairman.*] What was the market value of these shares a twelvemonth before the purchase, or when the purchase was mooted?—It was about 1867, I think, that they went down as low as 330 rupees; it must have been a little before that, because it was in 1867 that it was first bruited about that the property might be purchased by the State; then, of course, the shares gradually rose.

Mr. *J. M. Maclean.*

4 April 1873.

2462. They rose with the idea?—They rose with the idea; it was entirely owing to the idea that the State would purchase the property that the shares did rise.

2463. Then 330 rupees may be considered to have been the commercial value of the undertaking at that time?—Yes.

2464. Mr. *Fowler.*] But that was at a time of panic, I suppose?—It was at a time when the value of property was very much depressed.

2465. *Chairman.*] The 330 rupees would be the price arrived at upon the rental of the property; the price must have been based upon the rental of the property, I presume?—No; I think it was a speculative price altogether, because the property was bringing in very little indeed then; they were still spending large sums of money in reclaiming.

2466. Do you know whether in any access of speculation this property had been above the par value of the shares?—I think they were in 1864; everything was at a premium then.

2467. Mr. *Fowler.*] What was the highest point?—I do not know.

2468. *Chairman.*] That was a price arrived at by people who never paid for anything, was it not?—I should say so.

2469. Did not all those Bombay speculators who inflated prices, end by retiring into privacy without fulfilling their engagements?—A good many of them.

2470. Was the only ground for buying this property the vindication of a principle that people ought not to have poperty in Bombay on the sea shore; or had it any other object?—The object stated in the Administration Report of the Bombay Government last year was in order to prevent the foreshore of the harbour from becoming the monopoly of a private company. Well, they had it in their own hands at the time to prevent that by simply going on with the Moody Bay Works, and completing them. Perhaps you will allow me to contrast the actual expenditure and the results of what they have done with what they might have done. The amount spent by the Government was 2,800,000 *l.*, which they wished to fasten on the Port Trust,

2471. You speak of the Port Trust as if we knew it; what is the Port Trust?—The Port Trust is a body that the Government proposes to form (an Act has now been passed recently) to manage all the foreshore properties of Bombay, including the Elphinstone property and all those belonging to the Government.

2472. When you speak of it as a Trust, do you mean that it is a body of Commissioners appointed by the Government?—Yes, and including representatives of the mercantile community.

2473. Is this Commission under the control of the Government?—Practically it is; a Government official is to be at the head.

2474. You do not know whether the Government have reserved to themselves any absolute controlling power?—I think they keep the financial power in their hand; Sir Philip Wodehouse was very anxious not to give this to a Board. This Port Trust was to take over and be responsible for all the expenditure on the harbour foreshore of Bombay, including the purchase of the Elphinstone property; that amounted to 2,800,000 *l.*, I suppose about 2,000,000 *l.* of money was spent on the Back Bay scheme, and if you put down another 1,000,000 *l.* for the Mazagon and Colaba, and other properties, you have had an expenditure on the foreshore of Bombay, from one source or another, of nearly six millions of money.

2475. That is for the purpose of converting the sea-covered shore into dry land?—Yes; and of making wharves and docks. But not a single dock has been provided yet in any way. A number of wharves and boat basins have been built, but at the present moment I suppose Bombay is, with all its natural capabilities, the very worst harbour for landing and shipping goods that you can find all the way between England and India.

2476. Have any arrangements been made, as the result of this expenditure, by which a sea-going vessel can go alongside and unload its cargo?—Not at all; every ship in Bombay must be unloaded in small boats, and take its cargo on board by small boats, in spite of this lavish expenditure.

2477. Then what has been accomplished is only this: that the boats have a somewhat shorter journey, because the dry land has been brought a little further into the sea?—Yes, and all this expenditure, or the interest of it, having to be made good by the town of Bombay, the Government has passed an Act, called the Bunder Fees Act, estimated to produce 20,000 *l.* a year, and has actually begun levying, within the last year or two, a tax of 1½ *d.* on every single package taken on board a ship in the harbour, or brought ashore on any of the piers or wharves which used to be free to the public long before this Elphinstone property was bought.

2478. Now there is an Imperial Customs duty, and a local one also?—Yes, there are three sets of Customs in Bombay; an Imperial one; th municipality has its own octroi duties; and t Public Works Department has set up custom its own at every little place along the foresh poor fishermen at Worlee and Sewree, men w have had the prescriptive right in their families for generations of fishing there and landing their fish without any charge, now have to pay this tax to the Public Works Department for the purchase of the Elphinstone Company.

2479. Has it come within you observation that, where taxes of this kind are levied upon the people, there is a certain facility on the part of the immediate officers who levy them, of adding something to them for their own benefit?—Certainly; that is the great drawback on indirect taxation in India; I mean in dues levied on goods; I suppose it would be so with direct taxation also to some extent.

2480. It is direct as regards the goods of the people, but you mean indirect as regards the ultimate consumer?—Yes.

2481. Therefore there is a double addition as regards the consumer; first, the cost of the person to collect the small tax, and then the super tax which he puts on for his own benefit in the way of extortion?—Yes.

2482. Do you know whether these resources have been found sufficient to pay the interest on, I think you have made the account now, 5,800,000 *l.*?—That is only showing what the amount is that has been spent. The amount to be charged for the Port Trust was originally 2,800,000 *l.* The Government of India have reduced that very materially; they have reduced it until the income of properties, together with this Bunder Fees Act, will meet about the interest of the capital sum.

2483. Did you discover, from any communica-

tion

tion made to you, whether this theoretical view of the impropriety of people holding the foreshore was one that was strongly entertained by the community or strongly entertained by the people who possessed the property and sold it to the Government?—Well, I believe that the protest against letting the foreshore be monopolised by private companies was originally made by myself about the year 1864, when the Government had given its concession for Back Bay, and when there seemed to be a fear that the whole foreshores of the island would be bought up by one gigantic speculative company. It was then taken advantage of some two or three years afterwards by those who wished that the State should buy the Elphinstone Company's property.

2484. What I want to know is whether those who wished that the Government should buy the Elphinstone Company's property were the shareholders in the Elphinstone Company's property?—I suppose they wished the State to buy it or they would not have sold the property to the State.

2485. But you have spoken of a wish preceding the actual purchase; a wish that was expressed in Bombay. Do you think that you could trace that wish chiefly to the shareholders of the company?—Yes; I think the community was strongly opposed to it at the time.

2486. Did the general community see the necessity of adopting the theory of buying the property?—No, because the Government had, at the time, the very best site in the harbour in its own possession, and had been spending a great deal of money upon it. The Moody Bay site has been declared by the Bombay Chamber of Commerce to be the very best site for docks on the whole foreshore; I believe that was the opinion of the best engineers also.

2487. Was it the opinion of the railway companies also?—I believe it was the opinion of the Great Indian Peninsula Railway Company, because one part of the concession to the Elphinstone Land Company was to build them a goods station a little way higher up the harbour, and that they found useless.

2488. Apart from the particular transaction of the Elphinstone land, was the railway company itself desirous of using the Moody Bay?—Yes.

2489. Have you observed what has been done with this foreshore property since it has passed into the hands of the Government?—Since it was bought in 1869, the Government of India and the Government of Bombay have been engaged in quarrelling about which of the two was responsible for the purchase, and the correspondence was only brought to a conclusion last year; so that, really, three or four years have been wasted, and a million of money is still required to make any docks at all upon the estate.

2490. If it cost two millions of money, that would be a dispute which cost the people of India 100,000 *l.* for four years, for them to be edified by?—Yes; and I must say that the Bombay Government was solely responsible for it.

2491. You said it would cost another million to make it useful?—It will cost just about a million to make docks; that is Mr. Ormiston, the engineer's estimate. He proposes to cut a channel at right angles to the course of the tide, for large ships to come into these docks which he is going to make on the Elphinstone estate, and this is to cost another million of money. The same engineer estimates that the Moody Bay estate might have been completed, and docks made there, for a million and three-quarters, or just about the sum that the Government paid for the purchase of the Elphinstone property; so that, if the Government, instead of buying the Elphinstone property, had spent its two millions of money in reclaiming this property, and completing docks there, the public would by this time have had those docks finished, and been relieved from taxation which they are now paying; and at the same time if, as some of the shareholders of the Elphinstone Company say, their property was a good one, and they did not wish to sell it, they might have gone on with their work, and the estate would have been there, and the public would still have had the accommodation that they now have from the Elphinstone Company's property; they would have had both, in fact.

2492. I suppose the Government will only part with the use of the land to individuals at the best price they can get for it?—Yes; and there is no market for it at present.

2493. If it had remained in the hands of the company, do you think that the company could have done more than that?—No.

2494. Therefore, whether the land is owned by the company or by the Government, the result to individuals, and through them to the public, must be precisely the same?—Exactly the same.

2495. Now, to pass to the other purchase on the other side of the island, the Back Bay reclamation, what was done with that?—Well, the object of that reclamation was to give the Bombay and Baroda Railway Company an approach to Colaba, a terminus there on the harbour foreshore. The work of reclamation in Back Bay was completed as far as it has gone about the end of 1866; but it is only within this last year that this railway company has got permission from the Government of Bombay to complete its line down to this Colaba terminus; so that there have been these six years wasted without making any use of the land. After the failure of the company, the Government bought it back at a low price; I forget the exact sum now.

2496. What is the distance and quantity of land measured from the old shore that has been reclaimed; how many feet or yards from the former shore has been reclaimed?—I do not know the exact quantity.

2497. About how much?—I should say about a tenth of a mile. In some parts it may go out as far as that; in other parts it is a narrower strip. In some parts there is a good space of land outside where the railway will run until you get to the end of the reclamation.

2498. But was there not land all along the side of the island over which the railway could have been constructed?—Certainly there was sand.

2499. And so far as the railway was concerned the reclamation was not necessary?—No.

2500. Do you know whether that land has been turned to any account?—The Back Bay land has been turned to no account whatever; it is mere waste now.

2501. Was that land facing the sea called Back Bay, which is inaccessible to vessels on account of its rocky nature?—Yes, it is quite inaccessible.

2502. Therefore, it cannot be used for any mercantile purposes?—No.

2503. Only if anything for private residences facing the seashore?—Yes. And that is the only

Mr. *J. M. Maclean.*

4 April 1873.

plan for using the land, making really a new esplanade down it on the outside.

2504. Do you know how much the Government has paid altogether on this account?—I do not know the exact sum.

2505. Has anything been done to give the railway company a station on the harbour shore, so as to enable them to connect themselves with the shipping of Bombay?—Now, at last they have got a place there, on the harbour foreshore of Colaba.

2506. But it is under water, I presume?—No; it is the old gun-carriage factory, I think, which has been made over to them now.

2507. Then have the Government bought up the land which you describe as the Colaba Company's property?—No; that still belongs to the Colaba Company; the gun-carriage land comes next; then beyond that there is a piece of land that Sassoons have bought, which did belong to the Back Bay Company, and on which they are now making a dock of their own, which will compete with the Government docks.

2508. Adjoining that; the gun-carriage land has been taken for their station?—Yes.

2509. Will the railway company there be in relation to the seaboard trade?—Yes.

2510. Then is the Government in possession of all the intermediate land, between that and what you have been describing as the Elphinstone land, the foreshore?—Yes; they have got the whole of that land now, from the Colaba up to the Elphinstone.

2511. Then they had that at the time that they made these purchases?—Yes.

2512. Is it as much as half, or more than half the sea-face of the Island of Bombay for commercial purposes?—It is by far the most valuable commercial part of the foreshore.

2513. Have you anything further to add, with regard to the land purchases?—Yes; I want to show why it is that so strong a feeling of distrust exists in Bombay, with reference to the action of the Public Works Department. The Bombay Government's reason for purchasing the property was this: they say, "in 1869, in the interests of the trade of the port, and to prevent any monopoly by private companies in an extensive portion of the foreshore, the property of the Elphinstone Land Company was purchased by Government." The correspondence which was printed last year, and given to the press, shows that Colonel Kennedy, the Secretary to the Public Works Department in Bombay, on 1st February 1869, wrote to the Government of India, estimating the value of the land on the Elphinstone Company's estate at 60 to 120 rupees a square yard, and declared that there could be no doubt whatever that this value would increase greatly. The Government of India then gave permission for the purchase on these representations. The principal condition mentioned in Colonel Strachey's Memorandum for the Government of India, 15th June 1869, was that the "whole sum paid to the Elphinstone Company, with the costs attending the transfer, should be placed to the debit of the Port Trust;" that is of the local body. The Government of Bombay concluded the purchase on this condition, and then spent a couple of years in trying to evade the fulfilment of it. There is a letter written on 21st June 1870, by Colonel Dickens, the Public Works Secretary of the Government of India, in which he puts the case very clearly. He says, "If it be now found that conditions, without the acceptance of which the Government of India would assuredly not have assented to the purchase of the Elphinstone property, cannot be complied with, a serious responsibility rests on the Bombay Government for having placed the Government of India in the position of having sanctioned the creation of a permanent debt of more than one and three-quarter millions sterling, which, if the whole of the facts had been fully represented, the Government would not have done." That is the case of the Government of India throwing the whole responsibility of this purchase upon the Government of Bombay; and so far from the land, as Colonel Kennedy estimated, being worth from 60 to 120 rupees a square yard, it is impossible to sell any portion of it now at 20 rupees a square yard. The Government tried it, put up some to auction, and the highest offer they got was 22 rupees a yard for some part, but the greater part is not saleable.

2514. They do not appear to have appreciated the commercial principle that, if they added enormously to the quantity of land in the market, they could not get the same price as they could have got for land when there was a limited quantity of it?—Just so. Again, a large part of this Elphinstone property, about 660,000 *l.* of the money spent, was spent in building a piece of property for the railway station, which the company was bound to hand over to the Government for nothing, as one of the conditions of its original concession; so that, practically, the Government, by paying off the shares at par, has paid for this land twice over.

2515. Do you wish to make any statemen[t] with reference to the proceedings of the Publ[ic] Works Department with relation to any railw[ay] in the Bombay Presidency?—If the Commi[ttee] care to go into the inquiry about the Ca[lcutta] Railway, I shall be glad to state the feeling abo[ut] that.

2516. Mr. *Fawcett.*] That scheme has been disallowed and stopped, has it not?—Not yet. I will state how the case stands. The railway was first recommended by the Bombay Government upon the ground that it would pay 8⅓ per cent. on the capital invested; that was the statement in Colonel Kennedy's despatch recommending that this line should be sanctioned.

2517. Sir *G. Balfour.*] Of what date was that?—The 21st of November 1871. The Government of India thereupon actually recommended the line, and sent the scheme home for approval to the Secretary of State. When the official papers were published in Bombay, there were very vehement remonstrances made by the press, and the Bombay Chamber of Commerce took up the question, and passed strong resolutions against forming the line. The Government then appointed a Committee of Inquiry to revise the estimates.

2518. *Chairman.*] Was that a railway on what is called the standard gauge or the narrow gauge?—It was the narrow gauge even at that time. A Committee was then appointed to revise the estimates, and they have lately published their report. I will just refer to that report. Colonel Kennedy's estimate of the net return was 8⅓ per cent. The conclusion come to by the Committee is "that taking the working expenses at 55 or 60 per cent. of the receipts, there would be a net return of 4·09 or 3·63 per cent. on a capital outlay of 110 lacs." That is the result of the Committee's inquiry as to what would be the net

net return. They have raised the estimate of the cost from 90 lacs of rupees to 110 lacs; but at the same time they say that the traffic return which is to pay this revenue of say 4 per cent., will not begin to come in for about three years; they say "within a reasonable period, say three years after the construction of the line;" and they make no allowance in their estimate of cost for interest on capital during the three years the line is to pay nothing, or hardly anything. If you add for that to the 110 lacs, I think that you may fairly say that the lower estimate of 3½ per cent. is as much as the line can possibly return, even according to the report of the Committee.

2519. Sir *G. Balfour.*] What is the length of the line?—About 140 miles. It is an isolated line, and the Committee take the average of the working expenses very low, at 55 or 60 per cent.; the average for all India is over 54, and that includes very long lines, where of course the working expenses are not so heavy.

2520. Mr. *Cross.*] The Government suggested that they could get the 8½ per cent.?—Yes.

2521. How do you account for that?—The report goes fully into the estimate of the traffic and the cost, and changes the whole thing. In fact what the Committee now recommend is a perfectly distinct thing, as I propose to show you from what they say.

2522. *Chairman.*] What do they propose now to do?—The Bombay Chamber of Commerce recommended an alternative line from a point on the Great Indian Peninsula running north and south through the southern Mahratta country to Dharwar instead of a short sea line from Carwar, they said that that would open up very important districts of the Bombay Presidency, which are now, practically, without railway communication, the rich districts of Sattara, Kulludghee, Belgaum and all the southern Mahratta country.

2523. Sir *C. Wingfield.*] It would be a communication with the Great Southern of India, would it not?—No, it was between Poona and Sholapore that the connection was to branch out. The line has not been actually surveyed yet; they only pointed out that, if a railway was to be made, that would be a better line in the interests of the country. The Committee say, on that point, "If it was proposed to make one railway only into the southern Mahratta country and if the practical alternative rested between a railway from Karwar to Gadak, or a railway from Sholapur or Diksal on the Great Indian Peninsula Railway to Hubli, or some point in the centre of the Dharwar cotton field, we are of opinion the latter or Deccan line is the one which, as a commercial enterprise, would best answer for Government to undertake, as an extension, if possible, of the guaranteed Great Indian Peninsula Railway, the receipts of which would be enhanced by the traffic therefrom. The chief reason against the Deccan line is that adduced by Colonel Trevor in the latter portion of his Report of 29th September 1869, 'That it would not be as beneficial to the cotton interest as a railway from the cotton districts to Karwar.' But on consideration of the two schemes, and after the full expression of mercantile opinion thereon, which has lately been given by the Chamber of Commerce in Bombay, it appears to us doubtful whether the Deccan line, on account of its greater certainty as a means of transport for cotton to market, would not really serve the cotton trade as well as the isolated Karwar line, while in most other respects, so far as we can judge, the Deccan line seems preferable to the isolated Karwar line." So that they give a distinct preference, as a commercial enterprise, to the line proposed by the Chamber of Commerce; but they recommend the Karwar line on new grounds altogether as a political and military line. They propose to make Karwar the great terminal point of a new network of railways, which are to connect the Great Indian Peninsula and the Southern railways together; and this just allows you to see how the mania for expenditure gradually grows as these schemes come on. This is entirely, I may say, a new idea; they say, in their report, "We gather, however, from the papers before us, that the Government of India, entertaining a larger view of the question, intends to design, and eventually carry out, a regular system of railways in the southern Mahratta country, starting from a fresh port on the Western Coast of India, and opening out a new railway route for trade and produce, from and to the centre of the Indian Peninsula. There can be no question of the general public benefit which would result from the completion of such a railway system, which would of course connect Karwar with both the Great Indian Peninsula and Madras railways; and the intimation that such a scheme is contemplated by the Government of India renders it less necessary to weigh the merits of different lines as alternatives, than to consider the order of priority in which Government might be advised to undertake those lines, for which a sufficient case exists." The only reference that I can find to any wish, on the part of the Government of India, to carry out such a scheme, is in a despatch of theirs, appointing the Committee, dated 3rd August 1872, in which Colonel Dickens says: "Although the Government of India, actuated by a sense of serious financial responsibility, have, throughout, expressed their belief that the new railway up the Ghauts, to Karwar, ought not to be built at present if it is thought unlikely to prove remunerative, the Government have never lost sight of the manifest Imperial benefits which would result from opening at least one efficient port on the western coast in addition to Bombay. A leading consideration in the alignment of Indian railways should be, and has been, their value as supports to the military position; and in this view it is not desirable to throw too much on one line of railway." This paragraph suggested to the Committee a way of getting out of the disagreeable duty of quarrelling with influential people out in Bombay, by opposing a line which they admit would not pay as a commercial scheme, and so they recommend it on political and military grounds. Here is a sentence from a despatch of the Duke of Argyll, dated 14th August 1872, within a few days of the despatch which I have just read from the Government of India, in which his Grace says, "The present case is not one in which the political and military considerations which have justified, irrespective of commercial advantages, the construction of many Indian railways, hold an important place. The proposed line was suggested and encouraged on purely commercial grounds, and must be adopted with regard to commercial results." So that, while the Government of India is suggesting or hinting at this new scheme for a great terminal port at Carwar, with a new system of military railways, the Duke of Argyll is distinctly stating that this line was

Mr. *J. M. Maclean.*

4 April 1873.

proposed on commercial grounds alone, and must be judged by commercial results alone.

2524. *Chairman.*] And all these various forces, in opposite directions, have brought things to a state of rest now?—The Government of Bombay has now passed an extraordinary resolution that the vehement assertions of the press and the Chamber of Commerce to prejudice the railway have been completely disproved by this Report; and they recommend the Government to go on making the railway from Carwar to Bellary, right through.

2525. Would it involve a complete construction of everything to create a port of commerce at Carwar, in opposition to Bombay?—You would have to create the port, and trade, and everything.

2526. And to find European inhabitants, and everything else to carry on the business which is now carried on at Bombay?—Yes.

2527. It would seem to be very much like the Port Canning affair over again?—Yes, or Kurrachee; Kurrachee, of course, is different, because there is a dangerous frontier there, and there is all the Indus Valley behind it.

2528. Does Kurrachee get on very fast?—No, I do not think it is likely ever to supersede Bombay.

2529. Mr. *Eastwick.*] You are aware that Carwar was formerly a place of national importance; and that there are graves of Europeans there?—Yes, in the old days when the course of trade was different; when trade went round the Cape, it was more important I should say, that the Committee's estimates on the port of Carwar are not estimates for the expenditure of a million or two that would be required to make it a port, but only a wharf or two to provide for the convenience of a little isolated railway; so that practically they recommend an enormous scheme with these estimates only for a very small one.

2530. *Chairman.*] Do you wish to make any statement to the Committee on what is called in India the tribute that is paid to England?—I do not know how far the Committee have gone into that question, or if they have taken any evidence on that head.

2531. They have got before them the finances, as to the application of those finances; but what we want to know from you is the view, if there is any particular view taken in India with reference to the payments that are called tribute paid by India to England?—I wanted to give some little evidence in opposition to the conclusion which has been put in various ways, that there is a great drain of the wealth of India out of that country for the benefit of England, and that that is the result of the English connection. This argument is very often based on a comparison of the returns of the trade. The exports from India as a rule greatly exceed the imports, and it is said that this shows a very heavy balance of trade against India, and that the excess really represents the tribute paid by India to this country. Now it is not a singular case at all that the exports of a country should exceed the imports. If you compare India, for instance, with the United States, which can hardly be called a country that is being drained of its natural wealth, I think you will find that the excess of exports over imports in the United States is very much greater than the corresponding excess in India.

2532. Mr. *J. B. Smith.*] Do you mean the exports generally, or to England only?—Generally, to all the world; I have taken the figures for the six years, from 1866 to 1871, from the Statistical Abstract, and I find that the excess of exports over imports, against India, in those years, is about 48,000,000 *l.*, that is about 8,000,000 *l.* a year.

2533. Sir *G. Balfour.*] Direct to England, do you mean?—No, the whole trade; you cannot take it direct to England, because there are so many complicated transactions. If you take the six years of the United States, from 1867 to 1872 (I got these figures from the "Statesman's Year Book") the balance against the United States in that time is about 126,000,000 *l.*, that is about 21,000,000 *l.* a year. It might be said that the United States have been reducing its debt during that time very largely. Of course there are Members of the Committee who know better than I do; but I should think that the amount of American securities held by foreigners is as great now as it was six years ago; so that really the exports have exceeded the imports by that amount, about 21,000,000 *l.* a year; and I think there is a very natural reason for that, namely, that the United States is one of those countries where there is a great deal of foreign capital constantly employed in developing the resources of the country, and this capital is constantly bringing out large profits to the people who lend it to the States; but at the same time it is doing immense good to the States themselves. They borrow the capital that they want, and the trade returns only show the profits that go to foreigners for the use of this capital. As regards the trade returns of India, the same reason applies in a great measure. There is another thing to be said about the export returns, that cotton, for instance, has been systematically over-estimated in the Custom House returns in India; that is one cause of the excess being apparently greater than it really is. Then again, there is all the opium duty included in the export returns at the Custom Houses. Now the cost to India of producing opium is very small in comparison with what it gets from China; but all this duty, the revenue from opium, is paid in India, and thus included in the calculation of Indian produce sent out. About 8,000,000 *l.* of revenue a year is derived from opium, and that really wipes out the whole annual deficit on these trade returns.

2534. *Chairman.*] In point of fact the money that the Chinese pay for the opium to the Government is equal to all the money that the Government of India in any form pays to the home administration in connection with Indian affairs; is not that so?—Yes; it is equal to the money that India pays to all the rest of the world for the benefit of foreign capital and labour in developing its resources, and for the foreign forces that keep the peace in the country.

2535. Mr. *Fawcett.*] But how do you make out that; what are the figures that justify that statement?—Simply that the revenue from opium is 8,000,000 *l.* a year.

2536. And the expense of the army to begin with, which is to keep the peace, is 16,000,000 *l.* Your evidence goes to this, that the profit which we get from opium is equal to all the money that is spent in keeping the peace for India?—Equal to all which is paid out of the country.

2537. Then what are the home charges?—These are all included in these trade returns.

2538. Sir *C. Wingfield.*] We have never realised 8,000,000 *l.* net from opium; it is about 6,000,000 *l.* net?—Yes.

2539. Mr.

2539. Mr. *J. B. Smith.*] What are the exports that you refer to?—You will find them in all the statistical abstracts. I have added them together for the six years 1866 to 1871. The imports were 282,800,000 *l.*; the exports were 330,180,000 *l.*; balance against India 47,380,000 *l.*

2540. Sir *G. Balfour.*] And how about the treasure?—That includes merchandise and treasure.

2541. Mr. *Fawcett.*] But the exports consist of useful commodities which are produced by the people, whereas a great portion of the imports consist, for example, of warlike materials and Government stores, which the people have to pay for?—But they are of use to the people, are they not?

2542. It is not commodity received in return; it is not like sending out cotton, and the people receiving goods in return which they can use and consume. To give any fair estimate you ought to give the items of which those exports and imports are composed, ought you not?—The stores are a very small proportion of the whole.

2543. *Chairman.*] Supposing that the Government were a separate Government, altogether like the Government of Russia, the exports to Russia embrace all the goods whether sent for the Government of Russia, or for the consumption of the inhabitants of Russia?—Yes; and if India were an independent country, she would still have to buy most of her warlike stores from England.

2544. Mr. *Fawcett.*] That begs the important question of what her military expenditure would be under the circumstances; the persons whose theory you are now attempting to refute hold this opinion; that India annually sends out, say 40,000,000 *l.* of useful products, representing food and articles which can be consumed by the people, drawn away from India; and in return for that they only receive a very small amount which contributes to the wants of the people; and your figures taken in a lump sum do not disprove that theory at all; cannot you give the items?—Yes, the items are all given here in the statistical abstract; the total of merchandise imported in 1871 was 33,413,900 *l.*

2545. *Chairman.*] The point you were on was this; you were asked as to the expense incurred in England in connection with the Government of India, and you stated that it was about equal to the amount of the opium duty?—The point I want to make is this, that by the protection of the English Government, by English taxpayers paying the Navy to secure to India the trade with China, we put into the Indian Treasury a sum of 8,000,000 *l.* taken from the Chinese.

2546. Mr. *Fawcett.*] Six millions?—We will say 6,000,000 *l.* taken from the Chinese, and that that sum is really as much as the balance of the trade of India with all the world as shown by these returns. The protection of England makes up to India this amount.

2547. Mr. *J. B. Smith.*] But is there not besides this the payment for the capital invested in railways and other works?—No; that is all included. I was going to point out also, that, if this balance of trade does exist against India, it ought not to be attributed to the action of the Government, at least, not entirely. For instance, the Indian foreign trade is entirely in the hands of foreign adventurers; and supposing that the country were independent, she would still find it to her advantage to get English capital and skilled labour to employ the same as she does now. So long as we can build cheaper ships and show more enterprise in trade than other countries, other countries will always think it worth while to get these means of improving themselves, and carrying on their trade from us; and that would take place whether the country belonged to England or not. In the argument about the depletion of the wealth of India, I think it is often overlooked what an immense amount of individual enterprise there is concerned in India. If you just take the history of a bale of cotton from the time it is grown in the field:—It is cleaned by machinery brought from England and worked by Englishmen; it is brought down on a train by a railway made by English capital, and also worked by English skilled workmen; then when it gets to Bombay it is financed for by English brokers and by banks, working principally with English capital, and by English merchants. And then it is put on board an English ship worked by English people and brought home; so that the whole of that trade is entirely in the hands of foreigners from the time that the cotton leaves the field. That is not due in any way to the action of Government; and the profits made on business of that kind naturally come to England, but it is a legitimate and good profit. If the Custom-house returns on the other side took notice of all the skilled labour imported into India, I fancy that the balance would show considerably the other way.

2548. *Chairman.*] I can give you the figures now for 1870, which represent sufficiently the money spent in England, connected with the Indian administration; that money amounts to about 6,300,000 *l.*; and, in addition to that, there is a sum of a million and a half which is the interest of debt borrowed for the Indian Government; the general debt?—Yes.

2549. And the six millions and a half include 620,000 *l.* of annual dividend, paid to what are called the proprietors of Indian stock?—Yes.

2550. And the sum of 6,300,000 *l.* would be less than the annual revenue derived from the Chinese?—Yes.

2551. Mr. *J. B. Smith.*] I understand your argument to be this, that, in all those cases where India exports produce for the purpose of paying for the interest upon works which have been beneficial to India, it is no more a tribute to England than it would be for America to export produce to pay England for money which had been borrowed to make American railways?—Exactly.

2552. Then, as regards the charge for military purposes for India; if the Government were a Native Government instead of an English Government, the Native Government must levy something for the purposes of those expenses, must they not?—Certainly. The point of my argument is, that the English connexion is really materially very beneficial to India; that India has the advantage in it. Suppose she were independent, for instance, she would have to maintain a navy like Turkey. Turkey pays 3,000,000 *l.* a year for her navy alone, and has to buy all her ironclads in England, and get them made there. So India would do if she had a navy.

2553. The idea that the benefit England derives is in the way of trade, a tribute upon India, is a fallacy?—I think so. Another point in which we benefit India to a great extent is,

Mr. J. M. Maclean.

4 April 1873.

enabling her to borrow money at a low rate. The credit of India is far better than that of any other country, almost, except England. You can borrow at 4 per cent. for India at the present moment. Look at Turkey and Egypt, and the rates at which they borrow. If India were left to herself, she might fall into the condition of the South American republics.

2554. Mr. *Eastwick.*] With reference to this last point, when you give these figures about the exports and imports, I want to know whether there is any information at all about the trade which takes place round that enormous frontier inland; these are merely the exports and imports of the Custom-houses by sea, the foreign trade?—Yes.

2555. But is an immense trade going on all the way from Kurrachee round to Chittagong or Rangoon which we have no figures for?—Yes. I do not pretend to limit myself to these returns. I only took them up as having served for the foundation of an argument.

2556. I am aware that the controversy has been carried on in India, and also in this country, but I believe it is impossible to arrive at an accurate statement of the matter; is not that so?—I think so, because you must take into account so many other things, the movement of Government paper, and so on, which are not included in these returns.

2557. To go back now to the beginning of your evidence, you did not tell us what was done with that 10,000 *l.* a year which was taken away by Sir Seymour Fitzgerald?—There was a deficit of 100,000 *l.* a year, and he made up that partly by taking away this Imperial grant of the police. He got a lac of it by taking it from the city of Bombay.

2558. Then he applied it for public works, I suppose, roads, and so on?—Yes, for the general expenditure of the province.

2559. Do you object very strongly to this decentralisation scheme altogether?—I object to it altogether, except in those very few cases in India where it may be possible to apply a check from below instead of from above. If you can get hold, as I believe you can in Bombay, of a real living community with public spirit and energy in it, I think you might safely trust the representatives of the people there with the control of the finances of that city. I think it would be a great experiment, and a very wise one for the Government of India, to try in those great cities to give such communities the control of their own affairs; but, as regards India generally, I do not think that there is any possibility of getting a check on the financial expenditure of ambitious officials, except from above, by means of the Government of India.

2560. Supposing, for instance, that Bombay was the only possession that we had in India, is there any reason why its finances should not be as well administered as they are now, with the control of the Supreme Government?—I think that you cannot give absolute power in finance to governors ruling a province or a city in that way. You must have some independent check; such a check as that of the Government of India, which has no local ambition, and no desire to make a name by spending money on fine buildings.

2561. But that, of course, cannot exist in any country, except one like India, which is made up of vast provinces subject to a Supreme Government?—It is a very wise check to apply there; it is unwise to remove it, unless you apply the check from below; and if you give the taxpayers the power of the purse, you may trust to their not spending too much. It might be necessary for the Government to interfere to compel them to spend money in sanitary matters, for instance; they would never be too lavish in expenditure.

2562. Supposing these cesses were levied through committees of the natives themselves, do you think that would take off the cause for dissatisfaction; supposing these extra cesses were submitted to bodies of the natives, and they were consulted?—I do not know enough of the interior of India to give an opinion upon that; I think it would be advisable in a community where a great deal of progress has been made, and where the natives have been to some extent Anglicised.

2563. You told us about the enormous waste of money, 5,800,000 *l.*, on the foreshores of the Island of Bombay; I want to ask was any reason ever given why none of these separate works were completed. Why, for instance, was not this Moody Bay work completed; is there no statement to show why it was not completed?—I do not know that there has been any statement made; I can only state the facts, and leave the Committee to form their own conclusion as to the motives which induced the Public Works Department and the Government of Bombay to spend money in such a way.

2564. Was not the enormous waste of money shown in the most decisive manner by the Abyssinian Expedition, owing to there being no places for landing goods; was not that a most flagrant proof to everyone in Bombay of the need of piers and landing places?—Yes.

2565. I suppose some notice was taken of it in the press, after that?—The Government has been frequently urged to go on with these works; it has been a constant subject of complaint by the mercantile community and the press that they did not make docks on their own ground.

2566. Then the fact is that India has been suffering to the extent of about 240,000 *l.* a year, owing to the misapplication of this vast sum of 5,800,000 *l.*?—Yes.

2567. I should like to ask a question about that Carwar project; is it not possible that there is a certain amount of jealousy on the part of the Bombay community which made them oppose this new port?—I do not think so; this last report of the Committee even confirms the statement of the Bombay merchants, that if Carwar is made a port it must be subsidiary to Bombay; there will never be any direct trade with England there of any great extent. Now that commerce is carried on so much in large steamers running through the Suez Canal, it never will be worth the while of anybody to run a line down to Carwar alone for direct commerce with Europe; steamers will always prefer to go to Bombay.

2568. The cotton would be brought from Dharwar direct to Carwar, and shipped there, and there would be a great saving through the cotton being brought over that short distance, instead of being carried all the way from Dharwar to Poonah and Bombay?—No; it is admitted by this Committee, to which I have referred, that nearly all the cotton, even if the railway were made, would still be brought down to the sea at Carwar, and then carried by sea to Bombay, because freight would be cheaper at Bombay than anywhere else. The tendency of commerce everywhere

where is to make large ports larger, and to extinguish the smaller ones.

2569. Then we must not put out of consideration altogether, must we, the advantage to all the coasting trade of having another port along that coast?—They have the ports already; I do not see that there would be any advantage to them in having a short railway up to the interior, and Madras has already a port on the western coast, Beypore.

2570. I believe none of the ports are very good except Goa?—No.

2571. Sir *G. Balfour.*] You mentioned a district in the Deccan which has had its assessment largely increased; but was not that district very lowly assessed by Sir George Wingate when he had the revenue survey made?—No doubt it was assessed at a very low rate. Sir George Wingate went on the principle of assessing lands at the lowest possible rental; the whole country had really been wasted by the Peishwah's agents. The Mahratta Government was just an organised system of brigandage, and it was necessary to assess land low in order to get people to take land into cultivation again.

2572. Are you not aware of the fact that, before you went to Bombay, even the Bombay Presidency pointed out the exceeding lowness of Sir George Wingate's assessments?—I am not aware of that.

2573. Are you not aware that the great object which he had in view was to extend the Government area?—Yes.

2574. And that the Government in those days willingly sacrificed revenues for that object?—I daresay his policy was objected to. I discovered last year, in some old papers, that Sir George Wingate was originally an advocate of the permanent settlement in Bombay. When he first began his work he said that a permanent settlement was the best of all settlements for India beyond a doubt. It is only in later years that he has changed, having been infected by the zeal of the Revenue Department. The policy of his earlier days was wiser.

2575. I am not advocating the increase of assessment, because I consider lowness of assessment giving satisfaction to the people of India to be of great importance; but I merely wish to bring out the fact that the land was very lowly assessed?—No doubt it was.

2576. Could you give us any idea what the assessment was of that district that has had 80 per cent. added to it; the average rate per acre?—I could not give it now.

2577. Could you give us any idea as to what amount it was raised per acre?—No.

2578. Could you give us any idea of the quantity and value of the produce raised per acre?—I have not those figures by me. There was another talooka of most fertile land in Guzerat, for instance, the Soopa-talooka, Mr. Beyts proved, that the net return to the ryot there was 3 *l.* 14 *s.* an acre.

2579. You mentioned that the Government of India were exceedingly economical in former years in the plans for public works?—They exercised a very wholesome control, I think, over expenditure, or tried to do so.

2580. And that they had no local influences at work to induce them to be extravagant?—No.

2581. You are aware, with reference to the expenditure in Burmah, the Central Provinces, and the Punjab, that it was not by any means small?—I cannot speak about those provinces.

2582. But you can say, with reference to Madras and Bombay, that the expenditure there was exceedingly economical?—It was not exceedingly economical in Bombay, but that was because the Government of Bombay systematically set the Government of India at defiance.

2583. I am speaking of the period before that took place; in the old days?—There was very little spent in Bombay or in Madras then.

2584. But the expenditure was lavish beyond measure in the Punjab and Burmah?—Yes, that was in the days when the Government of India was a Bengal Government. It is now fairly constituted, and represents the different provinces.

2585. As to Carwar, you know that 20 years ago this project was publicly discussed and gone into?—Yes.

2586. And that it was considered a great object 20 years ago to bring Dharwar into connection with Carwar?—Yes.

2587. And that the expectation was that an export of cotton, direct to England, would take place from it?—Yes.

2588. And that a railway up the Ghâts was considered to be a great project, both commercially and in a military point of view?—I am not aware of that.

2589. You are aware that this question was fully gone into when Carwar belonged to Madras?—I have not seen any papers so far back as that. I know ever since it was transferred to Bombay there have been projects of this kind.

2590. With reference to the financial position of India and England; do you think that we have any statistics sufficiently accurate to enable us to say what have been the relative advantages of India in the present day as to the imports of treasure and as to the wealth of the people?—Perhaps it is hardly possible to pronounce a definite opinion as to the relations. All I can do is to point out some counterbalancing considerations to those so frequently urged, to show that India pays to England a heavy tribute.

2591. But you are aware that India, since 1833, has had a vast amount of bullion imported into it?—Yes.

2592. That since 1833, the flow of bullion has been into India, and not from India?—Yes.

2593. And that we have never yet ascertained what has become of that enormous quantity of bullion?—No.

2594. But you are aware that the people's ornaments have become much more numerous in the last 20 years?—Yes; and that the standard of living has improved.

2595. And that the people have shown great symptoms of being well-to-do?—Yes.

2596. Mr. *J. B. Smith.*] As regards the condition of the people, are you aware that in some districts where cotton was grown and the people used to be in the most wretched condition, their women are now covered with silver ornaments?—There is a great deal of wealth in the districts.

2597. That in some cases they have such a profusion of wealth, that they even made their ploughshares of silver?—I have heard that story.

2598. *Chairman.*] You have never seen any of those?—I have not.

2599. Mr. *J. B. Smith.*] Are you aware that Mr. Rivett Carnac states that in his report?—I am aware that he reported the story.

Mr. *J. M. Maclean.*

4 April 1873.

2600. Is there any reason to doubt it?—I do not know that there is.

2601. And that some of them had silver wheels to their waggons?—I think he mentioned it as reported to him, not as having seen it.

2602. Is not that sufficient evidence of the improvement?—It is a slight exaggeration, perhaps.

2603. *Chairman.*] Do you think it was a mistake for the metaphor that the plough and the cart produced silver to the cultivator?—Yes, perhaps so.

2604. Sir *C. Wingfield.*] You say that this so-called decentralisation scheme has led to the local Governments imposing fresh and increased taxation on the people; but you are probably aware that that was the wish and the object of the Supreme Government, because the Supreme Government, in their decentralisation order, expressly stimulated them to put on additional taxation. They said: "We diminish your grant by 350,000*l.*, and you must supply that yourselves; we point out that local taxes might be levied here and there"?—No doubt the Government of India rid itself of the responsibility, and the local Governments in their turn threw it on to the municipalities and local officers.

2605. It was the aim and object of the Supreme Government that the local Governments should have recourse to new and increased taxation?—Yes; and generally speaking to local cesses on land. They could not have that in Bombay, because they had one there before.

2606. Mr. *Beach.*] Do I rightly gather from your remarks that the action of the press has been to excite the Government to new works?—In Bombay I do not think so; rather to restrain the Government.

2607. You stated, I think, that it was particularly pointed out by the press that various new works were required?—That new docks were required for the improvement of the harbour; but the press, I think, has taken generally the line of urging the Government to do this work themselves.

2608. To do that they must levy new taxes?—We say it would have been better for them to do that than to pay another company a sum of money for a piece of property not worth having; and now it will have to be done by a Government board.

2609. Sir *D. Wedderburn.*] Your objections to the decentralisation scheme would be removed, you said, if there were anything of a representative check upon the local Governments?—Yes.

2610. In the case of the non-agricultural cess, did not the native members of the Bombay legislature protest against the reduction of the minimum income assessable to 50 rupees?—I think Mr. Tucker protested against it; I do not know that anybody else did.

2611. Were there not native members who also protested?—I daresay.

2612. They were overruled?—Yes.

2613. They are not in any sense representatives of the natives?—Not at all; they are nominated by the Government of the day, and are not representatives really.

2614. With reference to the withdrawal of that grant from the Imperial Government for the police of Bombay, I suppose the Bombay Government simply carried one step further the principle of decentralisation, and threw the odium of supplying the deficiency upon the municipality?—Yes. A system of decentralisation, in fact any system, is very good where you have a safe man to deal with; but the object of these checks is to prevent a man, who has not much public spirit or principle, from taking advantage of his position to go in for lavish expenditure, without caring for the interests of the people.

2615. I should like to understand exactly how you attribute the advantage, such as it is, of the opium revenue to the action of England; is it because of our having forced opium upon the Chinese that we are to claim the credit of giving India this large additional revenue?—Certainly; I am not speaking of the morality of it, merely of the financial result.

2616. Then you drew a parallel between the United States and India; is it not the case that the United States are a country of great wealth and vast undeveloped resources, only requiring capital in order to develope those resources, and where capital is certain spontaneously to find its way?—So is India to a large extent.

2617. That is just what I was going to ask; is it not the case that in India, capital does not find its way there in order to create great public works, such as railways, unless the security of interest is made safe by a Government guarantee?—I do not know. I think there is a very great deal done in India by English capital, without any connection with the Government. For instance, English capital and skilled enterprise have given India her coffee plantations and her tea plantations in Assam, and all along the Himalayas. Then the indigo factories to a great extent are worked by English money, and it is Englishmen who have taught Western India to prepare cotton for the English market, and they also taught them how to make cotton yarn by machinery.

2618. Take the railways, hardly one of the railways is a commercial success; but they have been made by British capital, and a certain rate of interest has been guaranteed upon them by the Government, while the balance between their commercial earnings and that rate of interest has to be made up by the Indian taxpayer?—Yes.

2619. Surely that balance may be regarded as something in the nature of a tribute?—No; I do not think it is; it is what the Government pays for the military and political advantages of the line.

2620. Mr. *Fawcett.*] You are intimately acquainted, as I judge by your evidence, with the circumstances immediately preceding the purchase of the Elphinstone Land Company by the Government, are you not?—Yes.

2621. The Company was an ordinary joint stock company, the shares having a market quotation?—Yes.

2622. Do you remember what the value of the shares was; 100*l.* shares were they not?—They were 100*l.* shares.

2623. Am I correct in stating that just at the time when the negociations began for the purchase of this company, the shares were at about 50*l.*?—Yes, my impression is that they went down at one time as low as 33*l.*; but a Member of the Committee, Sir Charles Wingfield, stated this morning that he bought them when they were at the lowest rate for about 50*l.*

2624-5. Then the capital of the company, you stated, was 2,000,000*l.*, did you not?—Yes.

2626. Then in buying these shares at par, in the

the first place, as to the fortunate shareholders, there was a million of money distributed amongst them, abstracted compulsorily from the unfortunate Indian taxpayers?—Yes.

2627. Now, was there ever in Bombay a list of the shareholders in this Elphinstone Land Company published so as to enable the public to obtain some idea of the kind and nature of the pressure that was put upon the Government in order to induce them to carry out this transaction so favourable to the shareholders?—No; no list was ever published.

2628. But it was again and again stated, was it not, that a considerable amount of private influence was brought to bear upon the Government?—Certainly.

2629. Are you prepared to state (of course, if you would rather not answer the question I will not press the point) your impression, or the impression of the Bombay public, as to the nature and character of that private influence?—I am not prepared to say. I should say that the influence principally used was a social influence to a great extent; and there is no doubt that the people principally concerned in the sale of the Elphinstone Land Company were the Messrs. ——— & Co. and ——— of London, and their influence was used both at the India Office and in Bombay, that is the general impression.

2630. And have not the same parties (it has been stated as to one of them, at any rate) been very instrumental in getting up the Carwar Railway scheme?—Certainly; their influence has been at the bottom of the whole scheme.

2631. Have the circumstances which led to that prodigal purchase of this Company ever been investigated; has a list of the shareholders, for instance, ever been published?—No.

2632. Was it known, or was it not known, to what extent the shares were held by people officially connected with the Government?—No; there were rumours, but that was all. No facts have ever been ascertained.

2633. Still those rumours have floated about, and they have never been either contradicted or proved?—No.

2634. Then, as I understand your evidence, to get at the exact nature of this transaction, a million more was paid to the Elphinstone Land Company than the market value of the shares?—Yes.

2635. But that does not represent the entire prodigality and waste of the transaction, for in addition to that I understand you that the Government paid 630,000 *l.* for what the Com- [redacted] bound to hand them over for nothing?

[redacted] that really what took place was this: [redacted]rn, the market price of which at the [redacted] million, the Government gave out of [redacted] of the Indian taxpayer 2,630,000 *l.*; [redacted]at it really comes to?—Well, I do not [redacted] you can reckon it in that way. If the [redacted]ice of the property was 1,000,000 *l.*, [redacted]for the property irrespective of the [redacted]nging to the Government, which the [redacted] bound to hand over; that already [redacted]e Government.

[redacted]hen there is no doubt about twice [redacted] paid as the market value?—No [redacted].

[redacted]*man.*] As I understood you before, [redacted]the market price rose with the [redacted]he intention of the Government to purchase, and that at the actual time of the purchase the market price had reached the equivalent of the sum which the Government gave?—It had not reached it even then; but when the question of purchase was first mooted, the Government might have bought it certainly for half the money.

2639. Mr. *Fawcett.*] Would you give similar information, if you can, to that which you have just given with reference to the Elphinstone Land Company, with reference to the Back Bay Company?—That was an entirely different scheme. The great objection to that was that the Government gave a concession which they really must have known was intended to be used for speculative purposes only; because it was a very wild and impracticable scheme, the reclamation of Back Bay. It could not be turned to any profitable use. They gave that at a time of the wildest excitement in Bombay, at the beginning of 1864, when the shares went up to a fabulous premium, and an immense deal of money was lost, but not of public money; it was subscribed by shareholders; and after the collapse of that scheme the Government brought back the whole reclaimed property, in 1866, I think, for a comparatively small sum of money. They took it off the hands of the shareholders in order to enable them to wind up the affair.

2640. What did they give for it?—I think a third of a million.

2641. But still, considering what desperate straits the Government of India are often put to to raise small sums of 20,000 *l.* or 30,000 *l.*, a most vexatious and worrying tax being sometimes imposed, the net result of which is only about that, you can scarcely speak of a third of a million, spent upon what you describe as a bankrupt scheme, a trifling sum, can you?—No.

2642. But it was trifling in comparison with the enormous amount spent on the Elphinstone Land scheme?—Yes.

2643. As I understand, the Government, first of all, fanned the flame of speculation mania there, by giving a concession which never ought to have been given to speculators?—Yes.

2644. I suppose the transaction was a public one, and, therefore, I presume there can be no harm in putting the names of the persons to whom the concession was made, in evidence; do you know them?—The principal promoter was Mr. Michael Scott, now dead.

2645. Were the directors of the company known?—Yes; Mr. Michael Scott, and Sir Cowajee Jehangier, and Mr. Gavin Steel.

2646. Do these instances exhaust the list of the commercial transactions into which the Bombay Government entered?—There was the Mazagon case.

2647. Will you describe that in the same way?—I do not know that I can give that so accurately as the other.

2648. Can you give, roughly, the figures?—The Government had a piece of land at Mazagon; the only action which they took in the matter was selling it to any bidder; it was bought at public auction by some men, I believe the same who afterwards started the Back Bay scheme, and they afterwards sold it to another set of projectors for double the money, and these projectors also brought it out again at double the price which they paid for it as a land company. I think that was the history of it.

2649. Who has got it now?—It belongs to a company

Mr. *J. M. Maclean.*

4 April 1873.

a company still; the Government has not taken it back.

2650. With reference to this Carwar Railway, as I understand you, the finances of India you cannot say are safe yet from that transaction, it may be carried out, judging from your evidence, on a greater scale than originally threatened?—Just so; the Government of Bombay has strongly recommended it now a second time.

2651. Has it not again and again been asserted in Bombay, and has not the assertion been made so positively that, if the transaction is entered into, it ought to be most carefully investigated; that, again, in this case, as in the cases of the Back Bay and Elphinstone Land Companies, there were private speculators at the bottom of it?—Yes; there is the Carwar Land Company, which is almost entirely in the hands of Messrs. —— & Co.

2652. Therefore you think, as a matter of precaution, that the utmost care should be exercised in order to see how much of the pressure which has been brought to bear on the Government to undertake the railway does not arise from interested motives of private speculators?—Certainly; that was the object of my opposition to it in the first instance to bring that out. I hope the Committee will allow me to say that I do not of course charge anybody with anything. I do not say that ——— & Co. are not justified in making the best bargain they can for themselves with the State; but I only raise an opposition to the State making a bargain with private people against the public interest, as I consider.

2653. Naturally enough private business men will make the best bargain they can; but, judging from the past commercial transactions of the Government of Bombay, you think it of the utmost importance that they should exercise in the future far greater care than that which they have exercised in the past?—Yes, I think the present officers at the head of the Public Works Department, at Bombay, were far too closely bound up personally, and have had too close connection with reference to this Elphinstone business, with this firm, for them to be fair judges of a matter of this kind.

2654. Therefore you think an inquiry should be conducted by people who have had no connection whatever with these past commercial transactions?—Yes.

2655. Have you formed any estimate, or has any estimate been formed, of what would be the whole outlay; supposing a great network of military railways, which is contemplated at Carwar, is carried out?—No, I do not think any estimate whatever has been formed.

2656. Of course it would be many millions?—It must be many millions.

2657. Do you know anything of the nature of that transaction which led to the enormous expenditure on the country house of the Governor of Bombay?—You mean at Gunnesh Khind. No. I only know the history of it, that Sir Bartle Frere had permission from the Government of India to sell the old house and land, and to build a new one for himself, on condition of not spending more money.

2658. But can you, as an independent member of the Bombay community (we have had official evidence on the point), give us any clue to the fact that a local governor can spend, as it appears he did in this transaction, six times more than he ought to have spent; how was it that he was able to disregard every check?—A governor can really disregard every check, if he is so inclined; he has the control of large sums of money, and he can simply spend money, and then say that the deficit is so much.

2559. But you have spoken of a time when the Bombay Government was a frugal Government, when they were kept in check by the Central Government; you have contrasted those times of frugality with the times of great prodigality, including the last 10 years, when I think you used the expression that the Government of Bombay freed itself from all control from the Central Government. How is it that 20 years ago the Government of Bombay could be controlled, and how is it that now the Government of India, or the Secretary of State, seems powerless to exercise any control over it?—Well, all I can say is that I think that the influence of the Government of India has been used of late years in the direction of economy, and that this Decentralisation Minute was a step in the wrong direction on that account; but the previous efforts of the Government of India in the direction of economy were no doubt thwarted continually by the Government of Bombay. There was a standing feud between the two Governments, and it was taken up as an inheritance by Sir Seymour Fitzgerald when he went out, and was carried on with much more bitterness than in Sir Bartle Frere's time.

2660. But the point I wish to get at is this, whether you can tell how it happens that 20 years ago the Government of Bombay could be controlled by the Government of India, and how it has happened that it cannot be controlled in later years; what checks have been relaxed?—My recollection does not go back 20 years ago; that was mentioned by a member of the Committee, I think.

2661. *Chairman.*] As a matter of fact, in the meantime has there not been a separate legislative council set up at Bombay?—Yes, and the great tendency is to make the subordinate governments more independent.

2662. Mr. *Fawcett.*] Then the result of this setting up of local councils, and the attempt to make them more independent, has led to greater extravagance?—Yes, and we have had more money to spend too.

2663. The local council in Bombay exercise a very small control upon the Government, do they not?—Very small.

2664. Its meetings are not as well attended as they might be, are they?—No; the councillors as a rule do not show any independent spirit. I think they do not take that interest in affairs that they might take. I am n of the council of the last six months, there have been changes.

2665. Without entering into a theo cussion, do not you think, in estimati vantage which a country gets from trade, it is very important carefully t that portion of her imports that cons vernment stores?—As bearing on t whether India is materially better rule than if she were independent must take into consideration whet have to buy the stores when she w or not.

2666. But without comparing have to do under a different simply treat it as a trade questio put this illustration to you: Sup

Mr. *J. M. Maclean.*

4 April 1873.

exported 50,000,000 *l.* and she imported 60,000,000 *l.*, it would appear that she got an enormous amount of wealth in exchange for her exports; but it may happen that only 20,000,000 *l.* of that were imports which really represent commodities to be consumed by the people, and that 40,000,000 *l.* represents warlike materials or materials for public works, which would prove unproductive, and which were purchased by the Government, and would ultimately have to be paid out of the taxes of the people, and therefore it is very important to ascertain, is it not, of what the imports consist?—Yes, certainly.

2667. And without doing so, a rough statement of the figures gives you no accurate idea of the advantages which a country derives from foreign trade of any particular kind?—No.

2668. Mr. *R. Fowler.*] With regard to the question of the Elphinstone Land Company, could you give the Committee any statement of how the shares of the Company rose in different years; at one time they were at a premium and another at a discount?—They were at a premium in the years 1864 and 1865, and, I suppose, up to 1866. Then they fell in the collapse of all shares in Bombay, but the price was a purely speculative one in those years.

2669. You do not think that the Government could have any ground for thinking that they were really entering on a good commercial transaction?—I do not think they possibly could.

2670. Then as regards the Carwar Railway, was that urged on the Government on military grounds?—No; I read an extract from the Secretary of State's despatch of last year, refusing to give his sanction until some further inquiry had been made. He says distinctly that the present case is not one in which the political and military considerations are of any importance.

2671. Mr. *Grant Duff.*] As a matter of fact, you do not expect to see that railway made, do you?—I do not know what is going to be done at all. I only speak on this last recommendation of the Bombay Government.

2672. But you have no reason to suppose that it will be made?—I have no reason to suppose that the Government will sanction it.

2673. Mr. *Fawcett.*] Is the recommendation of the Bombay Government since the despatch of the Duke of Argyll?—Yes.

2674. Mr. *Grant Duff.*] You have not heard anything to lead you to suppose that the view of the Secretary of State in Council has changed?—No, nothing at all. I believe that the recommendation of the Bombay Government has not yet formally come before the Secretary of State; it is so recent as that; it was only published last month.

Mr. WILLIAM GIMBER GOODLIFFE, called in; and Examined.

Mr. *W. G. Goodliffe.*

2675. *Chairman.*] HAVE you held any office in connection with the administration of Indian affairs?—I was Accountant General at the India Office.

2676. How long ago was that?—I was appointed to the India Office in 1860, in consequence of the recommendations of a Committee appointed to inquire into the India Office business. This was a committee appointed by Sir Charles Wood in December 1859, "to examine into the system pursued in the India Office as to the grant of authority for incurring expenditure at home to be provided for out of the revenues of India;" and also "to examine into the system of audit under the 51st and 52nd clauses of the Act 21 & 22 Vict. chap. 106." That Committee made a report; at the same time an office committee had recommended, for "the introduction of changes in the system of book-keeping, and for other reasons, that a person from some other Government department, or from some other quarter should be selected by the Secretary of State to fill the office of chief clerk accounts branch and assistant to the Accountant General;" and my appointment to that post, upon the recommendation of Mr. Foster, followed; I was thus first appointed chief clerk in the accounts branch of the Accountant General; and on the retirement of the Accountant General in 1866, Sir Charles Wood, now Lord Halifax, appointed me Accountant General, which office I continued to hold until its abolition at the end of 1871.

2677. Then it was your duty to see the manner in which accounts were kept in the India Office?—My duty was principally in connection with the home accounts; I had the general control of the home accounts.

2678. Do you think the accounts were kept in a satisfactory manner while you were in office?—The home accounts were entirely revised after my appointment, and by degrees they were brought into a satisfactory system, but not as completely as I should have desired.

2679. In what respect do you consider that they were incomplete when you left the office?—They were defective in two important points, first in connection with the guaranteed railway companies, in regard to which I considered the accounts were defective, and also in regard to the "remittance" account, that is the "Account Current" between England and India.

2680. In what respect do you consider that they were defective?—The railway accounts did not exhibit sufficiently clearly the funds applicable to the different railway companies, their revenue earnings and their working expenses.

2681. You mean that there should be a balance sheet exhibited for each railway company with the Government, appended to the account?—Yes, and absolutely subsidiary to that account.

2682. Have you any other respect to name in which you thought the accounts were incomplete?—Another important matter was, as I have said, in connection with the remittance account between India and England. That account had been transferred from the Accountant General's Department to the Department of the Financial Secretary, which was in my judgment a very bad arrangement, preventing that complete control over the accounts which ought to have been exercised by the Accountant General; and I am not at all sure that it did not open the door to considerable possible malversation, because there was no efficient audit, I consider, of the sums passed through the account current.

2683. How could there be any malversation. I suppose some one examined the accounts?—The items passed through that account were treated as final payments, and being passed by the auditor, he then dismissed them altogether from his view, and they had to be taken up and followed upon a separate set of books.

Mr. *W. G. Goodliffe.*

4 April 1873.

2684. Do you mean that the money which was raised by drawing bills on India was taken to a separate account?—Entirely; a separate set of books altogether, a fictitious set of accounts was created.

2685. You do not mean fictitious, do you?—I mean fictitious in the sense of unnecessary, that is to say unreal. I will explain more particularly why I call them unreal. Take the accounts, for instance, of the Government of Bengal, bills are drawn upon the Government of Bengal and sold at the Bank of England. For these bills the money is received by the Secretary of State, and the amount is paid in India on the presentation of the bills.

2686. The amount for which the bill was drawn is paid by the Government of India?—Yes.

2687. But was not the amount paid by the purchaser of the bill paid into the Bank of England to the credit of the Secretary of State's account?—Yes; the perfectly simple and straightforward arrangement therefore, would have been to have given the Bengal Government credit for that amount in the India Office ledger, and to have subsequently ascertained that a corresponding entry was made in the Indian books; but instead of that being done, the accounts were transferred to a different set of books.

2688. What was this other set of books kept for?—They were kept with the intention originally, I presume, of obtaining a division of labour; but it was an entirely improper way of obtaining that division of labour, and, as I had pointed out, it led to considerable additional trouble.

2689. It was for the purpose of entering in it some accounts, I presume; for what particular accounts was it kept?—The whole of the transactions between England and India, which were matters of account current, were taken out of the general ledger of the office, and transferred to this new distinct set of books, called "Remittance Books;" and therefore the labour was multiplied instead of being simplified.

2690. But what the Secretary of State had to take care of was to account for the cash which he received as the price of the bills, was it not?—No; I think, also, he had to see that the Government of India did not pay a great deal more out of their Treasury than he received the money for.

2691. But the Government of India could only have paid the bills drawn on them?—But I desired to know that the amount paid by the Government of India corresponded with the amount that the Secretary of State received.

2692. Do you mean that the Government of India did not send home periodically an account of the bills drawn on them and paid in India, so as to compare the numbers and amounts and dates?—They did latterly send home some sort of account current; for many years no such an account passed. When I joined the office, these remittance accounts were 12 or 14 years in arrear.

2693. According to your view, seeing how skilfully forgeries are done now, a forged bill might have been presented in India and paid, and it could not have been discovered till 14 years afterwards?—No doubt of it; and I say that now there is no security that it would be discovered at all.

2694. The security now would be, if the Government of India would send home an account exhibiting every bill, with its date and amount, and number, and then that would be compared with the issue of those bills brought into the finances in this country?—No; because, in consequence of there being two sets of books, it is quite possible that different figures might be transferred to the second set of books from the real figures, and the consequence would be, that when the transactions came home from India, they might correspond with the fictitious set of figures, whereas with one set of books, they would be compared with the transactions in England under a systematic and proper mode of book-keeping. Under the present system two distinct officers look after the two sets of books, and therefore they are not brought into that simple adjustment that would occur if there were only one set of books. This is a subject to which I devoted a good deal of attention, and I had always intended, on assuming the office of Accountant General, to put an end to this second set of books, and to establish a sound and systematic method of book-keeping; but a day or two after my appointment as Accountant General, the Financial Secretary produced to me an order signed by Sir Charles Wood, the then Secretary of State, directing that the whole of these accounts should be taken from under my supervision, and transferred to the Financial Secretary.

2695. But surely these accounts are under the direction and care of some responsible person in the India Office, the separate accounts which you have spoken of?—They were under the Accountant General's direction.

2696. But you were the Accountant General, were you not?—No, not at that time. I was in a subordinate position; but as soon as I became Accountant General, I intended that these books should be put an end to.

2697. Do I rightly understand that both these sets of books were under your inspection and control?—They were under the control of the Accountant General until transferred as I have stated.

2698. If you had both sets of books under your inspection and control as Accountant General, how could there be any fraud committed in that case; you could see it?—Yes, at very great additional labour; and it was a very unsound and complicated system of book-keeping, and such as no merchant would think of allowing to exist.

2699. Then sometimes a Government keeps duplicate accounts for the purpose of manifesting transactions under certain aspects, bringing out special results; you are aware of that?—Yes, I am quite aware of that; but in this case, instead of any advantage arising out of it, I represented, in a report to Mr. Stansfeld, the impolicy of maintaining a double set of books.

2700. Have you any other observation to make as to the mode in which the accounts were kept at the period that you left the office?—Not as regards the home accounts.

2701. Was your attention, as Accountant General, directed to the Indian accounts?—Yes, it was my duty to add to the finance accounts sent from India the home transactions, so far as they affected revenue, and so to complete those accounts.

2702. Did you find anything objectionable in that?—I had sometimes occasion, more particularly in connection with the remittance account, to examine a good deal into the books of account sent from India to this country.

2703. Transcripts of the originals, do you mean?—I do not know how far they were literal transcripts or not; they were large volumes; some tons weight of books are sent to this country.

2704. Did they appear to be transcripts of the Indian accounts, or statements of accounts sent to this country drawn from other accounts; you could tell that from the character of the account? —I think, from the character of the accounts, they were made up for the purpose of being sent to this country.

2705. Did you find anything objectionable in them?—I came to the conclusion, from a careful examination of the accounts, that the account system of India was a thoroughly unsound system of accounts.

2706. But how could you tell that if they were not original accounts?—I am basing my statement upon the examination of the accounts, and particularly with reference to the annual accounts presented to Parliament.

2707. Do you consider that they are also objectionable in their form?—I consider that they are bad and incomplete in form, and unreliable as statements of the receipts and payments of the year, and that the account system of India is unsound in principle, and not calculated to give the finance minister and the Government of India that control over the expenditure which ought to be exercised.

2708. Can you give us any illustration of these general views by taking some particular item of the accounts?—Perhaps it would be convenient to the Committee if I take each statement in its order; let us take, first, the bad and incomplete form of the accounts.

2709. What year are you going into?—The year 1869-70; that is the last year which I saw much of; I will ask the Committee to try by this account to know anything of the public debt of India.

2710. What page are you looking at?—Page 57; you will find there a "General Abstract Account of the sums paid and payable for interest on India debt, in the year ended the 31st March 1870, showing also the amount of the debt at that date." Now on the right hand side of this account you have the amount of the debt, headed, "Registered Debt," therefore it appears that the whole of this statement is registered debt. Well, I do not know, I am sure, whether "Treasury Notes" and "Miscellaneous Deposits" are to be considered as registered debt, except that a record must, I suppose, be made of every debt. But what is the amount respectively of the funded and unfunded debt of India?

Friday, 25 *April* 1873.

MEMBERS PRESENT:

Mr. Ayrton.
Sir George Balfour.
Sir Thomas Bayley.
Mr. Beach.
Mr. Birley.
Mr. Bourke.
Mr. Steven Cave.
Mr. Cross.
Mr. Charles Dalrymple.
Mr. Grant Duff.
Mr. Eastwick.
Mr. Fawcett.
Lord Edmond Fitzmaurice.
Mr. Robert Fowler.
Mr. Hermon.
Sir Stafford Northcote.
Mr. John Benjamin Smith.
Sir David Wedderburn.
Sir Charles Wingfield.

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

Mr. WILLIAM GIMBER GOODLIFFE, re-called; and Examined.

Mr. *W. G. Goodliffe.* 25 April 1873.

2711. *Chairman.*] YOU were giving evidence when we left off on the last occasion, on the account of page 57 of the Finance Accounts for 1869-70?—Yes, I was upon the form of the account. I stated that in my opinion the Indian accounts were bad and incomplete in form, and I proposed to illustrate that by first of all speaking of the public debt of India. I said that if you look at this account on page 57, and endeavour to ascertain from it what is the funded and unfunded debt, it does not show that at all. There is a statement to be seen on the right-hand side of this account, which is headed "General Abstract Account of the sums paid and payable for interest on India debt in the year ended 31st March 1870; showing also the amount of the debt at that date." The right-hand side of the account shows the amount of the debt; and it is there headed "Registered Debt;" but that is not correct, because a portion of it is in the form of Treasury notes and deposits.

2712. Have you anything to add with reference to the entry regarding the debt?—Yes; on the left-hand side of this account is the amount of the interest paid in the year, and the total in India is represented to be 3,400,681 *l.* Now, a page or two further on, at page 61, will be found a "General Abstract Account of the Receipts and Disbursements of the several Presidencies and Provinces of India, for the year ended 31st March 1870, showing the local surplus or deficit at each Presidency or province," and the first two items of the expenditure in this General Abstract Account are "Interest on Funded and Unfunded Debt," and "Interest on Service Funds and other Accounts." The first item of "Interest on Funded and Unfunded Debt," under the head of "General and Political Government of India," is 2,773,414 *l.*; but when you look at the previous account to which I have called attention, you will find the interest on loans stated to be 2,865,063 *l.* The interest on the service and other funds in the second of the accounts is stated under "Government of India, General and Political," to be 401,115 *l.*; but in the previous account it is 309,466 *l.*, if you take the two items together, the Treasury notes and the deposits, that is to say, the interest on other monies excepting loans. The two aggregates agree, 3,174,529 *l.*; but I am quite unable to explain, and I think anyone who looks at these accounts will be quite unable to explain how it is that this discrepancy arises between these two statements of account.

2713. If you turn to the Account No. 33, which is also an account of the expenditure for interest on the debt, you find that the two items, "The Interest on Funded and Unfunded Debt" and "The Interest on Service Funds and other Accounts" taken together amount to 3,174,529 *l.*, do not they?—Yes.

2714. That is precisely the same sum as is shown in the Account No. 29 divided into three heads, thus: "Interest on Loans," "Interest on Treasury Notes," "Interest on Deposits on account of Service Funds, Military Savings Bank, &c.?"—Yes; but I want to know the cause of this discrepancy between the interest on loans being stated in one account at 2,865,063 *l.*, and in the other at 2,773,414 *l.*

2715. Does it not occur to you that the discrepancy as you call it arises from the fact that some of these funds are invested and some are not, some of the service and other funds; and therefore in one place they are classified more accurately as funded debt, and in the other they are differently classified?—That is the possible explanation, but you do not learn it from the Finance Accounts. The next point to which I wish to call attention is, that on the right-hand side, at page 57, you will find "Madras Loans," 15,400 *l.* at 8 per cent., and 8,050 *l.* at 6 per cent. But these two loans are part of the "registered debt" of India, and therefore the interest upon these amounts together, which is stated upon the other side of the account to have been paid, namely, 4,550 *l.*, it appears to me should not be classified under the head of "Interest

on

on Service Funds and other Accounts, in Account No. 33."

2716. Would not that depend upon the nature of the particular accounts kept in India, separate or otherwise, for some particular purpose?—Yes; but I say it is difficult to understand from these accounts what is really the funded and unfunded debt of India; and giving my own impression, and speaking with reserve, I doubt very much whether there is an accurate account in India of the public debt in India.

2717. Do you understand that what is called "Registered Debt" has a technical meaning in India with regard to the operation and mode of keeping the accounts?—Yes, that it is distinguished from the amount of miscellaneous deposits and Treasury notes.

2718. Do you not know that it has a technical meaning as to the particular issue of debt called "Registered Debt"?—I am not dwelling upon the point of registered debt. I should wish to see what was really the amount of the funded and unfunded debt of India.

2719. But that is not the phrase used in Indian finance, is it, funded and unfunded debt?—In Account No. 33 you will find that that is the precise term used, "Interest on Funded and Unfunded Debt." I say there is a difficulty; I do not say that it is impossible of explanation. I propose next to ask the attention of the Committee to the revenue side of the account, Accounts 2 and 3, at pages 8 and 9. We find here assessed taxes put down for 1,025,799 *l.* net at page 9. There is not a figure in these accounts to show on what property, persons, or things these taxes are assessed. Take Customs, again; they amount to 2,166,000 *l.*; there is nothing to show how much is export or import, or on what articles it is levied. Again, take opium, 6,132,387 *l.*; there is nothing at all in these accounts, not a line, to show how much of the tax is paid in India and how much of the tax is got from China; how much is duty, and how much profit. The Committee have taken a great deal of evidence on the Opium Revenue, but what a key to the whole question it would have been if the receipts had been exhibited in such a way as to show how the whole amount of that duty is obtained! Now let us go to the expenditure side of the account, and we will take, if you please, any of these accounts, which may be called Service Accounts; we will take, for example, the Marine Account at page 42. Can anything be more thoroughly unsatisfactory than the way in which the payments in England are added on to this account? The payments in India are classified with care and distinctness, amounting to 934,044 *l.*; but here you find at the bottom an amount equal to one-third of that expenditure, put down in two lump sums, "Stores," 109,000 *l.* odd, "Other Payments," 249,000 *l.* odd, making together 359,000 *l.*

2720. Mr. *Cross.*] "Other payments, as in Home Accounts"?—Yes.

2721. Does that refer to some other Table in these Finance Accounts?—No; it refers to dictinct accounts. And 136,690 *l.* out of this 249,000 *l.* is for the construction of two iron-clad monitors for Bombay. But these are the only service accounts that Parliament has at all in connection with the marine charges, or that the Government of India publish; and therefore I submit that this expenditure for these iron-clad monitors in Bombay should find its place under the head of Bombay, where, possibly, other expenditure of he same character is going on.

2722. Who is responsible for ordering that 136,000 *l.* worth of goods?—I do not know myself the principle on which the indent comes from India. I only speak of the fact of the payment. As Accountant General it was my duty to make the payment when it was duly authorised, and it appears in the Home Account.

2723. I want to understand this: who ordered the goods for the 136,000 *l.*; if they were ordered in India, why did they not appear in the accounts in India?—Because they were paid for in England, and instead of being added on in their proper place they are put in a lump at the bottom of the account. Again, to take a second item, "Contributions towards the Expenses of Her Majesty's Ships employed in the Indian Seas," 51,521 *l.*; that is also a portion of the 249,130 *l.* It appears to me that that is also an item which should be classified as is the Indian expenditure. The whole expenditure is incurred by the Home Government upon application from the Government of India with reference to services which are set forth in detail here, and therefore, it appears to me, it should find its place properly classified with the expenditure in India.

2424. *Chairman.*] Let me understand the exact nature of your suggestion with reference to this account. The account of the expenditure in India states, that there is an addition under the head of Marine, of 359,000 *l.* spent in England for that head of service; and when you turn to the account of what was spent in England, you find Marine Charges stated precisely the same sum, 359,000 *l.*, and then you find that the details of those charges are "Pensions and Retired Allowances, Furlough and Absentee Allowances, Commutation of Pensions of Officers of the late Indian Navy, on account of Contracts for Construction of Two Iron-clad Monitors for Bombay, Contribution toward the Expenses of Her Majesty's Ships employed in the Indian Seas," that is at page 3 of the Home Accounts for the same years, and that with the "Stores for India," amounts to the same sum?—Those are the details given in the Home Accounts of this expenditure; but my view is, that this expenditure being on account of India, should be classified in these accounts under the heads to which it relates, and under which similar expenditure, if any, in India is classified. If it belongs to Bombay, it should go to Bombay; there is nothing in the Home Accounts to show whether the expenditure is for the Government of India, for Bengal, Madras, or Bombay; but the Home Treasury must know, of course, for which Government the expenditure is incurred, and it should therefore be properly classified in these Finance Accounts, in order to make them complete.

2725. I suppose it is quite consistent with a system of accounts, when the accounts profess to give a general abstract account of the marine charges of India for the year 1870; and it is subdivided under the head of the country or district in which the expenditure is made, British Burmah, Bengal, Punjaub, Madras, Bombay; consistently with that classification, if the expenditure is made in England, England would be the head; that is the system on which the account is made out, by localities?—Yes.

2726. And therefore it necessarily follows, that England being the locality, the expenditure in England must be so classified?—No; I think

Mr. *W. G. Goodliffe.*

25 April 1873.

that the Home Government act as agents for the Government of Bengal, or of Bombay, as the case may be, and they make certain payments on their behalf, and when their payments are made, those payments should fall in their place; of course in a different column, so as to preserve the distinction of how much is paid in India and how much in England.

2727. Are you aware that in all these accounts each Government is acting as an agent for another Government in various services, and yet the account of the services performed in a particular Presidency may form a part of the accounts of that Presidency, without reference to whether it was done by the desire of the Governor General, or any other Governor?—My view is, that the accounts for Bombay should show the total expenditure for Bombay.

2728. Mr. *Cross.*] But these ships do not belong to Bombay?—That is exactly the question, whether they do belong and properly belong to Bombay or not. If they do not, then I say that the expenditure should appear under the Government of India, or whichever may be the proper head.

2729. I do not quite see what your objection is. If these ships belong to the general service of India, why should they appear in the Bombay account?—I say that it appears to me that the expenditure in England on account of India should be classified in the same way as the expenditure in India is classified, so that you may know what is the total expenditure for each service. But we will come to an account in which the services are exactly the same. Let us look for a moment at page 47, stationery and printing, 253,325 *l.* paid in India. In England they have paid on account of these several Governments 121,841 *l.* I submit that that 121,841 *l.* should be classified under the Governments on whose account the expenditure was incurred.

2730. Mr. *Eastwick.*] You find it all classified I think in the Home Accounts. Is your object simply to save a reference to the Home Accounts?—Not at all. I do not find it classified in the Home Accounts at all.

2731. Mr. *Fawcett.*] Your contention is, that as the figures are presented you cannot tell how much was spent for Bombay and how much for Madras for stationery?—Yes. I will take a stronger case still, Account No. 25 for superannuations, at page 51. The total payments in India amount to only 592,752 *l.*, which is all classified under a great variety of heads; but we find payments in England put down in a lump, 739,763 *l.* without any classification at all, and a great portion of that is for services identically the same in both countries.

2732. Mr. *Cross.*] And in looking to the Home Accounts you cannot find out the facts that you want to know?—No; and even if you could, you want the information complete in these Finance Accounts. I will take one case more, that is the Public Works Extraordinary; the account will be found at page 60, Account No. 32. Now, surely the Public Works Extraordinary Expenditure is expenditure that should be carefully classified. This is the expenditure stated to be carried on out of loans, specially borrowed for the purpose; but we find here more than a million of money put down in a lump sum thus, "Other payments as in Home Accounts," without any attempt to put it under special works or governments.

2733. *Chairman.*] Your view is that the expenditure made in England should be re-classified, so that it may be the correlative of the expenditure in India?—Yes.

2734. So that each separate head shown in India may have its complement of expenditure in England added to it?—Yes.

2735. Mr. *Fawcett.*] Then those statements that are made in India, for instance, the things which you constantly see stated in official reports; that, for instance, Bengal spends so much in stationery, and Bombay spends so much, and Madras so much, are quite untrustworthy, because the main larger sum behind represents the Home Accounts, which is not divided at all; that is the case, is it not?—It requires some care, if anyone wants to ascertain the expenditure, that he is not mislead into taking the expenditure put down in India as the total expenditure.

2736. *Chairman.*] If you want to go into it minutely you must always have regard, in fact, to some supplementary item in the Home Accounts in connection with that particular service into which you are examining?—Without going into it minutely, if you want to go into it in the broadest possible way, you must do so.

2737. No; because in that you have the totals in the English expenditure, as the supplement of every head of Indian expenditure in a general way?—Not as regards the Governments.

2738. Mr. *Fawcett.*] Taking those figures that you have alluded to, 500,000 *l.* was spent in India in superannuation allowances, and 700,000 *l.* in England. You know into what portions the 500,000 *l.* spent in India is divided; for instance, 200,000 *l.* of it may be spent in Bengal, 200,000 *l.* in Bombay, and 100,000 *l.* in Madras; but there is nothing to show that the aggregate expenditure, so far as Bengal is concerned, may not be twice as great as that of Bombay, though they appear to be equal. Therefore it is not a question of minute detail?—It is not.

2739. *Chairman.*] If you turn to the account of the Revenue of India at page 8, you will see against every head that the expenditure in India is so much, in England so much, total the sum of those two items?—Yes; but there we have got away from the Presidencies.

2740. Mr. *Fawcett.*] The point that you want particularly to bring out is this, as I understand, that you object to the expression "minute detail," because it does appear that in many cases the expenditure in England which is not classified is considerably larger than the expenditure in India which is classified; therefore it is not a minute detail, but a thing that affects substance?—Yes. With regard to this account at page 51, where there is this expenditure of 592,753 *l.* in India, and in England 739,763 *l.*, I have very strong reason to myself suspect that the Government of India and the India Office are at cross purposes on a portion of this account; because, while the payments in England are stated in gross 739,763 *l.*, and include the payments on account of the military and medical funds which have been assumed by the Government of India, the subscriptions on account of those funds received in this country being brought to account as receipts in Accounts 2 and 3; I am strongly inclined to think that considerable abatements are made on the payments in India, and that the net amounts have been stated in the account there. I do not speak positively on that subject, but I make the statement in order to show

to show how necessary it is that clear accounts should be presented of these military funds; so, that, although they have been assumed by the Government of India, we may know the exact position in which they stand.

2741. *Chairman.*] What item do you refer to now?—Take the item of Madras, on page 51. Pensions of the Military Fund are put down there at 29,873 *l.* Now, so far as I could understand the books that came home from India, it appeared to me that a very large receipt had been taken off that amount, and the net amount only entered; but that would not affect the surplus for the year, because, if it were so, a larger proportion would be put on the other side of the account. I point that out chiefly with the view of stating how necessary I think it is that clear accounts of these military funds should be presented, notwithstanding that they have been assumed by the Government of India.

2742. Mr. *Fawcett.*] Speaking with reference to these funds, have you, as Accountant General, ever been able to discover what has become of them; are they invested, or has the money been spent and is what is represented as money in these funds really a part of the debt; can you throw any light upon that?—It is not a matter that came under my notice as Accountant General, but on a transfer of the funds I saw a dispatch which went to India on the subject directing what course should be followed with regard to taking over the funds, and the appropriation of a portion of the capital fund to meet the surplus payments in each year, and I rather think that I disagreed with the course that was followed, but I was not consulted upon the subject; it did not fall within my province at all. I made a memorandum at the time on the subject, and I should not object to tell the Committee what my view of the case is.

2743. I want to find out is it possible from these accounts (of course the whole accounts of India have been carefully looked into by you) for any one to discover where these funds are?—Not from these accounts.

2744. Then from what official documents; what document is there in existence which would tell us?—I am not aware that there is any document.

2745. Then we do not know whether these funds exist or not?—I do not know that we do. I suppose they are part of the debt of India; that the funds were invested in the debt of India, and that the debt was taken over.

2746. Is it not rather extraordinary, considering that this represents a portion of the capital of India, that it is impossible to find out from any statements of the accounts where the money is, whether it has been invested or not?—Yes, I only assume that it is part of the debt of India. Now, for example, in the Home Accounts there was a pension fund at the India Office arising from abatements made from salaries and other sources; the amount is a large one, and is invested in capital stock; that capital stock stands in the names of trustees, and the interest upon that stock is brought to account every year in aid of the payments made on account of pensions; and in that case it is quite clear exactly how much is held on account of the funds. And so I apprehend, in regard to each of these military and medical funds, it is clearly known how much of the public debt relates to these funds which have been assumed by the Government, and the account should show it.

2747. The accounts in India, although there is such an enormous amount of printing, do not show that fact; it is impossible to find out from any accounts in India how much money in these funds is invested, and whether any interest is derived from the investment to meet the charges on that account?—I do not think that there is any account that gives any satisfactory light on the subject at all.

2748. *Chairman.*] Do you mean no account in the books of the Government of India or England, or no account printed and laid on the Table of the House of Commons?—That no account has been printed and laid on the Table of the House of Commons. I think that there is probably a most accurate account in India.

2749. Mr. *Fawcett.*] I suppose the object of these Finance Accounts, which are laid before Parliament, is to give Parliament and the country a true and accurate idea of the financial position of India?—And I think more than that, that they should give some control over them.

2750. Now in your opinion, in your experience as an accountant, is it possible for us to obtain an accurate knowledge to enable us to exercise a judicious control as long as that information is wanting to which you have referred?—I think it is not; and I think when I come to the question of the reliability of the accounts, you will see that neither the House of Commons nor the Secretary of State has any possibility of control. I am going now to ask the Committee to look at the balances of Public Monies Account, No. 34, pages 62 and 63. This account shows, in the last line but one, a cash balance in the Treasury of 13,940,451 *l.* Now, when we speak of public balances in this country, we all know that we are talking about the balance under the control of the Treasury, and that it does not include departmental balances of the army and navy and other services; they are quite distinct. But here is a balance which is the aggregate balance of all the monies of all the services and of all the departments apparently; and, I think myself, it is very doubtful whether it is correct.

2751. *Chairman.*] As you make this comparison, will you tell me what you understand by the public balances in English finance?—The balance under the control of the Exchequer, that is, of the Treasury, and which is distinguished from the departmental balances of the army and navy and other public departments.

2752. You say that the public balances here are the balances in the Exchequer, and that they do not include the balances in connection with the several services. Do you mean that they do not include the balances unissued in the Votes in Supply of the several services?—No; I mean that they do not include the monies which have been issued to those departments, and have passed to the control of those departments. Now here, in this account, this is the whole balance of the whole of the Indian Services.

2753. Is there any Exchequer in India?—I am not now speaking of the system of accounts in India; I am only pointing out the defect in the form of the accounts, and I point it out at this moment because I consider that a large portion of this money is not public money at all in the true sense of the word; it belongs to the Guaranteed Railway Companies, and belongs to trust funds and other funds, and therefore I should say that the accounts ought to

Mr. *W. G. Goodliffe.*

25 April 1873.

show how much belongs to each of the guaranteed railways, and how much to trust funds.

2754. You began by saying, as I understood you, that this account is improperly framed, because it is not like the Exchequer Account in England?—No, that is not now my point; but that when we speak of the public balances in this country, we all know that we mean balances in the Exchequer, and not the balances that have passed out of the control of the Exchequer to the different services, which are very considerable of course. But I say that a portion of this Indian balance is not strictly speaking public money at all.

2755. This does not profess to be an account of the public balances in the sense of an Exchequer Account in any way, does it?—No; it is the balance on this account, or rather, in fact, it is the difference between the one side of the account and the other.

2756. But what is the objection if the account itself does not profess to be what you think it ought to be?—I am pointing out a defect, the result of which is that no one can tell how much of this balance belongs to the Government of India, and how much to guaranteed railways and trust funds.

2757. Is it your idea that there ought to be an Exchequer Account in India?—I prefer to come to that later in my evidence. The defect in form in this case I take to be that you do not know how much of this money belongs to the Government of India, and how much of it to railway companies and other trusts. My point is that the departmental balances are all included here along with what would be the Exchequer balances if there were such an account.

2758. Is not that because there is no Exchequer Account in India?—That is the reason.

2759. Is it your view that there should be an Exchequer Account?—It is my opinion that there should be an Exchequer Account in India.

2760. Mr. *Fawcett.*] But even supposing that there was not an Exchequer Account, you think that the accounts could be presented in a different form from what they are?—Yes, unquestionably. The defect of these accounts is that although the whole receipts and payments in England affecting the revenue are brought on to these Finance Accounts, yet the balance of the Home Treasury is not brought from the Home Accounts; you cannot say, therefore, how much of the aggregate balance belongs to the railway companies and the other trusts. But I wish most strongly to protest as an accountant against accepting an account which is signed by officials who are not responsible for the balances shown in the account. Now no one will pretend for a moment that the Comptroller General of Accounts in India and the Deputy Comptroller General are responsible for this 13,940,000 *l.*

2761. *Chairman.*] Is there one person, or can any one person be responsible for the receipt and expenditure of public monies?—Undoubtedly the accounting officers should be responsible; those who are responsible for the money should submit accounts showing what money has passed into their hands and what has been done with it.

2762. Does not everybody in India sign his own vouchers?—I am not speaking of what is the practice in India, but of what is a sound system of account, namely, that those personally responsible for the expenditure of money should render the account, and sign the account, and know where the balance is.

2763. Do you know whether that is not done in India?—I say it is not done by these accounts.

2764. Mr. *Cross.*] Are those accounts signed anywhere?—Yes; this account is signed at page 65. I am not at all saying that there is not a great deal of account keeping in India, and in my opinion, probably much more than is necessary; but I am speaking only of these Finance Accounts.

2765. *Chairman.*] Do you make any suggestion that is practicable?—I maintain, that it is perfectly practicable, and should be insisted on.

2766. Is not this a summary of the accounts of a great number of persons?—Yes.

2767. And can anybody sign it except one who takes the entire accounts together?—That is because these accounts are based upon a thoroughly unsound principle; the principle of accounting is radically and fundamentally wrong, in my judgment. But now I am only pointing to the defect in the account, because I should object, as an accountant, to accept such an account.

2768. Sir *George Balfour.*] Is not this the aggregate of about 450 treasuries?—I dare say it is.

2769. How could we arrive at the balances, except by one officer being appointed to sum them up?—That is exactly what I object to.

2770. *Chairman.*] Are you not confounding this summary of the accounts rendered with the accounts themselves, which it is not necessary, for this particular purpose, to present?—Of course it is for Parliament to determine what accounts they wish to have; but I was speaking of them as Finance Accounts, and in the point of view in which it strikes me that they are defective, and fail to give the information which it would be useful to have. What I submit is that they on the one hand fail to give a great many particulars which it would be very valuable to have, while on the other hand, a great deal that is given is valueless from the way in which it is furnished, even assuming the figures to be correct, and the natural consequence is that few persons take the trouble to look into these accounts, and those who do, find their labour for the most part fruitless.

2771. Would it not occur to you that if people do not take the trouble to read these accounts, which are not very long, they would take less trouble if they were much longer?—My suggestion would be to make them much shorter and simpler so as to give them more interest.

2772. Have you any other point in regard to these accounts on which you would like to offer a suggestion?—Not as regards the form of the accounts.

2733. Sir *G. Balfour.*] Your contention is that the Indian Accounts should be complete and perfect in themselves, including the cost of stores purchased in England?—All payments in England on account of India I think should be properly classified under the Government on whose account they were supplied.

2774. And that the sums expended on account of stores should be exhibited where?—Under the proper head of the Government who had called for them.

2775. Then in the Home Accounts, in what form would you represent the monies laid out for the purchase of those stores?—I think that there is not any fault to be found with the classification of the Home Accounts. It appears to me to be stated

stated sufficiently clearly there for the purposes of those accounts which are merely the accounts in a certain degree of an agency.

2776. Then the practical conclusion we come to is that the final charge on account of stores supplied to India ought to appear in the Indian Accounts, and not in the Home Accounts?—They must be final payments, and they are final payments in this country. I only submit, when the Service Accounts are made up for India, that the payments in England should fall into their proper place.

2777. I used the word "charge," not "payment," and I want to see that we understand the words in their exact and proper meaning. The word "charge" is a different thing altogether from the word "payment"?—My opinion is that the payment should be the charge; that the payments made between the first day and the last day of the year, should be the charge for the year.

2778. I will draw your attention to the fact that the system of charging the account of stores was changed more than once in the Indian Accounts. I will go back to one account which I have got here by which the expenditure on account of stores for India appeared in the Home Accounts in the account current between England and India, and the final charge on account of the stores actually supplied appeared in the India accounts?—The charge eventually did; the payments were a matter of account current for the time between England and India, and eventually were brought to charge in India.

2779. Since that you are aware that that system, for reasons which satisfied the authorities, was changed, and that they excluded the stores from the charges in India, and exhibited them as a final charge in the Home Accounts?—No, that does not exactly describe the case as I understand it; the payments for stores were excluded from the account current between England and India, making them a final charge in the Home Accounts, and that final charge is transferred to the Indian Accounts, so that it becomes a charge against the revenue of the year.

2780. *Chairman.*] Is that added as part of the Indian expenditure, or is it added merely to show the expenditure in England in connection with the expenditure in India?—Added as a charge and against the Revenue of the year, to complete the charges against the Revenue of the year.

2781. Is it added as an Indian charge or as an English charge for the purpose of showing the total expenditure under that head?—It is added as an English charge, as a payment made in England.

2782. Sir *George Balfour.*] Then if it is a charge in the Home Accounts it ceases to form a charge in the Indian Accounts?—I do not say that it is wrongly treated in that respect, but that it should be brought to charge in a separate column, and be properly classified. A portion of the expenditure occurs in India and a portion in England; I wish them to be brought into juxtaposition.

2783. Then we come back to the same thing as existed formerly, namely, that the whole charge on account of stores purchased in England was exhibited in full in Indian Accounts?—As I understand, the former practice was not to bring to account in India the payments made in the year, but stores made use of in the year.

2784. No; the practice of India was clear and distinct that whatever stores arrived between the first day of the year and the last day of the year, these stores were most carefully and exactly tabulated, and whatever the value of those stores which arrived in India had been, that value was put into the Indian Accounts as a charge against the revenues of India?—Yes, and that is a totally different thing from the payments.

2785. But your statement I think was that the sums expended were brought to charge, which is a different thing?—In one case the actual payments within the year were brought to charge, and in the other case something, not the actual payment, but the stores that arrived, or stores that were used; I do not know which it was.

2786. I will call your attention now to one objection which you have raised. If you observe the Indian Accounts of 1856 and 1857 you will see there a classification of the heads under the different kinds of stores and the different presidencies (*handing the accounts in question to the witness*)?—Yes; this is the account of stores exported to India in the year 1857.

2787. In that year no monies on account of stores so exported were exhibited in the Indian Accounts; the whole sum expended on account of stores supplied to India was exhibited in the Home Accounts?—The change I am speaking of is this: That the payments in England for stores are now brought to charge from the Home Accounts; that is to say transferred from the Home Accounts to the Finance Accounts, and brought to charge against the revenues of the year as being the payments of that year.

2788. In the year 1857–58 following the year 1856-57 an entire change took place, by which the value of the stores arriving in India then became a charge in the Indian Accounts against the revenues of India, and the expenditure previously shown in the Home Accounts as a final charge then ceased to be shown; are you aware of that?—I am speaking with reference to what is actually the case now; and what I understood, what I know in fact, was the case when I entered the India Office in 1860.

2789. Will you tell me the change made in 1866-67?—When I entered the India Office the course was this: The stores paid for in England were treated as part of the Remittance Account between England and India, and what amount was brought against the revenues of India I cannot say; I know nothing about it whatever, whether it was the amount of stores received, or whether it was the amount of stores issued, or whether it left out half that ought to have been brought to account. All I know is that it was a matter of account current between London and India. But on looking into the Remittance Account, the first point that struck me was that this was an unsound system. In my judgment, whatever has been paid in the year ought to be brought to charge against the revenues of the year, whether it is paid in England or whether it is paid in India. That was the conclusion which I formed.

2790. Will you describe the change that subsequently took place in the year 1866-67, with regard to these very stores?—It became the practice to omit these stores from the account current between India and England, and to transfer them from the Home Accounts as final payments to the Finance Accounts, and make them part of the charges of the year against the revenues of the year in the Finance Accounts.

Mr. *W. G. Goodliffe.*

25 April 1873.

I do not know in what year precisely the change was made, but that is the system now. The payments in England on account of the stores are transferred from the Home Accounts to the Finance Accounts, and are made a part of the charge against the revenues of the year.

2791. *Chairman.*] Your view is, that in the Indian Accounts the English Home expenditure in connection with services in India should be analysed into a number of details, so that for every item of the Indian Accounts shown, there should have the correlative English expenditure shown against that; the total expenditure in England and India for that particular head of service?—That is precisely my view; but General Balfour is under the impression, as I understand him, that the payments in England on account of stores, between the 1st April and 31st March, are not made a charge against the revenues of the year for that period.

2792. The question was whether it was brought to charge as a final payment in England or in India. According to the accounts laid before us it is brought to charge as a final payment in England, and for the purpose of showing the total expenditure, the two are brought together in the accounts not as a charge but merely as a statement of account?—I say that these Finance Accounts should agree with the Indian and Home books.

2793. If you look to the Account, at page 8 you will see the totals stated "Expenditure in India" and "Expenditure in England," and these are brought together in the totals to show the whole expenditure both in England and in India in one statement; but the charges that are represented as expenditure in India are brought to charge in India as final payments, and the charges described as expenditure in England are brought to charge in England as final payments in England; the two are added together to show a statement of account?—Yes.

2794. Mr. *Fawcett.*] But making the statement of the account in that particular way renders it impossible to gain an accurate idea of the true financial position of India in any one year, as I understand you?—You do not ascertain the real expenditure on account of each Government.

2795. *Chairman.*] If you want to go into detail, to know the details for any head of Government or Service, it is necessary to rip up the expenditure in England and see how much is to be attributed to that particular service?—Yes.

2796. Sir *G. Balfour.*] Taking stores for India, for the Army for instance, in the year 1869-70, at page 11 of the Home Accounts, they amount to 878,491 *l.*, and we have no statement of how that sum is apportioned to Bengal, Madras, and Bombay; that is your point?—Yes. Of course I apprehend that these payments being final payments, and brought to charge in this country, do not come on to the Indian books at all.

2797. You mentioned as the system of our Home Accounts that the Exchequer Balances are kept distinct from the Departmental Balances. You are aware that the Drawing Accounts of the different departments are not included in the Exchequer Balances?—The balances of departments form no part of the Exchequer Balances.

2798. Then it is quite possible that these accounts, technically known as the Drawing Accounts of the departments, may be largely swelled on the last day of the month, so as to decrease the Exchequer Balances?—Yes; the balances in the departments are quite distinct from the Exchequer Balances, and they may be larger than necessary.

2799. And they may be increased on the last day of the month so as for the department to have a very considerable sum in hand on the first day of the new year?—Each department has power to draw within its estimate for the whole amount of its estimate.

2800. But inasmuch as all sums ought to be relinquished by the different departments, and all monies unexpended by the Home Departments are so relinquished at the end of the year, it follows that they can have no other balances excepting those sums which stand to their credit in the Bank of England on the Drawing Accounts?—The balances of the departments which stand to their credit in the bank on their cash accounts or drawing accounts.

2801. And that these sums could be very considerably increased, and the Exchequer Balances very considerably decreased?—No question they can draw to the full amount of the Vote.

2802. Then looking at the cash balances here of the Indian Government, is it not a great advantage to have the whole sum of the cash shown, both that which is in the hands of the departments and that which is in the 450 treasuries of India?—No; I think that that aggregation of the balances prevents that knowledge of the position of the services which ought to be obtained; but I think I should deal with that better when I come to speak of the principle of the accounts.

2803. Mr. *Fawcett.*] With regard to these cash balances, unless you know of what elements those cash balances are composed, it is quite impossible to form any accurate opinion of the financial position of the country, is it not?—I think that the financial position of the country is ascertained from the statement that is exhibited of the revenue and expenditure of the year; but what I want is security for this large amount of balance.

2804. But my point is this; last year it was stated that the cash balances were 13,000,000 *l.*; as far as we know nearly the whole of that 13,000,000 *l.* might represent money belonging to guaranteed railway companies, or, in other words, may consist of property not a shilling of which the Government can properly devote to ordinary revenue?—Undoubtedly.

2805. It may, however, consist to a large extent, say 10 millions or five millions of money, which represents balances in various public departments, money which has been devoted out of public revenue to ordinary public works, but not spent; and consequently it may happen that Government really has 5,000,000 *l.* to spend?—There is no explanation where that 13,000,000 *l.*, or whatever the amount may be, is, or in what form it exists.

2806. And unless you know in what form it exists you cannot possibly tell how much money the Government of India really begins the year with, and what it has to spend?—No.

2807. Therefore unless you know how much money the Government has to spend, it is impossible for you to tell what is the true or financial position of the Government, and therefore what taxation ought to be imposed for the current year?—I daresay it is known sufficiently well in India.

2808. But

2808. But I am referring now to the knowledge that is given to us?—The accounts do not give the information that is necessary for anyone to form a judgment upon them.

2809. For instance, the accounts tell us (I refer to the information laid before us as Members of Parliament) nothing whatever about the elements of which the cash balances are composed?—No.

2810. And unless we know something about the elements of which the cash balances are composed, it is impossible for us to form an opinion of the financial position of the country?—I think not; and also that it is impossible to feel that the cash balances are secure.

2811. You think that the information which you consider to be desirable to enable Parliament to form a proper opinion of the financial position of India could be given if the accounts were presented in a different form, and arranged upon a different principle without making them more voluminous?—No question but that they might be far more simple.

2812. Now with reference to the public works, as the large amount that is spent for public works is not divided or allotted to public works ordinary and extraordinary, all that division we hear so much about, ordinary public works being paid out of revenue; extraordinary public works being paid out of borrowed money, becomes of course absolutely meaningless and perfeetly useless?—You cannot follow any distinction; you cannot trace it.

2813. In fact when we are told that it has been carefully decided that extraordinary public works should be paid with borrowed money and ordinary public works should be paid out of the ordinary revenue, as far as the accounts are concerned, which we as Members of Parliament have, it is absolutely impossible for us to know whether that has been carried out or not?—The same state of things exists now, as when Lord Halifax stated in the House of Lords that some two millions of money had been raised for extraordinary public works, in the time of Lord Dalhousie I think, and somehow or other it had been spent on ordinary public works.

2814. And you cannot trace it in fact?—No.

2815. Sir *G. Balfour.*] And that loan was raised particularly as a public works loan?—So I understood Lord Halifax's argument.

2816. Sir *C. Wingfield.*] Perhaps you are aware that in the accounts of the cash balances of the last year it was admitted by the Financial Member of Council that upwards of 2,000,000*l.* was money that had been borrowed for State railways, and had not been employed, and lay idle there?—Yes.

2817. Sir *G. Balfour.*] You think that these monies borrowed both for public works and the money lying to the credit of the railways ought to be exhibited separately, and are special funds that ought not to be mixed up with the ordinary transactions?—I regard it as a most serious defect in the Finance Accounts to add on the extraorninary expenditure in the way that is done, and so to discredit the finances of India, by constantly exhibiting a deficit when a surplus exists.

2818. All this system of borrowing for the [illegible]pose of executing works and mixing of these [illegible]sactions renders it impossible for anyone to [illegible]rstand the real nature of the transactions?—[illegible]or the expenditure that takes place upon [illegible]ork.

Your contention is that whatever service funds should exist, the capital of the funds and the cash payments should be shown distinct?—The service accounts of the extraordinary public works should undoubtedly show what amount had been allotted to each work, how much had been issued and spent, and what was the balance.

2820. Then, with regard to the military funds, the civil service funds, and the medical funds, your contention also is, that the capital of these funds, as well as the receipts and the payments on account of these funds should each be separately exhibited?—There should be separate accounts of each of the funds.

2821. Does the fact of the Government having taken over these service funds at all change the form of the accounts?—It only renders it more necessary that separate accounts should be rendered now that they are managed by public officers. Before, they were private trusts, and were properly looked after.

2822. Sir *C. Wingfield.*] But now the Government undertake to pay a man a pension of a fixed amount, irrespective entirely of his own contribution to the fund, whereas before, he got his pension proportionally?—I am speaking only of the account system; I say, that now that the Government of India has taken over these funds, an enormous capital, two or three millions has been taken possession of, and, as I understand the system, the payments in the year form a charge against the revenue of the year, and the subscriptions form a part of the receipts of the year, and whatever deficit is required is made up from the *corpus* of the funds. I want to see an account to show that the Government of India has not altogether made away with the *corpus* in one year.

2823. But the intention of the Government of India now in taking over the funds, is no longer to treat any account at all, but that the pensions should be a charge against the revenues of India, and a uniform pension is to be given, whereas, formerly a uniform rate of pension could not be given?—I do not think that that absolves the Government of India from showing an account of how the funds stand.

2824. Mr. *Fawcett.*] What I understand you to wish to express is this; now that the Government has taken over these service funds, two things it is essential to show; in the first place, what becomes of the capital, and secondly, what amount of revenue is required by the subscriptions, and what, on the other hand, the Government has to pay in superannuations and payments?—Yes.

2825. And as far as the accounts are presented to us, we do not know whether the capital exists at all, whether it may not have been spent in some year when the Government was hard up as ordinary revenue, and whether the payments to these funds do not come to more than one-half of the amount which the Government have to pay, and before the money, and therefore they made a bad bargain; none of these things can we find out?—No.

2826. Sir *G. Balfour.*] Then as to superannuation, do I understand that you would also desire to see the superannuations at home divided geographically into Bengal, Madras, and Bombay?—No, I should desire to see parallel columns; and so far as the payments in England relate to payments in India, the payments in England set beside the payments in India.

2827. Mr. *Eastwick.*] This would very much

Mr W. G. Goodliffe.

25 April 1873.

increase the volume of the accounts, would it not, because you would have a separate account for the funds?—I should have a separate account for each service, and therefore when you were examining the Army Account you would have the Army Account only to examine, and then the Public Works Account, and so on.

2828. Sir *G. Balfour.*] Then you made objections with regard to the opium revenue not being sufficiently shown; would not that item, as entered at present in the account, be made clear by having an appendix to show how that sum is made up; how much is made up from the cost of manufacturing opium, and how much by profit?—I do not know precisely what is the course in India, but I apprehend that there is some department or officer chargeable with the control of the collection of that revenue.

2829. The opium revenue is composed of two descriptions of revenue; one is entirely the revenue from the Bombay opium, which is a transit duty; and then the Bengal opium is manufactured by Government, and the expenses for the manufacture are borne by the Government, so that the actual sum is not made up in a uniform manner?—But I apprehend that there is some department responsible for the control of that revenue, and which knows the amount collected. I want that department to submit an account, to say what is the total amount collected, and to see how that corresponds with the amount brought to account in the Financial Accounts.

2830. Would an appendix answer the purpose?—I think it would in part.

2831. And the same with reference to Customs, to exhibit reports?—I do not precisely understand what these Finance Accounts are, whether they are cash accounts or to a certain extent service accounts. Take the Post Office, for instance; it is impossible that all the Post Office receipts should be paid in on the 31st of March from all the collectors of the Post Office. All these officers must have balances more or less in their hands; I want to know therefore how much that is at the end of the year, and where it is. If this is an account of all the money collected actually up to the last stroke of the hour, of the last day of the financial year, then the balance is in the Indian Treasuries, as it is stated to be. But if it is not, then it is in the boxes of those charged with the collection of the money. I want to know how much that money is. Taking our own Finance Accounts at home it will make it plain at once what I mean. If you look at the Customs in this country you will find that here are the gross receipts, 22,575,463 *l.* 13 *s.* 5 *d.*; these are cash accounts. These accounts of India are not cash accounts at all, merely an aproximate statement.

2832. Have we any reason to doubt that the Treasury system to which you are referring is in force in India, so that the actual payments within the year and the receipts within the year are brought to account?—I think unquestionably they are in force, and I want to see them exhibited in the Finance Accounts.

2833. Have we any reason to doubt that the Indian accounts represent the real facts of the actual payments and receipts within the year?—I want to show what is done in India. As regards the Customs in this country. Here is the gross receipt, 22,575,463 *l.* 13 *s.* 5 *d.*; then come payments out of the gross receipts, and then we have the net produce of 20,238,879 *l.* 14 *s.* 8 *d.* That is signed by a responsible officer in the Customs, who is responsible for that money.

2834. But that receipt is simply the actual sum received in the year, and the deduction you see there is the sum paid away in the year?—Not paid away but allowed.

2835. The transactions close with the 31st of March?—Yes. There is the gross receipt, and there is the net produce.

2836. You do not mean to say that the whole sum due on account of the Customs duty is represented by the sum you have quoted?—That is the actual money receipts of the year.

2837. But not the money dues of the Government within the year?—As I say, these are the gross receipts of the year. Here is a department which is responsible for that money, and how do we find it account for it? "Balances" on the 31st of March, 586,297 *l.*; "Gross Receipts," as I have quoted them from the account, "Repayments" so much; "Net Receipts," 20,238,879 *l.* Then we find "Payments with the Exchequer," 20,191,000 *l.* Turn now to the Exchequer Account and there is the 20,191,000 *l.*, while the Customs Department is responsible for the balance; and any one can follow the receipts from the tax-payer into the Customs Department, and eventually into the Exchequer.

2838. Then if we had an Appendix to the Finance Accounts of India, similar to what you have there, and if the sums making up the whole of the receipts on account of the revenues of India agreed with the sum made up from the different departments, you think we should have a clear account then?—I wish to see some department responsible for what is not brought into the account of the revenue of the year, that is to say, for the monies in the hands of the collectors at the time that they make up their accounts for the year, namely, to the 31st of March, but they cannot have paid in all their receipts.

2839. But that Customs account to which you have referred is made up of all the different collectors of Customs throughout the kingdom?—Yes.

2840. What is the difference between that united sum and the united sum of India?—The balance here is stated to be in the Indian treasuries. If it includes the gross receipts up to the 31st of March the amount cannot be in the Indian treasuries, unless the Customs' Collectors' balances are regarded as part of the balances of the Indian treasuries.

2841. But the 450 separate treasuries which are in India are part and parcel of the great treasury?—Then I apprehend that it is the duty of those persons entrusted with the collection of public money to pay into those treasuries the money that they collect.

2842. Have you any doubt that that is done?—Not at all; I only wish the accounts to show how much has reached the Exchequer.

2843. *Chairman.*] You wish to see the audited accounts of which this account before us professes to be a summary?—Yes.

2844. Mr. *Birley.*] Will you inform the Committee how the account current is kept between the Home Government and the Indian Goverr ment?—I gave some evidence on that last ti and I should like to give some further evid with respect to it on a future day. When the India Office I consider that it was do most unsatisfactory manner.

2845. *Chairman.*] What point do you to take next?—The reliability of the

accounts. I wish particularly before entering on this portion of my statement to state very clearly how far it is from my intention to cast any reflection upon the gentlemen who are charged with the laborious duty of keeping the accounts in India. I know the tremendous difficulties they must have to contend with under a bad system, and it is the system that is in fault and not the officials; and I should be most sorry and grieved that any evidence I should give should at all bear the impression that I desire to cast any reflection upon the officers in India. I will ask the Committee to look at the military charges of India for 1869-70 at page 52. Now, without stopping to speak of the utter inadequacy of this account for an expenditure of 12,828,750 *l.*, consisting of some 20 items, I would just remark in passing, that the account of miscellaneous charges for instance, amounting to 754,207 *l.*, has four times as many items. But my object is now to show what light the Secretary of State has to walk by when he attempts by the aid of these accounts to deal with a question of such vital importance as the military charges in India.

2846. Do you know from the position you have held in the India Office that the Secretary of State has no further accounts of the military expenditure than the Summary laid before Parliament?—I believe that the Secretary of State has no further knowledge of the actual expenditure in India than these Finance Accounts. I am going to ask the Committee to look at Parliamentary Return (No. 467 of 1871) moved for by the honourable Member for Brighton called "A Copy of all Correspondence which has taken place since 1869, between the Governor General of India in Council and the Secretary of State for India in Council in reference to possible Reductions in the Indian Military Expenditure." That Return opens with a despatch from the Secretary of State, dated the 26th of January 1869, and states as follows: "In considering recently in Council the present state of taxation in India, my attention has naturally been drawn to the question of the practicability of effecting reductions in any of the branches of Indian expenditure;" and the second paragraph says that there has been an increase of about "15 millions, in the income, which is nearly counterbalanced by augmentations in expenditure;" and then paragraph 5 goes on to point out that, "It is therefore mainly to the military expenditure that my attention has been directed." We find then the next page set forth the military expenditure in each of the years from 1862-63 to 1868–69, taken from the Finance Accounts, and paragraph 8 says, "Combining the military charges in India and England, and excluding military buildings, the increase in 1868-69, as compared with 1862-63, was 1,277,690 *l.*, and this, notwithstanding the strength of the European army in India, for which the capitation rate is payable, has been reduced since 1862-63 by upwards of 7,000 men." The despatch then goes on to make a minute comparison between the Estimates of 5-66, and those of 1868-69. Now, the first pur vation I have to make upon this account, trai e which will probably occur to the unde ittee: how is it that the Secretary Yes, te departs from the actual, and makes any w arison of the Estimates? The actual ex- may be tens or hundreds of thousands of pounds, more than the Estimates; and therefore how unsafe it is to make a comparison between the Estimates.

2847. In what year is he speaking of the Estimates?—1865-66 and 1868-69 are contrasted, with a comparison as regards the cost per man, "I have therefore directed certain statements to be prepared from those Estimates, copies of which are transmitted herewith." The second observation I have to make is, that the Financial Department in the India Office in setting out this expenditure in the margin of this despatch, has pursued two different and quite opposite principles in stating the Indian and English expenditure; the Indian expenditure is stated in gross and the English in net, a difference in one year of upwards of 200,000 *l.* Now let us turn to India. At page 17 of the Return will be found an important despatch from the Governor General in Council, stating that the subject of military expenditure has been "searchingly considered" with a view to ascertaining what reductions are feasible; and page 24, paragraph 70, of the Return states, "In a separate despatch to follow this we shall allude to the course of military expenditure during the last few years, and of the measures we have taken and shall take to keep it down, irrespective of reductions in the actual strength of fighting men." At page 109 we find this promised despatch; it is dated 11th of October, 1869, inclosing reports by the Controller General of Military Expenditure on the subject of the cost of the Army; and paragraph 2 says, "These contain a clear and comprehensive review of military expenditure since the year 1862, and do not admit of condensation." Now, the first of the enclosures in this despatch is a memorandum of the Controller General, dated the 23rd of February 1869, to paragraph 33 of which I would refer; and it is not a little remarkable that at the very time that the financial department at the India Office was occupied in bringing under review the military expenditure, the Controller General in India was engaged on the same duty for the guidance of the Governor General in India. But what is the conclusion that the Controller General in India draws from his examination? We find it in paragraph 36 page 112. He says, "From the foregoing statement it will be seen that the ratio of expenditure as compared with revenue is steadily decreasing, although occasional fluctuations must be expected." That is the conclusion that he comes to on the subject. But the principal cause of this wide divergence of views between the Secretary of State and the Controller General is, that the Controller General bases his calculations on the expenditure in India alone, as if the expenditure in England were not a charge on the revenues of India at all. There are, however, serious discrepancies between the total charge in India and England as set forth in the India Office despatch, and as shown in the statement of the Controller General of Military Expenditure although they are described by that officer in a subsequent memorandum (10th March 1869, page 115, paragraph 3) as "slight variations;" and he instances the year 1863–64, where the difference is 158,130 *l.*; and then, in paragraph 15 of this memorandum, he demonstrates "the fallacy of the conclusions drawn from the system of averages" adopted in the Secretary of State's despatch; and in paragraph 16 he points out

Mr. *W. G. Goodliffe.*

25 April 1873.

"the unreliableness of the data" on which certain other averages are based; and he maintains, in paragraph 9, that the results he obtains "do not exhibit any very remarkable increase of expenditure." The first memorandum of the Controller General was dated 23rd of February 1869, but on the 24th of March in the same year, with another memorandum in continuation (page 118), he submits a more detailed report of the military expenditure in years each from 1861-62 to 1868-69, the totals of which in the earlier years from 1861-62 to 1864-65 differ from his previous statement, as do his statements of annual receipts differ from the Financial Accounts. Now, I say, can anyone be at all surprised when we find this occurring, that the Duke of Argyll, in his speech in the House of Lords on the Finances of India, should find himself obliged to declare, after setting forth the causes of increases that had taken place upon a number of heads of expenditure, that there was still a million of the increase that he could not account for at all? But there is a particular point that I want to ask the attention of the Committee to in this despatch, because it has a bearing upon what I shall show subsequently. The Financial Department of the India Office, upon the receipt of this despatch from the Controller General, gives up altogether any further attempt to come to an agreement as to what the real expenditure has been; it considers that no advantage would follow from doing so. But there is a method devised of avoiding any controversy of this kind for the future, and this is to be found in paragraph 7 of the despatch of the Secretary of State to the Governor General, dated the 24th of February 1870 page 250, which directs as follows: "With reference to the differences between the military charges, as quoted in the enclosures to your letter, and in my financial despatch of the 26th of January last, it is only necessary for me to observe that the sums stated in that despatch were taken from the Finance and Revenue Accounts presented to Parliament which, so far as relates to expenditure in India, were furnished by your Government, the expenditure in England being added here. They are consequently the most authentic statements of income and expenditure obtainable, and it is important that you should require that they be adhered to in all comparisons prepared in India for transmission to this country." Now, there is a declaration of what these accounts are, and how they are to be adhered to; and therefore I maintain that it is of the utmost importance that these accounts should be reliable; but I submit, also, that if it is found upon subsequent examination that the accounts are not reliable, they should not be adhered to, and that it should be clearly set out where differences occur, what is the cause of them. I venture now to ask the Committee to look at a Public Works account. Perhaps the Committee have never seen such an account as a detailed balanced statement of the public works expenditure for a year. This balanced account which I have before me was published in the "Gazette of India;" it is for the year 1867-68. I never saw any actual account of public works expenditure but this one account. I only examined this account as Accountant General of the India Office with a view of forming a judgment of the account system. I was not responsible for the Indian Accounts in any way. The accounts are given in great detail in this Supplement to the "Gazette of India" of the 27th of March 1869, but they fail in this respect that they still do not enable one to judge what the outlay has been on that important subject of barracks with respect to which the Committee has taken a great deal of evidence. I will refer to the cash account at page 521. Here we have a statement of the total receipts and total disbursements of the Public Works Department, and it starts with a balance on the 1st of April 1867, and concludes with a balance on the 1st of April 1868, and the expenditure is stated to be 6,351,375 *l.*; but when I look at the public works expenditure, as stated in the Finance Accounts for that year, page 9, I find "Public works, including 156,525 *l.* for supervision and cost of land for railways, 101,877 *l.* loss by exchange on railway transactions, and 111,410 *l.* income tax grant," total 5,800,269 *l.* Bringing on the public works "extraordinary" expenditure of 602,402 *l.*, we get a gross total, not as stated in the "Gazette," of 6,351,375, but of 6,402,731 *l.*, the Finance Accounts being too much by 51,356 *l.*; when I came to look into that to find out where this discrepancy occurs, the Committee will not be surprised perhaps to hear that it is in that dubious item of "loss by exchange on railway transactions." The Public Works Department should, of course, know what this loss is; they have set out in a special account at page 506, a statement of the loss and gain by exchange. The Finance Accounts also contain a statement of the gain and loss by exchange, they show that the Bengal net loss is 3,538 *l.*; the Supplement to the "Gazette" states, that it is a net gain of 9,494 *l.*, a difference of 13,032 *l.* In the Punjaub, the net loss is 63,976 *l.* according to the Finance Accounts in the "Gazette" the loss is 60,512 *l.*, a difference of 3,464 *l.* In Bombay, by the Finance Accounts, the net loss is 37,578 *l.*, the Supplement to the "Gazette" gives it at 3,947 *l.*, a difference of 33,631 *l.* The Finance Accounts are thus far all too much, but in Madras, while the net gain in the Finance Accounts has been put down at 3,215 *l.*; the "Gazette" says it is 4,445 *l.*; and here the Finance Accounts are 1,230 *l.* too little, making up a difference of 51,357 *l.*, in regard to this item of gain and loss by exchange.

2848. Were both those audited accounts?—I do not know whether they are audited. I presume that the "Gazette" Account is actually an audited account. The chief reason why I point out this discrepancy is, because it shows how necessary it is that we should have an account in respect of each railway, showing what this gain and loss by exchange is. It is an item that arises from real transactions, it is not an amount to be put down as an approximate one; it results from the amount of capital paid in by the companies on which a loss of two-pence in the rupee occurs, and is the result also of traffic earnings paid in by the companies. But an examination of that account showed another matter which it is important to notice. At page 494 of the "Gazette" account we find a statement of the "Grants and Expenditure for Civil Buildings for the period from 1st April 1867 to 31st March 1868." We find there Bombay among them, and in Bombay it appears that there is a "special fund"; the expenditure is, therefore, stated both including and excluding the special fund payments; but I found a difference between the amount of the expenditure in the Finance Accounts, and the amount in this "Gazette,"

"Gazette," and therefore looked to the Bombay Special Fund Account to ascertain how this arose. I found the account at page 512, the total there given for Civil buildings being 118,209 *l.*, and not 63,200 *l.* as returned in the Finance Accounts, and the following explanatory note is added at the foot of the page: "In the account of the year the expenditure on Civil buildings is shown as 63,209 *l.*; in this account it is shown as 118,209 *l.*, the difference of 55,000 *l.* having been ordered to be debited to special fund after the accounts of the year were closed." The consequence is, that as the accounts are made up at present, the revenue or surplus of the financial year was deranged by 55,000 *l.* Referring to this power of transfer or adjustment, Sir Richard Temple himself seemed to be conscious that people in India had reason to suppose that adjustments were made in the account which did affect the surplus or deficit, and enabled the Financial Minister to modify his surplus or deficit as he pleased. In his speech on introducing the Income Tax Bill, on the 9th March 1871, he said, speaking of the good fortune that had attended the Government of India during the financially eventful year 1869-70, when, although the original estimate showed a small surplus of 52,650 *l.*, yet, as the year wore on, a large deficiency was anticipated, to obviate which extraordinary measures were resorted to, whereas the result proved that the original estimate had been more than fulfilled; he explains in what the good fortune existed, and he says:—"I am constrained to make the remark, because it seems to have been supposed in some quarters that we brought out the surplus lower than it ought to have been by a variety of debit adjustments made at the last moment." However this may be, one instance at least came under my notice, in which, as I consider, the expenditure of 1869-70 was unduly increased by about 150,000 *l.*, or, at any rate, it was perfectly open to the Financial Minister to do as he pleased with the amount. It is an item in the account for 1869-70 of "Allowances and Assignments out of the Revenues of India," Account No. 13. The item is, "Payment of the Debts of Prince Azim Jah Bahadoor, 149,691 *l.*, page 35 of Finance Accounts. It is stated in the Administration Report that that amount was not paid in the year, but was placed in deposit. Of course it is possible that it may be quite correct to treat that amount placed in deposit as a payment in the year; but I say how open it is to a Finance Minister to modify his surplus or deficit by such a proceeding; but beyond that, if we look at the Statement of Moral and Material Progress for the year 1870-71, just published, we shall see there that the Marine Charges are stated for that year, at page 4, to be 475,602 *l.*, a decrease, as compared with 1869-70, of 458,442 *l.*, nearly half a million of money, and the explanation is (page 5), that "the Marine Charges for 1869-70 included a large extraordinary charge on account of irrecoverable advances to certain port funds; hence the apparent decrease under this head in 1870-71." Of course, if the Finance Minister, or the Government of India, had thought it undesirable to write off these particular advances in that year, the surplus or deficit for the year would be *pro tanto* increased or diminished.

2849. Mr. *Birley.*] But there must be always a certain discretion in the Finance Minister as to writing off an amount, must there not?—The question is whether the Finance Minister contemplated in his estimate that this expenditure should form a part of his Budget for the year, or whether it was only brought in because it was thought desirable.

Tuesday, 29th April 1873.

MEMBERS PRESENT:

Mr. Ayrton.	Mr. Eastwick.
Sir George Balfour.	Sir James Elphinstone.
Sir Thomas Bazley.	Mr. Fawcett.
Mr. Birley.	Lord Edmond Fitzmaurice.

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

Mr. WILLIAM GIMBER GOODLIFFE, re-called; and further Examined.

Mr. *W. G. Goodliffe.*

29 April 1873.

2850. *Chairman.*] HAVE you any further statement to make to the Committee respecting what you consider the reliability of the accounts that are laid before Parliament?—Yes; if the Committee will allow me, I will follow that subject a little further. I should like to ask the attention of the Committee for a short time to an important Blue Book which is annually laid before Parliament at the same time with the Finance Accounts, and is intended to elucidate and supplement those Accounts; at any rate, there is an important connection between the two. I refer to the "Statement of the Moral and Material Progress of India," and I have that for the year 1869–70 before me. This Statement is prepared annually, pursuant to the 53rd section of 21st & 22nd Vict. c. 106, which provides that the Finance Accounts "shall be accompanied by a Statement prepared from detailed reports from each Presidency and district in India, in such form as shall best exhibit the moral and material progress and condition of India in each such Presidency." I should say that it was impossible to exaggerate the importance of a book of this character, and it is no doubt studied very much by those who take an interest in the progress of India. At page 5 of this book it is stated, "It is believed that the comparative statements of receipts and expenditure which are for the first time embodied in this Report will prove to be at once interesting and useful." Now it appears to me that the interest and usefulness of statements of this kind must depend upon their accuracy and completeness. But one can learn from these Accounts little more as regards the revenue than is to be found in the Finance Accounts, that is to say, there is no clear statement of the large opium revenue, for example. I do not mean to state that this is the proper place to give that information, or whether the Finance Accounts should not rather contain it; I am inclined to think that the Finance Accounts should more properly give it; but taking the two together we are without that information, and there is no light thrown by this book upon the amount of loan-money raised during the year, and the application of that money.

2851. Do not the whole of these observations amount to this: that the accounts ought to be accompanied with subsidiary special accounts on particular points that cannot be brought in completely into the general summary?—No; I wish to show that, as it appears to me, the principle of the accounts is entirely wrong.

2852. That the principle ought to be that in addition to this general summary there should be what may be called a statement of account with regard to those transactions which are of a complicated nature, where you wish to see results?—I do not think that any statement of accounts subsidiary to these present Finance Accounts would elucidate the accounts at all. With respect to expenditure, it will be observed that the expenditure in India, in the "Statement of Moral and Material Progress," is classified as in the Finance Accounts; but the whole expenditure in England, amounting to nearly 10 millions, is put down in three lump sums; and subsequently throughout the whole of the statements relating to the several Administrations the expenditure in England is entirely ignored; and with regard to the expenditure on "extraordinary" public works, which exceeds a million, this is altogether omitted.

2853. But you do not consider that Statement of Moral and Material Progress an account, do you?—That is exactly the question that I wish to raise to the Committee. The point of view I wish to submit to the Committee is, that a statement which entirely leaves out of account 10 millions of money, simply because it is paid in England, is entirely to misconceive the intention of Parliament in calling for this Statement of the Moral and Material Progress of India. Unless it is comprehended and consistently borne in view that the Home Treasury is but a branch of the Indian Treasury, it will be quite impossible to have a proper understanding of the finances of India.

2854. Do

2854. Do you want to see one complete amalgamated account, with one cash balance of the whole of the operations both in England and India?—Yes; I think it is impossible that the finances of India can be understood, unless the whole expenditure is brought together.

2855. In that case the transactions between England and India would be eliminated, and the whole would be represented as if they were one series of transactions?—Transactions, so far as they affect the revenue and expenditure, would be brought on the accounts. Now, the first of the administration statements given here is that of the Government of India, at page 7, restricted as I have pointed out to the receipts and payments in India. Now, it appears, first of all, worth while to notice on this account the item of Pensions.

2856. Will you find the corresponding item in the Accounts?—My object in referring to it at this point is that this statement shows what the Finance Accounts do not. The item in the Finance Accounts is at page 51, Account No. 25, and the amount for pensions under the Government of India is put down at 84,314 *l.* My reason for referring to that item upon this Statement of Moral and Material Progress is, that this Statement elucidates the Finance Accounts, and supplements them by comparative statements of increase and decrease, which of course are very valuable; and here there is a decrease shown upon this one item of 157,755 *l.*, the payments being only 84,314 *l.*

2857. But are you sure that you have the same head?—Yes, I say that there is that decrease upon a payment amounting to 84,314 *l.*; while in the following year, 1870–71, the payments under this head rise again to 162,151 *l.*, or nearly double. The item on which this violent fluctuation occurs is that of Donations to Service Funds, the payments under this head in the three consecutive years being, in 1868-69, 152,338 *l.*; in 1869-70, 29,516 *l.*; in 1870–71, 105,894 *l.* My point is simply this, that with proper detailed estimates and Service Accounts, the cause of these increases and decreases would be manifest; and of course in all I am saying I am looking at these accounts as from the standpoint of a Member of Parliament, or anyone else who has only these accounts to refer to.

2858. But have you referred to the details of the accounts in 1868-69 shown in the accounts of the item for the Superannuation, Retired, and Compassionate Allowance of the Government of India, general and political, to see what the items are that cause the increase or decrease?—It entirely occurs in this one item of Donations to Service Funds; the fluctuations occur upon that one item alone. But to proceed; the Committee will see the Post Office Receipts put down in this statement at 711,698 *l.*, and the expenditure among the "Direct Claims on Revenues" put down at 649,934 *l.*; the receipts, it is stated, showing an increase of 3,906 *l.*, and the payments an increase of 72,380 *l.* over 1868-69. Now, if the Committee will go to page 23, they will find a report of the little Province of Coorg, and at the foot of the page they will observe in the margin the words "Post office." An inadvertence has evidently occurred here in setting up this part of the report, because, as it stands, anyone would naturally suppose that the report had reference to the Post Office of Coorg, more especially as the word "Coorg" is mentioned in the margin of the next page. But this is not so; it is a statement of the operations of the Post Office in India generally, and the last paragraph, page 24, sums up the observations of the Director General thus: "Mr. Monteith considers the financial results of the year to have been very satisfactory; the receipts, including official postage and service stamps, were 711,698 *l.*, the disbursements were 649,934 *l.* (these are the figures given in the statement first referred to). The receipts were more than in 1868–69 by 3,906 *l.*; the expenditure was greater by 72,380 *l.*; but the Director General confidently expresses the hope that the current year would form an exception to the long list of years in which the expenditure of the department had increased, and would show, instead, a very considerable decrease." The last three lines are all the *ipsissima verba* of the Director General, but the figures are not his at all; the figures are the Finance Account figures, and if anybody, having this report of 1869-70 in his hand, had turned to the account of 1868–69, and anybody studying these accounts would naturally take the two Blue Books and compare 1869-70 with 1868-69, he would find in the report of the Post Office for 1868-69, at page 5, this statement: "The year under review is remarkable, both for an unusually large increase of revenue and an unusually large increase of expenditure. The receipts, including official postage, were 608,447 *l.* in 1867-68; in 1868–69 they amounted to 686,072 *l.* The disbursements in the two years were respectively 475,494 *l.* and 537,020 *l.* These figures give a net revenue greater by about 15,000 *l.* than in the previous year."

2859. Sir *G. Balfour.*] Are you comparing like things?—I am taking the report of the Director General in both cases.

2860. Does it include official postage?—It is precisely so stated in both cases. The result of the comparison of the three statements shows these conflicting results: according to the Finance Accounts, a comparison between 1868–69 and 1869–70, shows an increase of 3,906 *l.*; the Statement of the Moral and Material Progress of 1868–69, as compared with that for 1869-70, shows an increase of 25,626 *l.*; but a comparison of the statements of the two administration reports shows a *decrease* of 4,471 *l.* With regard to the payments, there are likewise discrepancies of the same character. The Finance Accounts show an increase of 72,380 *l.*, the Statement of Moral and Material Progress of 1868-69, if put against the statement of 1869-70, shows an increase of 112,914 *l.*, while the two administration reports of the Director General show an increase of 22,657 *l.* only.

2861. Mr. *Fawcett.*] Three conflicting results?—Yes; an enormous difference of result. In fact, the Finance Accounts of 1869-70 exhibit the Post Office receipts of that year at over 4 per cent. and the payments at about 16 per cent. more than the Director General; the net difference between the totals of the receipts and payments being 60,160 *l.* This shows the effect of acting upon the instruction which was sent out to India (to which I called the attention of the Committee on a former occasion in connection with the military expenditure) to adhere to the Finance Accounts. Either the Finance Accounts are correct, or the administration reports. But passing on to page 38 of the year 1869-70, we come to the statement for the receipts and expenditure of the North Western Provinces, and it will be seen that the Public Works Ordinary Expenditure is

Mr. W. G. Goodliffe.

29 April 1873.

set down at 775,066 *l.*, but the Finance Accounts show, in Account No. 28, at page 53, this expenditure under various heads at only 658,945 *l.*, or 116,121 *l.* less than the statement given here.

2862. Sir *G. Balfour.*] Do you aggregate the military public works with the civil?—I have taken out the total under all the heads. But I may say at once that it is a transfer of expenditure, for some reason or other, between the North Western Provinces and the Government of India; at page 7 of this book there is a corresponding difference in the opposite direction, the expenditure there being put down at the same amount more than in the Finance Accounts. But not to occupy too much of the time of the Committee, I will ask them to look at only one other account contained in this Blue Book, that of the Government of Bombay, at page 79 of the Statement of Moral and Material Progress for 1869-70; and keeping still to the Public Works Expenditure, it will be seen that the first item of Ordinary Expenditure is a sum of 846,124 *l.*, and the last item is the Extraordinary Expenditure, 534,459 *l.* But if the Committee will turn over only one page, they will find at page 81 a precis of the Administration Report in connection with Public Works, with a classified abstract of the expenditure in the margin of the page. And what does this show? Why, the ordinary expenditure is put here not at 846,124 *l.*, as in the preceding statement, and in the Finance Accounts, but at 903,124 *l.*, or 57,000 *l.* more than the Finance Accounts.

2863. *Chairman.*] But with regard to these discrepancies, are you aware that this Statement of the Moral and Material Progress of India is a statement that is made up in this country by a gentleman in the India Office, giving his views deduced from the Finance Accounts and other accounts sent home from India to this country?—What I understand is, that they are prepared from the Administration Reports sent from India; but instead of adopting the figures contained in those reports, the Finance Accounts figures are adopted, and they are not consistently adopted, because, as I show in one page, the ordinary expenditure is put at 846,124 *l.*, and at the next page at 903,124 *l.*

2864. But how do you make out that this is any objection to the reliability of the Finance Accounts, because inasmuch as the Finance Accounts are made up and audited in India, and a gentleman in the India Office undertakes to prepare a statement according to his view of all the documents that come from India, would it not rather be that his statement is wanting in clearness and precision, and not any impeachment of the reliability of the Finance Accounts?—On the contrary, I think that this statement is done exceedingly well. I find that this statement at page 81 corresponds with the Administration Report, but on the preceding page the Finance Accounts, statement is adopted.

2865. That would be his mode of reviewing and preparing summaries of the accounts, but it would not prove that the original accounts which he thus reviewed were erroneous or unreliable, would it?—It opens at once this question. On page 81 it is stated that the Extraordinary Expenditure is 477,460 *l.*; the previous statement declares it to be 534,459 *l.* Now, it depends entirely upon which statement is to be adopted as to what the surplus or revenue of the year is, because the Extraordinary Expenditure is excluded from the account before the surplus is struck.

2866. It would only go to question the skill of the gentleman who prepared this statement. What he has written here, he has written in England, with all these accounts before him; it does not touch the correctness of the accounts?—I do not take that view at all. I question altogether the correctness of the Finance Accounts. I say that if the Administration Report states the expenditure in a certain way, that statement should be adhered to.

2867. Mr. *Fawcett.*] Your point, I understand is this, that the Finance Accounts are partly made out from the Administration Reports?—I do not know how the Finance Accounts are compiled.

2868. The Administration Reports are authoritative statements of the financial position of the country?—Yes.

2869. And you find that a report made up out of the two is inconsistent, sometimes with one and sometimes with the other, and therefore it throws doubt upon every account that is laid before Parliament?—No question.

2870. Another difficulty arises; representatives of the Government in the House of Commons would be perfectly justified in quoting accounts of the Administration Reports as authoritative, would they not?—Unquestionably.

2871. And then some one might get up and find that the Finance Accounts were altogether different?—This is now guarded against, because the figures of the Finance Accounts are adopted in the Statement of the Moral and Material Progress. I say that this arises from the power of transferring expenditure from ordinary to extraordinary, as in the case of the Bombay special fund, probably after the accounts of the year were closed. But this power of transferring expenditure from "ordinary" to "extraordinary," and from one service to another, is exercised in a manner which makes it impossible to rely upon the accounts, and I will give the Committee an illustration of this. I have here a Parliamentary Return, in connection with the Indo-European or Persian Gulf Telegraph. Now, the India Office desired, for the information of Parliament, to know what had been the total outlay on the Indo-European or Persian Gulf Telegraph; and I need scarcely say, that it was quite impossible to ascertain this from the Finance Accounts. The task of making up the account was therefore confided to one of the most able and skilful accountants in India (who is now Military Accountant General, I believe), in conjunction with General Goldsmid, the Chief Director of the Telegraph. It is quite unnecessary for me to speak of the enormous difficulty that those gentlemen had to contend with in the performance of this duty; but I have the Parliamentary Return here, and what does it show? . After all the payments respecting which sufficient infomation for the purpose could be obtained had been classified under appropriate heads, there will be seen at the foot of the account transfers from other departments, Marine, Military, and Public Works, amounting to over 130,000 *l.*, which is not classified at all. The question naturally arises, has all this expenditure, which is now transferred from these various services, appeared in the Finance Accounts at all, if so, where?

2872. Then you seem to me to wish to make several points. In the first place, taking the Indo-European

Indo-European or Persian Gulf Telegraph as an example, it is impossible for anyone, from the Finance Accounts or any other accounts, to find out accurately what it cost?—Quite.

2873. Secondly, that it is absolutely impossible to trace from the Finance Accounts, or any other, how the money has been spent upon that, and from what source it has been provided?—Yes.

2874. And as far as we know the money might have been given for a distinct purpose. For instance, take the Marine; a portion of the money might have been taken from that particular service and might have gone to the consumption of the Telegraph?—As far as the Finance Accounts go they show nothing whatever. The question therefore arises in what way an effective control over the public expenditure is to be obtained.

2875. Sir *G. Balfour.*] This account with regard to the Persian Gulf Telegraph which has been before Parliament, is a classified account of the whole expenditure for a series of years, including stores of every description?—Yes.

2876. But the Finance Accounts do not show the charges on account of stores?—They do not show the outlay on account of the Indo-European Telegraph.

2877. Will you look at page 31 of the Home Accounts of 1869-70; I would like to see the difference between the two accounts?—I am familiar with the Home Accounts. This is an account of the Indo-European Telegraph expenditure.

2878. Kindly tell us the difference between that account and the classified account?—This is an account only for one year.

2879. Is there no one year's account in that general abstract to correspond with that one year in the Home Accounts?—I do not know as regards this one year. I am speaking of those years to which this Parliamentary Return had reference, and I say it is impossible to identify this expenditure with the Finance Accounts.

2880. Have you compared the item for the one year, 1869-70, in the general account with the particular sum in the Home Account?—I have not made that comparison. Then my position, as I was about to say, is this, that in my judgment, with regard to an effective control over expenditure, the Secretary of State does not possess this, nor does the Government of India, because General Strachey and other witnesses have testified to the extravagance that has taken place, and least of all has Parliament any power of control, because it has only these Finance Accounts before it, and they do not even show where the money has gone in any way. On that point I need only say that, for example, Mr. Harrison made a statement that sums of money had been lent to municipal authorities, which I believe have been lost. I do not know whether the amount was thousands or hundreds of thousands of pounds; but there is not a line in the Finance Accounts that will indicate that.

2881. Mr. *Fawcett.*] What is the remedy that you suggest?—If the Committee desire me to offer any suggestions to [illegible] obtaining that control, I would ask them very briefly (and this is coming now really to the principle of the accounts) to consider what the present accounts are not. They are not an exchequer account; they are not service accounts; and they are not a cash account. They are a collection of statements of receipts and payments; but you cannot learn from them as regards one single service whether the grant for the year has been exceeded or not, and if so, to what extent; nor whether, for example, the million sterling of army receipts in 1869-70, shown in the Accounts Nos. II. and III., has been taken in aid of the army grant, or has been spent in excess of it.

2882. Sir *G. Balfour.*] Where is this large sum of Miscellaneous Receipts from the army disbursements shown to have been taken, in any form or shape, to diminish the expenditure on the army?—There is no information at all about it. The army grant might have been twelve millions, and they may have had this one million beside.

2883. Will you look at page 9 of the Accounts, and will you not allow that Miscellaneous Amounts on account of army have been included as a part of the receipts of the Government?—Yes; but I want to know who has spent the money; whether the army grant for that year has been exceeded, and if so whether these receipts have been applied to it or not.

2884. Mr. *Fawcett.*] In fact, you know that 12,000,000 *l.* is voted to the army; less than 12,000,000 *l.* may have been spent; only 10,000,000 *l.* may have been spent, and the remaining 2,000,000 *l.* might have been lent to municipalities, or spent in any other way; or, on the contrary, the army may have cost 14,000,000 *l.* or 15,000,000 *l.*?—My position is this, that the Finance Accounts show that a sum of 12,800,000 *l.* is put down as the army expenditure for 1869-70. I do not know from these accounts, and no one knows from these accounts, whether the army grant was 11,890,000 *l.*, and this 1,000,000 *l.* has been spent over and above the grant, or whether the expenditure has been kept within its grant.

2885. Sir *G. Balfour.*] Will you kindly keep to the two points. One is that at page 9 of the Accounts the estimated expenditure on account of the army is not shown in any parallel column with the actual expenditure?—It is not.

2886. But is there the slightest appearance that this million of army receipts has been employed to diminish the expenditure of the army so as to show a less expenditure actually incurred?—There is nothing to show what has been done with that one million at all, except that it is taken in aid of the general revenue of the year.

2887. *Chairman.*] Does not that show what has been done with it if it is credited as part of the resources of the year?—No, I think not.

2888. Sir *G. Balfour.*] At page 9 you will find it already stated that the one million has been put in as an actual receipt, but there has been no diminution of military expenditure on account of that?—My position is that the Government of India may have sanctioned a military expenditure of 11,800,000 *l.*, and that the 1,000,000 *l.* additional spent are extra receipts.

2889. *Chairman.*] If you look back to the accounts for the previous year you have got the Estimates, have you not?—No, there is nothing to indicate this point.

2890. If you look at the accounts laid on the Table of the House for the previous year, you will see this estimated account of the income and expenditure of India, and there you will see the amount of army expenditure estimated at a certain sum. If you wish to make the comparison, you have only to refer to the Estimates in the previous year?—The security I desire to obtain,

Mr. *W. G. Goodliffe.*

29 April 1873.

is that the Army Department shall not use this money.

2891. In this country, that is all you could do, is it not?—In this country the army receipts are accounted for and paid over to the Exchequer, and cannot be applied to the expenditure of the year.

2892. If you find an entry in the accounts of an army receipt amounting to this sum of money, what makes you question it?—I say that there is nothing in the accounts which shows how that million has been applied.

2893. Surely if the money is brought into the credit side of the account out of which the disbursements are made, it does show that?—It shows that it is taken in aid of the general revenue of the year.

2894. Mr. *Fawcett.*] But your contention, as far as I understand it, is, that it is impossible to find out what has been the net cost of the army?—Undoubtedly. I maintain that there is no control over this expenditure, as to whether the one million has been used by the army department or not.

2895. *Chairman.*] Does that depend upon a statement of account, or must not it depend upon the arrangements made for regulating receipts and expenditure in India?—Certainly, that is what it depends upon, upon the system of accounts which controls the issue and expenditure of money.

2896. Sir *G. Balfour.*] I am afraid you will find many more reductions in the English Estimates on account of the army than in the Indian one?—That may be so.

2897. Mr. *Cave.*] Still you see what balance is paid into the Indian Exchequer?—No; you find sums of money brought to account, that is all; but there is no service account. I quite admit that there is a sum of money put down for receipts. With regard, now, to Public Works, it is impossible to know with certainty how much of the expenditure has been defrayed from current revenue, and how much from borrowed money; nor, speaking generally, can any intelligent judgment be formed from these accounts of the financial policy of the Government. But there is another fundamental defect in these accounts, or, perhaps, I should say in the present account system. If the Committee will take the account for 1869–70, and look at Account No. II., at page 8, they will see no less than 9,000,000 *l.* put down as "Direct Claims and Demands upon the Revenue." Now, I respectfully submit that in the judgment of the most experienced accountants in the country, that system is totally at variance with a sound system of public accounts, and although it once prevailed in this country, it is now abandoned, and no deductions from revenues on their way to the Exchequer, except such legitimate abatements as refunds, drawbacks, &c., are permitted. Let me show the Committee the anomalous consequence of the course permitted in India. Look at the telegraph service, which, by-the-bye, most improperly, as I conceive, includes the Indo-European Telegraph, which certainly ought to be a separate service, with distinct accounts, and so the Public Accounts Committee of the House of Commons considered; but look at this service as it stands. We find on the revenue side of the account, receipts, 247,042 *l.*, and on the other side expenditure, 535,374 *l.*, or a deficit of 288,332 *l.*; and in every year for the last 10 years this deficit has varied from 81,000 *l.* in 1865–66 to 401,027 *l.* in 1868-69; a difference which alone, to my mind, suggests considerable doubts as to the accuracy of the accounts. But where has this deficit been made good from; is it not plain that this system of appropriating revenue to expenditure without the sanction of a grant is fatal to all control? But, if I might dare to do so, I would submit to the Committee the outlines of a system which, in my humble judgment, might lead to the establishment of a real control both over receipts and expenditure. I do not pretend that, by the touch of a magician's wand, order and system are to be introduced, where, as I conceive, confusion and complication exist at present, nor that I am the magician to give that touch; but I will gladly place at the disposal of the Committee such knowledge and experience as I have gained during my official career. I desire, however, at the outset to guard most carefully against its being supposed that either I have stated or implied that there is no account keeping in India. Quite the reverse; I am inclined to think that there is too much, or at least that it is not done by the right persons, especially in the Public Works Department. But that was the case with the Home Accounts. I will venture to say that there was no public office in this country in which the books were kept with the beautiful neatness and accuracy that distinguished the books kept in the time of the East India Company; but that did not prevent its being necessary to entirely re-organise the system of the Home Accounts; and it is quite likely, I think, that witnesses may follow me who will satisfy the Committee that elaborate accounts are kept, and to a considerable extent, if not altogether, with reference to the grants, in India, and that this has been done more and more effectually of late years. But what I do say, and what I am prepared to maintain is, that what is the very foundation of the budget system, and the essential element of a sound system of national accounts, is wanting, and this is the absolute, clear, and rigid separation of the revenues from the Service Accounts. Whether you call the account to which the revenues are carried by the name of an Exchequer Account, or by any other name, there must be the means of following the taxes and duties from the hand of the taxpayer into a cash account, for the balance on which account, some department must be solely responsible; and into this same cash account must go in the first instance all loan moneys, and eventually all extra receipts of the service accounts. There should therefore, in my judgment, be in each presidency a Head Treasury Department, having under its control at the Presidency Bank the cash account of the presidency; whether, as I say, you give to this account the name of the Exchequer Account or any other name; but through this cash account must come, not in coin, but in account, all the revenues; and eventually all the extra receipts of the services and all loan monies. Through this account, in like manner, must pass all issues on account of their respective grants to the several departments charged with carrying on the administration of the various services of the State; the Head Treasury Department being, however, exclusively charged with the control of the public debt. Subordinate to this Head Treasury Department would be the departments charged with the supervision of the collection of the various heads of revenue, and subordinate to these

these again would be the various collectors. The great Service Departments, such as the Army, Public Works, &c., would act under the direct control of the several governments. Each presidency would then exhibit an annual cash account, showing the revenues that had reached that account and the issues therefrom on account of the service grants. It would show also all other moneys of whatever kind which had come into the account, and how far and in what manner they had been applied, and the Head Treasury Department would be responsible for the balance of this account. Subsidiary to these Presidency Treasury Accounts would be the Departmental Revenue Accounts. These latter would show the gross receipts under each head and sub-head of revenue, the abatements therefrom in the way of refunds, drawbacks, &c., the sums accounted for to the Head Presidency Treasury, and the balances for which the department, through its officers, was responsible; that is to say, for the money which had not reached the Exchequer. With respect to the services, the issues to each department on account of its grant would alone appear in the Presidency Treasury Account, and separate accounts with reference to the grants, and in strict agreement in form therewith, would be rendered by each department; and the departments would be responsible for the balances on these service accounts. Of course, one department might have several services under its control, both voted and not voted, as the First Commissioner of Public Works and Buildings has in this country, and as have the Commissioners of Public Works in Ireland; but the accounts are all distinct, and the balances can all be followed. From these various Presidency Accounts—which should be real accounts in the currency of the country, and duly audited—coupled with the Home Accounts, might be compiled really reliable accounts of the total revenues and expenditure of the Empire, in even pounds sterling, as they are now exhibited to Parliament. The several services would then transmit accounts in respect of their several grants, in conformity with their estimates, which would undergo an intelligent review at the India Office by each secretary of department; and it would be competent to the department to know how each service was going on, and what increases or decreases were taking place. Of course, it must appear to be a very bold thing on my part to come before a Committee of this kind, and to appear to dogmatise on so large and intricate a subject as the Public Account System of India, but I can assure the Committee that I speak with the utmost diffidence. I feel that I am dealing single-handed with a very large matter, and I only come forward from a strong sense of public duty. And if the suggestions that I have ventured to offer should be of any value, I shall be well pleased. But I am convinced that such a system as I have sketched out is the only one by which you can fix responsibility and secure accountability. I would venture to ask the Committee to call before them such a witness as Sir William Anderson, and I could not name a higher authority, and I am convinced that he would tell the Committee that to mix up the revenue receipts with the service payments in the hotch potch way that is done in these Finance Accounts, is to destroy all power of control over the expenditure, and render impossible that security for the balances of the public money which it is the very essence of a sound system of national accounts to provide. The Committee will perceive that in all I have said I have put forth no creation of my own brain; I have but suggested the careful and skilful application, as soon as may be, of a system of accounts analogous to that in operation in this country, and which is the fruit of the labours of some of the best accountants in the kingdom, supervised by Committees of the House of Commons.

2898. Sir *G. Balfour.*] Are you not aware that a great effort was made in 1860 by the late Mr. Wilson to establish the English system of budget account for India?—I am convinced that an enormous deal has been done in India towards bringing the system of accounts into order and method.

2899. Are you aware that he personally supervised the arrangements then made for establishing the English system, and adapting it to Indian accounts?—I have no doubt he did.

2900. And that Committees sat under him to carry out the plans which had been proposed by Sir William Anderson, and by other able men such as Sir William Anderson?—I do not know at all what the labours of the Committees were.

2901. Are you aware that the Government of India also sought the assistance of Sir William Anderson, and by his advice obtained the assistance of Mr. Foster, then the Deputy Paymaster of the Treasury, and also Mr. Whiffin, then the Assistant Accountant General of the Army?—I know that those two gentlemen went out to India as a Commission, but not by any advice of Sir William Anderson.

2902. They spent there several years, did they not?—Mr. Whiffin, I believe, spent about 10 months there, and Mr. Foster about two years.

2903. And they were employed to adapt the accounts in India in accordance with the principles in force in England, and the accounts were modified in accordance with their suggestions, were they not?—I have no doubt that the labours of those gentlemen in India were very useful. Of course I do not know exactly to what extent their labours went.

2904. As an historical fact, as you were at the India Office at the time that these two gentlemen went out, I merely wanted to have it on our Proceedings that they were sent out for the very object that you now recommend?—I understood that their object particularly was to re-organise the Public Works Department Accounts; that is my impression upon the matter.

2905. Excepting mentioning the object with which they went out, I do not think that they have touched the Public Works Accounts, or, at all events, in a very slight manner; but that they were chiefly devoted to the military accounts and the civil accounts of India?—You are, I daresay, correct; my impression was that the primary duty of those gentlemen was the reorganisation of the Public Works Department.

2906. Whatever defects may exist (and no doubt great defects do exist) in the Indian accounts, it is well to ascertain that efforts have been made to remedy them?—I think enormous efforts have been made, and great strides taken towards a better system of accounts in India.

2907. May I ask whether Mr. Foster was not employed at the India Office during your service there, to advise upon some accounts?—My introduction to the India Office was consequent upon a report

Mr. *W. G. Goodliffe.*

29 April 1873.

a report by Mr. Foster, who was associated with a Committee of the India Office to consider the state of the Home Accounts, and they recommended a total reorganisation of those Accounts, which led to my appointment.

2908. You came in then upon that inquiry?—Yes.

2909. Have we on record anything that Mr. Foster did on that occasion?—I have a copy of the Report here; it is called a "Report upon the Account and Audit Departments of the India Office."

2910. *Chairman.*] Have you anything further to add?—I think not.

2911. Mr. *Fawcett.*] You, in giving us the evidence which you have given, have the advantage of speaking from longer experience in English Government offices than you had in the India Office, have you not?—My experience has been entirely gained in English public departments.

2912. Therefore in advocating strongly, as you do, that the method of keeping the Indian accounts should be more assimilated to the method of keeping the English accounts, you express that opinion as one based upon your official experience in the English Government departments?—Believing it to be a sound system of accounts, and the only sound system for national accounts.

2913. To show the value of your evidence, I would ask you what offices did you hold in the English Civil Service?—I can read shortly from a Parliamentary Return No. 383, laid on the Table of the House in 1872, which was moved for by the honourable Member for Penrhyn. It contains a letter of mine in which my public services are placed on record. I was originally selected by Mr. Anderson, now Sir William Anderson, at the close of 1846, to proceed to Dublin to join the establishment of the Commissioners of Public Works (I had had seven years' experience in a merchant's office before); I was there placed in charge of the relief accounts. "At the expiration of some 12 or 14 months, Mr. Anderson, who had prepared a scheme for the reorganisation of the account system of the Office of Works, which had been approved by the Treasury, selected me, with the sanction of their Lordships, to take charge of the principal books. I held this appointment until the end of October 1850, when, by open competition, I obtained the appointment of book-keeper in the office of the Commissioners of National Education, Ireland. This was a new appointment, consequent upon a report made to the Lords of Her Majesty's Treasury by the late Sir Richard Bromley, then Secretary of the Audit Board, recommending a complete alteration in the system of accounts in operation in the Education Office. In February 1854, the Lords of Her Majesty's Treasury were pleased to appoint me accountant in the office of the Commissioners of Works and Public Buildings in London. The accounts of that department were to be revised, and the late Sir William Molesworth, the then First Commissioner of Works, had requested Mr. (now Sir William) Anderson to make inquiry for a fit person for the duty. Sir William Anderson considered the claims of three gentlemen besides myself, two of whom were in the public service, and he finally selected and recommended me for the appointment. It has thus fallen to my lot to be four times selected for special and arduous duties in different public departments under the Lords of Her Majesty's Treasury. I come now to my appointment to the establishment of the Secretary of State for India, in August 1860. A scheme for the permanent establishment of this office had shortly before been approved by Her Majesty in Council, which included the post of 'Chief Clerk, Accounts Branch and assistant to the Accountant General.' A committee, appointed by Sir Charles Wood (Lord Halifax), consisting of Mr. Arbuthnot, Mr. Mills, Mr. Baring, and Mr. Foster, had made a report, which had been approved by the Secretary of State for India in Council, containing recommendations involving an entire change in the manner of conducting the account business of the office, more particularly as regarded the manner of authorising payments, and the substitution of a system of post-audit for that of pre-audit. The staff of the department had come also under revision, and it is stated in a report signed by Mr. Baring, that 'the Committee recommend, with regard to the introduction of changes in the system of book-keeping and for other reasons, that a person from some other Government department, or from some other quarter, should be selected by the Secretary of State to fill the office of Chief Clerk, Accounts Branch, and assistant to the Accountant-General.' My appointment to that post, upon the recommendation of Mr. Foster followed." Therefore, it will be seen that I did not enter the office as chief, but as subordinate to the Accountant-General. On the retirement of my predecessor, I was appointed Accountant-General by Lord Halifax (then Sir Charles Wood); it was, I believe, his last official act at the India Office. That was in June 1866, and Lord Halifax was good enough, in April 1871, to give me the following testimonial:—"Dear Sir,—I have received your letter, and can most truly say that I had great pleasure in appointing you to the post of Accountant-General, from having witnessed the great zeal and ability which you had displayed in carrying out the recommendations of a Committee on the Accounts of the India Office. I had every reason to be satisfied with the manner in which you had performed that work, and I considered you the fittest man I knew for the head of the Indian Accounts Department. I shall be very glad if this testimonial should ever be of any use to you."

2914. Then I understand, from what you have just said, that in consequence of certain changes, when you were still in the prime of life, and as fit for work as ever, although Sir Charles Wood, who appointed you, said that you had discharged your duties with eminent zeal and ability, and entirely so as to give satisfaction, and although you were ready and anxious to do the work, and still in the prime of life, you were dismissed from the service on a pension of 900 *l.* a-year?—My post was abolished.

2915. Of course, when I said "dismissed from the service," I did not mean that there was any censure upon you?—I took the opportunity, before retiring, of placing my services, as I have read, upon record, and I concluded in this manner: "It is impossible but that I must feel deep pain at the abrupt termination of labours in the public service, which I think I have herein shown have been of no ordinary character, and in which I had looked forward to earn further distinction. I am able, however, to retire with the consciousness that I have at all times devoted the best energies of my mind to the performance of my duties, and I most respectfully ask

ask that I may, on quitting this office, receive from the Secretary of State in Council such a recognition of my services as may bring my official career, extending over a period of 25 years, to an honourable close. I cannot refrain, in conclusion, from asking that if an opportunity should occur for my employment again with equivalent rank under the Secretary of State for India, my services and claims may be considered."

2916. The point that I want to bring out is this: You had received every testimony that a public servant could have received, that you had discharged your duties efficiently; but the arrangements at the India Office are such that, in the prime of life, they give a man a pension of 900 *l.* a-year when he was not only willing, but anxious, to continue to discharge the duties, or duties analagous to those which he had previously discharged, and which duties he had discharged entirely to the satisfaction of his superiors. That is what it comes to, is it not?—Yes.

2917. Now, as I understand you, you served 15 years in the English service, and 10 years in the Indian Civil Service; therefore your aggregate service is 25 years; three-fifths of that time you served England; two-fifths of that time you served India. You were pensioned, and the whole of your pension, in contravention to the spirit of an Act of Parliament, is paid out of the revenues of India. Is not that the case?—I am not aware whether my pension is entirely paid out of the Indian revenues.

2918. But it is put down in the Indian accounts, is it not?—Perhaps I should say that I have reason to believe that it is wholly borne by the Indian revenues.

2919. The pension you receive is 900 *l.* a-year, and it is stated amongst the disbursements every year as one of the disbursements out of the revenues of India?—Yes, I think I have seen an account which does show it.

2920. But is it not the spirit of the arrangement, or do not you think it to be a fair arrangement, that if a man has served a portion of his official career in the English Civil Service and part in the Indian Civil Service, when it comes to a question of his being pensioned, India should not bear the whole financial burden?—I think my case is an exception. There is no question that the Act of Parliament contemplates that the superannuation allowances in the ordinary course of things should be apportioned rateably. In my case, I apprehend that the Treasury would rather say to the India Office, "You thought proper to tempt Mr. Goodliffe out of our service; you have employed him for a number of years, and you now think proper to abolish his office and give him a pension in consideration of his services; you cannot ask us to give anything towards that pension."

2921. Lord *E. Fitzmaurice.*] That abolition of your office was the work of the India Office?—Quite independent of consultation with the Government, I apprehend.

2922. *Chairman.*] Did you resign your position in the English service?—No; I was invited to accept the appointment in the India Office at the time that I was serving in the Office of the Commission of Works.

2923. Sir *G. Balfour.*] Will you kindly explain to us what changes or improvements you made in the system of accounts during the ten years you were in the India Office?—The changes that I made had chiefly reference to the mode in which the bank business was conducted, and the substitution of a system of post-audit for that of pre-audit. The mode of payment was entirely changed, a system of payment by cheques and drafts being substituted for that of payment by warrants.

2924. Then in reference to the book-keeping, did you make any changes?—Yes, I altered the system very considerably, and also the subsidiary arrangement, so as to make it eventually come into a clear and concentrated form.

2925. Would you describe generally, or have you any record by which you could show, what the changes are in the form of the books?—They are principally, I think, important changes in reference to the system of bringing the actual charges of the year to account, and not estimated payments.

2926. *Chairman.*] The effect was to keep the accounts in the India Office in the same way as they are kept in other public departments in England?—Yes.

2927. Sir *G. Balfour.*] For instance, the first account of the Home Accounts is called the Account current, is it not?—It is an actual Cash Account.

2928. Was that improved by you while you were there?—Yes, I think so; before that, I may say, it was not a statement of the actual receipts and expenditure of the year as it is now, but rather an approximate account, subject to adjustment afterwards. The system was cumbersome, and the principal books were two or three years in arrear when I joined the department, and expedients had to be constantly resorted to in order to enable the accounts to be laid before Parliament with the expedition which the Act requires. It was my study to make the books themselves available for the purpose.

2929. If I remember rightly, in 1858 we had a year's expedition in respect to the laying of accounts before Parliament, and in that year we had a duplicate of the year before laid before Parliament, so as to throw back the Home Accounts for one year?—I am not acquainted with that.

2930. Mr. *Birley.*] You said on the last occasion that you would be glad to give us some information with reference to the mode of keeping the accounts here between the India Office and the Government of India; have you anything to add on that subject?—I consider that a most cumbersome and a most unreliable system of treating the account current between England and India exists at the India Office. Unfortunately, as I think, the Account Current between England and India was transferred from the direction of the Accountant General to that of the Financial Secretary at the very moment that I was appointed Accountant-General. The system of maintaining a record of transactions between England and India was to have two sets of books, which is a most cumbersome and defective system; in fact it would be condemned by any practical accountant or merchant; but I have no doubt that it was an expedient adopted for the purpose of effecting a divison of labour, but which, of course, might have been obtained in a different and better manner. It was my intention to put an end to that double set of books as soon as I assumed charge of the department; but, as I say, within a day or two of my being appointed Accountant-General, an order was presented to me, signed by the Secretary of State, directing the transfer of which I have spoken.

2931. Sir *G. Balfour.*] In what year was that?—

Mr. *W. G. Goodliffe.*

29 April 1873.

that?—In 1866; this was a very important change, as it transferred a large portion of the business of the Accountant-General to the Financial Secretary; and, as I consider, it tended to complicate, and rendered insecure the bringing to account the money transactions of the two countries. I thought it therefore my duty to make a representation on the subject. I made this representation to the Under Secretary of State. Of course it was in some degree a technical question, and one to be determined on its own merits. Just at that time Mr. Stansfeld joined the Office as Under Secretary of State, and I thought that he was likely to give attention to a matter of this kind. I mentioned to him that there was this defect, as I consider, in the system of Home Accounts, and he said that he would be glad to have a memorandum from me on the subject. I gave him that memorandum, and I will now read an extract or two therefrom, because it will very briefly indeed show the anomalous nature of this double account. I said, "This account appears to have been a standing difficulty in the Office. Upon my joining the department in 1860 the books connected with this account were from 10 to 12 years in arrear. In August 1861, consequent upon a report by the late Accountant General, Mr. Johnstone, a gentleman of considerable experience as a book-keeper, was appointed to bring up the arrears on these books; and by a Minute of Council, dated 5th June 1863, based upon a recommendation of the Finance Committee, the keeping and adjustment of the account current was entrusted to Mr. Johnstone, assisted by Mr. Ritherdon, a junior clerk in the department of the Accountant General. By the exertions of these gentlemen the books have been brought up to the year 1860-61, and the balances at the close of that year have, as far as practicable, been analysed. I believe, however, it may be said with truth that the account is very far from being placed upon a satisfactory footing. The difficulties connected with this account do not, however, I conceive, arise from the nature of the transactions themselves, but rather from the want of a good system of accounts, and the absence of well-defined regulations for the conduct of the business connected therewith. I should remark that no account current has ever, I believe, been sent from this side to India, nor was any such account received from India, until, by a despatch written in the Financial Department, in August 1861, the Government of India was requested to furnish half-yearly an account current with London, commencing with the 1st May 1861. It can scarcely, therefore, be surprising that the accounts between India and England should have fallen into confusion, and much risk of pecuniary loss have been incurred. In consequence of the instructions above referred to, some accounts current have been furnished from all the presidencies;" and then I go on to say that "the little value of these accounts has just been shown by a report made by the gentleman in charge of them. I will, however, review the subject under the two points of view I have mentioned, namely, the defective system of accounts and the absence of regulations for the conduct of the business. First, as regards the system of accounts. A distinct set of books on the double entry system has been established, termed the 'Remittance Books,' dating from the year 1834. To these books are transferred, at the close of each year, all receipts and payments recorded in the Home Books, which are considered to be subject to adjustment with India, or in other words, to be matters of account between the Home and Indian Governments. These transactions being removed in this way from the 'Home Books,' they are, so far as those books are concerned, totally lost sight of, and are taken up *de novo* on the Remittance Books, the transactions in India being brought on to the same books from the Indian journals and ledgers sent to this country." Now, this opens at once, as I consider, a defect in the audit of the accounts, because the Auditor in England does not follow the amounts to see that they are brought to account after he has passed them. "The labour connected with the account current under this system is out of all proportion to the end to be attained, and is the chief obstacle to its attainment. To arrive at an adjustment of the monetary transactions of one year which are matters of account between India and England, no less than 23 ledgers and journals sent to this country from India must be consulted, independently of the Home Books. The system of accounts is moreover not only intricate and laborious, but is wrong in principle, involving the opening of fictitious accounts in the Home and Remittance Books, which tend to prevent the true state of the accounts from being ascertained. In illustration of this, take for example, the account of 'Family Remittances' from Bombay paid at this office. These remittances are sums deducted from the pay of officers and soldiers in Bombay, and are payable to their relatives and others in this country. For the adjustment of this account the following ledger accounts are made use of under the present system: Home Books, 'Family Remittances;' to this account the payments in England are charged. 'Remittance Account.'—To this account the balance on the foregoing account is transferred. 'Territory of India.'—To this account the balance on remittance account is transferred. Remittance Books.—'Bombay Presidency' (*i. e.*, Government of Bombay). This account is debited with the sums received in India. 'Territory of India.'—The balance on the Bombay Presidency Account is written off to this account. 'Family Remittances.'—This account is credited by the Bombay Presidency Account with the sums received by the Bombay Government, and is debited by transfer from the succeeding Account, 'General Books,' home, with the amount paid in England. 'General Books,' home.—This account is used for bringing the home transactions on to the remittance books. 'Territory of India.'—The balance on the preceding account is written off to this account. Of the foregoing eight accounts, the only real ones are those of the Government of Bombay, 'Bombay Presidency' and 'Family Remittances.' The former should show the amount due to or by the Government of Bombay in connection with the home accounts generally, and the balance at the close of the year should be written off to the account 'Territory of India,' as is done under the present system, and should agree with the balance on the account current sent from this side to the Government of Bombay. The latter account, 'Family Remittances,' should exhibit the amount of remittances unpaid, and should continue an open account. The whole of the remaining accounts are purely superfluous, and only tend to complicate the accounts."

2932. Is that Report upon official record?—I having made this representation to Mr. Stansfeld, he took some trouble to look into the matter, but he went away before he came to any conclusion upon the subject, and I felt that it would he unavailing on my part to press the subject further. It was a transfer of what I considered my legitimate duties, but it was a transfer under the order of the Secretary of State, and I did not feel called upon to protest further against it, and therefore I sent my report to the Financial Secretary with a letter.

2933. Mr. *Birley.*] I was going to ask whether anything was done in connection with this report of yours?—As I found nothing was done by the Under Secretary of State, I thought the better plan would be to send my views on the subject to the Financial Secretary, which I did, with this letter dated the 12th of December 1866. "Some time since, I mentioned to you that I had prepared some papers on the subject of the account current between this office and India. I did so at the request of Mr. Stansfeld, and I have no doubt, had he remained in office, that the whole subject would have been investigated by him. As I learn from you that you are now about to make some addition to your department in connection with this account, I venture to send you these papers (two marked A and B), although very unwilling to appear to interfere in a matter which is no longer under the direction of this department, and is, I am aware, in very able hands. You will find that, in my opinion, the only satisfactory way of dealing with this 'Account Current,' is to make it a portion of the General Account business of the Office, to abolish the present separate set of books, and to incorporate all the transactions in one General Ledger, and I have sketched out a plan on which I consider this could be effectually done. I shall be very glad if the papers, or either of them, should prove of any service to you, and I shall feel obliged by their return when no longer required."

2934. *Sir G. Balfour.*] Are you aware what progress was made at the time that you left the office in bringing the Account Current to a close?—No.

2935. Have we any record at the India Office when the Account Current between India and England had been settled, and the balances adjusted before you entered the office?—I do not think they ever had been adjusted. There was no Account Current then. It was ordered that an Account Current should be sent from India to this country. All the India books were sent home, and the accounts were made up in this country.

2936. Mr. *Birley.*] I suppose now that an Account Current is kept, they do not keep it with interest, do they?—No.

2937. Then it ought to be a very simple matter, ought it not?—Exceedingly simple.

2938. It is simply a record of all the debits and the credits between the several Governments in India and the Home Government?—Yes.

Friday, 2nd May 1873.

MEMBERS PRESENT:

Mr. Ayrton.	Mr. Dickinson.
Sir George Balfour.	Mr. Grant Duff.
Sir Thomas Bazley.	Mr. Eastwick.
Mr. Beach.	Mr. Fawcett.
Mr. Bourke.	Mr. Robert Fowler.
Mr. Campbell-Bannerman.	Mr. Lyttelton.
Mr. Candlish.	Mr. M'Clure.
Mr. Stephen Cave.	Mr. John Benjamin Smith.
Mr. Cross.	Sir David Wedderburn.

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

Colonel ALLEN BAYARD JOHNSON and Mr. GEORGE WELSH KELLNER, called in; and Examined.

Col. *A. B. Johnson* and Mr. *G. W. Kellner.*

2 May 1873.

2939. *Chairman* (to Colonel *Johnson*).] WILL you state what office you hold?—I am Assistant Secretary to the Government of India in the Military Department.

2940. (To Mr. *Kellner*.) What office do you hold?—I am Military Accountant General to the Government of India.

2941. Will you be good enough to give in a statement of the strength of the Army in the year 1856-57, and in recent years?—I have been at some pains in preparing a statement of the strength of the Army in India, both European and Native, from the year 1861-62 to the year 1871-72, from the Quartermaster General's returns, corrected by those of the Adjutant General, but I was sorry to observe that the returns, though having a common origin, did not agree; and I find on an examination of the statement which I prepared in India of the strength of the Army, that it does not correspond with a statement that has been prepared in this country from, as I understand, returns received from India; and neither of these statements agrees with the numbers given in the capitation settlements between the Indian Government and the British Government. It seems extraordinary that there should be such discrepancies in returns having a common origin—that is, the regimental muster rolls—but strangely enough they do disagree in a very remarkable manner. On the understanding that they are liable to revision and correction, I am quite prepared to lay before the Committee the statements that I have prepared. They are in great detail, and they show the strength, month by month, in each Presidency, of each arm of the service, European and Native, and the causes of every variation, month by month. With the reservation I have made, I shall be very happy to place the printed statements before the Committee.

2942. Do you think that this variation in the returns might arise from any difference arising from taking into account troops that had left this country, as troops that were in India?—That is very possible, I should think.

2943. I suppose, at any given period, there are a certain number of troops which, if the returns were made in this country, they would represent as on the Indian Establishment, because they had left this country?—Yes.

2944. And on the other hand, if the troops had left India, they might be represented in the returns as not there?—Yes, that is possible.

2945. Therefore that might be a source of error unless carefully eliminated?—Yes.

2946. In those two conditions there might be a difference of one or two thousands?—Yes. Having that in view, I was careful in preparing these statements to give the actual strength, month by month, on the first day of each month in each year, from 1861 to the year 1872.

2947. That would be the strength in India?—That would be the strength in India, of each arm of the service, in each Presidency.

2948. Now, supposing that details of invalids had been dispatched from the regiment, or were on their way for the purpose of embarkation for England, would they appear in the rolls of the regiment still as part of the strength of it?—They would appear on the rolls until they left the country. (Colonel *Johnson*.) They are shown in the Quartermaster General's rolls, not as with specific stations, but as in the division, or moving in the division at other places than the station to which there is a regular garrison allotted.

2949. *Chairman* (to Colonel *Johnson*).] Supposing they had gone out of the division?—Then they would be shown in the division to which they had removed. (Mr. *Kellner*.) I shall lay before the Committee these printed statements in the form of an appendix.

2950. *Chairman* (to Mr. *Kellner*).] Would you like now to give in some short compendious form a statement of the strength of the Army in these years under different heads so as to admit of comparison; we may as well have it for these various years, because it is necessary to consider the effect of the changes?—I shall be prepared at

at the next sitting of the Committee to have a printed statement ready. I thought the question would come later in the proceedings, otherwise I should have been prepared to-day. I can give you the strength in 1856-57, and in 1871-72 at once.

2951. Will you do so?—The strength of the British troops in 1856-57 was 45,522 troops, inclusive of officers, and the strength of natives was 232,224.

2952. Are those the natives of the regular army only?—No; they include irregular troops, the Punjab frontier force, not under the Commander in Chief, and the Hyderabad Contingent.

2953. Can you separate in those the native troops that constitute the regular army of the Presidencies?—Yes. (Colonel *Johnson*.) The Return was presented to Parliament in 1859, in the Report of the Commissioners appointed to inquire into the organisation of the Indian Army. That was a return framed in the India Office, and presented then.

2954. *Chairman* (to Colonel *Johnson*).] Does that give the regular army of the Presidencies?—Yes. It does not give in detail the several branches of the service, but shows the divisions of regular and irregular European and native.

2955. What is the difference there between the regular and irregular?—The regular native infantry was 152,860; the irregular was 35,426.

2956. Sir *G. Balfour*.] And the two together come to what?—188,286.

2957. *Chairman*.] What constitutes the difference between that and the larger figures given?—Veterans and the Medical Establishment. The native artillery and cavalry. Regular and irregular require to be added to the total.

2958. I meant the whole regular army?—I worked it out in the lump simply with reference to the proportion of the staff for the whole Army.

2959. (To Mr. *Kellner*.) Can you give us the state of the forces in 1871-72?—In 1871-72 the established strength was 60,453 Europeans. The average effective strength during the year, as made out from the returns which I obtained from the Quartermaster General of the Army was 58,438.

2960. Sir *G. Balfour*.] What is the date of that return?—The end of 1871-72. In fact, it is the average strength from the 1st of May 1871 to the 1st of April 1872, or for the year 1871-72.

2961. Can you give us the strength in any particular month?—Yes.

2962. *Chairman*.] Will you kindly give us a summary of the intermediate years from 1871-72 backwards, down to 1862, if you can get at it easily?—I have got it in the greatest detail here.

2963. Have you there an account of the Indian Army for 1856-57?—Yes; this is a statement showing the military charges and receipts in England and in India; the gross charges for the year 1856-57, and from the year 1861-62 to the year 1871-72, which is the latest year to which the accounts have been completed.

2964. The intermediate period was one of military operations that would rather prevent any useful comparison, was it not?—Possibly; but we have a catalogue of all the measures during the intervening period which affected military expenditure, either in the amount of increment or decrease. Then, I have the Estimate for 1872-73, and for 1873-74 which brings the information down to the latest period.

2965. Will you just read out the general summary that you have got?—The gross charges in 1856-57 in England and India together amounted to 13,227,879*l.*; in 1861-62, they amounted to 16,631,045*l.*; in 1862-63, the amount was 14,998,373*l.*; in 1863-64, the amount was 14,773,004*l.*; in 1864-65, the amount was 15,787,150*l.*; in 1865-66, it was 16,793,306*l.*; in 1866-67 (a year of 11 months, a period of transition, to a new system of accounts), it was 15,825,791*l.*; in 1867-68, it was 16,103,295*l.*; in 1868-69, it was 16,269,582*l.*; in 1869-70, it was 16,329,740*l.*; in 1870-71, it was 16,074,800*l.*; and in 1871-72, it was 15,678,112*l.* In 1872-73, the estimate is 15,646,000*l.*; and for the current year 1873-74, the estimate is 15,524,000*l.* That is the gross military expenditure.

2966. Mr. *Fawcett*.] But this does not include several charges properly military; for instance, it does not include the cost of military chaplains, does it?—No, the Ecclesiastical Establishment of chaplains was originally intended for the Army, but their duties now are civil to a greater extent than military, and the cost of the establishment is included in the charges for Civil Services. But we include in our military charges the grants to Roman Catholic chaplains, and to Presbyterian chaplains with Highland regiments, and like charges that do not pertain strictly to the regular Ecclesiastical Establishment of India.

2967. Are the receipts deducted from this, or is this the gross expenditure?—This is the gross expenditure. The receipts are exhibited separately.

2968. *Chairman*.] Will you kindly state the receipts during the same period?—The receipts are very trifling in England, mere waifs and strays. The receipts in India are considerable comparatively. The receipts in India, in 1856-57, amounted to 454,896*l.*; in 1861-62, they amounted to 956,219*l.*; in 1862-63, they amounted to 802,309*l.*; in 1863-64, they amounted to 747,431*l.*; in 1864-65, the amount was 735,567*l.*; in 1865-66, to 728,340*l.*; in 1866-67, the year of 11 months, to 71[illegible]489*l.*; in 1867-68, it was 742,712*l.*; in 1868-69, it was 1,101,503*l.*; in 1869-70, it was 1,060,423*l.* I may mention, that the receipts were abnormally increased during these later years by the sale of stores connected with the Abyssinian Expedition. In 1870-71, the receipts amounted to 943,685*l.*; and in 1871-72 to 889,340*l.* The estimate for 1872-73 was 870,500*l.*, and for 1873-74 it was 857,000*l.*

2969. Without going through all the years, will you give us the net military expenditure in 1856-57, and then for the last two or three years; have you got the English receipts, so as to be able to give the net?—Yes.

2970. The English receipts are a very small sum, as I understand you?—Yes, I have a statement of them.

2971. About how much are they yearly?—They vary very considerably; they are subject to adjustment. The amount was 10,404*l.* in 1861-62. It was 213,000*l.* in 1863-64; that was after adjustments with Her Majesty's Government. I may say that generally it is about 20,000*l.* to 25,000*l.* a year.

Col. *A. B. Johnson* and Mr. *G. W. Kellner.*

2 May 1873.

2972. Mr. *Fawcett.*] Is 213,000 *l.* the largest sum in the receipts from England in those years?—Yes; there were certain arrear adjustments then.

2973. *Chairman.*] Will you give the net military expenditure after deducting the receipts for 1856-57?—The net charges in India and England in 1856-57 were 12,772,983 *l.* The net charges for the last five years from 1868-69 are as follows: In 1868-69 they were 15,136,558 *l.*; for 1869-70 they were 15,247,135 *l.*; for 1870-71 they were 15,112,652 *l.*; for 1871-72 they were 14,733,692 *l.* The estimated charges in 1872-73 are 14,758,000 *l.*; and for 1873-74 they are 14,654,000 *l.*

2974. Mr. *Fawcett.*] An increase of about 2,000,000 *l.* since the year 1856-57?—Yes.

2975. *Chairman.*] Will you be good enough to state under what heads the expenditure is classified for the purpose of administration and account?—It is classified under various heads of grants or services, corresponding with the votes of the Army Estimates in this country; they are 20 in number. The first is the Army and Garrison Staff, which comprehends the staff of the army, the commanders in chief, and the headquarters establishments, the divisional and brigade staff, and so on. No. 2 Grant is the Administrative Staff; it includes the staff of the Viceroy and of the Governors of the minor Presidencies, and of the local administrations and provinces, and also the pay of the Military Account Departments. The third grant is the Regimental Pay Allowances and Charges; that is in fact the pay of the Army, European and Native, officers and men. I may mention that with regard to the European commissioned military officers employed in the garrison or army staff, their pay and allowances are charged to the departments in which they are respectively employed, but the regimental pay and allowances of those employed with European or Native corps are charged to this Grant No. 3. The fourth Grant is the Commissariat Department, that comprehends the pay and allowances of the officers of the commissariat, of the commissioned officers, the warrant and non-commissioned staff, all the native establishments connected with the duties of supply, and transport, the cost of provisions and forage for the Army, the maintenance and hire of transport cattle, and the provision of sea, river, and land transport.

2976. Is the system adopted of charging what may be called the pay of the rank to the Grant that you have described as number three, of officers who are employed in these various branches of the Army, and charging to the particular branch the staff pay?—No; Grant 3 includes the purely regimental charges; the regimental pay of the military staff officers employed, for instance, in the Commissariat Department, would be charged to Grant 4.

2977. You mean that the whole expense of the officers is charged to the particular service to which they are attached?—Yes.

2978. That is the system throughout?—Yes; the next Grant is No. 5, the Stud and Remount; that comprehends all charges connected with the supply of remounts to the Army, including the cost of the Government studs; we have large breeding establishments, and the maintenance of the studs and farms connected with them is all charged to this particular Grant.

2979. Mr. *Bourke.*] And the purchase of other horses?—Yes. No. 6 is the Army Clothing. The materials, cloth and garniture, are sent out from this country, and the cost appears in the Home accounts. The charges incidental to the manufacture of the clothing in India are exhibited in the Indian accounts. There are three agencies in India for making up the clothing for the Army, and the local charges are comprehended under this Grant. They include money compensation; where the soldier has not received clothing in kind, he gets compensation in money. No. 7 includes all charges connected with Barrack Establishments, barrack supplies of various kinds, fuel, furniture, and the like. No. 8 is the Administration of Martial Law; the pay of the Judge Advocates General and their establishments. No. 9 includes all charges connected with the Medical Services. No. 10 includes all charges connected with the Ordnance Services; the maintenance of the gun and gun carriage, and gunpowder factories, and other ordnance factories established in India, besides the arsenals, magazines, and depôts. No. 11 is Ecclesiastical; as I mentioned before, it does not include the pay of the chaplains of the regular Ecclesiastical Establishment; although that establishment was originally intended for the Army, the duties of chaplains are now more civil than military; but these are charges for spiritual ministrations directly for the soldiery, through Roman Catholic and Presbyterian chaplains attached to regiments. No. 12 is Education; this contains charges connected with the regimental and army schools; the grant has increased very considerably of late, through the increased encouragement extended to educational establishments for the Army.

2980. Does it include anything to the Lawrence Asylums?—Yes, it does now; they have lately been brought into the military expenditure. No. 13 includes Sea Transport Charges; those are connected with the reliefs and transport of troops by sea. No. 14 is for Miscellaneous Services; that comprehends everything that cannot well be brought under any of the other grants. No. 15 is the Volunteers. No. 16 is rewards for Military Services; it includes the expenditure connected with good service pensions to European commissioned officers, annuities and gratuities for meritorious services, and for the Victoria Cross to European non-commissioned officers and men, also the Order of British India and Order of Merit, pay to natives, and the pay of aides-de-camp to the Queen. Grant No. 17 is for Retired Officers' Pay; that is, the pay of retired officers who draw their retired allowance in India. No. 18 is Military Pensions, consisting for the most part of pensions to the Native Army; it includes also the pensions of European soldiers who elect to reside in India. No. 19 is Widows' Pensions and Compassionate Allowances; these are pensions granted to the widows of soldiers. No. 20 is Superannuation Pensions and Gratuities, being chiefly for the pensions of clerks and others who are allowed to retire after a certain period of service on superannuation pensions, clerks in military offices and the military departments.

2981. *Chairman.*] Now, have you any subdivision of expenditure in England under the particular heads which you quote for India?—Yes; the military charges in England are under

two

two heads. The effective services include the passage of officers and troops; the furlough allowances of officers of the Indian service; payments to the Imperial Government for troops serving in India; the Indian Overland Troop Transport Service; stores; expenses for education of officers, and pay and passage of officers under instruction; and other miscellaneous charges. The non-effective services are the retired pay of the officers, including colonels' allowances; pensions from Lord Clive's funds; and payments to the Imperial Government on account of retired pay, &c., for troops serving or having served in India.

2982. Now we will go to the first Grant, and will you be good enough to explain with regard to the army and garrison staff what has been the course of the expenditure, first stating what it was in 1856–57?—The cost of the army and garrison staff in 1856–57 was 375,523 *l.*; in 1869–70 it was 523,382 *l.*; in 1870–71 it was 466,136 *l.*; and in 1871–72 it was 465,840 *l.*

2983. (To Colonel *Johnson.*) Now, what changes have taken place with reference to this head of the Grant, which have affected this expenditure?—The main changes are the amalgamation of the general staff of the British and Indian forces; the revision of the artillery staff; the introduction of a revised scale of staff salaries; the abolition of half batta; the reduction of divisional and brigade commands with their staff; reductions in army staff; establishment of convalescent and other depôts at Parisnath and other places, and the abolition of others at Cawnpore and other places; the revision of the station staff appointments throughout India, and the placing them on a systematised footing; increase to the staff salaries of the Adjutant General, the military secretary to the Commander in Chief, the chief instructor of musketry, and the military storekeeper; revised rates of pay for medical subordinates; creation of the departments of garrison instruction, military telegraphy, and gymnastics. There are further changes affecting the amount of the Grant in the removal of the Hyderabad Contingent from the Military Estimates, and the transfer to this Grant of staff officers' pay, pay of certain medical officers, and a new charge for official postage.

2984. Mr. *Fawcett.*] Do all those affect the first item?—They affect the first Grant of army and garrison staff.

2985. But then some of them affect others, do they not?—They affect others as well, but they affect this one, and I am taking this head as one of the causes of increase.

2986. Then you will have to repeat these again?—To a certain extent, but not necessarily to repeat the reasons why they are done. Further, there is the gradual increase in the staff corps and local officers' promotion, which, of course, carries with it an increase of regimental pay.

2987. *Chairman* (to Mr. *Kellner*).] To what extent have these influenced the amount, either by addition or diminution, from the expenditure in 1856–57, which was very much less than it appears to be at the present time; can you explain how the expenditure has increased from 375,000 *l.*, in 1856–57, to the present rate of charge of 465,000 *l.*; what has been the increase or diminution arising from these various changes which have taken place?—There are so many changes, and so many elements of increase and decrease in each successive change, that it is difficult to answer that question at once. For instance, there are many charges now included under Army and Garrison Staff which formerly were not so included, but were charged to the Regimental Grant. Some of these are merely formal transfers from other grants, not absolute increments of charge. There is one little item of 8,000 *l.* or 10,000 *l.* a year for official postage alone; that goes to swell the postal revenue on one side of the Finance and Revenue Accounts, and, on the other side, to increase the military charges under this grant. A great many of those increments were merely transfers from other grants, either of the military or of the Civil departments. Others, again, constituted an actual increase of charge upon Indian revenues, as (for example) the revised scale of staff and regimental salaries which was introduced in 1862–63, and was calculated to have caused an annual increase of about 60,000 *l.* or 70,000 *l.*

2988. Can you state what the amount was in 1861–62 for this Grant?—Yes.

2989. That we may take as the first year when the Army had settled down, after the great augmentation for military operations?—Yes, it amounted in that year to 512,782 *l.*

2990. Was there a change then made consequent upon the amalgamation, getting rid of the double staff for the British and Indian troops which formerly existed?—Yes, that was amongst the changes.

2991. Did that produce any economy or reduction?—Yes, Colonel Johnson has the details of that. There has been a distinct diminution of charges as regards the Commander in Chief and the head quarters establishments.

2992. Can you state generally what was the reduction from the year 1861 to the following year?—Yes, it was, in 1862–63, 463,000 *l.*, and it has remained pretty well at that figure, for in 1871–72 it was 465,000 *l.*

2993. Mr. *Fawcett.*] But in 1861–62 the effects of the Mutiny had not spent themselves, had they?—No.

2994. Therefore it is hardly fair to make that comparison, because there were a great many more men who were on the staff at that time than there are now; therefore, though there has been no nominally increased expense, there has been actually one?—Quite so. I was asked to state what the charge was under this head in 1861–62, and I gave the figure for that year.

2995. *Chairman.*] Was the whole of that reduction, which you have just shown, due to the abolition of the double staff, or was it due to any general reduction of the staff?—There were both reductions and increments by the reorganisation of the army and garrison staff, by the creation of new staff appointments, and the improvement of staff salaries generally. I have here a very complete catalogue of all the items of increase and decrease under this grant, for each year from 1862–63 to 1871–72; one giving the items of increase, and another the items of decrease. Whilst there has been a steady endeavour to reduce expenditure, it has been impossible to resist additional charges—as, for instance, the creation of new staff appointments connected with the artillery and musketry inspection, garrison instruction, military gymnasia, and army telegraphy, hill sanitaria for British troops, and the unavoidable growth of ministerial establishments in the offices at army head quarters.

2996. Will you give us shortly what have been

Col. *A. B. Johnson* and Mr. *G. W. Kellner.*

2 May 1873.

been the items that have produced an increase or decrease, and the amount of them?—The amount of increase or decrease upon each item of charge would be matter of calculation. The increase or decrease would depend upon the number and rank of officers in the country, and on many other causes. The effect of a general measure like that of a revised and improved scale of departmental staff salaries (taken by itself) may be easily calculated, because the staff salary has to be paid under any circumstances, but the case is altogether different when considered in connection with other cotemporaneous charges.

2997. What is the amount of increase consequent upon that measure for the year 1863-64?—It was calculated at the time at 82,500 *l.* a year; but against that, certain staff appointments were abolished, and the regimental pay and allowances of each rank were reduced by the institution of staff corps pay; but then again the accelerated promotion of officers in the staff corps caused a distinct and continual increase of charge for regimental pay and allowances. I would say roughly that an increase of about 70,000 *l.* was the effect of these changes.

2998. Mr. *Fawcett.*] When you say that the effect of it was 80,000 *l.*, that will not represent it, unless at the same time we know how many men were affected, because, suppose for instance you have 200 persons on the staff corps, and that you had before 300, and the 200 cost 80,000 *l.* more than the 300 did before, it would not be fair or correct to say that the increased cost was only 80,000 *l.*?—No.

2999. Therefore it seems to me that we must, in making these comparisons in order to arrive at a conclusion, keep before us as far as we can in each item the number of men who are affected by it?—Yes, I shall be prepared with that, if necessary. I have a statement here showing all the staff appointments included under this grant in 1856-57, in 1861-62, and in 1871-72. If the Committee would wish me to supplement this information with the staff salary in each particular case, that can be done against the next meeting of the Committee, and would, I fancy, give exactly the detail that is wanted.

3000. *Chairman.*] It would, on the whole, give us perhaps a better idea if you were to give us the figures, showing the effect of the measures that increased the charge, and a statement of the estimated result of the decrease of the charge?—I have a statement here of charges for the year 1871-72, going back as far as was possible under the prevailing classification of accounts, and giving the details of all the charges under this head of Army and Garrison Staff, showing, for instance, what the Commander in Chief and his staff cost in 1856-57 and in 1871-72, in Bengal, Madras, and Bombay, and I have the same information with regard to the Adjutant General and other officers of the staff. Then I have another statement, giving the number of the staff appointments in 1856-57, in 1861-62, and in 1871-72. If desired, we could prepare against the next meeting an approximate statement of the cost. (Colonel *Johnson.*) I can give the head quarter staff as it stood in 1856 and 1871, compared with what it does now, but the actual cost I am not able to give.

3001. (To Mr. *Kellner.*) But first we want to see how the thing has increased or diminished; you stated that the cost of the staff in 1861-62 was 512,000 *l.*, and that the modification that was then made was the abolition of the double staff, consequent upon the amalgamation of the Indian army with the Queen's service?—Yes.

3002. And that with that modification the charge was reduced in the following year to 463,867 *l.*?—Yes.

3003. Then what was the next charge, and what was the effect in the following year on the grant?—The items of decrease were the amalgamation in 1862-63, and 1863-64, of the general staff of the British and Indian forces, with the abolition of the following appointments: one adjutant general, two deputies, one assistant, one brigade major, one quartermaster general and one deputy, two assistant quartermasters general and one deputy assistant quartermaster general. Then the revision of the artillery staff, with the abolition of the following appointments: three commandants of artillery, two assistant adjutants general of artillery, one brigade major, and the artillery depôts of instruction. The abolition of the second class brigade command at Merut, of the European depôt at Cawnpore, of the brigade command at Jaulnah, of the European infantry depôt at Arcot, and of the school of musketry at Bombay.

3004. In the next year was there a measure for the general increase of the pay and emoluments of the staff?—Yes.

3005. And what was the effect of that upon the Grant of 1863-64?—It was to increase the charges.

3006. What was the amount of the increase?—It was calculated at the time at 82,500 *l.*

3007. The general increase of allowances?—Yes, the staff salaries.

3008. At the end of those two years was that increase in full operation?—Yes, in 1863-64 and 1864-65. The full effect of it was seen in 1864-65.

3009. Was that counteracted by any diminution of charge?—It was counteracted by other diminutions of charge.

3010. What were those chiefly?—The abolition of certain appointments; the abolition of the Invalid Depôt at Cudalore, the reduction of the allowance for the medical charge of hill depôts, and the discontinuance of staff salary to the second assistant surgeons. Every year exhibits a record of reductions and also of increments.

3011. Did the expenditure, notwithstanding this, increase in 1865-66?—It increased in 1865-66.

3012. To what extent?—In 1865-66 the expenditure amounted to 493,152 *l.*

3013. Was there any attempt made to reduce it by substituting more economic arrangements?—Yes; in 1865-66 there occurred the conversion of a divisional into a brigade command at Madras; the abolition of one assistant adjutant general, one brigade major, and several garrison and station interpreters in Bengal; of one deputy assistant quartermaster general, one brigade major, and one station staff officer in the Bombay Presidency; these were all measures of decrease. Then there was the revision of station staff appointments in the Bengal and Madras Presidencies, the establishment of a convalescent depôt at Parisnath, and an addition of 600 *l.* a year to the pay of the Adjutant General of the Army.

3014. Was there any transfer from any other Grants?—Yes (and this I would mention as one great item of increase), the regimental pay of officers holding certain staff appointments. Formerly,

Formerly, the regimental pay and allowances of staff officers were charged to the Regimental Grant, and now they are charged to the Departmental Grant. Again, the effect of the system of promotion in the staff corps has been to increase the rank and pay of the officers holding these staff appointments.

3015. Then it would be further increased by the whole pay being charged to this grant?—Yes.

3016. Was any reduction effected again in the year 1866–67?—The abolition of the Invalid Depôt at Fort William, and the re-organisation of the depôt at Chinsurah were the measures of decrease.

3017. But was not that a reduction of force really?—No; it was only the reduction of the staff connected with the charge of invalids.

3018. Was the custom of keeping up these invalid depôts abolished?—Yes.

3019. (To Colonel *Johnson*.) What became of them?—The invalids were men invalided for a time to go home. It was a depôt where they were detained till they could be sent to join their regiment or sent to Bombay for embarcation. There was a staff maintained to carry on the business of these depôts; it was not an establishment of men; there was no actual reduction of force.

3020. (To Mr. *Kellner*.) In 1867–68 was the grant increased or diminished?—Increased; there were additional commands at Fort Mackeson and Jhansie, an increased charge for convalescent depôts and for musketry inspection, and an increase in the staff salary of the chief inspector of musketry.

3021. Were these increases counterbalanced by any economies?—Yes, by the removal from the Military Estimates of the pay of the staff and other charges of the Hyderabad Contingent; the transfer of the Straits Settlements to the Crown, whereby we were relieved of the cost of the staff officers, besides the other expenses of military occupation.

3022. Would not that as regards India be a real diminution of force?—As regards this grant, it was a relief of the cost of staff officers; and we were relieved in this year of all charges connected with the troops in the Straits Settlements.

3023. And with regard to the Hyderabad Contingent; what became of that?—It was transferred to another branch of the Finance Accounts; it was removed from the Military Estimates, but still charged to the Indian Accounts.

3024. Were there any other transfers tending to increase the grants?—Yes; the pay of medical officers and subordinates attached to depôts, and hill sanitaria were added to this grant.

3025. What was the cost in 1868-69?—The expenditure rose to 528,249 *l.* in that year.

3026. Was there any reduction affected in that year?—The reduction in this year was that of a second-class brigade command, by combining the command of the Aden Brigade with the duties of Political Resident.

3027. Were there any increases in that year?—Yes, there was an increase of 360 *l.* a year to the staff salary of the military secretary, and the appointment of a native aide-de-camp to the Commander in Chief.

3028. Were there any general increases?—In depôts and hill sanitaria the charges were increased, owing to the improved rates of pay of medical subordinates attached to them.

3029. Was there any further increase arising from the new system of the staff corps?—Yes; the rise in rank of the staff officers increased the charges under army and garrison staff.

3030. You mean that the officers employed were of higher rank that formerly for the same services?—Yes.

3031. Was that the effect of promotion by length of service?—Yes; instead of succession. Then there was an increase caused by the staff of the Hazara field force; that campaign occurred in this year.

3032. That would be a special charge for the year?—Yes; then there were some transfers from other grants; for instance, the pay of the staff officers commanding at Barrackpore, Jullunder, and other places was transferred to this grant; and the travelling allowances of the Divisional Brigade Staff were transferred from the Miscellaneous Grant, No. 14, to this grant.

3033. Was any further effort made to reduce this expenditure after that?—Yes; in the autumn of 1869, considerable reductions were ordered in the staff of the Army.

3034. Was that a real economy of administration?—Yes.

3035. Can you state generally what the amount of reduction was in the officers?—I can give the numbers. In Bengal, one divisional general, one assistant adjutant general, one deputy assistant quartermaster general, one aide-de-camp, two brigadiers general, and four brigade majors.

3036. Were similar reductions made in Madras and Bombay?—Yes.

3037. And what has been the effect of that on the grant?—The effect of it was, that the charges in 1870–71 fell to 466,136 *l.*, or less by 57,246 *l.* than the charges for the year 1869–70.

3038. Was it considered that this was bringing the staff down to the very minimum of efficiency?—I believe that it is the opinion of the military authorities that the reductions have been brought to the lowest point.

3039. Has there been any increase in respect of new staff appointments since then?—Yes, the charges for artillery and musketry inspection, garrison instruction, gymnasia and soldiers' institutes, new hill sanitaria, and army telegraphy, are new charges.

3040. What have they added to the grant?—About 60,000 *l.* or 70,000 *l.* per annum.

3041. Do you think that the system of the staff corps is still operating to increase the cost of the service?—I think so.

3042. By the system of officers of higher rank performing the duties?—Yes.

3043. (To Colonel *Johnson*.) When do you think that that system will attain its maximum?—I do not think that that has been worked out yet.

3044. But have you formed any opinion?—I think that it has very nearly reached its maximum at present; it must shortly do so, at any rate; but that is being worked out now in the India Office by General Hanyngton.

3045. The principle would be, I suppose, that these officers who were on the establishment when the reorganisation of the Army took place, or when the staff corps was established, being all now promoted by length of service, have gone up in a regular ratio to higher rank quicker than they would have done under the old system?—Certainly; they began higher; at least they come on in greater numbers at the introduction

Col. *A. B. Johnson* and Mr. *G. W. Kellner.*

2 May 1873.

of the staff corps, than they would if the staff corps had been absolutely formed normally upon the proportions that will hereafter form it.

3046. Then under the conditions of the staff corps they are to be paid in proportion to their rank?—Yes.

3047. In the arrangements formerly of the Army, were the officers when they reached a certain rank compelled to resign what are called the junior appointments in the staff?—All had to be resigned at certain periods, except, perhaps, the secretaryship to the Government, and a few of the very high ones; but the commands of irregular corps, and others, and all the minor appointments, were held up to a certain rank only.

3048. Therefore, when an officer attained that higher rank, the office was not charged with the higher expenditure, but a junior officer was put in at a lower rate of pay?—Yes, except where the pay of the appointment was consolidated.

3049. So that it had the effect of always keeping down the relative expenditure between the junior and senior appointments?—It kept them on the same footing generally.

3050. Has that been abolished?—Yes; all staff appointments, or rather, for there are certain exceptions, I should say the great proportion of the staff appointments carry with them a staff salary, in addition to the pay of the rank which the officer is holding.

3051. So that, instead of making way for the junior officer, he continues to hold the office at the high rate of pay?—At the rate of pay of his rank.

3052. If he does not get promotion himself to a higher office in consequence of a vacancy, he continues to hold the office?—Yes.

3053. What I understand is, that he receives the pay then of the higher rank, but he performs the duties that were formerly performed by a junior officer at a lower rate of pay?—Yes, I suppose so.

3054. That is to say, if a lieutenant was employed in certain services formerly, he only got lieutenant's pay, and now a captain can hold that same appointment with captain's pay?—Yes; but (it is rather complicated) the captain's pay now is lower than the captain's pay of the former system.

3055. But still higher than the lieutenant's?—Still higher than the lieutenant's.

3056. And if that be applied to the higher ranks still, where the pay is very much larger, it would make a material difference?—Certainly; the aggregate pay of appointments, I suppose, is now considerably higher than the aggregate pay of appointments before 1857.

3057. Then this system would go on increasing until by the introduction of younger men the number of junior officers bore a proper proportion to the number of junior appointments?—True; but if the officers who are now of a higher rank were not employed in this duty, they would under the guarantee of Parliament still be in receipt of the pay of their rank, and be doing nothing at all.

3058. It would be a charge incidental on the amalgamation and the conditions imposed upon that amalgamation by Parliament?—Yes.

3059. Mr. *Fawcett.*] When you say "imposed by Parliament," was the scheme framed by the direct action of the House of Commons?—No; I am referring to what is generally called the Henley Clause, by which it was declared that the promotion and position (the "rights and claims," I think, is the phraseology) of the Indian officers should be in no way affected by the transfer of the Company's army to the Crown.

3060. *Chairman.*] That has been insisted upon by the Company's officers as entitling them, whatever might be the changes necessary for the due administration of the army in India, to receive whatever emoluments they would have been entitled to if the old system had been kept on foot; is not that the substance of it?—That is what the two commissions, which sat in 1864 and 1866, decided were their claims.

3061. Mr. *Fawcett.*] But what I want to find out is this: it would be more correct to represent it thus, would it not; the amalgamation of the two armies did not emanate from Parliament, and this clause was, as it were, the growth of that amalgamation; the clause would not have been thought of if the amalgamation had not taken place, and the amalgamation did not emanate from Parliament?—But it was by Act of Parliament that it was decided that no local force should be maintained in India.

3062. The thing originally did not emanate from Parliament; of course I know that there was an Act of Parliament, and therefore Parliament in that way was responsible, but the amalgamation did not emanate from Parliament; it was a suggestion of the Government, and they got Parliament to accept it?—I suppose so; it was the suggestion of the Royal Commission which sat in 1859.

3063. *Chairman.*] But the re-organisation of the Indian army was quite a separate operation from the mere amalgamation of the European regiments serving in India with the army of the Queen, was it not?—They were distinct operations, but arising from the same root.

3064. But not necessarily connected; it would have been possible to transfer all Europeans serving in India into the Queen's service ultimately without re-organising all the Native army, would it not?—Certainly; but it was attempted with the European army, and the result was disastrous.

3065. But the difficulties that have arisen are supposed to have arisen from the combined operation of the entire re-organisation of the Native army, as well as the amalgamation?—That is the staff corps, as I understand you?

3066. Yes, and the establishment of the staff corps?—Yes, it is supposed so.

3067. Then you are aware that before this clause was put into the Act of Parliament, the Court of Directors and the Government of India claimed the right of organisation and altering the organisation of the Indian army just as they thought necessary for the public interest, and making the interest of the officers subordinate?—The Court of Directors certainly had that power.

3068. And did they not make various changes in the organisation of the army?—They made several changes in breaking up regiments into battalions. I am not quite prepared to go back into the earlier history, when they had one officer with a regiment, and native officers, and so on.

3069. They dealt with the claims of officers just as they thought fit?—Yes, but I do not think that in the historic times of the Court of Directors there were reductions of officers; it was always an increase.

3070. Still they had an absolute right to make such alterations as they thought fit, and they exercised it?—Yes.

3071. And Parliament introduced a clause which declared that no changes should be made that should affect the interests of the officers?—I think the clause rules thus,—that no change should be made which the Court of Directors had not the full power of making; and that has been interpreted to mean that no changes should be made which the Court of Directors were not in the habit of making.

3072. Did it not say that no change shall be made which shall affect the rights and interests and position of the Company's officers?—I cannot at this moment put my hand upon the exact wording.

3073. Are you aware that the result has been that the officers have quoted that Act for the purpose of making claims consequent upon any improvement in the administration of the army in India?—I think so. It was interpreted in 1866 to mean that they were entitled to the same pay as other officers received in the staff corps, with higher rank.

3074. Mr. *Fawcett* (to Mr. *Kellner*).] On the staff corps, can you inform me how much is the pay of an officer usually increased; supposing we take, for instance, a captain who with his regiment is receiving 400 *l.* a year; he gets a staff appointment; to what extent is his pay increased?—To the extent of the staff pay of the appointment. It might be 20 *l.*, or 30 *l.*, or 40 *l.* a month; he would get his staff corps pay, or regimental pay, *plus* the staff pay of the appointment.

3075. Then on what principle is this staff pay regulated?—The staff pay is regulated by the nature of the appointment, by its importance and the character of the duties, and it remains unaffected whoever might be the incumbent.

3076. But I mean who regulates that; who places the value upon the nature of the appointment?—The Government of India submitted a scale of staff salaries, which was approved by Her Majesty's Government here, and that has been the established scale of staff salaries.

3077. Is it done by regulations which are varied from time to time?—No, they cannot be varied without the sanction of the Government of India and the Secretary of State.

3078. Have they often been varied?—I think they have not since the last revision of staff salaries in 1862–63.

3079. With reference to the number of staff appointments, who creates them?—There is no appointment created without its being proposed in the Military Department of the Government of India, and confirmed in the Financial Department, and then referred Home.

3080. Has the number of these appointments [illegible]creased?—No increase is made without the [illegible]tion that I have described, either in number [illegible]y.

[illegible] understand that; but has the number [illegible]eased; has the sanction been ob[illegible]: I think I am prepared to show exception of the station staff ap[illegible]ch Colonel Johnson can describe [illegible]ve have really a less number of [illegible]ts now comprehended under this [illegible]ad in 1856–57, or in 1861–62, [illegible]e have a less number in 1871–72 [illegible]856–57, or in 1861–62.

3082. But the cost in 1856–57 was very much less?—Yes, but that is not entirely due to the staff pay, but also to the addition of military pay and allowances, and to the operation of the staff corps system of promotion, by which field officers are now holding staff appointments which were then held by subalterns and captains. The direct effect of that is considerable.

3083. Mr. *Bourke*.] Could you give any estimate as to the ratio at which the retiring allowances for those colonels who are now entitled as becoming entitled year by year to their 1,110 *l.* a year are proceeding, and when that will reach its maximum at the rate that it is going on at present?—That subject would come in ordinary course under Grant 18, but, as Colonel Johnson mentioned just now, such a statement is now being prepared by General Hanyngton of the India Office. (Colonel *Johnson*.) I told General Hanyngton some time ago that that information would be required by the Committee; and I told him that on the instructions of the Committee.

3084. Mr. *Fawcett* (to Colonel *Johnson*).] The staff corps, the number of staff officers is not at all diminished in proportion to the diminution of the army during the period from 1856-57 to 1871-72, I think?—I will give you the army head quarters staff in 1856–57, if you will allow me, first. Then the total force consisted of 277,746 men, European and Native, and in 1871-72 the force (I am not prepared to say exactly what it was then), was we will say 191,047 of all ranks.

3085. Then it has decreased by nearly a third?—By 86,000; but it has increased in Europeans by 18,000, or thereabouts.

3086. But the aggregate decrease has been a third?—The aggregate decrease has been, say a third. The army head quarters in 1857, as included in Grant 1, consisted first of three commanders in chief and their personal staff.

3087. What was their personal staff?—Three aides de camp and a military secretary, and a Persian interpreter; but I use the words their personal staff, because they have not varied between the two periods except in one respect. Then, further, it consisted of four adjutant generals, five deputy adjutant generals, five assistant adjutant generals, and one deputy assistant adjutant general, a total of 15.

3088–9. As I understand from some evidence that you gave just now, it sometimes happens that a captain is taken away from his regiment and appointed to the staff corps, and his pay is nearly doubled?—The staff corps is not a regiment.

3090. But a captain can be appointed to a staff corps from a regiment?—Not now as a captain, but as a subaltern.

3091. As a subaltern in the staff corps?—As a subaltern in the staff corps.

3092. But it is possible that a captain may be receiving 400 *l.* a year say, and may get an appointment in the staff corps, which will make an important addition to his remuneration?—You appoint him to the staff corps, and he then receives the pay and allowances attaching to the appointment which he may hold.

3093. But he may be appointed to an appointment which will represent an important addition to his remuneration?—Certainly.

3094. Sometimes it represents nearly double pay, does it not?—Yes.

3095. On

Col. *A. B. Johnson* and Mr. *G. W. Kellner.*

2 May 1873.

3095. On what ground is that; considering that the man is discharging arduous duties with his regiment, and it is supposed that those duties are fully paid for, why is this staff corps' salary so arranged that a man suddenly finds that his remuneration is doubled?—He would not enter the Indian service if his position were not benefitted pecuniarily. No man would leave the British service for the sake of serving with natives in India without some extra remuneration.

3096. But supposing that a man is a captain of a native regiment, then if he goes in the staff corps, his remuneration is still very much increased, is it not?—No, there is no native regiment now that is not paid as a staff appointment. There are no regimental officers serving with native regiments drawing any rate of salary, either pay or staff salary, other than that which is drawn by the officers of the staff corps.

3097. Then if a man once goes into the staff corps does he leave his regiment for ever?—He leaves his British regiment for ever; he has no other regiment to leave; as now there is no native army as consisting of regiments apart from the native army of the present organisation, which is now officered entirely by officers of the staff corps or by officers of the local service on the same footing as the staff corps.

3098. He cannot get back to his regiment?—There is no regiment to get back to.

3099. Then still the amalgamation is not complete, because although nominally the two armies have been amalgamated, yet you still speak of an Indian army; the existence of this staff corps seems to constitute an Indian army, which if you enter, you virtually leave the British army?—You leave the British regiment; we use the word "British" as meaning European. I should explain that we should call the Indian army Her Majesty's Indian army, which is a branch of the Imperial army, but an Indian branch, instead of being, as it was before, a distinct service under the Court of Directors, which was only in a very remote way, you may say, under Her Majesty's orders.

3100. Then what it comes to is this, that you have amalgamation carried on on this principle; you have amalgamation, and it has cost India a great deal, yet you have two armies and the amalgamation has been so managed than an officer in the European army can be transferred to the Indian army, but an officer in the Indian army cannot be transferred to the European army?—He may exchange.

3101. *Chairman.*] He is never out of the army?—No.

3102. Mr. *Fawcett.*] You say he has left?—He leaves his British regiment. He does not leave Her Majesty's service, but he joins a branch of the service which is employed entirely on Indian service, and under certain conditions he may, if he can effect it, effect an exchange with an officer on what we may call a general service British regiment; but ordinarily, for the sake of the higher emoluments which have been considered necessary to induce officers to undertake the duty, they remain in India.

3103. Who has the patronage in this staff corps?—It is the officering of the army, so to speak, and the appointment to all the different administrative staff appointments which exist in the army.

3104. But I mean, supposing, for instance, that a man was in a European regiment in India, and wanted to get a staff corps appointment, who would appoint him?—Say that he wants to enter the Indian army pure and simple, without reference to civil employment, his first duty is to pass an examination in the native languages. He then applies to the military secretary to the commander in chief.

3105. Which commander in chief?—It depends upon his Presidency. If he wishes to enter the Bengal Staff Corps, and is serving in the Bengal Presidency, he would apply to the Commander in Chief of the Army who commands the Bengal army.

3106. Then, according to that, there are three commanders in chief, and they all three have distinct staff corps?—Yes; there are three distinct staff corps, one for each Presidency. Then in the event of a vacancy existing in a native regiment, he would be appointed as second doing-duty-officer, on probation for a year. His application for this appointment must be accompanied by a certificate from his commanding officer, that he has completed three years' duty with his regiment, two years of which he has spent in India; that he has passed the examination in the native languages, which qualifies for staff employment; that he has attained such a knowledge of his drill and duty as an officer of infantry or cavalry, as the case may be, in all its branches, as to qualify him for the command of a company or troop in all situations; that he possesses a fair knowledge of the Articles of War and of the Queen's Regulations, as well as of the military regulations of the Presidency, besides having gained some general acquaintance with the organisation and nature of the duties of all branches of the army serving in the Presidency in which he has served; that he has been during his service attentive to his duty, and that his conduct has been in all respects unexceptionable. He must also produce a certificate of sound bodily health from the surgeon of the regiment.

3107. Then the staff corps discharges two distinct duties, as it were; it officers the native regiments, and it supplies the ordinary staff appointments of the army, the civil appointments?—Through the staff corps only can admission be got to the native army, to the military staff appointments, excepting what are called army staff appointments, that is, adjutant generalships, assistant adjutant generalships, and so on, which may be held by officers of British regiments of the line serving in India.

3108. I understand now, if a man wants to get into the staff corps with a view to joining a native regiment, how he does it; but there are now two cases to be considered: how does a European officer who wishes to get into the staff corps in order to hold a military staff appointment, get this military appointment; secondly, how does an officer of a native regiment get a military staff appointment; there are two distinct cases, I see, to be considered?—An officer of the staff corps gets his military appointment by selection of the commander in chief of the Presidency in which he is serving.

3109. That is simply the patronage of the commander in chief?—It is an exercise of the commander in chief's duty.

3110. But is there anything which, for instance, to restrain him as to the [illegible] that he selects, because that may make a difference as to the cost?—Yes, the

lations prescribing the grade of officers to hold certain appointments.

3111. But, for instance, is it not possible sometimes, in certain cases, to appoint officers of a higher grade than might otherwise be appointed?—There is a certain discretionary power allowed to the commander in chief; but when I said that the commander in chief appoints, I should have said that it is the commander in chief who nominates. The actual appointment to these army staff appointments rests with the Government; but the commander in chief's nomination is very rarely indeed, in fact you may say never, except on most special grounds, objected to.

3112. A discretion is left to him as to what grade of officer he appoints?—Yes, within the limits of the regulations.

3113. And of course the cost of the appointment to the revenues of India depends to a great extent upon the grade of the officers who are appointed?—Yes, to the extent of the difference between the staff corps rate pay of the officer, according to the rank which the officer may hold.

3114. Now what is the process if a man serving with a European regiment in India wants to get a military staff appointment?—If you mean one of the army staff appointments which an officer can hold without entering the staff corps, he records his name as a candidate for it, having qualified, with the military secretary to the commander in chief.

3115. Private patronage again?—No; there again the commander in chief only nominates.

3116. But virtually that nomination is never over-ruled, you have told?—You can hardly call it private patronage. Some one must be selected, and it is one of the most important duties that the commander in chief has to perform.

3117. And here again discretion is left to him as to the grade of officer he selects?—Yes, within the limits prescribed by the Regulations.

3118. But those limits are sufficiently wide, are they not, to represent very different costs to the revenues of India?—At this moment I have not with me the Regulations, stating what the different grades are for the different classes of appointment, but I do not think that the discretionary power is very wide. It is chiefly in the higher army staff appointments; but they are almost invariably held, except on very special grounds, by field officers, that is, by majors or lieutenant colonels.

3119. Sir *D. Wedderburn.*] You distinguished just now between staff corps pay and staff pay, and said, did you not, that staff corps pay might be regarded as equivalent to what used to be known as regimental pay?—The staff corps pay is the regimental pay.

3120. There are in fact no officers of the Indian Army properly so called, except the staff corps officers?—Yes, there are local officers, that is, officers of the old Indian Army, who did not elect to enter the staff corps, but who chose to remain as local Indian officers.

3121. There are very few of them, and they are all officers of senior rank, I suppose?—No, there are two classes of them; there is the class of officers who had been attached to a regiment when the Mutiny broke out; and the class of officers that were sent out as young doing duty officers, under condition that they would submit to any changes which might take place in the event of the Government desiring to make them.

3122. I should like to know about how many such officers there are distinct from the staff corps; and what sort of army rank they hold?—The one class, that is, the old Indian officers, are of proportionately high rank. The younger ones, forming what is called the general list, that is, those who entered the service subsequently to the Mutiny, but prior to the transfer of the army to the Crown, subject to any change that might be made, are of junior rank, subalterns and captains, but chiefly captains. (Mr. *Kellner.*) I can give you the number on the 1st of January 1872 of local officers. The local officers of cavalry were 172, of infantry 601, and of the staff corps 2,443.

3123. (To Colonel *Johnson.*) Are these officers employed on the same terms, that is to say, *pari passu,* with the officers of the staff corps in officering the native regiments?—Precisely; provided, of course, that they are qualified, or otherwise fit for employment.

3124. And the whole Native Army is officered practically on the same principles on which the old irregular corps used to be officered, by men selected from these local officers, and from the staff corps?—Yes, but with this difference, that the officers for the old irregulars were drawn from native regiments, whereas the officers for the native regiments of the present day are drawn from British regiments.

3125. It is from British regiments only that the staff corps is now recruited?—Solely.

3126. And, of course, the local officers are not recruited in numbers at all?—Not at all; they are in process of extinction.

3127. And, I suppose, that the result of all this system has been not only that officers of higher rank are employed in the Native Army, but also older men, because formerly these irregular corps were generally officered by young men?—No, I think as a rule you would find that the average age of officers with the corps now, and of the officers with the old irregular corps, are pretty nearly the same. I am not speaking from any absolute facts, but I can ascertain it if you wish.

3128. Then you stated, that in the year 1865-66 a sum of 600*l.* a year was added to the salary of the adjutant general; can you state what was the cause of that addition?—The increase of the pay of the adjutant general was given on the strong representation of two successive commanders in chief, Sir Hugh Rose and Sir William Mansfield. He was, though adjutant general of the whole Army, that is, of the British troops in all the three Presidencies, only receiving the same pay as the quartermaster general of the Bengal Army, that is to say, of the simple Bengal Army; he was in fact, though occupying a far more responsible and onerous position, only receiving the pay, or very little more, of a brigadier general commanding a district. In fact he was underpaid, or was considered underpaid, as compared with other officials, civil and military. His pay was raised from 250*l.* to 300*l.* a month.

3129. Is the Adjutant General the only officer whose authority extends in that way to the British troops in the three Presidencies?—He and the commander in chief are the only two.

Col. *A. B. Johnson* and Mr. *G. W. Kellner.*

2 May 1873.

3130. But how far does the jurisdiction of the local commanders in chief, that is to say Bombay and Madras, extend over the British troops?—very completely; not entirely, but to the extent of giving furlough, I believe. It is a much more extended authority than a general of division has, but not so complete as the commander in chief in India.

3131. Has it been increased of late years, because I had an impression that at one time the authority of the Bombay and Madras commanders in chief was limited to the native troops?—I do not remember that it was.

3132. Then as regards one of your answers, I think in giving the number of troops in India you spoke of the frontier force as if it were not under the commander in chief?—It is not; I referred to the Punjaub frontier force.

3133. Then under whom is it?—Under the Governor General, and more immediately under the Punjaub Government.

3134. Mr. *Cave.*] What becomes of the officers of the staff corps after they have got beyond regimental rank?—They get what are called their colonels' allowances, and gradually rise in the general list to generals.

3135. And when they are generals are they considered as belonging to the Indian Army?—Yes, they are on what is called the amalgamated list of generals; that is, they rise in the Imperial list.

3136. But they can never be brought to do duty in this country, can they?—Yes, Her Majesty might employ them anywhere; the Staff Corps Service is general.

3137. Would there be any distinction between them and the generals who had remained in the British Service?—If you mean in the matter of their employment in England for district commands, I fancy that the chance of a staff corps general getting employment, except after extraordinary exceptional services, would be very limited indeed.

3138. Are there any such instances yet?—No.

3139. There are no staff corps generals under the new system yet?—On the general list there are a great many.

3140. Then they are a sort of half pay officers doing nothing in India?—They are living in England or in India as the case may be.

3141. Not doing any duty?—Not doing any duty.

3142. Unattached; and are they receiving full or half pay?—They are receiving not the full Indian pay; they are receiving the English pay of general officers.

3143. And they may reside where they like till they are called upon to do duty?—Yes; till they are appointed to a divisional command, or to some other work.

3144. If called upon to do duty they will receive Indian pay, I presume?—They will receive the consolidated pay of the appointment that they are called upon to hold.

3145. Mr. *Beach.*] What is generally the regimental rank of those who get staff appointments?—They are appointed from all ranks. Every officer in his turn, if he wishes to be employed, applies. Of course a subaltern would not dream of applying for an appointment which he knows is only held by a field officer, and *vice versâ*.

3146. Mr. *Eastwick.*] Mr. Fawcett put some questions to you with regard to the manner in which officers enter the Staff Corps. Is it not a fact that there are a certain number of appointments still retained which are given to the sons of officers who have distinguished themselves?—No, not appointments, but there are nominations, as what are called Secretary of State's cadets to Sandhurst. The number I cannot tell you.

3147. But they are not particularly given to the local army of India, but generally are they?—Generally. They are supposed in some measure, I imagine, to compensate for the loss to officers of the old service of the chance of cadetships for their children, procured through the Court of Directors.

3148. I want to know whether they go into the staff corps for India after having passed Sandhurst, or into any regiment?—They go into a British regiment; to go into the staff corps afterwards or not as their fancy leads them, or as opportunity may serve.

3149. Mr. *Campbell-Bannerman.*] How many are there of these appointments; something like six?—It may be about that number.

3150. Sir *D. Wedderburn.*] When an officer joins the staff corps in India, his commission in his own regiment is vacant, and is therefore filled up at once, is it not?—His vacancy may be filled up at once, even while he is on probation, and before he has completed it.

3151. Mr. *Campbell-Bannerman.*] While he is on probation he is supernumaried to his regiment?—Yes, but he is borne on the Indian grant.

3152. Sir *G. Balfour.*] You mentioned the Henley clause being in operation. Is it in operation for the staff corps as well for the officers of the old local army?—I presume for all the officers of the old local army, whatever changes may have taken place.

3153. When do you think the clause was passed?—In 1858, when the Act was passed.

3154. When was the staff corps formed?—In 1861.

3155. Then how could an Act passed in 1858 apply to officers who obtained new conditions of service in 1861?—I fancy that it was that the officers were identically the same to whom the Act referred in 1858 as those who joined the staff corps in 1861.

3156. Was the promotion in the staff corps in the same way as that of the old local officers?—No.

3157. The clause only applied to the old privileges of the Company's officers, the rights of promotion?—Yes.

3158. Then if the promotions were different in the staff corps, the clause did not apply to them?—The promotions being more favourable generally they would not apply the clause to themselves.

3159. But am I to understand that you adhere to your opinion that the clause is applicable to the staff corps?—Applicable to the officers of the old Indian Army who entered the staff corps.

3160. That they were entitled to all the privileges of the staff corps advancement under the Henley clause?—No, I should say it was under the Royal Warrant, which is of a later date.

3161. You said, in reply to the Chairman, that the Henley clause guaranteed the officers of the Indian Army their rights and privileges, and you

mixed up the staff corps more or less with that statement, and I want to ascertain clearly from you whether you consider that clause to apply to the staff corps officers as well as to the old local officers?—I do not think that entering the staff corps in any way is held to abrogate the claims of the officers of the old Indian Army to the privileges which that clause confers.

3162. Did not the Royal Warrant lay down new rates of pay and pension for the staff corps?—Yes.

3163. And were not the officers distinctly told that those who entered must be governed by the Royal Warrant of 1860?—Yes.

3164. Does not that Royal Warrant make different rules and regulations from those which the old Indian officers were under?—I do not think that the Henley clause insisted that officers should remain on exactly the same footing as they held when the clause was passed, but that nothing should be done against their interests which could not have been done by the Court of Directors.

3165. Then I understand that your view is that the Henley clause is in operation for the staff corps officers?—Certainly.

3166. You mentioned that the amalgamation of the European Army took place in consequence of an Act of Parliament; do you remember exactly what the Act of Parliament did say?—No, except that I quoted a reference that is made to it.

3167. Did it not provide merely that the European troops of the Indian Army should cease?—Yes.

3168. It did not prescribe any course of amalgamation?—No, not what was to be done.

3169. You mentioned also that the former amalgamation was very disastrous; what was that?—Not that the amalgamation was disastrous, but that the attempt to transfer the European troops from their service under the Company to the Crown was disastrous.

3170. And what date was that?—That was in 1859.

3171. Was there not a second transfer of European troops?—By bounty.

3172. What year was that?—It was in 1860.

3173. It was in April 1861, was it not?—Perhaps so.

3174. The former disastrous effect was caused by reducing bounty?—Yes.

3175. The second one was brought about by giving a bounty?—Yes.

3176. And that bounty was recommended by the Amalgamation Commission which sat in Calcutta, was it not?—I am not aware of that.

3177. Do you remember the strength of European troops that was transferred on that occasion?—No.

3178. Would you be surprised to hear that it was 17,400?—No.

3179. And that it was done with a great degree of quietness and ease?—And it only cost some 160,000 *l.*

3180. The former system in sending home troops and sending out new troops cost upwards of a million, did it not?—No doubt it was very expensive.

3181. (To Mr. *Kellner.*) You also mentioned the large augmentation of the cost of the Indian Army by reason of the staff corps?—Yes.

3182. Could you give us any comparison of the numbers or pay by which the Committee could judge of the increase in the number of officers of different ranks?—I have a calculation of the number and cost of the officers of the General List of Cavalry and Infantry, and of the Staff Corps, in 1862 and 1872.

3183. I will read a statement of Sir Henry Durand's, and ask you to see whether or not your figures agree with it. At page 171 of this Blue Book, No. 467 of 1871, I find this: "The result is that the 3,312 officers at present cost above seven lacs more than the 4,513 did formerly; and actually cost 60,60,960 rupees, or 606,096 *l.* more than the same number would have cost in 1856"?—It is very much that. My figures bring out this result: that on the 1st of January 1862 we had 306 officers of cavalry, 2,523 of infantry, and 1,338 of the staff corps; total, 4,167 officers, costing 1,866,000 *l.*

3184. Can you state the rank?—Of cavalry, 21 colonels, 13 lieutenant colonels, 11 majors, 102 captains, 141 lieutenants, and 18 cornets, making a total of 306. Of infantry, 165 colonels, 105 lieutenant colonels, 98 majors, 545 captains, 1,267 lieutenants, and 343 ensigns, making a total of 2,523. Of the staff corps, 3 general officers, 29 lieutenant colonels, 312 majors, 588 captains, and 406 lieutenants, making a total of 1,338. The cost of these was 1,866,000 *l.* a year; that is the total cost of the three sets of officers. The last one, the staff corps, cost 644,000 *l.*; the infantry cost 1,042,000 *l.*; and the cavalry 180,000 *l.*

3185. What is the next year that you have got there?—1872.

3186. Will you look at Sir Henry Durand's statement, and see if that is correct (*handing a book to the Witness*)?—There is an interval of three years. Sir Henry Durand gives you the number of cavalry officers in 1869 at 193. The number on the 1st January 1872 was 172. The number of infantry officers in 1869 was 686; in 1872 it was 601. The number of staff corps officers in 1862 was 1,338, and in 1872 it was 2,443.

3187. Would you now give us the 1872 statement more fully?—On the 1st of January 1872 in the cavalry the number of colonels was 12, lieutenant colonels 16, majors 10, captains 95, and lieutenants 39. In the infantry, the number of colonels was 108, lieutenant colonels 131, majors 13, captains 276, and lieutenants 73. In the staff corps the number of general officers was 47, lieutenant colonels 664, majors 500, captains 825, and lieutenants 407. The total number of officers on the 1st of January 1872 was 3,216.

3188. Will you be good enough to fill up the figures, so as to show in a comparative statement the number and cost and rank of the three services of the cavalry, infantry, and staff corps, for the years 1862, 1869, and 1872?—Yes. The total difference is this, that on the 1st of January 1862 we had 4,167 officers, costing 1,866,012 *l.*; and on the 1st of January 1872 we had 3,216 officers, costing 2,050,399 *l.*

3189. And the numbers in different ranks have largely increased?—In the higher ranks, and those in the lower ranks have decreased.

3190. It is to the larger increase in the higher ranks that the increased cost of the Army has been partly due?—No doubt.

3191. And to a considerable extent?—Yes.

3192. (To Colonel *Johnson.*) Can you tell us

Col. *A. B. Johnson* and Mr. *G. W. Kellner.*

2 May 1873.

the history of this staff corps, where it was originated and by whom?—By the Secretary of State for India.

3193. But from whom did the suggestion first come?—I fancy from Colonel Norman.

3194. Can you give us the date of his suggestion?—I am unable to give it precisely.

3195. Will you kindly look at that and see whether you could adopt that (*handing to the Witness Parliamentary Paper* 330 of 1860, *page* 180)?—I presume this is it.

3196. Would you be kind enough to state the date of the letter?—It is the 2nd of February 1860, from Lieutenant Colonel Norman, Deputy Adjutant General of the Bengal Army.

3197. And dated from where?—Weston-super-Mare.

3198. Addressed to whom?—To the Secretary of State for India.

3199. That was Sir Charles Wood, I think?—It was Sir Charles Wood who was then Secretary of State for India.

3200. Will you kindly say what took place after that; was there not a Commission subsequently formed by the Secretary of State?—I presume there was, but the Reorganisation Committee was in 1859.

3201. Did the Reorganisation Committee recommend the staff corps?—I think not, but I do not know.

3202. I am referring now to the Commission of which Lord Houghton was president; do you remember the Report of that Committee or Commission?—I do not remember the Report of it.

3203. Perhaps you will kindly inquire, by our next meeting, and look at that Report?—Yes.

3204. Was that Commission appointed in consequence of the letter of Colonel Norman?—I am not prepared to say that it was in consequence of his letter, because the Commission, I suppose, was appointed by the Queen.

3205. (To Mr. *Kellner.*) You mentioned that the strength of the European force in 1856 was 45,522, I think?—Yes, but including officers.

3206. And you mentioned that the strength in 1871–72 was 60,453?—That was the established strength, but exclusive of officers.

3207. And what was the 45,522; was that established or effective?—That was effective, I think. I have taken those figures from page 20 of the Appendix to the Commissioners' Report on the Reorganisation of the Army.

3208. And the 60,453, you have already told us, was the established strength; but in that year, 1871–72, what was the effectual strength?—About 58,500.

3209. And the difference between that and the 45,522 would be only 13,000?—Yes, only about 13,000.

3210. (To Colonel *Johnson.*) In reply to the honourable Member for Brighton, you mentioned that the European strength had been increased by about 18,000 European tooops, did you not? Yes.

3211. How would you account for that difference; if 45,522 existed in 1856, and 58,000 only were the effective force in 1871, the increase could only have been 13,000?—I took the returns from the Report on the Organisation of the Army, from the returns furnished to them.

3212. Then, perhaps, on looking over your evidence, you will come forward next time and give us the exact numbers, because there are discrepances now?—Yes. (Mr. *Kellner.*) Colonel Johnson's figures for 1871–72 are those published lately in the volume of statistics connected with India; but these include the officers, which my statement does not. (Colonel *Johnson.*) I took the figures from this statistical abstract furnished by the India Office for 1871, and from the returns furnished from the India Office to the Organisation Commission for 1859.

3213. You will kindly look over and see where the inaccuracies occur?—Yes.

3214. (To Mr. *Kellner.*) Can you tell us the strength fixed in 1861–62, and will you furnish us with it from 1861–62 upwards?—Yes.

3215. As a rule, you have found great difficulty with regard to the returns, have you not?—Yes.

3216. It is an old difficulty?—Yes.

3217. And one that I experienced myself?—Yes.

3218. And we never ascertained distinctly what the strength was?—No.

3219. And it requires an immense deal of trouble to ascertain that?—Yes.

3220. Mr. *Eastwick.*] Would you also, when you furnish this statement, explain the origin of these discrepancies?—It is a very difficult thing. All these returns have a common origin, that is the regimental muster roll, and it seems strange that, starting from the regimental muster roll, the returns based upon it should be so discrepant. The discrepancies occur, no doubt, in the subsequent treatment of the primary record.

3221. Sir *G. Balfour.*] Will you be good enough to look over your returns, and give us the strength for those periods, and say precisely for what month you take it?—Yes.

3222. In reply to a question from the Chairman, you appeared to allow that, in 1861–62, the expense was free from cost of the Mutiny?—No, I did not mean that.

3223. You are aware that in that year nearly three-quarters of a million was allowed me for the expense of recovering arrears?—Yes.

3224. And that in the sum of 16,631,045 *l.*, which you gave as the cost of that year, there is a very large sum included on account of arrears?—Yes, and which we were unable to classify.

3225. And you are aware that in that year a considerable part of the men were retained after the beginning of the year, and that the pay of the men discharged then fell upon the finances of the year 1861–62, instead of 1860–61?—Yes.

3226. 1862–63 you consider, then, to be the first approximately fair year after the effects of the Mutiny had ceased?—And 1863–64.

3227. And these are the two years in which the least expense has been incurred until recently?—Yes.

3228. For the year 1863–64, if you kindly look at your figures, you will see that you gave the charges for England and India at 15,255,699 *l.*?—Yes.

3229. When I call your attention to the fact that the expense laid before Parliament for 1862–63 for England and India combined is only 14,892,751 *l.* against your 15,255,699 *l.*, will you try and make the necessary correction by next time, and try to reconcile the two statements?—Yes. My original figure was 14,998,373 *l.*, as the expenditure of 1862–63; but only this morning it was corrected at the India

India Office. I was told that I had made certain omissions, and I corrected the figure.

3230. Kindly glance your eye at the Finance Accounts laid before Parliament, and you will see that you are 100,000 *l.* out in the Home charges?—Yes, that is so.

3231. I will call your attention also to the statement made in 1863–64; the expense stated by you is 14,972,191 *l.* for that year?—Yes.

3232. Then I call your attention to the fact that in the Finance Account laid before Parliament it is 14,546,410 *l.*; will you try and correct that also?—Yes.

3233. In 1864-65 you state the expense to be 16,099,660 *l.*; I will call your attention to the fact that in 1864-65 it is, in the Finance Accounts laid before Parliament, 15,774,486 *l.*; will you also endeavour to rectify that?—Yes.

3234. In 1865-66 you stated the expense to be 16,793,306 *l.*, in the Finance Accounts; it agrees within a fraction, namely, 16,763,200 *l.*, and in subsequent years your figures appear to approximate to the Parliamentary ones?—Yes. There has been a difficulty in reference to the earlier years, and after communication with the Government of India I transposed the charges for stores from the Indian to the Home accounts, and made certain alterations which I shall be prepared to explain; they are very slight.

3235. Mr. *Eastwick.*] How did these arrear accounts happen?—To the best of my recollection they dropped through; they had not been audited or accounted for, in consequence of the Mutiny, and the confusion which occurred then.

3236. Sir *G. Balfour.*] But a large portion of the special grant which was made was for the purpose of meeting donations and allowances to men on their discharge from the service when a large reduction of the Army took place, when 30 or 40 regiments were broken up; that money was partly given for the purpose of donations, was it not, as well as to meet arrears coming in?—Yes.

3237. And in 1861–62 we effected the adjustment of the whole arrears of the Mutiny charges?—Yes, it was so.

3238. After that you do not remember any arrears?—I think there were some that fell into the accounts in 1862.

3239. But they were very trifling, were they not?—Yes.

3240. (To Colonel *Johnson.*) You made a remark, did you not, with reference to a question that you were asked as to the large increase of the numbers drawing the colonels' allowances on the staff corps?—I do not think that I made any observation on that point. I said that General Hanyngton was preparing a statement that would bring the information out more fully.

3241. Will you kindly explain how the colonels succeed to colonels' allowances in the staff corps?—After 12 years' substantive rank as lieutenant colonels, provided they have performed 38 years of service.

3242. Was it a part of the original staff corps formation; did the original Staff Corps Warrant provide for the large augmentation which has recently taken place of staff corps officers succeeding to the prize of the service, 1,124 *l.* a year?—No.

3243. When was that advantage extended to the staff corps?—In 1862.

3244. Perhaps you will look into that question?—I will. I have carefully avoided the question of colonels' allowances in preparing for this Committee, as it is a subject that has been very much discussed between the India Office and the Military Department in India, and I understood that General Hanyngton was to prepare a statement for this Committee which should lay down the general principle.

3245. (To Mr. *Kellner.*) You mentioned that a very considerable increased expense was incurred in 1862–63, by reason of the staff salaries being re-organised?—Yes; it was in consequence of the Report of the Committee in that year, to the best of my recollection; but the full effect of it was not experienced till 1863-64, or 1864-65. There was a general increase of staff salaries, departmental as well as regimental.

3246. Were not the staff salaries organised by a sub-committee, of which Sir Richard Birch and I were members?—Yes.

3247. Would you look over the papers and tell us on another occasion what were the subsequent changes from our recommendations?—Yes.

3248. And let us know the effect of those changes in regard to the increased expense?—Yes.

3249. You mentioned that considerable reductions had taken place in Grant No. 1?—Yes.

3250. Particularly in the divisional expenses, the expenses of divisional command?—There has been considerable reduction in the divisional and brigade commands in recent years.

3251. Do you consider that in regard to the total expenditure incurred on account of divisional and brigade command, a very great reduction has taken place in the total of these two commands?—Yes.

3252. Have you the means of telling us the result of the two combined?—I think that Colonel Johnson has that information in detail.

3253. (To Colonel *Johnson.*) Will you state that?—In 1857 there were 17 divisional commands; in 1871 there were 12. In 1857 there were 41 brigade commands; in 1871 there were 22. Five divisional and 19 brigade commands have thus been abolished since 1857. Of these, one division has fallen in the Bengal Presidency, leaving it with six; three in Madras, and one in Bombay, leaving them with three each. Of brigade commands, seven have been reduced in Bengal, leaving that Army with ten; seven in Madras, leaving six; and five in Bombay, leaving six. This gives for Bengal one divisional commander to about 14,600 men.

3254. Are you reading from General Norman's memorandum?—I had it extracted from it.

3255. Could you give us the expense?—No; I could find it out, of course. (Mr. *Kellner.*) It will be included in the Statement that I am about to prepare.

3256. (To Colonel *Johnson.*) Are you aware that you will find in the Blue Book, No. 467 of 1871, a similar statement to that which you are giving?—I was not aware of that; in that case I will not continue it further.

3257. (To Mr. *Kellner.*) You also mention, did you not, as a reason for the difference in the Returns, that troops on the passage to and from India were included?—It was surmised by one of the members of the Committee that possibly that may have been one cause of the discrepant returns of strength.

Col. *A. B. Johnson* and Mr *G. W. Kellner*.

2 May 1873.

3258. But you do not pledge yourself to that?—No, I am not quite sure. I have not been able to trace the causes of these discrepancies in returns of the Army strength.

3259. And you are not prepared to say that one cause is that the troops to and from India are included or excluded; you do not know?—I am sure that troops to and from England would not be included, but troops *in transitu* to and from the place of embarkation may possibly be included in some cases and excluded in others.

3260. But the Returns would be also rendered inaccurate by the troops arriving in the ports of India before the regiments were able to bring them on?—Yes.

3261. So that the inaccuracy would be merely the difference between the numbers going away and the numbers coming out?—Yes.

3262. And inasmuch as the numbers coming out are greater than those going away, the inaccuracy would rather be to understate the number in India, would it not?—Yes, perhaps so.

3263. Perhaps you will look into that one element of inaccuracy?—Yes.

Tuesday, 6th May 1873.

MEMBERS PRESENT:

Mr. Ayrton.
Sir George Balfour.
Sir Thomas Bazley.
Mr. Beach.
Mr. Birley.
Mr. Bourke.
Mr. Candlish.
Mr. Cross.
Mr. Dickinson.
Mr. Grant Duff.
Mr. Eastwick.
Mr. Fawcett.
Lord E. Fitzmaurice.
Mr. Robert Fowler.
Mr. Hermon.
Mr. Lyttelton.
Mr. M'Clure.
Mr. John B. Smith.
Sir David Wedderburn.

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

Colonel ALLEN BAYARD JOHNSON, and Mr. GEORGE WELSH KELLNER, re-called; and further Examined.

3264. *Chairman* (to Mr. *Kellner*).] HAVE you now been able to obtain a statement of the strength of the army in 1856-7, and the subsequent years?—Yes, I had prepared statements, as I mentioned at the last meeting of the Committee; but looking at the discrepancies between those statements and others prepared in India, and in this country, I felt some hesitation in putting them before the Committee. I have now made a summary of them, and I would observe that the statements themselves have been prepared in such full detail that they contain a statement of the strength of the army, European and Native, in India, for every month in every year, from 1862 to 1872, and the causes of every variation, from month to month, have been stated in marginal notes.

3265. Can you give us a summary of that for the different years?—Yes.

3266. Can you give it for 1856-7?—Yes. I may mention that my statements throughout, merely give the strength of the non-commissioned officers, rank and file, not including the officers. In 1856-7, the strength of the Royal Regiments of Dragoons was 2,571, and infantry, 20,884, making a total of 23,455 Queen's troops. The number of Company's European troops, of all arms, was 15,512.

3267. Sir *G. Balfour.*] Will you divide that into infantry and artillery?—I have it divided; 110 sappers, 2,029 horse artillery, 4,390 foot artillery, and 37 European non-commissioned officers, with the native foot artillery; 60 non-commissioned officers, with the native regular cavalry, 8,103 in the European infantry, 259, with the regular native infantry, 59, with the irregulars, and 465 veterans.

3268. *Chairman.*] Will you give us the whole number of natives at the same time?—The number of natives was 231,139.

3269. Sir *G. Balfour.*] Can you divide that?—Yes. Sappers, 3,043; horse artillery, 1,108; foot artillery (European foot artillery), 3,147; native foot artillery, 4,708; native cavalry, regular, 9,532; native, irregular, 20,941; native infantry, regular, 149,832; irregular, 35,215; veterans, 3,613; making a total of 231,139.

3270. *Chairman.*] Can you give the number of officers serving in India in that year in the Queen's service?—Eight hundred and eight; and in the Company's service, 4,548; and there were 814 medical officers, giving a total of 5,362 officers.

3271. Do you suppose that that includes the whole of the different irregular forces under the Government of India and the separate Governments?—Yes, excepting the Hyderabad Contingent.

3272. Sir *G. Balfour.*] But that does not include the number of officers on the staff?—No.

3273. Your numbers are taken from the Parliamentary Paper, No. 361, presented to the House of Commons in 1860?—Yes.

3274. Then that Paper must have been compiled in the India Office?—I think so, from returns received from India; it is signed by the Secretary of the Military Department in the India Office.

3275. *Chairman.*] When you say that it does not include the officers on the staff, would not the officers on the staff be returned in connection with the regiments to which they belonged in that return, excepting the small number of Queen's officers on the staff at that time who were not regimental officers in India?—No, I think not; I think the staff officers are not included.

3276. Do you mean the staff officers in the Company's service?—The departmental staff officers, I fancy, are not included there.

3277. Sir *G. Balfour.*] Did your expenditure which you gave us for 1856-7, and which you stated to amount to 13,257,300 *l.*, cover the force that you now give?—The expenditure in 1856-7 was in England 1,765,415 *l.*, and in India 11,462,464 *l.*, making a total of 13,227,879 *l.* In

Col. *A. B. Johnson*, and Mr. *G. W. Kellner*.

6 May 1873.

regard to the expenditure for 1856-7, I may mention that these figures do not completely represent the expenditure of that year. A very large portion of the military expenditure dropped out altogether of the accounts.

3278. *Chairman.*] You mean it was treated as civil expenditure and charged to other services?—Yes.

3279. Sir *G. Balfour.*] Was the Hyderabad Contingent included in that, do you think?—I do not think so. But then there were a number of other charges, transport charges for instance, the beer of the army, and other things, which were charged to the Marine Department in those days. Many charges which now appear as military expenditure, were in previous years charged to civil and marine services; but irrespective of that, the destruction of pay offices and other executive disbursing offices in the Military Department, and the utter destruction of accounts and records, caused a very considerable amount of military expenditure to drop out of the accounts of that year.

3280. But we have on record the exact sum that was lost by the mutiny, have we not?—I do not remember. I do not think there is any complete record of these things. It was an absolute destruction of one or two military pay offices, and executive commissariat offices also.

3281. Will you kindly look at that Return (*handing to the Witness Parliamentary Return No.* 486, *of* 1858), and look at the item on account of the destruction of the pay offices?—It is stated here as being 86,874 *l.*

3282. (To Colonel *Johnson.*) On the last occasion you gave evidence with regard to the military expenditure in India. I think you were at Calcutta in 1861, were you not?—At the close of 1861.

3283. Then you were not there when the army was re-organised in 1861?—I was there when the new line regiments were in course of formation.

3284. But not when the re-organisation of the army took place and the publication of orders re-organising the army?—No.

3285. You gave the strength of the army in your last evidence very far below the numbers which the Governor General of India announced as the numbers in 1861. In the General Order of the 30th of May 1861, and in the Government letter of the 8th of June 1861, No. 100, the strength of the European army in April 1857, was stated as follows: European cavalry, 2,826; European artillery, 6,404; European sappers, 163; European infantry, 32,786; total, 42,179. The Native cavalry was, 35,400; the Native artillery, 12,891; the Native sappers, 3,122; and the Native infantry, 217,000; making a total of 268,413, and a grand total, European and Native, of 310,592. You will observe that that number is far in excess of that which you stated?—I took as my guide the Return which was furnished by the Commissioners in 1859.

3286. You are aware that it is important to bear in mind the strength, because Mr. Kellner's statement of the expenditure bears upon the actual expense incurred for military and civil corps. I will hand you the General Order of the Governor of India, and you will observe that by that very carefully prepared Return, which I can vouch for, the strength in April 1857 was far in excess of the numbers that you or Mr. Kellner have given?—That is to say, they are in excess of the numbers prepared by the India Office.

3287. *Chairman* (to Mr. *Kellner.*] What is your total of non-commissioned officers and men, to compare with what has just been read?—It would be 39,352, including 385 warrant officers.

3288. And what is the grand total?—Two hundred and seventy-one thousand, five hundred and seventy-six, Europeans and Natives, including medical subordinates and native doctors.

3289. Sir *G. Balfour* (to Colonel *Johnson*).] That Return, which was prepared, to my knowledge, with the utmost degree of care, by the Government of India, was made on purpose to compare, as it does, the strength of the army, as maintained in April 1857, and the strength, as re-organised, in 1861. Now, will you kindly state to the Committee what you see in that Order of the Government of India as the strength of the re-organised army in April 1861?—The strength of the army of India, as proposed, is shown in this Return, Table 6, as being 209,946.

3290. Will you separate them?—Europeans, 73,577.

3291. Divided into what?—Artillery, sappers, cavalry, and infantry. Artillery, 12,695; sappers, 250; cavalry, 5,000; and infantry, 55,632; excluding officers; total, 73,577. Then, Native (all ranks) artillery, 983; sappers, 2,200; cavalry, 22,114; and infantry, 111,072; making a total of 136,369, and a grand total of 209,946.

3292. *Chairman* (to Mr. *Kellner*).] Can you state the strength of the army in that year, 1861-62?—I have the strength from the 1st of May 1862 to the 1st of April 1872.

3293. Is this exclusive of officers?—This is exclusive of officers in every case. As I mentioned before, these are compiled from the returns of the Quartermaster General of the Army for the three Presidencies, and they are divided under artillery, cavalry, infantry, and sappers. Of Europeans, the total number on the 1st of May 1862 of effectives, as I was able to make them out from the Quartermaster General's Returns, was 70,370.

3294. Sir *G. Balfour.*] Will you detail them according to the arms of service?—Artillery, 11,018; cavalry, 6,387; infantry, 52,630; and sappers, 335. Then the Native troops, under the Commander in Chief, of all arms, amounted to 101,851.

3295. *Chairman.*] When you say under the Commander in Chief, that excludes the irregulars?—That excludes the Native troops not under the Commander in Chief, that is to say, under the local governments.

3296. Sir *G. Balfour.*] Could you give the strength of these Native troops not under the Commander-in-Chief?—Forty-one thousand three hundred and one.

3297. And the total of the Native troops?—One hundred and forty-three thousand one hundred and fifty-two.

3298. You have given the effective strength on the 1st of May 1862?—Yes.

3299. Will you glance your eye at the Army Estimates for that year, which show the established strength for that year (*handing the Army Estimates to the Witness*)?—Her Majesty's British forces in the East Indies are shown here as 75,899.

3300. Will you divide those into arms?—Royal horse artillery, 3,000; cavalry of the line, 7,062; Royal artillery, 11,000; and infantry, 54,837; total, 75,899.

3301. These

3301. These numbers include officers, I think, do they not?—They include officers.

3302. Do you think that you could give us the number of officers effective in May 1862, so as to compare your numbers with the establishment?—I have not them in these returns; but I have no doubt that I have a note of the strength from the budgets of the year. But it would be quite possible to compare my figures with those given here for the non-commissioned officers, rank and file, excluding the commissioned officers.

3303. Will you kindly do that?—That would bring my figures to about 2,000 more than the figures given here for that date.

3304. Then the effectives would be about the same as the establishment, would it?—It would be 2,000 below the establishment.

3305. Could you give us a comparison of the strength now to correspond with this statement?—Yes. I have made it out from the 1st of May 1862 to the 1st of May 1872, and I have also taken the average for each year, that is from May 1862 to April 1863, and so on; but I thought that it would be convenient to the Committee to give the strength on a given date, on the 1st of May in each year, from 1862 to 1872; and if you will allow me, I will read the figures out.

3306. *Chairman.*] Will you be good enough to do so?—On the 1st of May 1862, the strength of the army was 70,370 Europeans, and 143,152 Natives. On the 1st of May 1863, the number of Europeans was 68,428, and Natives, 127,962. On the 1st May 1864, there were 67,446 Europeans, and 128,356 Natives. On the 1st May 1865, there were 62,865 Europeans, and 124,278 Natives. On the 1st of May 1866, there were 59,453 Europeans, and 124,789 Natives. On the 1st May 1867, there were 57,910 Europeans, and 115,875 Natives. On the 1st May 1868, there were 56,825 Europeans, and 116,706 Natives. On the 1st May 1869, there were 58,666 Europeans, and 117,371 Natives. On the 1st April 1870, there were 56,078 Europeans, and 116,188 Natives. On the 1st April 1871, there were 57,995 Europeans, and 115,048 Natives. On the 1st April 1872, there were 60,987 Europeans, and 115,355 Natives. That is the effective strength as taken by me from the Quartermaster General's returns.

3307. Have you got the establishment?—I could get the establishment in juxta-position.

3308. Sir *G. Balfour.*] Then to compare the establishment of 1862-3 and 1871-2, in the financial exposition of the expenditure of the army, I see that in 1870-71, General Norman gave the established strength of the army as follows: 6,545 British officers, 60,425 European non-commissioned officers and soldiers, and 122,122 Native soldiers?—Yes,

3309. In the year 1871-2, he stated the strength to be 6,436 officers, 60,445 European soldiers, and 121,981 Native soldiers?—Yes.

3310. Could you give us the corresponding strength for every year down to 1872-3?—Yes, from 1865-6 to 1872-3.

3311. Mr. *Fawcett.*] What you mean by the establishment is the actual number of soldiers that India is paying for, is it not?—No. India is paying for the number of soldiers actually in India.

3312. But she is paying partly for those in England?—Yes, in the depôts; that is under another arrangement.

3313. Then I understand that the difference between the effective strength and the establishment strength is this, that the effective strength is the number of soldiers which India is paying for who are actually in India; whereas the establishment strength is the number of soldiers which she is paying for who are in India, *plus* those whom she is paying for who are in England?—No; the difference would be this: suppose that a regiment should have 800 privates, as the established complement or strength; through casualties the actual number of effective soldiers in India is 700; the difference between the established and the effective strength would be 100; and India would pay only for the number actually present in India; that is, it would feed, clothe, house and equip only the 700 soldiers actually in India. There would be a further charge in the Home Accounts, against the revenues of India, either in the form of a capitation rate, or of actual expenses, for providing recruits from this country, and for non-effective services on account of invalids returned from India.

3314. When you say the established strength, you mean those actually present in India, whether fit for duty or not?—The established strength is the complete establishment of each battery or regiment in all its grades.

3315. Under what expression would you describe the strength of the army that India is actually paying for; because it has been given in evidence here, that a certain portion of the soldiers which nominally constitutes a proportion of the effective strength of the Indian army, are soldiers who are in England, and who are being paid for wholly, or in part, by India?—That, no doubt, is so, but it is a part of the arrangement between Her Majesty's Government and the Secretary of State for India. In reference to what was formerly the capitation rate, it was arranged that there should be 10 *l.* paid per head all round for all the British soldiers actually in India. Besides paying the troops, clothing, feeding, and equipping them, and paying all their expenses from the date of their leaving this country until their return, there was an arrangement between Her Majesty's Government and the Indian Government, that India should pay 10 *l.* for every European soldier in India for effective services, and another 3 *l.* 10 *s.* for non-effective services.

3316. Mr. *Eastwick.*] The total cost to India for soldiers will be represented by the effective strength in India, the troops on the sea coming to join, and the recruits?—Yes.

3317. Sir *G. Balfour.*] If I hand you in the Army Estimates for 1863-4, you will perhaps be able to show the Committee clearly the result, by combining the strength in depôt and the strength in India in service, and to explain, therefore, clearly the distinction between the depôts and the Indian force?—This shows depôts in the United Kingdom of regiments in India, 458 officers, 1,019 non-commissioned officers, and 7,812 rank and file; making a total of 9,349.

3318. Mr. *Fawcett.*] Then it comes to this, that 9,000 officers, non-commissioned officers, and men, which represents something like 15 per cent. of the whole strength of the European army in India, are soldiers who are in England, and to a very great extent being paid for by India?—Yes, but the payments to the Home Government, at the capitation rates, covered all expenses of the depôts chargeable to India, whatever the strength of the depôts.

3319. Then, in addition to that, none of those figures which you have mentioned shows under

Col. *A. B. Johnson*, and Mr. *G. W. Kellner*.

6 May 1873.

any category the number of officers who are being supported out of the revenues of India, who are in England doing nothing?—I shall, perhaps, better be able to put the information required by you in a separate Paper distinctly, for a future meeting.

3320. Sir *G. Balfour.*] In addition to the numbers which you have read off just now as being at home in the depôts, the numbers wanting to complete the establishment in India are mainly also in the depôts, because they are recruited at home as soon as ever we hear of casualties?—Yes.

3321. Therefore the number which you have now read off as establishment in depôts does not represent in reality the numbers that may be in depôts?—No, it may not.

3322. At one time we had in depôt, if you remember, at home between 20,000 and 25,000 men belonging to India?—Yes, I think so.

3323. Mr. *Fawcett.*] In what year was that?—In 1861.

3324. Sir *G. Balfour.*] You will be able to give us the established strength year by year from 1862-3 onwards?—Yes.

3325. (To Colonel *Johnson.*) In regard to the number of 44,522 of Europeans given by you for 1856-7, are you aware whether that includes officers?—Yes, it does include the officers.

3326. Does it include the warrant officers?—It includes the warrant officers.

3327. (To Mr. *Kellner.*) Does yours include the warrant officers?—Yes, among the Europeans.

3328. And does yours include the medical establishments?—No, only the subordinate medical establishment and native doctors, not the medical officers.

3329. (To Colonel *Johnson.*) But your number includes the medical officers in India, does it not?—It includes the European officers, the apothecaries, and stewards.

3330. Then, in drawing a comparison between the strength of different dates, will you take care and compare the exact ranks with each other, so as to have uniformity of comparison?—Yes, so far as I can.

3331. (To Mr. *Kellner.*) On the last occasion when you gave evidence, you said that you would look over your total expenditure in India and England for a series of years, to see where the difference between your figures and the Finance Accounts was?—Yes.

3332. I now hand you a statement (*handing it to the Witness*), and will you be good enough to tell us which amounts you wish to adopt?—I may mention that my figures agreed in the main with the Finance and Revenue Accounts, except that I transposed the charges for stores in the earlier years from the English into the Indian accounts, to admit of easy comparison as to the cost of stores, which is a very large and considerable item in the expenditure of India.

3333. But in order to get that comparison of stores we put the English and Indian expenditure together, so that there is no question as to how the stores are charged?—Yes; I have recast the statements, and these now strictly correspond with the Finance and Revenue Accounts laid before Parliament. I may mention that in preparing these statements, I have re-transferred the charges for stores; working up to the general statement, I have prepared subsidiary statements of the details of the charges in England on account of the army in India, and of the charges in India. In the first years of the series, that is up to the year 1866-7, the charges for stores occurred in the Indian Accounts, but subsequently, were exhibited in the Home Accounts, and do not appear in the Indian Accounts at all. I thought that it would be convenient for the comparison to place the whole of the charges for stores in the Home Accounts. That necessarily caused a discrepancy between the Accounts laid before Parliament, and the Return which I submitted; and there were other little variations; but they were very trifling. I have now prepared a statement in accordance with the Finance and Revenue Accounts, and they will be found to agree strictly. I beg to put in these statements.

3334. Which of these three sets of figures do you adopt?—The finance and revenue accounts figures.

3335. In comparing the expenditure at different dates, you have mentioned various increases which have taken place, which have caused a considerable augmentation of the military charges?—Yes.

3336. But there are some charges also which have ceased to be borne by the Military Department since 1862-3?—Yes.

3337. Will you state what these charges are?—There are a very great number of charges which have ceased to be borne in the Military Department, and a very large number that have been brought on the Military Accounts; but the details of those, perhaps, could be more conveniently given under each Grant, instead of stating them in the gross, because the enumeration would be a very extensive one. There is the Hyderabad Contingent, for instance; that was a considerable charge, which has gone off the Military accounts altogether.

3338. And the Topographical Department?—Yes. All these changes affect more than one Grant; they would affect the pay of the army, the staff, and the commissariat charges, and in fact almost every Grant; and perhaps the effect had better be seen in discussing the expenditure under each Grant.

3339. *Chairman.*] Now will you go to Grant No. 2, the Administrative Staff. To what part of the administration of the army does that belong?—The administrative staff consists of the charges for the personal staff of the Viceroy, the Governors of the minor Presidencies, and the Lieutenant Governors of Provinces, besides the cost of the bands, which were lately transferred.

3340. What were the charges for that Grant in 1856-7?—The charges in 1856-7, amounted to 146,708 *l.* (I may mention also, that the charges for the Military Account Department form a very large portion of this Grant). In 1869-70, the charges amounted to 198,952 *l.*; in 1870-1, they amounted to 195,794 *l.*, and in 1871-2, they amounted to 198,634 *l.*

3341. How has this Grant worked up from 146,000 *l.*?—Chiefly by transfer from other Grants. For instance, in 1856-7, the Military Account Department of the Army was in the Financial Department and charged to the Civil Department; that was subsequently transferred to the Military Department, and occurs in this Grant.

3342. In what year was that?—In the year 1861, I think. Then the examination of these accounts was formerly charged to the Department concerned, that is, the Ordnance or the Commissariat, as it might be. There were separate examiners, and a separate staff of officials appointed

pointed in 1861; in fact, the Military Account Department was then organised as a separate and distinct establishment, and all the charges are included under this Grant.

3343. Do you know whether the number of officers in the Department under this Grant has increased or decreased since 1856-7?—They have decreased.

3344. What were they then?—The decrease is chiefly in the number of pay and pension paymasters. There were 35 pay and pension paymasters and deputies in 1856-7, and we have only 14 in 1871-2.

3345. Then, having reduced the establishment, the expenditure has increased?—Yes.

3346. On what account?—The organization of new departments for the examination of accounts; it was found necessary to provide for an efficient and careful examination of the army accounts, and to improve the pay and prospects of the subordinate agencies.

3347. Have you increased then the number of examiners?—Yes; then, too, there is the cost of the military and medical fund establishments; these were distinct family funds for providing annuities on retirement, and pensions to the widows and orphans of officers in the military and medical services, and were formerly managed and paid out of the resources of the funds; the Government took them over the other day, with the executive establishments, and the charges have been added to this particular Grant.

3348. Can you give the financial result of these changes, so as to make it clear how far they have increased or diminished the Grant?—Yes; the first charge, for instance, for the personal staff of the Viceroy and the Governors and Lieutenant Governors is 15,000 *l.* a year at present, against 6,000 *l.* in 1856-7.

3349. To what is that to be attributed?—The addition of charges not previously included under this Grant, viz., the military pay of the staff officers, the total expenses of the personal staff of two Lieutenant Governors, besides the transfer of the bands of the Viceroy and the Governors of Bombay and Madras.

3350. What is the character of that increase; is it made by the transfer of the charge for the bands, which were formerly paid out of some other fund?—I think so, from some other account.

3351. Mr. *Fawcett.*] The bands are not included in that 15,000 *l.*, are they?—Yes, they are included, I believe.

3352. Does that give the details there, and show what the cost is. Can you give the details in 1856-7, to show that they were not included then?—Yes. And I may mention that in 1856-7, the military pay of all the officers of the personal staff was charged to the Regimental Grant, and now they are charged to this Grant; that is one chief element of increase.

3353. *Chairman.*] Now, in the stated expenditure in 1861-2, was there not some omission of the staff charges at Bombay?—Yes, they were exhibited under the army and garrison staff in that year. Then in 1862-3, the pay offices at Mhow and Belgaum, and the pension pay office at Barrackpore were abolished. It was in that year that the military pay and allowances of the officers of the Account Department were transferred to this Grant from Grant 3.

3354. What does that make the charge amount to for 1862-3?—£. 190,391. In 1863-4, it amounted to 202,827 *l.*; that increase was owing to the promotion in the staff corps of the officers of the Military Account Department, and of other officers whose pay was charged to this Grant, and also to the appointment of probationary officers in the Military Account Department.

3355. Was any saving effected after that by the reorganization of the Finance Department?—Yes, in 1864-5 the expenditure was reduced to 191,361 *l.* The Military Finance Department was reorganised, the Marine Establishment of the Military Accountant's Office was transferred to the Civil Department, and there was a reduction of certain extra office establishments. There was a decrease in Madras resulting from the abolition of two circle and two deputy paymasters, with their establishments.

3356. Did the charges increase in 1865-6?—Yes, the charges continued to increase year by year, owing chiefly to the promotion of the officers to higher military rank; then it became necessary also to increase the pay of the subordinate agencies for the examination of the military accounts; and in Bombay it was found necessary to increase the pay largely, in the form of compensation for dearness of provisions. It was given in the first instance as compensation for dearness of provisions, during a season of scarcity, and it resulted in a permanent increase of pay, at least my impression is that what was given as a temporary grant for a special exigency was continued afterwards as a permanent increase of pay.

3357. Has that counteracted, to some extent, the decrease of expense by the reduction of the establishment?—Yes; the Pension Pay Office at Surat, and the office of Compilers of Military Pay Accounts were abolished in that year.

3358. Were there any further reductions effected after that in 1866-7 and 1867-8?—Yes, there was a pay office in the Madras Presidency abolished in 1866-7, and the treasure chest at Kolapore.

3359. In 1868-9, was it further increased again?—Yes. The Military Fund Offices in the three Presidencies were transferred to the military accounts.

3360. What was the effect of that?—The effect was an addition of 6,000 *l.* or 7,000 *l.* per annum to the Grant.

3361. Then was it reduced back again in 1869-70?—Yes. Two circle and three pension pay offices in Bengal, and one circle pay office in the Bombay Presidency were abolished.

3362. Was this extra grain allowance considered again, and reduced, or has it been reduced?—My impression is, that it has not been reduced, but that what was then granted under a temporary pressure has continued more or less throughout the Bombay Presidency. The matter has been frequently brought to the notice of the Local Government, who have invariably represented that the increased cost of living required a continuance of the rates that were granted in 1865-6. The grain allowance, I may mention, was discontinued as a grain allowance; but this was in most cases followed by a general revision of establishments on rates of pay which really included the grain allowance, with possibly here and there some reductions in the number of the establishments; but the cost of these establishments has been maintained pretty much at the standard at which it stood when the grain compensation was first allowed.

3363. Then the expenditure was again brought

Col. *A. B. Johnson*, and Mr. *G. W. Kellner*.

6 May 1873.

down in 1870-1 to 195,000 *l.*, you have told us?—Yes.

3364. Was it increased again by the allowance to the bands?—Yes.

3365. But that was a mere transfer?—Yes, it was a mere transfer.

3366. Then the effect of all these changes is, that you have a less force under this head?—Yes, that is, compared with 1861-2, we have a less number of officers; we have 23 less in 1871-2 than in 1861-2; but the effect of these reductions was neutralised by the transfer to this Grant of the pay and allowances of the personal staff, and departmental officers, the cost of the Military and Medical Fund offices, the bands of the Viceroy and Governors of the Presidencies of Madras and Bombay, and the formal addition of official postage. Then the reorganisation of the ministerial establishments, which took place throughout the Military Account Offices, was also attended with expense.

3367. But the result is that the general scale of allowances would seem to have increased?—Yes, on the whole, by the effect of the transfer to the new Grant, chiefly of the military pay of the officers, also the increase to the pay of the establishments, which was rendered absolutely necessary by the necessity for a strict and intelligent examination of the accounts of the various branches of the Military Department.

3368. Is the great increase since 1856 that is shown, chiefly due to the fact that the account for Bombay was not included?—The account for Bombay was omitted altogether from the account.

3369. Mr. *Fawcett.*] You say that the bands have been transferred; what is the cost of the bands now?—£. 1,680 a year is the charge for the Viceroy's band in this account.

3370. And what is the cost of the bands of the Governors of Bombay and Madras?—£. 285 for Madras and 647 *l.* for Bombay are charged to this Grant.

3371. Then this is an illustration of the fact that everything in Bombay is much more extravagant; it costs about 2½ times as much as in Madras. Why does the Governor of Bombay want a band which costs 2½ times as much as that of the Governor of Madras; is it purely an act of extravagance?—Well, it is difficult to answer that question.

3372. You do not see any justification for it?—There is no apparent justification for it; but it was no doubt duly sanctioned.

3373. It has been sanctioned by the Government of India and by the Secretary of State?—Yes.

3374. You cannot give any explanation of how it is that the Government of India and the Secretary of State (I take this instance simply as an example) allow Bombay habitually in every single thing to be more extravagant than the Government of Madras?—No; I am afraid I cannot give any explanation.

3375. Can you give me those items (they may appear small items, but I examine you upon them because I think they are typical of a good deal of what has taken place in India) of the cost of the band in 1856-7?—I am sorry I have not got them here, but I shall be glad to furnish them.

3376. They have increased since that, have they not?—No doubt.

3377. (To Colonel *Johnson.*) It is not more necessary for the Governor General now to have a very expensive band, which costs 1,600 *l.*, than it was 16 years ago, is it. What occasion is there for everything, all luxuries of this kind, to be carried on on a much more expensive scale?—The Governor General's band are soldiers, and the pay of soldiers has risen throughout the country.

3378. But are you quite certain that that is the simple explanation of it?—It is one; it is a portion of the explanation.

3379. But is it not now a larger and more costly band?—I do not think so, but I cannot speak with any degree of certainty.

3380. Then how is it that the Lieutenant Governor of the Punjaub and the Lieutenant Governor of the North Western Provinces preside over districts at least as important and more populous, than the Governor of Bombay, and have no band?—That I cannot say.

3381. Then it is not essential, is it, to the dignity of a ruler over a great Province in India to have this kind of semi-state which is allowed to the Governors of Madras and Bombay?—Perhaps not absolutely essential, but the withdrawal of it from any dignitary to whom it has already been given might have a questionable effect.

3382. But if not withdrawn, why is it permitted to increase?—That I cannot say. I am not aware that it is.

3383. (To Mr. *Kellner.*) Now, making allowance for all this transfer of charges, what do you estimate the increase arising from, as you say, the increased cost of the bands and other things; after making due allowance for the transfer, for the nominal and unreal increase and decrease, will you please give me an estimate of the increase of this item of military charge between 1856-7 and 1871-2?—It would involve a difficult calculation. I shall be glad to prepare it against the next meeting of the Committee. There are so many elements of increase and decrease, that one would have to be set against the other. The chief element of increase is in the higher rank of the officers, whose military pay is charged to the Grant, and that is a most difficult thing to estimate. There are changes from year to year of increase, as well as of decrease, and to follow them through, and to show the financial effect of every change, would involve a very intricate and tedious calculation.

3384. But then I submit to you, as an experienced financier, that unless we can follow it out there is no use in it. What I want to know is this: has there been, or has there not been, an increase, and to what is that increase due. Now I cannot, from your own evidence, discover what is the amount of the increase, and I cannot discover to what that increase is due. All that I do discover is that a portion of the increase is due undoubtedly not to a real increase, but simply to a transfer of charge?—Yes, I can give you the details, as I promised for the other Grant, by the next meeting of the Committee. It would be, perhaps, sufficient if I gave a list of all the staff appointments, and all the officers whose pay is charged to this Grant, now and in 1856-7. That would enable the Committee to see whether there were any absolute increases of staff pay, or whether the increase of charge was not very much due to the indirect effect of the staff corps promotions, to the measures deemed necessary for the efficient examination of the public accounts, and to the formal transfer to this Grant of

of expenditure that had previously been exhibited elsewhere.

3385. I want to save you as much trouble as possible, and to exhibit it before the public as clearly as possible; I do not want to overwhelm you with details, or to let the truth be concealed in details; therefore I should perfectly trust your summary. If long Tables are given in, of course it is very difficult to arrive at the result, and perhaps 12 months after they are given in we cannot arrive at that in a short way?—Just so.

3386. Mr. *Eastwick.*] As regards these officers, whether they were in that department or in any other, their pay would increase by promotion, would it not?—Yes.

3387. Therefore I think that element ought to be left out entirely, ought it not?—No, because you are comparing the charges under this Grant with those in 1856-7, when their military pay was not charged to the Grant.

3388. What Mr. Fawcett wants to know is this; take the band, it cost so much in 1856, and it cost so much more in 1872, because there were so many persons added to it or the pay was increased; there you get at something definite?—Yes.

3389. Just the same in the pay department; there were so many officers in the pay department and their pay was so much, and the number of officers was diminished or increased in 1872. There you get at something definite again?—Yes.

3390. Would not the plan be to leave out all the elements which are not essential to this particular question, and to take only those which represent a positive increase?—Yes, I have endeavoured to illustrate the increase by showing the numbers of appointments at each period, but that I see is not considered by the Committee to be sufficient. But I will endeavour to add the cost in each case, as in the appointments under Grant 1, against the next meeting of the Committee.

3391. Mr. *Fawcett.*] If you have time, would you look through the other items, because I would put to you, or some other honourable Member would put to you, questions on them; and will, as far as you can do it, with regard to the other items also?—Yes.

3392. Sir *D. Wedderburn.*] In this item of 15,000 *l.* for the staff of the Viceroy and of the other Governors, is there any charge included for the body guard?—No; that would be under the regimental grant.

3393. Then the officers whose pay is included under this charge are the aides de camp and military secretary?—Yes.

3394. Mr. *Beach.*] In the actual additional pay it must be easy to trace the increase; but in some of the relative charges, I presume, you would have to make allowances for the diminished purchasing power of money, would you not, which would add to the expenses?—Just so: the general rise in the cost of living has necessitated a revision of the subordinate establishments throughout India, and the grant of better rates of pay, especially for the establishments connected with the examination of public accounts.

3395. Mr. *Eastwick.*] Does this charge include also the travelling expenses of the Governor's staff, going up to Simla, and so on?—No; that is a civil charge; it is only the pay that is included here.

3396. I suppose that would be rather a considerable item, would it not?—Yes.

3397. Sir *G. Balfour.*] Grant No. 2 has been changed considerably, and reductions have taken place in it since 1862-3?—Yes.

3398. Have the reductions, do you think, been made uniformly in the Presidencies, or have they been partially made in Madras and Bombay more than in Bengal?—No; I think that they have been made with tolerable uniformity in all three Presidencies. The reductions have been chiefly in the circle and pension pay offices; the Government has reduced the number of military pay offices in Madras and Bombay to one in each Presidency, whilst there are three in Bengal; but considering the larger number of troops in Bengal, and the extent of country over which they are spread, it was found unadvisable to reduce the number still further; I believe it may hereafter, and perhaps shortly, be practicable to reduce the number of pay offices to two.

3399. And will you by next time ascertain the number of officers in Bengal, Madras, and Bombay, and the allowances that they have each received, taking the three years, 1856-57, 1871-72, and 1872-73?—Yes.

3400. Mr. *Eastwick.*] What paymasters are these that are included in this department?—The divisional paymasters of the army, charged with the disbursement of the pay of troops and staff officers and establishments throughout the country.

3401. European and Native?—Yes; the regimental paymasters of British regiments have the immediate payment of their respective regiments.

3402. That is not included here?—The military divisional paymasters are used to a certain extent, to a very small extent, in paying the European troops, as the duty is really in the hands of the regimental paymasters of corps, and the commanding officers of batteries of artillery,

3403. *Chairman.*] Now going to Grant No. 3, for what purpose is that Grant applied?—Grant 3 contains the pay of the army, European and Native, and the pay of the officers attached to regiments. In fact, it embraces every regimental charge; artillery, cavalry, engineers, infantry, invalid, and veteran establishments, staff corps, general lists, cavalry and infantry, unattached officers, unemployed general officers, colonels' allowances in India, besides the pay of the Native army, bounty money, hutting money, marching batta, and other charges of a miscellaneous character.

3404. Will you state what that charge was in 1856-57?—It was 7,022,606 *l.*

3405. And what were the charges during the years from 1869 to 1872?—In 1869-70 it was 6,662,473 *l.*

3406. Sir *G. Balfour.*] Are you sure that we had not, in that 7,022,606 *l.* in 1856-57, the pay of the officers who were employed with the irregular corps of the army, and on the staff of the army?—I believe it does include that.

3407. Therefore, for a comparison with the sum mentioned in 1869-70, you have to diminish it to that extent?—Yes.

3408. And therefore the comparison would be much more favourable to 1856-57?—Yes.

3409. *Chairman.*] Will you read the other figures?—In 1870-71 the amount was 6,527,146 *l.*; in 1871-72 it was 6,503,793 *l.*

3410. You are not able to enter into the details of 1856-57 as to the charges?—No, but I would just mention here that though there has been considerable reduction of the Native army, there has also been an increase of the European army; and what is more remarkable is the increase in the rates of pay of the British and Native troops

Col. *A. B. Johnson* and Mr. *G. W. Kellner.*

6 May 1873.

troops during the interval between 1856-7 and 1871-2. If the Committee will allow me, I will briefly state the prevailing rates of pay at the respective periods. I may mention that these rates express in sterling money the sums actually received by the soldiers in India, converted at the exchange of 2 *s.* the rupee.

3411. We had better compare them for each class, if you can do so?—Yes. In 1856-7, a serjeant of horse artillery received 2 *l.* 17 *s.* 11 *d.* a month; he now receives 4 *l.* 3 *s.* 3 *d.*; a corporal received 2 *l.* 5 *s.* 10½ *d.*; he now gets 3 *l.* 3 *s.* 8 *d.* (I am speaking now of the British troops). A gunner received 1 *l.* 8 *s.* 10 *d.*; he now receives 1 *l.* 17 *s.* 4 *d.*

3412. Mr. *Eastwick.*] Does that represent all the allowances; everything, in fact?—No; the mere pay, simply. We are now upon the Regimental Pay Grant. In the field artillery a serjeant received 2 *l.* 12 *s.* 11 *d.* in 1856-57, and he now receives 3 *l* 2 *s.* 4½ *d.*; a corporal of field artillery got 2 *l.* 3 *s.* 10½ *d.*; he now receives 2 *l.* 18 *s.* 9¼ *d.*; a gunner received in 1856-57 1 *l.* 7 *s.* 6¾ *d.*; he now gets 1 *l.* 12 *s.* 5½ *d.* Then, in the cavalry, a serjeant used to receive 2 *l.* 12 *s.* 4 *d.*; he now gets 3 *l.* 2 *s.* 2¼ *d.*; a corporal used to receive 1 *l.* 17 *s.* 10¼ *d.*, and he receives 2 *l.* 2 *s.* 9 *d.* now; a trooper received 1 *l.* 8 *s.* 4½ *d.*, and he now gets 1 *l.* 13 *s.* 3 *d.* In the infantry, a serjeant received 2 *l.* 4 *s.* 4 *d.* in 1856-57, and he now gets 2 *l.* 14 *s.* 0½ *d.*; a corporal received 1 *l.* 11 *s.* 5½ *d.*; he now receives 1 *l.* 16 *s.* 4 *d.*; a private received, in 1856-57; 1 *l.* 3 *s.* 3 *d.*; he now gets 1 *l.* 8 *s.* 1 *d.*

3413. *Chairman.*] Now, will you give a similar statement with reference to the increased pay of the Native troops?—Yes. In the cavalry, the ressaldar, the senior Native commissioned officer, used to receive 15 *l.* all round a month, and the rates are now divided into three classes of 30 *l.*, 25 *l.*, and 20 *l.* respectively. The ressaldar used to receive 12 *l.* all round; he now receives in three classes, 15 *l.*, 13 *l.* 10 *s.*, and 12 *l.* The jemadar used to get 4 *l.* 10 *s.* in 1856-57; he now receives 8 *l.*, 7 *l.*, and 6 *l.*, according to the class. The duffadar used to get 2 *l.* 16 *s.*; he now gets 3 *l.* 16 *s.* The sowar used to get 2 *l.*, and now gets 2 *l.* 14 *s.*

3414. Now, in the infantry, what are the rates?—The subadar of infantry received 6 *l.* 14 *s.*, and now in three classes he is receiving 10 *l.*, 8 *l.*, and 6 *l.* 14 *s.* The jemadar used to get 2 *l.* 9 *s.*; and he now gets 3 *l.* 10 *s.*, and 3 *l.*, according to the class. Of the havildar and sepoy, the bare pay is unchanged; but they have received increases in good-conduct pay at earlier periods of service than before. The pay was 1 *l.* 8 *s.* for the havildar, and 14 *s.* for the sepoy, and those are the rates at present; but although their pay has not been increased directly, they receive good-conduct pay, ranging from 2 *s.* to 6 *s.* a month, on more favourable conditions than in 1856-57, so that it is an indirect increase of pay, in fact.

3415. Will you explain the difference of the nature of the pay for the European and Native troops?—The Native troops have to find themselves out of their pay. What I read as the pay of the British troops is the pay only. Besides that, they receive their rations, and they are fed, clothed, housed, and equipped at the expense of the State. The Native finds his own food and clothing, and in the cavalry he finds his own horse and part of his equipment.

3416. Mr. *Fawcett.*] Does the sepoy find any article of clothing?—He gets his uniform from the State.

3417. But has he to pay for anything himself?—He pays for certain articles of clothing, white clothing, for example, and he houses himself partly. The Government gives a grant in aid in the shape of hutting money.

3418. *Chairman.*] Has the sepoy received any additional grant in later years in consequence of the rise in the price of provisions?—Yes; but that would be over and above the increase shown here. In this, I confine myself only to the soldiers' pay, the amount of money actually paid to him by the State as the ordinary stipulated pay.

3419. But in a comparison of the rise it would be necessary to go into that also?—Yes.

3420. Although this is nominally a rate sufficient for providing himself with food, yet have not cases occurred where he has received a large increased allowance on account of the increase in the price of provisions?—Yes.

3421. Mr. *Eastwick.*] Are there no deductions made from this sum from the European soldier; nothing for washing, for instance?—No; there used to be, but now the washing of bed sheets, for instance, is done at the expense of the State; but they pay, of course, for the washing of their own linen.

3422. Is there no other deduction?—There is no other deduction; I may mention that the pay of the British soldier is treated differently in India from what it is in this country. A uniform deduction for rations, for instance, is made in calculating the pay of the soldier in India, and he gets the remainder in money, without any further deductions. That remainder is stated here.

3423. Sir *G. Balfour.*] In fact, he is on the same footing as the Secretary of State for War has now placed the British soldier upon?—Practically, much the same.

3424. And that system has been in force from time immemorial in India?—Yes.

3425. *Chairman.*] Does this Grant include the pay of the officers in the army, as well as the privates?—Those who are employed regimentally.

3426. When did the re-organisation of the army in India take place, as to the relative number of officers and men?—The year 1861-62 was the year in which the army was re-organised, or rather the effect of the re-organisation began to be experienced then.

3427. Will you state what the number of officers in the army was in 1856-57, and what is the result of the re-organisation in the number of officers relatively to the number of men regimentally, or otherwise?—Under the organisation of 1856-57, each regiment of native cavalry had one British field officer to 10 captains and subalterns; I am merely speaking as to the relative proportion of the field officers to the junior officers, to show that the preponderance of officers of higher rank in regiments is another cause of the increase of charge.

3428. But one wants to know exactly the number of officers there were to each regiment?—There was one field officer to 10 captains and subalterns in the native cavalry.

3429. Mr. *Eastwick* (to Colonel *Johnson*).] How many captains and how many lieutenants?—There were seven captains and nine lieutenants in the cavalry.

3430. *Chairman.*]

3430. *Chairman* (to Mr. *Kellner*).] What was the arrangement under the re-organization?—Out of seven officers to each regiment of cavalry and infantry there are on the average three field officers, or very nearly one field officer to one of the junior grades.

3431. It would be convenient if you could give us the number of officers that now form the establishment for the cavalry, or that did form the establishment in 1856–57, and that now form the establishment; I am not merely on the question of relative rank, but on the absolute number?—I have got that in a statement that Sir George Balfour wanted on the last occasion. This is the statement which I think embraces your question as well as the statement required by Sir George Balfour. It gives the number and the cost of the officers of the local service and of staff corps in the years 1856–57, 1862–63, 1869–70, and 1872–73. There were 4,513 officers in 1856–57. (Colonel *Johnson*.) In the infantry there were in 1856 a colonel and lieutenant colonel and a major, seven captains, eleven lieutenants, and five ensigns. But on the other hand, in a large number of regiments on an irregular footing there were only three officers.

3432. *Chairman* (to Mr. *Kellner*).] We wanted to get a statement to show what the establishment of officers per regiment might have been in 1856–57, and what it is now. Then of course the question of the relative rank is a second question after that?—Yes.

3433. Will you turn to the Blue Book, No. 467 of 1871, page 176, and can you give from that a statement of the establishment and the pay and allowances of a regiment, beginning with the European cavalry in 1856-57 and in 1869?—Yes. The number of officers in 1856 was 41, and the total strength was 704, and the pay per annum of the officers was 19,715 *l.*, and the pay of the men was 13,114 *l.*

3434. The number of privates being what?—Six hundred and six.

3435. But the non-commissioned officers and privates taken together were 704?—Yes, 704.

3436. Making a grand total of 745?—Yes.

3437. The pay that you have given as the pay of the men is the pay of the whole, 704?—Yes; the total cost per annum would be 32,830 *l.*

3438. What is a similar regiment in 1869?—The number of officers is 321, costing 15,618 *l.*, and the number of privates, including non-commissioned officers, is 460. The number of privates 378, and the grand total with officers 492. The cost of the men was 10,492 *l.*, and the total cost 26,111 *l.*

3439. Can you give also the statement of the command, staff, and horse allowances of the same regiment?—Yes; they amounted in 1856 to 6,453 *l.* Then there are the educational and subordinate medical and hospital establishments. The educational establishment was 173 *l.*, the subordinate medical was 935 *l.*, and the Native followers (1,173 in number) was 5,426 *l.*; the contract allowances amounted to 1,697 *l.*

3440. Mr. *Fawcett*.] Then there were 2½ followers for each soldier?—They would be chiefly grooms, and men to bring the forage.

3441. *Chairman*.] Making the total what?—The total would be 47,697 *l.* Then, in addition, family allowances were 255 *l.*, and good conduct allowances were 660 *l.*; making the total annual charge of one cavalry regiment, 48,612 *l.*

3442. To go to the same charges in 1869; what did they amount to then?—£.4,722, the command, staff, and horse allowances. The Educational Establishment was 188 *l.*; Subordinate Medical Establishment was 801 *l.*; the Native followers (761 in number), cost 3,877 *l.* The contract allowances amount to 1,110 *l.*

3443. Mr. *Eastwick* (to Colonel *Johnson*).] What do you mean by contract allowances?—Contracts with officers commanding corps, batteries, troops, or companies for the repairs or supply of arms and accoutrements, stationary, horse-drill equipments, shoeing, stable or line gear, horse medicines, &c.; also contingent allowances for gun carriages, store carts, and waggons. (Mr. *Kellner*.) This shows a total of 36,956 *l.* Then add the staff pay of instructor of musketry, family allowance, good conduct allowance, prizes for swordsmanship, and additional pay to non-commissioned officers and men during the second term of service, which brings the total charge per annum to 38,596 *l.*

3444. Mr. *Fawcett*.] You diminish the charge to 10,000 *l.*, as compared with 1856, and diminish the strength to how much?—The average cost in 1856 per man was 69 *l.*

3445. Does that include officers?—Yes. In 1869 it is nearly 84 *l.*

3446. Could you also give the average cost for each officer in 1856, and the average cost for each non-commissioned officer and for each private?—Yes, but it would take time.

3447. Could you show how many officers there were to each regiment, and what was the cost of each officer as far as pay went, because it would show whether the regiments were commanded by officers of superior rank as compared with what they were formerly, and what was the cost of each private?—Yes.

3448. Because you brought out in those figures which you have just given, a very considerable increase of cost, and that would be only partly due to the increase of pay owing to the increased cost of living?—Yes. But I may mention that there has been no increase to the pay of the officers; the pay of the officers has remained the same. The pay of the men has increased, and the other charges of the regiment have increased.

3449. But then has the number of officers in proportion to the men increased, or their grade?—The number has decreased from 41 to 32.

3450. But it has not decreased at all in proportion to the men; regiments now are more officered, are they not, than they were in 1856–57, according to your own figures; they are officered by officers of a higher grade?—The officers have decreased by a fifth, and the men by one-third.

3451. What we have now arrived at is, that the number of privates has been reduced by one-third, and the number of officers by one-fifth. Therefore I am correct in saying that the regiments are more officered now than they were in 1856–57?—Quite so. I have just made the calculation; in 1856 we had 41 officers to 704 men.

3452. That is as near as possible one officer to 17 men?—Yes; and we have now 32 officers to 460 men, which gives one officer to 14 men.

3453. Sir *G. Balfour*.] Have we not since 1869 changed the organisation very considerably, by which we have effected a great economy in the cost of cavalry and infantry regiments?—Yes; we have reduced the number of officers and troops, but not the cost of each soldier, I think.

3454. Will you kindly look at the Budget Estimate for 1871–72, by which you will see that the cost of officers has decreased very considerably since 1869, and will you read off the difference

Col. *A. B. Johnson*, and Mr. *G. W. Kellner*.

6 May 1873.

ence of the organization now as against 1869?—We have 28 officers now against 32 in 1869, and the cost is 13,412 *l.* now against 15,618 *l.*

3455. And the men?—We have 455 men; we have scarcely reduced them. You reduced the number of troops, but the complement of each troop was increased at the same time.

3456. Will you give us the cost of those 455 men?—The cost in 1869 was 10,493 *l.* for the number then; it is now 10,224 *l.*

3457. The total cost of the regiment is now how much?—£. 23,647.

3458. For how many officers and men?—Four hundred and eighty-three officers and men.

3459. So that there is 2,500 *l.* and more saved by the organization in the present day?—Yes.

3460. Then you will be able to answer the honourable Member for Brighton's question; the pay of the soldier has been increased, and the organization has also been changed, by which considerable economy has been effected?—Yes, quite so.

3461. (To Colonel *Johnson*.) Will you try by next time to give us a history of the changes in the organization which have taken place in the European cavalry and the European infantry since 1862, going back to the change that took place in 1862, up to date inclusive?—Yes.

3462. *Chairman* (to Mr. *Kellner*).] Will you give us the average cost per man of the cavalry, if you have it?—For 1872, it would be 74 *l.* odd, instead of 83 *l.*, which it was in 1869; that is got by dividing the 33,878 *l.* by the 455 men.

3463. Now will you go on to the next page in that Blue Book, and state the cost of a regiment of European infantry; how many officers were there in 1856?—There were 43 officers to a regiment of a European infantry, costing 18,578 *l.* per annum, and in 1869 the number was 40, costing 16,712 *l.*

3464. Then, in 1872, what was the state of things?—In 1872 there were 33 officers of infantry, costing 14,434 *l.*

3465. And what was the cost on the number of men and privates?—In 1856 the number of men was 1,066.

3466. That is including non-commissioned officers and privates?—That is including non-missioned officers.

3467. And what was the charge?—£. 15,935.

3468. And what was the number in 1869?—The number in 1869 was 859, and the cost was 15,751 *l.*

3469. What is the charge in 1872?—The number in 1872 was 885, and the cost was 16,160 *l.* Then the total number in 1856 was 1,109, and the cost 34,513 *l.* The total number in 1869 was 899, and the cost 32,463 *l.* The total number in 1872 was 918, and the cost was 30,594 *l.*

3470. Then there are the contingent charges of the regiment, and the command, staff, and horse allowances, which brought up the expenditure to how much?—It raises the expenditure in 1856 to 41,076 *l.* as the total expenditure of a regiment, and in 1869 it was 39,471 *l.*; and in 1872 it was 34,521 *l.*

3471. And what does that give per man for the three periods?—In 1856, it was 38 *l.* 10 *s.*; in 1869, it was 46 *l.*; and in 1872, it was about 39 *l.* per annum.

3472. Sir *G. Balfour*.] That is to say, it had fallen very considerably?—It had fallen very considerably.

3473. That is entirely by organisation?—Entirely by organisation.

3474. *Chairman*.] Now, will you give us a view of the Native infantry, which you will find on page 180 of that same Blue Book?—We have not the officers there; we have the Native officers.

3475. Will you have the officers added to this statement, in order to make it complete?—Yes.

3476. Sir *G. Balfour*.] Do you think that you are satisfied with these statements which Sir Henry Durand appends to his Minute?—I believe they were prepared with great care by Colonel Broome.

3477. Therefore, any calculation you now make of the additional charges for 1871-72 may fairly be compared with those statements?—I think so.

Friday, 9th May 1873.

MEMBERS PRESENT:

Mr. Ayrton.	Mr. Dickinson.
Sir George Balfour.	Mr. Grant Duff.
Sir Thomas Bazley.	Mr. Eastwick.
Mr. Beach.	Mr. Fawcett.
Mr. Birley.	Mr. Robert Fowler.
Mr. Bourke.	Mr. Hermon.
Mr. Candlish.	Mr. Lyttelton.
Mr. Stephen Cave.	Mr. M'Clure.
Mr. Baillie Cochrane.	Mr. John Benjamin Smith.
Mr. Cross.	Sir David Wedderburn.
Mr. Beckett Denison.	Sir Charles Wingfield.

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

Colonel ALLEN BAYARD JOHNSON and Mr. GEORGE WELSH KELLNER, re-called; and further Examined.

Col. *A. B. Johnson*, and Mr. *G. W. Kellner*.

9 May 1873.

3478. *Chairman* (to Mr. *Kellner*).] You promised to prepare some statements at the close of your examination on the last day; have you prepared those statements?—I think the information required by the Committee was in regard to the difference in the past and present organisation of the Native army. It is rather difficult to compare the organisation and cost of the Native cavalry and infantry regiments in 1856-57 with the present organisation.

3479. Can you state the regimental organisation in 1856-57 and now?—A regiment of cavalry in Bengal consisted, in 1856-57, of 23 European officers, 13 Native officers, and 580 of other ranks. In the cavalry regiments of the other Presidencies, there were the same number of officers, but a less number of other ranks, viz., 300 troopers and 40 recruits in Madras, and 504 troopers in Bombay.

3480. Have you got the establishment for the infantry in Bengal?—The infantry consisted of 26 European officers, 20 Native officers, and 1,140 other ranks. In Madras the number of officers was the same as in Bengal, but the complement of privates was 910.

3481. And Bombay?—The same number of European officers, the same number of Native officers, and 1,040 of other ranks.

3482. Now, can you give us the present state of the establishments for these regiments?—This excludes in all cases the medical officers. In the cavalry there are seven European officers, 13 Native officers, and 444 of other ranks. In the infantry, seven European officers, 16 Native officers, and 696 non-commissioned officers, rank and file. That is for Bengal.

3483. Is the organisation in Madras and Bombay the same?—There are seven European officers with the Madras cavalry, 12 Native officers, and 384 of other ranks. In the infantry of Madras, there are seven European officers, 16 Native officers and 753 of other ranks. In the Bombay cavalry there are seven European officers, 19 Native officers, and 474 of other ranks. In the infantry there are seven European officers, 16 Native officers, and 720 of other ranks. That is in the line.

3484. You have shown under the new organisation a great diminution in the number of officers compared with those in 1856-57; but can you state whether the number of officers in the present organisation represents entirely effective officers serving with the regiment?—Yes, it does.

3485. And are they always kept up?—Yes.

3486. If one goes away some one else is immediately placed in his stead?—Yes.

3487. Did the establishment that you have described to us as existing in 1856, include the whole of the officers in the regiment of whom a great many were not present?—Yes. (Colonel *Johnson*.) A certain proportion were allowed to be absent.

3488. (To Colonel *Johnson*.) Were there not two causes of absence, one from furlough either in England or in India, and the other absence in consequence of being employed either in other military employments or in civil employments?—Yes.

3489. Do you recollect in 1856 what was the general direction as to allowing absence for civil employment or other employment beyond the regimental service, and also with regard to absence on leave in England or in India?—There was no restriction as far as I can remember on the number of officers who might be absent on furlough. The Court of Directors laid down a rule as to the number of officers who might be absent from each regiment, on staff employ; I think it was that three captains and three lieutenants from each regiment might be absent, and one field officer.

3490. And do you know whether in considering the expenditure of the officers, those who were

Col. *A. B. Johnson*, and Mr. *G. W. Kellner*.

9 May 1873.

were in civil employment sometimes received consolidated allowances in their civil employment and no military pay, and in other cases received their military pay, and received additions for the special employment in which they were engaged?—Yes.

3491. But can you give me any idea as to what was generally considered to be the number of officers who were absent on furlough or on leave in India?—I have a return of the number of officers present with the regiment, which would give it in another form, but I cannot put my hand upon it now. There was, I think, an average of about 11 officers in three Presidencies; but I speak subject to correction.

3492. Mr. *Bourke.*] Take the camp at Delhi, or the camp last year in the Punjaub; with the cavalry were there not many regiments with only three or four European officers?—No, I should say certainly not; but I have not seen the returns.

3493. Mr. *Eastwick.*] Could not that be ascertained?—Yes; it could be ascertained from India.

3494. Mr. *Bourke.*] Perhaps you will look into that?—Yes; I will try and get all the information procurable on the subject.

3495. Sir *D. Wedderburn.*] Those seven officers you have named, include officers on sick leave or short leave?—Yes.

3496. *Chairman.*] Do you mean sick leave with the regiment, or away from the regiment?—Officers on the sick list with their regiment, or away from the regiment in India on short leave. But if an officer were away on furlough, his appointment would be filled up in the regiment, and one of the officers on probation for the staff corps or an unemployed officer would be brought in to fill his place.

3497. (To Mr. *Kellner.*) Now, going back to Grant 3, we will systematically go through the increase and diminution of the charges which have occurred upon the expenditure for Pay Allowances and Charges for Officers and Men upon the Forces in India. Will you state the amount in 1861–62 of that grant?—£. 7,254,740. There was a diminution of 871,404 *l.* in the following year.

3498. But during that period, was the reorganisation and revision of the whole Indian army administration going on?—It was going on; the effect of it was not experienced in 1861–62.

3499. But in 1862–63, what was the total expenditure?—£. 6,383,336.

3500. Showing a reduction of 871,404 *l.* as you have already given us?—Yes.

3501. Now, what was done in the year 1862–63 towards the improvement of the army affecting the expenditure; was there anything further done to carry out the reorganisation affecting the expenditure?—Yes, the organisation was carried into effect in 1862–63. Then the military pay of officers employed in the several military administrative and executive departments were withdrawn from this Grant, and charged to the respective Departments.

3502. That is to each separate grant. In the case of any officer who was passed to any separate service, his whole pay and allowances were charged to that special grant?—Yes.

3503. That would of course only make a nominal diminution of this grant, and an increase of others in proportion, and therefore that would not be any economy, in fact?—No. Then there were further important measures of decrease, the first being the reduction in the strength of British cavalry regiments from eight to seven troops each.

3504. Before you go to that, was the system of charging the military pay of some officers to the army discontinued, and the whole of that charge transferred to the civil departments with which they were connected?—Yes.

3505. And that would effect an apparent reduction; that is, a reduction of this grant to a considerable extent?—About 62,000 *l.*

3506. But that, of course, was no real economy of expenditure?—No. It will be found, as the Committee proceeds, that whilst the Military Department has taken over a great many charges which never were previously debited to the Department, it has also been relieved of certain other charges by transfer to the general finance accounts.

3507. You were going on to describe some other items of diminution by the reduction of the British cavalry regiments?—Yes, from eight to seven troops. That was arranged previously to 1862–63, but it was then that the full effect of the reduction was experienced. The Punjaub and Hyderabad batteries of artillery were reduced from six to four guns each, and three companies of the Golundauze battalion in Bombay were abolished. The native cavalry regiments in Bengal were reduced by 36 sabres each, and the native drivers in the Bombay Presidency were abolished.

3508. Were those native drivers attached to the cavalry?—No, artillery. Then there was a saving of about 97,000 *l.* by the retirement of Indian officers on enhanced rates of pension.

3509. Then their pensions would swell the charges in England?—Yes.

3510. Was there any increase made in other respects?—Yes, the batteries of Royal Artillery were reorganised on a uniform scale in all three Presidencies.

3511. Was any addition to the Artillery made?—Twelve additional batteries were formed to complete the establishment fixed for Indian service, and the Bengal rate of contract allowances was extended to other parts of India.

3512. Was that a higher rate than prevailed in the other regiments?—Yes.

3513. All those things then would contribute to swell the expenditure of the year?—Yes.

3514. Then what was the change in the expenditure in 1863–64?—The expenditure in 1863–64 amounted to 6,681,783 *l.*

3515. What was the increase in that year over the previous year?—£. 300,000.

3516. How was that occasioned?—Much of it was occasioned by the transfer of the pay and allowances of regimental medical officers, from the grant for medical services, to this grant. Then there was a general order this year for giving good-conduct pay to Native soldiers at earlier periods of service than before.

3517. That would be a permanent increase of the expenditure of the army?—An increase of pay, and a permanent increase. Then there was an increase to the pay of Native commissioned officers, and more liberal staff salaries to British officers serving with Native regiments.

3518. What was the expenditure in 1864–65; what change took place then?—The expenditure in 1864–65 rose from 6,681,783 *l.*, which it had been

in

in the year before, to 6,816,670 *l.* or 134,887 *l.* above that of the previous year.

3519. To what is that increase to be attributed?—Partly to the measures of increase sanctioned in the previous year; the full effect was felt in 1864-5. And then in this year increased rates of pay were allowed to medical officers.

3520. That would be a permanent increase?—Yes, a permanent increase; the pay of the medical officers was largely increased. The family allowance to European soldiers was also increased, there were increased rates of hutting money to Native troops of the Bombay army, and the substitution of full for half batta rates of pay generally.

3521. With the exception of the substitution of full for half batta, all those increases would be permanent increases in the expenditure of the army, would they not?—Quite so.

3522. The batta is a thing adjusted from time to time, I suppose?—No. The troops within a certain distance of the Presidency towns received a lower rate of pay than elsewhere; but in this year it was considered advisable to abolish that distinction.

3523. The batta is a payment adjusted from time to time, not necessarily a permanent increase, is it?—Yes, it would be a considerable permanent increase in the case of those regiments stationed within a certain radius of the Presidency towns. In this year also, a regiment of infantry was added to the Native army by the conversion of a police battalion. Then there were several reductions, seven field batteries of Royal Artillery, four regiments of Native Infantry, a force of Native Artillery in Madras, the disbandment of the Southern Mahratta Horse in Bombay and of the East Indian regiment in Bengal.

3524. Then with the exception of the regiment of infantry added, we have there a considerable diminution of force and an increase of pay in various directions, so that we have more to pay with less men?—Yes.

3525. Then in 1865-6 what was the result?—In 1865-6 it amounted to 6,898,059 *l.*

3526. Was that an increase on the previous year?—Yes, by 81,384 *l.*

3527. To what was that due?—There were several measures which caused it, the re-organisation of the Bengal Sappers and Miners, and of the Madras Native army, and the appointment of a second doing duty officer to every Native regiment.

3528. (To Colonel *Johnson*.) What do you call the second doing duty officer?—The seventh officer added to the regiment; in the first organisation there were only six.

3529. (To Mr. *Kellner*.) Were there any other items of increase?—Yes, there were increased establishments for heavy batteries of artillery. Then the Bhootan campaign occurred in this year. The charges of the Bhootan campaign added 245,419 *l.* to the charges for this year, 1865-66. In the previous year 1864-65 it added 112,498 *l.* to the charges.

3530. Those were the expenses of the field force?—Yes, the addition caused by the Bhootan campaign to the whole charges of the army, not to this particular grant only. It would be spread over all the grants.

3531. But with regard to the expenditure actually on this grant, what was the nature of the expenditure on this grant for the campaign; was it the batta, or what?—It would be about 11,000 *l.* in 1865-66, and it would be for the batta of the troops, the pay of additional regimental followers, and regimental establishments.

3532. Then this increased expenditure in the main, was due to the increase of force in that year?—Yes; but there were reductions in that year; two regiments of British infantry were sent home without relief; two heavy field batteries were converted into garrison batteries, and the Lahore Light Horse was abolished.

3533. It would seem, then, that the diminution of force in this year, would be rather greater than the increase?—Yes.

3534. Nevertheless, we have an increase of the whole expenditure?—Yes; it was partly nominal, owing to the change in the system of paying the British troops which had the effect of throwing an additional month's pay on the charges of the year; they were paid in advance.

3535. In 1866-67, what was the expenditure?—£.6,294,905; that was for 11 months only.

3536. That was on account of the change in the financial year?—Yes.

3537. What was the expenditure in 1867-68?—£. 6,677,604, being a decrease of 220,000 *l.* upon the charges of the year 1865-66.

3538. What were the items of increase in that year?—The additional pay and bounty granted to British troops in India.

3539. What was that additional pay and bounty?—It was an additional 2 *d.* a day, with another penny on re-engagement.

3540. Was that consequent upon the grant of additional pay and bounty to the British Army in England?—Yes.

3541. Did it become necessary to give the same thing in India?—Yes.

3542. Do you know generally, what was the amount of that expenditure in India?—Over a quarter of a million.

3543. Sir *G. Balfour*.] Would you divide the item into the pay and the bounty?—I have not the details here.

3544. *Chairman*.] Can you show a detailed account, showing how it was made up?—Yes; my estimate differs from the estimate made up at the time by General Broome; he made it a third of a million.

3545. Perhaps you can give his estimate and yours in a tabular form?—Yes, it wants some consideration. Then, as a decrease in this year, there was another British infantry regiment withdrawn from the Madras establishment.

3546. Was there any other cause of increase in the year before we go to the diminution?—Yes; the further effect of promotions in the staff corps was felt this year.

3547. Is that under the final revision scheme of the staff corps?—Yes. (Colonel *Johnson*.) When the staff corps was thrown open to the whole Indian Army.

3548. *Chairman* (to Mr. *Kellner*).] The date of that was what?—1866.

3549. (To Colonel *Johnson*.) Is that the scheme now in force, or has it been altered since?—That is the one now in force. The scheme was simply that the staff corps was thrown open to all officers of the Indian army who chose to enter into it; that was the only change; and the admitting all to Colonel's allowances after 12 years' service. That does not apply to the expenses of this year, which we are now upon, however.

3550. (To Mr. *Kellner*.) There were other reductions

Colonel *A.B.Johnson*, and Mr. *G. W. Kellner*.

9 May 1873.

ductions in this year, were there not, besides the one which you have mentioned?—Yes; one British infantry regiment was withdrawn from Madras, as I have stated, and there was a reduction of 56 and 60 men respectively, in each of the remaining British cavalry and infantry regiments. Then the Indian revenues were relieved of the cost of maintaining two regiments of Madras Native Infantry, and three garrison batteries of Royal Artillery, by transfer to the Straits Settlements; and the Hyderabad Contingent ceased to be charged to the military department in this year.

3551. As regards the Hyderabad Contingent that was a mere transfer of expenditure, was it not?—Yes, to the Civil and Political Department.

3552. Therefore it was no economy?—No.

3553. It would seem that the result of this year was that there was a considerable increase of permanent charge, and a considerable diminution of force?—Yes; and that was accompanied by a diminution of expense, to the amount of 220,000 *l.*

3554. Now, in 1868-69 what was the expenditure?—£. 6,714,873.

3555. What was that as compared with the former year?—A net increase of 37,000 *l.*

3556. How was that brought about?—When the troops were sent from India to the Abyssinian expedition it became necessary to increase the strength of the Native army, both of Bombay and Bengal; and in this year the return of these troops from Abyssinia caused a large number of supernumeraries. Whilst the regiments were absent in Abyssinia their charges were defrayed by the British Government, but on the return of the troops there were a considerable number of supernumeraries in India, and the excess charge in this year was caused partly by the pay of those supernumeraries.

3557. Mr. *Dickinson*.] That was not repaid by the British Government, then?—It has been, or will eventually be repaid; but it increased, for the time being, the charges against India, and that accounts for the apparent increase in the charges for this year. I believe it is an expense which is now in course of adjustment between the Indian Government and the British Government.

3558. *Chairman*.] Perhaps you can state what the arrangement was, and how far the military expenditure was affected by the Abyssinian expenditure?—During the absence of the troops on that particular service, the British Government bore all the expenses, and the Indian revenues were relieved for a time.

3559. And on the other hand, what additional expenditure did the Indian army have to bear?—The supernumeraries, or 100 men added to every regiment, and the pay of those men was paid out of the Indian revenues.

3560. As the men came back, there were so many more supernumeraries?—Yes.

3561. And the question has arisen whether the Indian Revenue should pay them, or the British Revenue?—Yes, India paid them, and so increased the charges of this year, but the charges were subject of course to adjustment between the two Governments.

3562. The question is whether the supernumeraries not being absorbed should be borne by the Indian Government or the English Government?—Yes.

3563. Were the whole of the contingent expenses of the expedition borne by the British Treasury?—Yes, they were paid by the Indian Treasury, but debited against the British Government.

3564. Then the repayment would appear as a military receipt or a general receipt?—Yes, afterwards. I would now mention that the strength of the Punjaub frontier regiments was increased this year by 40 privates each.

3565. Has that been a permanent increase?—Yes, a permanent increase; higher rates of pay were given to regimental paymasters and medical subordinates.

3566. That was also permanent?—That was also permanent; and a troop of cavalry was formed at Aden.

3567. (To Colonel *Johnson*.) Do you mean by forming a troop of cavalry at Aden, a native troop?—A troop was raised expressly for service at Aden.

3568. Native or European?—Native.

3569. (To Mr. *Kellner*.) What other items of increase were there?—The conversion of one field and one garrison battery of Royal Artillery into mountain batteries; then, too, there was a revised establishment and equipment for the Huzara and Peshawur mountain batteries.

3570. All these tending to increase the charges?—Yes.

3571. Was there any saving in that year?—Yes, there were certain regiments which on their return from Abyssinia, after the Abyssinian campaign, went home directly, and the relieving corps did not arrive in India until a very considerable time after; that was a temporary thing; then a regiment of Madras native infantry was absent in China this year.

3572. And being so absent, was the expense of that borne by the British Government?—Yes. In this year also three heavy field batteries in Bengal were converted into garrison batteries; and the Assam Mountain Battery was broken up.

3573. (To Colonel *Johnson*.) What would be the advantage financially of converting the heavy batteries into garrison batteries?—The saving of the cost entailed by maintaining the equipment of the heavy guns, and their draught and establishments; in fact, you disarm the battery altogether, leaving only the garrison company on its ordinary establishment without an armament.

3574. (To Mr. *Kellner*.) What other reductions were there?—The strength of the Bombay native cavalry regiments was reduced by six noncommissioned officers each.

3575. By "broken up," you mean disbanded in regard to the Assam Mountain Battery?—Yes.

3576. In 1869-70, what was the expenditure?—£. 6,662,472.

3577. And what was that as compared with the former year?—A decrease of 52,000.

3578. How was that arrived at?—The gradual absorption of sepoy supernumeraries in the Bombay and Bengal native regiments, the recruiting having been suspended.

3579. Was there any charge in regard to the number of unemployed officers?—Yes, the effect of the new furlough rules was in this year felt; a large number of officers were absent in England.

3580. Would that be merely a transfer of expenditure from India to England?—Yes; a transfer of expenditure from India to England, and a direct saving to Indian revenues to the extent of half the staff corps, or military, pay of the absentees.

3581. Was there any reduction of force besides?—Not in 1869-70.

3582. In

3582. In 1870–71, what was the expenditure?—In 1870–71, the expenditure was 6,527,145 *l.*, a decrease of 135,327 *l.* from the previous year.

3583. And how was that arrived at?—By the withdrawal of two regiments of British cavalry (this had been urged in 1862–63, but the withdrawal of the regiments took place only in 1870–71) and of two regiments of British infantry; and there was the reduction of a troop in each of the remaining regiments of cavalry, and of two companies in each of the remaining 50 regiments of infantry; further, there was the withdrawal of the second line of waggons in batteries of Royal Artillery, a reduction in the strength of the Viceroy's body guard, and the breaking up of four batteries of Native Artillery, and the local company of infantry in Bengal.

3584. When you say, "breaking up," do you mean disbandment and discharge?—Yes.

3585. How is it that this considerable reduction in force produced such a very small reduction in expenditure in that year?—The full effect of it was not experienced in this year.

3586. This is a very large reduction of force both in regiments and men and a comparatively insignificant reduction in expenditure, equal to the force of two regiments?—Yes.

3587. What is the explanation?—The reduction of so many regiments does not, in this case, imply a corresponding reduction of men. In fact, the number of men in each battery and infantry regiment remaining in India was increased, but the withdrawal of the British cavalry regiments caused a decrease of sabres. Then, the full effect of any reduction of force is not immediately experienced. There is always increased charge, especially in the Native army, by the grant of gratuities on discharge, and the expenses (both for Europeans and Natives) of transport in India.

3588. How would that appear in this grant?—That would not appear in this grant. Take for instance the reduction of the Viceroy's body guard; if the charges of the body guard were looked into, it would be found that they were increased this year by reason of the gratuities to discharged men, and that always is the effect of any reduction of the Native army, viz., that it is followed by an immediate increase of charge, consequent upon paying off the men.

3589. As regards reduction of Europeans, however, if they are merely thrown back upon England there would be nothing obtained by them in the way of compensation?—No.

3590. Then can you give us the exact reason why it is that with so large a reduction of the European forces, the reduction in the expenditure is so small; is it that the reduction of the forces took place in the end of the year?—Yes, quite at the close of the year. But the reductions were rather in the cost of the officers and staff than in the number of troops, which in the three years were as follows:—

	ESTABLISHED.	
	Europeans.	Natives.
1869–70 - - -	61,995	122,442
1870–71 - - -	60,425	122,122
1871–72 - - -	60,445	121,981

	EFFECTIVE.	
	Europeans.	Natives.
1869–70 - - -	56,772	116,653
1870–71 - - -	56,694	115,263
1871–72 - - -	58,437	115,196

You will observe that there was a reduction of the body guard and four batteries of Native Artillery and the Local Company of Infantry in Bengal. That would also account for some increase in the way of gratuities on discharge.

3591. Now going to the expenditure in 1871–72, what was the amount in that year?—£. 6,503,792.

3592. In this year would not the full effect of the reduction of force appear?—Yes.

3593. What was the diminution in 1871–72 as compared with 1870–71?—The figures being 6,503,792 *l.*, the reduction is about 24,000 *l.* as compared with the previous year.

3594. Then you will observe that the reduction in the two years, 1871 and 1872, would be 160,000 *l.*?—Yes.

3595. Now were there any reductions in the year 1871–72?—Yes. The withdrawal of a brigade and five batteries of Horse Artillery and the breaking up of a brigade staff and three batteries of garrison artillery. This was not accompanied by any reduction of men, because the number of drivers and gunners was increased in the remaining batteries. My impression is that this reduction of brigades and batteries of artillery caused an increase rather than a decrease of the actual strength.

3596. Mr. *Bourke*.] The object was to increase the strength and diminish the expense?—Yes. (Colonel *Johnson*.) To make the batteries efficient.

3597. *Chairman* (to Mr. *Kellner*).] Then was there any other decrease?—No; there was no other decrease. It was this year expected that there would be a reduction of the Native army, and the Budget of the year took account of that, but there was no actual reduction, and in consequence the expenditure slightly exceeded the Budget estimate.

3598. But we are still left in this difficulty, that we have had a large diminution in force in 1871 and 1872, and yet there is only a diminution in expenditure of 160,000 *l.* To what is that to be attributed, because in the years 1871 and 1872 the whole effect of the reduction must have been felt?—I think it would require a more detailed statement than I am prepared to give just now. (Colonel *Johnson*.) I can give the estimated items of reduction on each head; they are spread over a large number of grants; this is only one grant. (Mr. *Kellner*.) And then you have against that specific decrease of officers and staff an increase of rank and file, and a further increase in many other items.

3599. (To Mr. *Kellner*.) If that is the explanation that is sufficient; do you think you can say that is the explanation?—I should wish to satisfy the Committee with further evidence, as it is an important matter.

3600. To take two companies from 50 regiments, and to reduce two regiments of cavalry and of infantry, seems to come to a very large

Col. *A. B. Johnson*, and Mr. *G. W. Kellner*.

9 May 1873.

business, and 160,000*l.* would seem at first sight, considering that the total is seven millions of money to the Indian army, not a proportionate reduction?—No. (Colonel *Johnson*.) The estimated gain in the reduction of cavalry and infantry was 297,220*l.* (Mr. *Kellner*.) But that would include commissariat and all other charges. (Colonel *Johnson*.) That is the estimated saving on the pay of men on all grants, but the reductions contemplated were four regiments of cavalry with a loss of 860 sabres, and seven regiments of infantry with a gain of 940 bayonets.

3601. Sir *G. Balfour* (to Colonel *Johnson*).] Will you also add where you take that from?—I am reading from a Parliamentary Blue Book of the 17th of August 1871. (Mr. *Kellner*.) I think it will be found when the actual strength of the army is compared, that the reduction of actual strength was not so much in 1871-72 as the reduction of regiments and batteries would seem to imply.

3602. *Chairman* (to Mr. *Kellner*).] You will give us a tabulated statement on the question?—Yes.

3603. Now, will you give us a comparison showing the general result of all the changes that you have explained to us between the state of the army in 1862-63, when I understand from you that the reorganisation had been fairly developed, and in 1871-72?—Yes; and I have got the estimate for 1872-73 and for 1873-74.

3604. Are you prepared to give us the detailed explanations as to the causes of increase and decrease?—No, not just now; but they will be submitted in print to the Committee.

3605. Now, will you give us a view of the relative strength of the army in 1862-63 and 1871-72; and first with regard to the Europeans?—There were, in 1862-63, 104 batteries of Royal Artillery, 11 regiments of British cavalry, 55 regiments of infantry, the Lahore Light Horse, the East Indian regiment, and the Eurasian battery of artillery.

3606. Have you got the numbers that those represent of officers and men?—The effective strength of the European force in 1862-63, as prepared by me from the Quartermaster General's Returns, was 69,732; that is the average for the whole year 1862-63, exclusive of officers; I have, in every case, excluded officers.

3607. And now have you the number of officers as well?—I could get them, but throughout these returns I have not taken the officers. In putting in my return I will add them.

3608. Will you make it clear whether it includes the officers who are in India with the corps, or whether it includes the strength of the regiment without reference to their being with the corps?—Yes; and distinguishing the staff corps officers not employed regimentally, I presume?

3609. Yes; not merely the establishment, but the officers actually present in the corps, including in those officers those away on short sick leave?—Yes; this is the average; I may say that I have got both the average for the year, and the number for a particular date; and the average effective strength, as obtained by me from the Quartermaster General's Returns in 1862-63, was 69,732 Europeans.

3610. And in 1871-72 what was it?—In 1871-72 there were 14 brigades, comprising 86 batteries of Royal Artillery, nine regiments of cavalry, and 50 regiments of infantry; the number of men on the 1st April 1872, was 61,987, but the average for the year 1871-72 was 58,437.

3611. Now what was the strength of the Native army in 1862-63?—There were 44 regiments of cavalry, 147 regiments of infantry, and 25 companies of sappers and miners; then there were a lot of Native Artillery; three Punjaub light field batteries, the Punjaub garrison company, the Hazara and Peshawur mountain batteries, four batteries of the Hyderabad Contingent, and the Assam local company.

3612. Those are all in Bengal, are they not?—They are in Bengal; then in Madras there were one battery of horse and four batteries Golundauze; in Bombay there was one battalion Golundauze.

3613. And what was the number in 1871-72?—In 1871-72, there were 39 regiments of Native cavalry, 136 regiments of infantry, and 25 companies of sappers and miners; there were, of artillery, two Punjaub light field batteries, the Punjaub garrison company, and the Hazara and Peshawur mountain batteries; the total number of Natives in 1871-72, was 116,196, that is the average.

3614. Now you will observe that in these statements which you have given us there is a very considerable diminution both of European and Native force, but the expenditure for 1862-63 was 6,383,000*l.*, as compared with 6,503,000*l.* in 1871-72, showing that we have had an increase of expenditure at the same time?—Yes.

3615. Now can you give the Committee a general view how that has arisen?—Yes, the reduction of military expenditure has apparently not kept pace with the reduction of military strength, and the causes are various; first, it is owing to measures of military organisation, such as the augmentation of the strength of batteries of Royal Artillery and British regiments in India, and of Native regiments on the Punjaub and North Eastern Frontier; the formation of mountain batteries of artillery; the reorganisation of the Madras Native Army, and of the Bengal sappers and miners; the formation of skeleton companies of engineers, of a troop of cavalry at Aden, and of the Governor's body guard at Bombay; the appointment of second doing-duty officers to Native regiments, of instructors in gunnery to brigades of artillery; the extra establishments allowed for heavy batteries of artillery, and the appointment of trained bandmasters and armourer serjeants to British regiments. Then the pay of all ranks of the army has increased generally, and I would wish to state these increases under the various heads of the British commissioned officers, the British non-commissioned officers and men, and the Native commissioned and non-commissioned officers and men.

3616. First, will you state the general increase for the British commissioned officers?—Increased rates of staff salary for the regimental officers with the Native army; increased rates of pay to medical officers, adjutants, and quartermasters of Royal Artillery and British cavalry, and paymasters of all British regiments; the pay of veterinary surgeons has been largely increased also; full batta rates of pay are now allowed to officers near the Presidency towns, and the mess allowance to European officers with Native regiments has been increased.

3617. Now will you be good enough to give the

the increase of pay and allowances for the British non-commissioned officers and men?—The grant of increased pay, and bounty on re-engagement; good-conduct pay at earlier periods than before; full batta rates of pay, prizes for good swordsmanship to British cavalry regiments, and increased family allowance for all British troops.

3618. Now what has been the increase of pay and allowances for Native commissioned and non-commissioned officers and men?—Their pay has been increased all round, both in the cavalry and in the infantry, as I mentioned to the Committee the other day.

3619. Either in pay or in batta?—In pay, or in batta, or in good-conduct pay. The pay of the Deolee and Erinpoorah local forces has been largely increased; and the hutting money of the sepoys has been increased in all three Presidencies.

3620. Now, can you furnish the Committee with a tabular statement showing the cost of the officers of the Indian army in 1862 and 1872, respectively?—Yes; I have here a statement showing the number and cost of officers of the local service (cavalry and infantry) and of the staff corps in the years 1856–57, 1862–63, 1869–70, and 1872–73. (Vide *Appendix.*)

3621. Will you give us a general view of this statement?—I find that in the year 1856-57, there were 4,513 officers, costing 2,007,472 *l.* In the year 1862-63 there were 4,167 officers, costing 1,866,012 *l.* In the year 1869–70, there were 3,312 officers, costing 2,079,305 *l.* In 1872 there were 3,216 officers, costing 2,050,399 *l.*

3622. What is the average cost of the two periods for each officer; what does it come to at an average per officer per annum?—In 1872 it was 637 *l.* per annum. And in 1862, it was 447 *l.*, the increase being 189 *l.*, or 190 *l.* all round.

3623. To give this clearly, have you got an account showing the number of officers that were unemployed in 1872?—Yes; on the 1st of January 1872.

3624. What was the total of the number of officers unemployed in the three Presidencies?—Three hundred and four.

3625. And what was the cost of them, which I presume is borne on this grant, these being officers still in India?—Yes; the cost was 232,977 *l.*

3626. Mr. *Bourke.*] That does not include the doing-duty officers with the regiment?—No. (Colonel *Johnson.*) It includes the officers who are attached to regiments without drawing any pay. All captains or subalterns are attached to a regiment.

3627. (To Colonel *Johnson.*) Practically they have nothing to do?—Practically the less they do the better.

3628. Sir *G. Balfour.*] I will ask you some questions to clear up a few points in your evidence; I observe that you stated that there was no restriction upon officers absent in Europe?—I was not certain about it.

3629. You are aware, are you not, that there was a restriction; one-third of the field officers, lieutenant-colonels, and majors, one-fourth of the captains and surgeons, and one-sixth of the subalterns and assistant-surgeons were allowed to be absent in Europe; those were the limitations placed on the absentees in Europe?—I think I guarded the point by speaking to it only so far as I could remember.

3630. You overlooked also the Court of Directors' despatch, No. 143, of the 10th of September, 1856, defining clearly the number of officers that might be absent in Europe; will you bear that despatch in mind, and refer to it?—Yes.

3631. (To Mr. *Kellner.*) I do not think you mentioned when the East Indian regiment was reduced?—It was abolished in 1864-65.

3632. Will you be good enough also to give us the established strength as well during the years for which you have been giving us the effective strength?—Yes, I think I can give it you now.

3633. And would you be good enough to compare and show where your own established strength differs from the European strength in the Army Estimates?—Yes; I find it rather difficult for the years 1862-63, 1863-64, and 1864-65 to get the established strength, but I can only be guided by the Army Estimates prepared in India; and the estimate for 1862-63 for instance was based upon the established strength of 69,324. That was a much lower estimate than the facts of the time perhaps warranted. The estimate included only nine regiments of cavalry, whereas there were 11, and those were maintained up to the year 1869-70.

3634. That was my estimate, was it not?—Yes.

3635. I also calculated upon only six troops of European cavalry being maintained?—Yes.

3636. It also excluded the European veterans, did it not?—Yes; to the best of my recollection.

3637. And it did not provide for the increase of force which took place during the course of that year, 1862-63, did it?—Well, I was looking into that. I find that the artillery force was estimated at 12,695, and the actual average strength during the year was 11,000 and odd, rather below the estimate. Possibly my returns may be wrong, but I just mention it in passing. I find that in 1863-64 the actual strength of artillery exceeded the established strength; it was 13,047. The increase was experienced in that year, I fancy, more particularly. However, there are details for every year of the strength of each arm in each Presidency, so that the figures can be followed and checked.

3638. Then, if you were to correct the strength of which I sent in the establishment by the regiments in cavalry which you expected to be taken away, and the troops which you expected to decrease, that would give what I want; perhaps you will endeavour to correct that mistake which I fell into, and which was corrected subsequently to my departure; will you kindly look over the papers with regard to it?—Yes, I have taken the established strength in subsequent years from the estimates, and as the return will be laid before the Committee I suppose I need not read it now.

3639. Do you happen to have my report of 1862, stating the strength of the European force, in which I recommended reductions to be effected?—Yes.

3640. And have you General Norman's memorandum in reply to that letter of 1862?—No, I have not; I will take a note of it.

3641. Will you hand in my report of the 18th of March 1862, and General Norman's memorandum, Number 386, of the 31st of March 1862?—Yes; I think I have your letter, but I do not think that I have ever seen General Norman's memorandum;

Colonel *A. B. Johnson*, and Mr. *G. W. Kellner*.

9 May 1873.

memorandum; it will probably be in the India Office.

3642. I did not quite understand your statement with reference to the military amalgamation or organisation in 1862-63; you remember that the amalgamation, or rather re-organisation, took place in 1861?—Yes.

3643. And 1862-63 was, as near as possible, almost a complete year?—Yes.

3644. Therefore, would you compare the strength which was re-organised in 1861, with the strength which existed in 1862-63, so as to make the 1861 re-organisation a standard by which to compare the subsequent changes that took place in the army?—Yes.

3645. (To Colonel *Johnson*.) You mentioned that the change in the organisation of 1871-72, made no change in the artillery, but you remember that five horse artillery batteries were to be struck off the strength of the Indian army in that year?—I was speaking of the strength of the batteries that remained, the strength of which was increased and the expense diminished.

3646. Is it a fact, that in that year, we reduced the horse artillery in India from 20 batteries to 15?—Yes.

3647. (To Mr. *Kellner*.) You were unable to explain to the Chairman the effect of the reductions of infantry and cavalry upon the expenditure; but you will remember that although the number of regiments decreased in India from 52 to 50, that involved no reduction of the strength of privates?—Yes.

3648. It was merely a re-organisation?—Yes.

3649. (To Colonel *Johnson*.) Do you happen to rembember the reduction of officers in consequence of that change?—The total reduction, including the medical officers in 1869, was 40; in 1870-71, it was 34. The total number of privates of a British infantry regiment in 1869, was 750; and in 1870-71, it was 780.

3650. Sir *D. Wedderburn* (to Mr. *Kellner*).] In speaking of the abolition of half batta, do you mean that full batta was substituted for it?—Quite so; it was, in fact, an increase of pay to the troops within a certain radius of the Presidency towns.

3651. And can you state what amount of increase in the expenditure that produced?—The increase would depend upon the number of troops affected by the change, and the number varies from year to year.

3652. (To Colonel *Johnson*.) What was the immediate cause of the change of half batta into full batta for those troops?—Batta was one of the items into which the Indian pay and allowances were divided. Full batta varied according to grade, from 9 *l.* a month for an ensign, to 61 *l.* for a lieutenant-colonel; half batta being, as indicated, exactly the half of those sums. There was at one time a double full batta, which was abolished long before I entered the army.

3653. Was that during war?—Yes; I suppose when the great bulk of the force was in the field or lying along the frontier. In 1836 the Court of Directors restricted all officers stationed within 200 miles of their Presidency town to half batta rates with Presidency house-rent; that is, they reduced the ensigns pay from 20 *l.* a month to 18 *l.*, and the lieutenant-colonels from 103 *l.* to 82 *l.*; and so with the intermediate grades.

3654. Why was this done?—The object of this was to establish at all three Presidencies one uniform principle in the regulation of fixed allowances, whilst it was considered that the further an officer was serving from the Presidency (that is the capital town of the Presidency) the more expensive would he find it to live. In a few years, namely, by 1861, circumstances were entirely reversed, and the cost of living in Calcutta and Bombay had become infinitely greater than in other parts of the country. Meanwhile, too, the whole staff corps pay was fixed at half batta rates, as I have already stated, and their staff salaries had been readjusted accordingly. I explained the other day how it affected the rates of staff salaries. The half batta system applied, therefore, only to a few local officers, and to the officers and men of British regiments serving near the capitals. In fact, a lieutenant-colonel commanding a British regiment at a half batta station, received less pay by about 200 *l.* a year than a staff corps or local officer commanding a Native regiment. The abolition of the half batta system was first urged by Sir Bartle Frere, the Governor of Bombay, and supported by Sir John Lawrence and Sir Charles Trevelyan. The cost was estimated by the Government of India at 30,000 *l.* a year; but the Secretary of State, who fully admitted the propriety of the measure, extended it also to the soldiers, which produced a total charge of some 53,000 *l.* a year. Some of this was, however, reduced when the local officers entered the staff corps in 1866, but I have no idea how much it was, a very small sum. At the same time when half batta was abolished the India Government were proposing reductions in the British Army of some 240,000 *l.* a year.

3655. Can you tell me what was the reason for establishing a troop of cavalry at Aden?—Yes; there was some discussion between the Government of Bombay and the Government of India in the foreign department in 1866, as to the necessity for maintaining a small body of cavalry for special duty in Aden. One of the leading objects put forward for maintaining this body, was to cover the source of the water supply, which is procured from beyond our own line; with some reluctance, the Government of India asked the Secretary of State's sanction that they might, should they after further consideration be of opinion that it was needed, furnish this small cavalry force for Aden; either by raising a troop for the service, or by furnishing a troop from Bombay. The Secretary of State ordered a troop to be raised, and trusted that the police tranquillity which would be secured, would compensate for the cost.

3656. Where were they raised?—They were raised in Scinde; the extra cost was estimated at 7,250 *l.* a year.

3657. You spoke of an additional charge caused on account of the body guard of the Governor of Bombay; how did that arise?—The Governor of Bombay had no separate body guard; but his escort was furnished from a corps called the Southern Mahratta Horse. The Governor came up to the Government of India, and suggested that the Mahratta Horse should be abolished, as not being absolutely required, to which the Government of India consented. Subsequently, the Bombay Government applied for a small body of cavalry to serve as the Governor's escort, the source from which one had hitherto been derived having been abolished.

3658. Sir *G. Balfour* (to Mr. *Kellner*).] Are you now prepared to hand in a revised statement of

of the total military expenditure in India and in England during a series of years?—Yes.

3659. And will you explain what variations there are in that revised statement?—I wish to put it in substitution of my previous statement.

3660. *Chairman.*] You have reconsidered the statement that you handed in before, of military charges and receipts in England and India?—Yes, the difference between this statement and the previous one, is caused by the fact that it was considered convenient to put the charges for stores, which since 1865-66, appear in the home accounts, and previously to that appear in the Indian accounts, for the entire series of years in the home accounts; that naturally caused a discrepancy between the statement and the accounts laid before Parliament.

Colonel *A.B. Johnson*, and Mr. *G. W. Kellner*.

9 May 1873.

3661. The object being to make the comparison on the same basis?—Yes, practically it is very much the same, but there were certain other minor differences of adjustment; but I desire to adhere to the Finance and Revenue Accounts laid before Parliament. (*The Statement was handed in, and is as follows:—*)

STATEMENT of the MILITARY CHARGES and RECEIPTS in *England* and in *India*, connected with the ARMY in *India*, for the Year 1856-57, and for the Years from 1861-62 to 1871-72, with the Estimates for 1872-73 and 1873-74.

YEARS.	Gross Charges.		Total Gross Charges.	Receipts.		Net Charges.		
	England.	India.		England.	India.	England.	India.	Total Net Charges.
	£.	£.	£.	£.	£.	£.	£.	£.

1873-74 (Budget) - -	3,679,100	11,844,900	15,524,000	13,000	857,000	3,666,100	10,987,900	14,654,000

3662. Will you be good enough to give the Committee an account of the expenditure under Grant 4, for the Commissariat Establishments, Supplies and Services; what was the expenditure under that head in 1856?—It was 1,470,391 *l.*

3663. And what was it in the last year?—In 1871-72 it was 1,929,369 *l.*

3664. Now will you explain first more fully what this grant comprises?—It comprises the pay of the officers of the Commissariat Department, of the Native establishments, also the cost of Commissariat supplies and stores.

3665. When you say officers, you mean non-commissioned officers as well, do you not?—European commissioned and non-commissioned officers, and all the Native subordinate establishments connected with the supply and transport of the army, the cost of provisions and forage, the maintenance and hire of transport cattle, and the provision of sea, river, and land transport. I may mention that the increase of expenditure under this grant is due to the presence of a larger British force, the Indian commissariat being employed mainly for provisioning the British troops in the country.

3666. Then is the character of this expenditure also affected by the prices of provisions?—Yes, it is affected by any abnormal causes—a year of famine, for instance, or any time of war.

3667. The special expenditure you mean, for getting supplies is affected then?—Yes.

3668. What was the expenditure in 1861-62, under this head?—£. 2,566,490.

3669. Was that year a settled year, or was it still affected by the proceedings consequent on the mutiny?—The effects of the mutiny were no doubt experienced in that year, and there was a larger European force in consequence.

3670. Then may we take 1862-63 as a year free from the disturbance of the mutiny?—Yes, the charges amounted in that year to 2,343,893 *l.*

3671. And what were they in 1863-64?—£. 2,299,739.

3672. How was that reduction caused?—There was a less purchase of supplies in that year 1863-64, owing to the utilisation of surplus stores previously laid in for a larger force.

3673. What was the effect of that upon 1864-65?—In 1864-65 the reserve stock had to be increased, and the charges of the Umbeyla campaign raised the expenditure under this grant by 53,580 *l.*

Colonel *A. B. Johnson*, and Mr. *G. W. Kellner*.

9 May 1873.

3674. Was there any special rise in the price of commodities and supplies in that year?—Yes, in the price of grain, necessitating compensation for dearness of provisions to the Native army in Bengal. I may mention that any compensation given for dearness of provisions affects this particular Grant as regards the Bengal troops only; the corresponding charges for Bombay and Madras occur in another part of the estimates, namely, Grant 14, or Miscellaneous. Then, there was a large increase in the feed of horses in all the three Presidencies, in consequence of the dearness of grain.

3675. Was that the whole of the increase of expenditure?—Yes.

3676. Was there any diminution?—Yes; there was a less outlay for malt liquor. The malt liquor used to be purchased in this country, and partly paid for here and partly in India, but there was a less quantity supplied in that particular year.

3677. Did it produce a considerable reduction?—Yes, to some extent.

3678. What was the nett result?—The nett result was that the commissariat expenditure in 1864-65 was about 100,000 *l.* in excess of that in 1863-64.

3679. What was the expenditure in 1865-66?—There was an exceptional outlay for malt liquor in this year, exceeding that of the previous year by 186,000 *l.*

3680. For what purpose?—To bring up the reserve stock. There was a less purchase in 1863-64, reducing the charges of that year, and in order to bring the reserve stock up to the established proportions, there was an increased outlay in 1865-66.

3681. Were there any special charges in that year 1865-66?—Yes, the charges of the Bhootan campaign. I may mention that in time of war the Commissariat Grant is the grant that is principally affected by any military operations.

3682. What was the charge which that expenditure caused?—£. 363,000 for the Bhootan campaign.

3683. Were there any charges on account of scarcity?—Yes, there was scarcity experienced in the Bengal and Madras Presidencies, and a very considerable rise in the prices of all articles of commissariat supply in Bombay, owing to the prevailing commercial speculations.

3684. What was the effect upon the whole grant?—It raised the expenditure to the highest point it has ever yet attained, that is 3,126,633 *l.*

3685. What was it in 1866-67; that was an exceptional year of 11 months, was it not?—Yes, it was an exceptional year of 11 months, but the effect of high prices was felt in this year, and there were arrear charges on account of the Bhootan campaign amounting to a very considerable sum. I have a statement of the cost of the various campaigns so far as they affected the military expenditure during the whole period under review, which I shall put in before the Committee.

3686. What was the expenditure for the 11 months?—£. 2,565,700.

3687. Then, passing to 1867-8, what was the expenditure in that year?—£. 2,159,190.

3688. How was that great reduction effected?—There was a general fall in prices, owing to a more favourable season; and a very large sum was taken off this particular Grant by the transfer of the cost of malt liquor to the home charges.

3689. It was not any saving or economy, therefore, but a mere shifting of expenditure?—It was a mere shifting of expenditure from the Indian to the Home accounts.

3690. Was there any other transfer?—The cost of the Hyderabad Contingent was taken off the military estimates and charges.

3691. Was there any temporary relief felt in consequence of the Abyssinian expedition?—Yes; in consequence of the Abyssinian expedition the commissariat saved the cost of provisioning the troops drawn for service in Abyssinia.

3692. Was that an absolute saving to the Indian Treasury?—Yes.

3693. Then, in point of fact, the Indian Treasury rather benefited by the Abyssinian expedition?—To a certain extent it did, certainly.

3694. What occurred in 1868-69?—That was another year of scarcity; the cost of compensation for dearness of provisions and forage in the Bengal Presidency increased by about 40,000 *l.*; then there was a large increase in this year for the Hazara campaign of about 80,000 *l.*, and a considerable increase in railway transport charges amounting to about 138,000 *l.*

3695. (To Colonel *Johnson*). What was the cause of that increase in railway charges?—It is mixed up with the whole question of the inland transport, which is one of the very large items of increase. (Mr. *Kellner*.) In consequence of the establishment of the Overland Troop Service the reliefs to and from England are now all effected through Bombay; the relieved and relieving troops are carried from and to every part of India through Bombay.

3696. (To Mr. *Kellner*). But in former times the troops would have on an average a considerable journey to any port of embarkation, would they not?—Quite so, and we now carry them by rail.

3697. But were they not previously carried by rail to the port of embarkation?—No, only since the completion of the railway system, and the connection of the other Presidencies and Provinces of India with Bombay.

3698. Supposing the troops were in Peshawur, they would either be embarked at Kurrachee or in Calcutta in the former state of things.—Yes.

3699. Then they would have been conveyed by railway as far as they could have been to those ports?—No; there were no railways then, and there is a considerable difference in the cost of railway transport as compared with marching.

3700. But in 1868-69, the railway from Delhi was complete, was it not?—Yes.

3701. And some two or three years previously?—Yes; but now they are all taken to Bombay. (Colonel *Johnson*.) When they went to Kurrachee, they were taken by river generally; they hardly went any part of the distance by rail.

3702. (To Mr. *Kellner*.) But all in the Valley of the Ganges, went to Calcutta by rail?—Generally.

3703. And there is very little difference in the distance from the North Western Provinces to Bombay as compared with the distance to Calcutta?—The troops in Lower India would be embarked in Calcutta, and Madras troops at Madras; but now they are all carried by rail to Bombay.

3704. The average distance to Bombay from all the stations in India has to be compared with the average distance from the station of the four ports of embarkation?—Yes.

3705. Do you understand that this charge of 192,000*l.* is the gross sum paid to the railway companies, or is it the net increase after deducting what would have been paid for all the commissariat transport?—It is the gross increase in railway charges.

3706. But then would you not have, in order to arrive at a just view of the expenditure, to deduct all the commissariat supplies and transport which would have been provided under the old system?—Yes, to a certain extent; but the old means of transport are still maintained to a certain extent.

3707. But not to the same extent as formerly?—No.

3708. What I want to know is, whether any attempt has been made to prepare an accurate statement of account, showing what would have been the exact charges if this new system had not been introduced as compared with what has been under the new system; or are you giving us merely the gross increase of charges in the railway debited to this?—Yes; I am giving you only the gross increase; but I think that there is a statement which I commenced in India, showing the relative cost of transport by railway of a regiment of infantry, and the cost of marching the old way; the cost of railway transport is of course considerably greater.

3709. That is subject to the further question of the expense of getting the troops to Bombay, instead of getting them to the several ports of embarkation formerly used?—Yes.

3710. I meant have you prepared any statement showing the result of carrying them to the old ports without railways, and the present mode of carrying them to one port by railway?—No.

3711. Mr. *Cave.*] To complete that calculation, you would have to take the difference in cost of sending a troopship to Calcutta or Bombay, I suppose?—Yes.

3712. The cost of coals, for instance?—Yes.

3713. *Chairman.*] That is another point, the coaling in the cost of Marine Transport?—Yes.

3714. We should like if you could give us any distinct statement of what effect the railways have had, in reducing what may be called the establishment of the commissariat for transport purposes which is charged to this Vote, I mean the regular establishment in barracks and other ways?—I am afraid that there has been no corresponding reductions there.

3715. But can you tell us what has been the reduction, and what is the charge now for railway transport?—I will endeavour to ascertain that.

3716. You had an expenditure of a two-fold character; one an expenditure for what may be called the Commissariat Establishment; another an expenditure under running contracts, which were only paid for work done?—Yes.

3717. That last item would of course be entirely saved to the extent of the work saved?—Yes. There are the moveable column establishments maintained at certain military centres; the camel and other carriage is hired besides, as required.

3718. But we want to know how far the fixed establishments have been increased or diminished, since the railways have been used; that you will ascertain?—Yes.

3719. Now, you have been giving us the expenditure in 1868-69 under Grant 4; what was the expenditure in 1869-70?—In 1869-70 the expenditure amounted to 2,425,745*l.*

3720. That was an increase over the previous year, of how much?—£. 62,000. There was an increase on the one hand of the cost of provisions for British troops, and the feed of army and commissariat cattle, compensation for dearness of food and forage to Native troops, and the extra cost of establishments.

3721. What does that amount to?—All those items amounted to about 215,400*l.* in the Bengal Presidency alone.

3722. What is the reason of that increase of expenditure?—An unfavourable season, a year of famine; then this was partly counterbalanced by a less outlay for reserve stock, for hire of transport, and for water and railway carriage.

3723. What was the saving in that respect?—£. 192,000, leaving a net increase of about 23,400*l.* over the commissariat charges in Bengal for 1868-69.

3724. Was there any change in Madras?—The extra cost of provisions for Native troops, feed of cattle, purchase of live stock, and railway charges, amounted to 30,000*l.*

3725. Was there any saving affected in Madras?—There was less outlay for rum and arrack, and hire of transport, to the extent of 8,000*l.*, leaving a net increase in Madras of 22,000*l.*

3726. In Bombay, was there any increased expenditure?—There again, there was the extra cost of provisioning Europeans and Natives, feeding cattle, purchasing reserve stock, hiring of transport, and sea and inland water carriage, which amounted to 69,000*l.*

3727. That is all exclusive of the regular service?—Yes, all were extra charges; there were less payments on the other hand for malt liquor, rum, and arrack, and railway carriage, making the net increase in Bombay over the previous year, about 16,600*l.*

3728. What was the total increase in the year?—The total increase over 1868-69 was 62,000*l.*

3729. What was the expenditure in 1870-71?—It was 2,195,134*l.*, a decrease which was owing to favourable seasons and a general fall in prices, and to the effect of the military reductions ordered in the autumn of 1869.

3730. That is reductions of strength?—Yes.

3731. Was there any counterpoise to that in the way of a charge?—There was an increase of 65,000*l.* in railway and water transport, 7,000*l.* in the purchase of spirits for the troops, and 13,000*l.* in giving provisions in kind to the Native troops on the North Eastern Frontier, in lieu of money compensation.

3732. What was the reduction in the Bengal Presidency?—There was a saving of 112,000*l.* in establishments, provisions, hire of transport, reserve stock, cattle gear, and miscellaneous charges, and a reduction of 175,000*l.* in compensation for dearness of food and forage, and keep of army and commissariat cattle.

3733. Had you any further reduction?—The commissariat charges in 1870-71 exhibited a net reduction of 201,000*l.*

3734. Is that for Bengal only?—Yes.

3735. In the other Presidencies what were the reductions?—In Madras the charges remained much the same as in the previous year; in Bombay the charges for establishments, provisions for Europeans, feed and gear of commissariat cattle, malt liquor and spirits, exhibited a reduction of 48,000*l.*; there was on the other side an increase of

Col. *A. B. Johnson* and Mr. *G.* W. *Kellner.*

9 May 1873.

of 19,000 *l.* in railway charges, feed of horses, and purchase of reserved stock, giving a net reduction of 29,000 *l.*

3736. Have you the charges for 1871-72, under this grant?—Yes, 1,927,269 *l.*

3737. How was that reduction effected?—It was in various items, chiefly in supplies of provisions for Europeans, which exhibited a considerable decrease on the previous year.

3738. Was there not in this year a transfer of the Hyderabad Contingent?—No, that occurred in 1867-68.

3739. The reduction from the previous year amounts to 200,000 *l.*?—Yes, owing partly to the presence of a less number of European troops in the country, also to lower prices, and economical arrangements.

3740. Will you just compare then the expenditure of 1871-72 with the expenditure of 1862-63 and 1863-64?—The actual commissariat charges for 1862-63 and 1863-64, averaged 2,321,816 *l.*

3741. What is the decrease from that amount in the year 1871-72?—The commissariat charges in 1871-72 amounted to 1,929,369 *l.*

3742. But for the purpose of comparison have you not to put in the Hyderabad Contingent?—Yes, the accounts of the earlier year included the Hyderabad Contingent commissariat charges and the malt liquor; together, I should say that they would amount to about 350,000 *l.*; if you add 350,000 *l.* to the 1,929,369 *l.* spent in 1871-72, you get a total of 2,279,370 *l.* in 1871-72, and the actuals for 1862-63-64 averaged 2,321,816 *l.*

3743. That would show a decrease of 42,446 *l.* in 1871-72, under the head as compared with those years?—Yes.

3743.* Sir *G. Balfour.*] And I think you have got it down lower since?—Yes; we have got it down lower since; there has been general economy, especially in the arrangements for the provision of bread and meat for the troops.

3744. *Chairman.*] Still, that is a small reduction, having regard to the decrease of force, is it not?—Yes.

3745. Mr. *Dickinson.*] But there is a more rapid relief now than there was?—Yes, a much greater expense in relief.

3746. *Chairman.*] Still, as regards the force, it is a greater expenditure per man?—Yes.

3747. As regards the mere food of the men, and charges of that kind, the sum due per man would produce a much greater reduction than this; and how, therefore, has that reduction been counterbalanced in this expenditure?—In higher prices, for instance.

3748. Do you suggest that the rise in prices has been such as between 1862-63 and 1871-72, as to account for the whole increased expenditure per man; or are there other causes which have produced increased expenditure?—There are other causes. We have improved the rations, for instance; the soldier has better food.

3749. But are there any special increases of expenditure in connection with this grant?—Yes; chiefly in transport.

3750. Will you explain that?—For instance, the annual reliefs are now effected by railways; for the most part British regiments are carried by railway. When it is remembered that about 20 British regiments are relieved annually throughout India, that will account for a large expenditure.

3751. That is, you mean removals in India?—Yes; the annual reliefs in India generally include about 20 British regiments, and these are for the most part effected by means of the local railways. Then, in addition to these, the British troops going home are all carried by railway to the port of embarkation, whilst the relieving troops are carried from the port of debarkation to their respective stations by railway. If I said 24 regiments that would include the reliefs from England, but 20 is about the number of annual reliefs within India. (Colonel *Johnson.*) For three years, 1862-63, 1863-64, 1864-65, it was 14 battalions of artillery, $3\frac{2}{3}$ regiments of British cavalry, $19\frac{2}{3}$ regiments of British infantry, $1\frac{1}{2}$ companies of Sappers and Miners, $6\frac{1}{3}$ regiments of Native cavalry, and 19 regiments of Native infantry; for the eight years 1865-66 to 1872-73, it was 21 batteries of artillery, $2\frac{3}{4}$ regiments of British cavalry, 24 regiments of British infantry, $1\frac{1}{2}$ companies of Sappers and Miners, six regiments of Native cavalry, and $14\frac{1}{3}$ regiments of Native infantry.

3752. (To Colonel *Johnson.*) Has there been any change in the rule in the reliefs as to the length of time which troops remain in a station?—Yes, they remain now a considerably shorter time than they did before the Mutiny. Ordinarily, a British regiment only remains three years in a station now; formerly, and particularly with the British cavalry, they remained even 15 to 18 years in the same station; but then there were only two regiments.

3753. Mr. *Dickinson* (to Mr. *Kellner*).] Have you any calculation of what the average distance of the reliefs of the regiments is?—No; I daresay I could get it, but I have not prepared it.

3754. *Chairman.*] Could you give us a view of the difference of expenditure in 1871-72, as compared with the average of 1863-63 and 1863-64, for the transport services of the commissariat?—There has been an increase of 235,460 *l.*

3755. Will you give us a summary of the expenditure at both periods?—£. 619,828 for 1871-72, and in 1862-63-64 it was an average of 384,365 *l.*; that shows an increase of 235,460 *l.*

3756. Now can you give us any illustration of this increased expenditure in transport to show how this is brought about?—Yes; as I mentioned, the annual reliefs would account for it, to some extent.

3757. But have you any particulars to show how it has mounted up in this way?—Yes; the cost of conveying a regiment of British infantry a certain distance would be more than double the cost of marching.

3758. Can you give us any idea what it would be per mile under the old system, and what under the new?—It is 4 *l.* 10 *s.* per mile by railway, and it would be less than half that sum by marching. Then I should wish to mention that the Overland Troop Transport Services between Bombay and England require the concentration at Bombay of all the reliefs to and from England. Again, the cost of transport by railway of Ordnance *materiel*, machinery, malt liquor, army clothing, medical supplies, barrack and other military stores, is very considerable. I have a detailed statement for the year 1871-72, showing the transport charges on account of officers and troops of the British and Native Army, and for the carriage of war *materiel* of every description. I will put that in.

Tuesday, 13*th May* 1873.

MEMBERS PRESENT:

Mr. Ayrton.	Mr. Grant Duff.
Sir George Balfour.	Mr. Eastwick.
Sir Thomas Bazley.	Sir James Elphinstone.
Mr. Beach.	Mr. Fawcett.
Mr. Campbell-Bannerman.	Mr. Hermon.
Mr. Stephen Cave.	Mr. Lyttelton.
Mr. Baillie Cochrane.	Mr. M'Clure.
Mr. Crawford.	Mr. John B. Smith.
Mr. Beckett Denison.	Sir D. Wedderburn.
Mr. Dickinson.	Sir Charles Wingfield.

THE RIGHT HON. ACTON SMEE AYRTON, IN THE CHAIR.

Colonel ALLEN BAYARD JOHNSON and Mr. GEORGE WELSH KELLNER re-called; and further Examined.

Colonel *A. B. Johnson* and *Mr. G. W. Kellner*.

13 May 1873.

3759. *Chairman* (to Colonel *Johnson*).] HAVE you any further explanation to give with reference to the increased cost of the inland transport?—Yes; I should like to make some general remarks in continuation of what was said at our last meeting. The expenditure was shown to have been in 1861–2, 390,549 *l.*, and in 1871-2, 619,824 *l.*, or an increase of 77 per cent. This increase has been in great degree inevitable, but is not, I think, progressive, it having been lower in 1871–2 than in any previous year since 1864–5; between that year and 1865–6, it jumped from 383,664 *l.* to 699,239 *l.* I am unable to give the figures, or to distribute the rates of each item of increase; but generally, I believe that they may be placed under the following heads: 1st, military operations; 2nd, the re-introduction of a fixed system of reliefs; 3rd, the establishment of the troop ships; 4th, the extension of railway communication; 5th, the extension of hill stations and sanitaria, and the employment of European working parties in the hills; 6th, the transfer of charges to this head; 7th, the general rise in the cost of carriage and wages of establishments; 8th, the assistance it was found necessary to afford the soldiers' families; 9th, a similar concession to native troops proceeding to their homes on sick furlough; 10th, the great increase in the stores, ordnance, medical, machinery, &c., which it has been necessary to transport since 1865; 11th, the organisation of the system of cholera camps; 12th, the increased number of invalids sent home. There may be some other causes which do not, however, occur to me at present. First, as regards military operations; these, of course, if undertaken on any scale, or at any distance, or for a prolonged time, involve a very material addition to the cost of inland transport; for on each occasion not only is probably the bulk of the force moved to the base of operations by rail, but the entire charge for the conveyance of all stores and supplies for the extra establishments connected with the provisioning of the force falls on this grant. Thus the year 1865–66, which showed the first marked increase in the rates of inland transport, was the year of the prolonged war in Bootan, which cost altogether 363,000 *l.*, a large proportion of which was certainly for inland transport. That there was no such increase in 1863–4 during the short Umbeyla campaign, is probably due to the fact that the troops were at hand, and that there were no railways above Delhi; that a large proportion of the native corps engaged had their own establishments of mules; that they were close to their supplies, and that it only cost altogether 53,580 *l.*; a very small proportion of which was, I take it, chargeable against inland transport. Second, as regard reliefs, I gave on Friday what the average relief had been for the three years 1862–3, 1863–4, and 1864–5, and for the eight years 1865–6 to 1872–3. I would add, that these include all movements to and from England, and corps proceeding to Abyssinia.

3760. When you say proceeding to Abyssinia, you mean proceeding to the port for the purpose of going to Abyssinia?—Yes. (Mr. *Kellner*.) They went from the Bengal as well as from the Bombay Presidency. (Colonel *Johnson*.) These reliefs include also in 1868–9, the return from the port of debarkation of that force. They do not include movements of corps proceeding to camps of exercise otherwise than in relief, nor troops proceeding on service. The length of rail opened in 14 years between 1858 and 1871, rose from 332 miles to 4,778, namely, 1,506 miles in Bengal and the North Western Provinces; 854 in Madras; 1,412 in Bombay; and 674 in Scinde and the Punjaub; or an increase of 4,446 in all. Formerly, reliefs from England took place at longer intervals, and for far fewer troops; so that before the Mutinies, and for some time subsequent to them; until, in fact, the regular system of

Colonel *A. B. Johnson* and Mr. *G. W. Kellner.*

13 May 1873.

reliefs was organised, regiments remained for long periods together in the same station; sometimes for as long as five years; in the cavalry, even longer. Now the more frequent relief of troops from England, and through one port, necessitates a movement throughout India, in the distribution of the troops arriving, and the relief of those leaving India; for I need hardly point out that it is rarely feasible to effect a direct relief of the departing by the arriving regiment.

3761. (To Colonel *Johnson.*) May we understand that the system of more frequent reliefs has been adopted for the efficiency of the army?—Certainly.

3762. Was it considered necessary for the maintenance of discipline?—It is a disputed point. Proposals were made by the Government of India in 1868, at the instance, I believe, of Sir William Mansfield, that the tour of Indian service of a British regiment should be extended from 10 to 17 years; and of cavalry, from 11 to 15 years. The objections shown to this proposal on sanitary and military grounds were so strong that the measure was abandoned as impracticable. I mentioned that all the debarkations and embarkations are made at one port of troops arriving from and proceeding to England, that is. The question of using Calcutta and Madras was discussed and rejected on apparently sufficient professional grounds. Rangoon and Beypore have, however, been used on occasions; but these make no great difference in the charges for inland transport. The third reason I named was the greater use of railways instead of route marching. This no doubt adds very greatly to the charge for inland transport; for the railway rate, which, as Mr. Kellner has informed the Committee, is for a regiment of British infantry, 4 *l.* 10 *s.* a mile, is double that of route marching. If, therefore, you add to this double rate, the larger number of troops moved, and the greater extent of line traversible, the item becomes formidable. I believe I am not allowed to urge that, in the case of guaranteed lines, the money thus spent goes in great part back to the pocket of the State, and that in this view it is actually less cost to the State to move troops by rail than by line of march; less, in fact, by 22 per cent.

3763. That is provided that the railway companies are not making a dividend in excess of their guaranteed interest?—Yes.

3764. Mr. *J. B. Smith.*] Which is the case, is it not?—I believe that very generally the railways are not paying anything over the 5 per cent.

3765. And therefore anything received for the transport of troops is so much given to the Government?—So much given to the public. (Mr. *Kellner.*) So much debt repaid.

3766. Mr. *Fawcett* (to Colonel *Johnson*).] But then, on the other hand, railways, like some of the railways which are merely military railways, involving a very heavy charge on the revenue of India, ought to be put down to military expenses, like fortifications?—Possibly.

3767. *Chairman.*] Have you anything further to add on this subject?—I would add that, whether or no, it is inevitable, that where lines of railway exist they will be more or less used for troop movements. If they were never to be used except in time of actual war, it is very improbable that they would then be provided with rolling stock or establishments for the proper performance of the special work required by them; nor would the staff, or the regiments themselves, have any idea of what to do when required to proceed at a few hours' notice by rail. But putting this aside, it is absolutely necessary to make very large use of railway communication for the movement of troops. With the reduced Native army we have in India, it is necessary to carry them over great distances to effect proper reliefs, that is, reliefs which shall give them a tour of their own country, and their turn of less agreeable quarters; while, from circumstances which cannot be controlled, it is obligatory to move the English reliefs to and from Bombay, as well as the invalids and time-expired men *en route* for England, by rail. In fact, with the best efforts not to use rail when the road could be taken, I doubt whether a third, or even a quarter, of the miles covered by British soldiers in each year could possibly be performed otherwise than by rail.

3768. Have you got any Tables showing the number from year to year of the invalids and time-expired men sent to England?—Yes; from the Sanitary Reports.

3769. Will you put that in a Table?—Yes. I admit that I have no precise data on the point of the number of miles that are covered by rail, that might be by route marching; but a Return giving this information might perhaps be made up in India. The charge for the use of rail on account of the Bombay reliefs, that is, the overland troops, is an addition to this head of inland transport of some 168,000 *l.* a year, and this is, I believe, susceptible of little if any reduction. In the next place the operation of the extension of hill sanitaria and depôts in increasing the land transport charges is simple. The need to give each European corps its tour of the hills, and to give them as short a tour as possible of unhealthy stations, such as Morar or Peshawur, necessitates also the frequent movement of troops. British infantry occupy hill stations only two years, and unhealthy ones for the same time or even less. So long, therefore, as the increase in hill stations does not reach a certain limit, their increase will necessarily increase the number of two-year stations. So with depôts; the more there are, the more invalids will be carried there by rail or line of march. Lately, too, the number of movements to depôt is increased by the adoption of a plan of sending two or more sets to a depôt during a season when practicable; thus for a depôt constructed to hold 500 men, 1,000 or even 2,000 men may be carried backwards and forwards in the year. I need not point out that though these items swell the charge for land transport, their economy in every other respect is conspicuous. The same may be said of the small extra charge involved in the employment of working parties in the hills. The advantages immeasurably outweigh the small drawback of expense. Then the transfer of charges from other heads has been explained by Mr. Kellner.

3770. Sir *G. Balfour.*] What stores have been transferred to other heads besides malt liquor?—Under their own heads, they were all charged to the cost of the stores.

3771. What was charged?—The cost of carriage; malt liquor and other stores were despatched by Government steamers.

3772. Were the spirits ever charged in any other department besides the Commissariat?—I am not aware. The amount now brought under the head of land transport which did not appear

under

under it before is very considerable, when you remember the thousands of hogsheads that you have to carry over so many hundred miles.

3773. Was it ever in any other branch, excepting the Commissariat?—No; but I am merely referring now to the increased cost of inland transport.

3774. But was inland transport charged for in any other branch besides the Commissariat?—I do not know. (Mr. *Kellner.*) No, it was not. (Colonel *Johnson.*) Still it is a fact that the inland transport, as a separate charge, has increased very largely, and it seems desirable to explain in what respect.

3775. Sir *G. Balfour* (to Colonel *Johnson*).] I was anxious to ascertain what charges have been transferred from this Commissariat Vote, excepting malt liquor?—Spirits.

3776. What charge has been transferred?—The charge for the conveyance of spirits is now shown as separate from the cost of the spirits; formerly it was included in the cost of the spirits. My object is to show why there has been apparently only as well as actually a great rise in expenditure for inland transport. (Mr. *Kellner.*) I think what Colonel Johnson means to say is this, that formerly the spirits and malt liquor charges were included in the cost of the respective articles, and adjusted in the Indian Accounts under this Commissariat Grant. The cost of the malt liquor (and of rum in the case of Bombay) is now written off in the Home Account, and therefore the expense of transport to the different stations of the army is a distinct charge in this Commissariat Grant. In the same way, the charge for transport was added to the cost of spirits formerly; it now is shown as a distinct item in this Commissariat Grant.

3777. Mr. *Eastwick* (to Mr. *Kellner*).] It is merely swelling the transport charges, in fact?—Yes, distinguishing them from the cost of the articles carried.

3778. Sir *G. Balfour.*] The transport of beer and spirits was invariably a transport charge?—Yes.

3779. And in the same manner with regard to the spirits?—Yes.

3780. And the same practice was followed in 1861-2 as at the present day?—Yes.

3781. And therefore we have no difference in the mode of charging the transports included in the Commissariat Vote?—There is this difference, that the transport charges are now shown as distinct from the value of the article that is carried, though they both occur in the same Grant as they did before.

3782. Have we got in the accounts a distinct head showing the charge for the transport of beer separate from the transport of stores?—We have it now distinct for 1871-2; but I am afraid that is not available for the earlier years. I have a distinct statement, showing what the cost of the transport of beer in the year 1871-2 was.

3783. But, excepting for that one year, we have never had these detailed statements prepared?—No.

3784. And the charge for inland transport was included in the Commissariat charge in former years?—Yes.

3785. *Chairman* (to Colonel *Johnson*).] What is your next point on this subject?—My next point refers to the general rise in the cost of carriage and wages, which is established, I think, and need not be insisted on. It includes also the increased cost of feeding cattle and draught, which are borne on this Grant.

3786. Mr. *Fawcett.*] Do you give any estimate of the increase of wages?—Not at present.

3787. Sir *G. Balfour.*] Can you tell us how many troops were moved in the year 1861-2 and 1862-3?—I am not certain that I can.

3788. You are aware, are you not, that from half to two-thirds of the whole European force was moved in those years?—No, I am not.

3789. Then perhaps you would kindly furnish the Committee with some information to enable them to judge of the comparative movements?—I have given the number of regiments.

3790. If you would take some particular year, we could compare it with a later year?—I will furnish the relief orders of the three Presidencies for any given year that is necessary.

3791. Will you compare 1861-2 and 1862-3 with the two latter years?—Yes, if I can find the reliefs for 1861-2, I will.

3792. Can you give us any statement of the movement of the troops for the Umbayla campaign, all those corps that were brought up either to take part in the operations or to support the force in the hills?—It can be procured, no doubt.

3793. Can you give us any details there connected with these various increases which you have stated to us?—Yes, I hope so; I have merely drawn up at present a general statement of the general principles on which the increase has occurred.

3794. Has the movement of troops to Bombay, necessarily connected with the transport ships between England and Bombay, been the cause of an increased charge, do you think?—Yes, if you accept as an increased charge the movement of troops by rail instead of line of route.

3795. Do you think that selecting Bombay as the head-quarters for the reliefs between England and India, and moving all troops to Bombay from England and from Bombay to all parts of India, has added to the cost of the overland transport?—Certainly, I should think.

3796. Have you any idea what that increased cost is?—I have given that; at this moment I cannot say the authority, but I said that it was 168,000 *l.* a year.

3797. Did that include the batta for the troops, and the detention of the troops also in India?—I presume so.

3798. Then that is all the increased cost of the transport service?—Possibly; I got this information from some authority which satisfied me at the time.

3799. I was anxious to see in what way I could ascertain from the accounts the financial results of the opinions which you have so clearly expressed?—I suppose it could be done, but it would be extremely laborious to give detail by detail, item by item; I think the general view may be gathered and accepted.

3800. *Chairman.*] Would you not have to estimate the cost of the hypothetical operation of sending the troops to the port of embarkation under the old system, as compared with what has taken place under the new?—Yes, and under the old system with entirely different conditions.

3801. Mr. *Eastwick.*] I want to know why this charge was made as to landing the troops all at Bombay instead of sending them round to Calcutta?—I have said that it was discussed, and

Col. *A. B. Johnson* and Mr. *G. W. Kellner.*

13 May 1873.

it was decided on professional grounds that it was not safe or desirable to send the troops ships to the Hooghly; it was not considered a safe port for those large vessels.

3802. Is that, then, the only ground; is there no other ground but that?—I fancy that there are other grounds, connected with dockyards and marine establishments.

3803. *Chairman.*] And length of voyage?—Length of voyage, certainly, would be one ground; but it is all to be found clearly, laid down, I have no doubt, in the reports which are already before this Committee.

3804. Mr. *Bourke.*] Is there any authority for saying that the new system is more expensive than the old?—I believe that the transport of the individual soldier does cost something more than it did.

3805. Is that all due to the change in the mode of transport?—That I cannot say, because unless you carried men simultaneously now by the old system and the present one, it would be almost impossible to strike any average; it is not a subject, however, with which I have any intimate official connection.

3806. Sir *G. Balfour.*] But you seem to have got up a Paper setting forth very clearly the various changes under this head, and we are only anxious to ascertain where we can get information?—I have stated to the Committee what I have ascertained.

3807. Mr. *J. B. Smith.*] Is not the expense of sending troops by way of Bombay greater than that of sending them to Calcutta?—I presume it is, by sending all troops to one port.

3808. If you send them to Bombay, they have to go along the railway to Calcutta?—A good deal would depend upon the intelligence with which the relief was managed. You move troops to produce as little expenditure as possible, restricting as far as possible the distances or directions in which they shall move.

3809. Have you any calculation or facts to show what is the difference in the expense by way of Bombay to Calcutta, or direct by ship?—No, and I think it would be impossible to give that; it would be a mere hypothesis. (Mr. *Kellner.*) I believe there is no doubt that if the charges were taken together (it so happens that these charges for the overland transport occur partly in the Home Accounts and partly in the Indian Accounts) and, divided by the number of men carried, it would show a considerable increase; but it would be a matter of calculation; we have the materials to a certain extent already.

3810. Sir *G. Balfour* (to Mr. *Kellner*).] Will you read off the cost of the overland transport between England and India?—The following statement exhibits the total charges for sea transport by chartered vessels before the institution of the Transport Service and since; and I may explain to the Committee that the charges occur partly in the Indian Accounts and partly in the Home Accounts. In 1863-64 (these statements do not go further back) the charges in England were 174,357 *l.*; and in India, 286,855 *l.*; giving a total of 461,212 *l.* These are the charges for sea transport by chartered vessels. Then, in 1864-65, in England, the charges were 182,244 *l.*; and in India, 354,853 *l.*, making a total of 536,827 *l.* In 1865-66, in England, the charges were 280,417 *l.*, and in India, they were 340,945 *l.*, giving a total of 621,362 *l.* In 1867-68, in England, the charges were 159,048 *l.*; and in India they were 161,191 *l.*, giving a total of 320,239 *l.* In 1868-69, the charges were 145,359 *l.* in England, and 179,302 *l.* in India, making a total of 324,661 *l.* This reduction of expense for chartered vessels was cotemporaneous with the introduction of the Government troop transports. In 1869-70, the charge in England was 53,465 *l.*, and in India, 149,510 *l.*, making a total of 202,975 *l.* In 1870-71, the charge in England was 49,850 *l.*, and in India, 112,563 *l.*, making a total of 162,413 *l.* In 1871-72, the charge in England was 19,828 *l.*; and in India, 70,212 *l.*, making a total of 90,040 *l.* In 1867-68, the charge for Government troop transports, excluding cost of construction (these are working charges) amounted to 181,684 *l.*, both in England and India. In 1868-69, they amounted to 440,034 *l.*; in 1869-70 they amounted to 340,175 *l.*; in 1870-71 they amounted to 345,139 *l.*; and in 1871-72 they amounted to 300,704 *l.*

3811. Can you supply the estimated cost of the last two years?—Yes.

3812. *Chairman.*] The account is now kept so as to show the whole expenses of the working of the transports separately?—Yes; the outlay for the construction of these troop transports, as charged in the Home Accounts, amounted to upwards of a million sterling.

3813. Mr. *Eastwick.*] Then the interest has got to be added?—Yes.

3814. *Chairman.*] But then, in making that comparison, is it not an element on one side of the question that the troops were maintained for four months, included under the contract system, in the voyage round the Cape, whereas they are only maintained for one month in the system of overland transport?—Yes.

3815. And, as regards persons coming home invalids, they had a prolonged sea voyage, which was highly conducive to the restoration of their health in coming home, whereas now they have a voyage through the Red Sea, which is rather conducive to the other result?—Yes.

3816. Sir *G. Balfour.*] And they arrive in the most unfavourable period of the year in England, do they not?—Yes.

3817. *Chairman.*] On the other hand, it was said that under the old system the Government were deprived of the services of the troops during the four months that they were on the sea, and now they save three months of that time either in India or in this country?—Yes.

3818. The effective result then, as regards men going out, would be that it would depend upon whether discipline and drill could be maintained on board ship in the voyage?—Yes.

3819. The loss of the services must be regarded as an advantage, if the men are invalids recovering?—Yes.

3820. Mr. *J. B. Smith.*] Have you any statement of how much per head it cost [redacted] the two systems. (Mr. *Kellner.*) Colonel Johnson is preparing one, I think. (Colonel *Johnson.*) General Pears gave it in his evidence before this Committee last year.

3821. Sir *G. Balfour* (to Colonel *Johnson*).] And it has been laid before Parliament?—I believe so. (Mr. *Kellner.*) I may state that from the year 1863-64 to the year 1866-67, that is before the institution of the Government Transport Service, the expenditure for sea transport in England and in India together averaged 546,985 *l.* per annum. If we take the expenditure from 1867-68 to 1871-72, adding the cost of transport by chartered

chartered vessels to the cost of transport by the Government troop transports, with interest on the capital expended in constructing the transports, and an allowance for depreciation of stock, we obtain an average annual expenditure of 620,619 *l.*; that is more than 13 per cent. in excess of the expenditure in the years prior to the institution of the Government Troop Transport Service.

3822. Sir *G. Balfour* (to Mr. *Kellner*).] And the European force was greater then than it is now?—Yes; but it is my impression that the reliefs were much less. We now relieve one brigade of artillery, one regiment of British cavalry, and four or five regiments of British infantry, every year, besides the invalids, and time-expired men, and the importation of recruits; whilst formerly, I believe, it was much less; but we have promised to put in a statement of the reliefs at the two periods.

3823. Mr. *Fawcett.*] I should like you to explain this: what does that 390,000 *l.* in 1871-2, which you gave as the cost of the transport, include?—It includes all the working expenses.

3824. Sir *G. Balfour* (to Colonel *Johnson*).] In addition to these charges, you think that the 168,000 *l.* which you mentioned is to be added to that transport service?—That is additional, not in the Grant for the Inland Transport, but it adds that amount to the charge for Inland Transport.

3825. And you think that the Inland Transport for India has been augmented by the necessity of moving the troops?—Yes.

3826. So that the measure of the two systems is to compare the totals?—I suppose so.

3827. *Chairman.*] Are there any further points in connection with the increase of this Grant which you wish to bring before us?—There is next the assistance which it is found necessary to afford soldiers' families in moving. The need for this assistance is great, and caused partly by the rise in rates of carriage, which put it out of the power of a married man to hire a sufficiency for the decent accommodation of his family, and partly by the action of the Government which operated thus. Formerly there was a very large profit to canteens on the sale of rum, where but little beer was obtainable by the men, and their allowance was two drams of spirit. In 1864 Sir H. Rose recommended the Government to encourage the substitution of malt liquor for spirits, and to reduce the allowance to one dram. This was done, but the result was, that as beer is not sold at a profit, the profits of the canteen were materially lessened. As one of the chief objects to which these profits were applied was the assistance of the married women to get carriage on the line of march, it followed that the State had to do it.

3828. Do you happen to know whether, as a matter of finance, the profits were brought in as a casual military receipt and the whole expenditure shown, or whether the fund was administered separately?—It was administered separately.

3829. Sir *G. Balfour.*] Do you think that the malt liquor has increased?—The consumption of spirits only, which is the only point at issue here, has decidedly decreased by a reduction of one-half.

3830. You think half the quantity of spirits only is consumed?—Supposing every man to have taken two drams per diem, he is only allowed to have one; there is a reduction to that extent more or less. Then I may add that the Government gave one bullock cart free between every two married families moving on the line of march. Then there was the assistance also given to the native troops, which was pressed on the Government by successive commanders in chief. It had been the practice in Bombay, and it was found inconvenient that their sepoys born in the North West Provinces should return with a free passage, while those of the same village belonging to the Bengal army had to pay their own passage.

3831. *Chairman* (to Mr. *Kellner*).] To clear up the question of the charges for malt liquor, is the transport charge for the malt liquor added to the price of it in charging the price at the canteen?—No, it is sold at cost price by the Government, and the Government therefore bears the charges for transport.

3832. In point of fact, it is sold at less than it costs the Government to place it in the canteen?—At much less.

3833. Sir *G. Balfour.*] But do the Government lose less now or more than they did in 1861-2?—I think that the cost of transport, if I remember rightly, is more.

3834. The actual outlay, including the prime cost of the malt liquor and the transport charges is now actually less in the account than it was in 1861-2, is it not?—We get the beer cheaper than we did in 1861-2 from England; I think it is very much cheaper now than it used to be.

3835. Then the actual charge in the accounts will be less than formerly?—The transport charges are more.

3836. But still, putting them together, we have a less expenditure falling on India?—In the old time, the malt liquor was carried from Calcutta to Allahabad by Government steamers, and the total charge was shown against the Government Steam or Marine Department.

3837. *Chairman.*] There were no charges made between the Army and the Steam Department?—My impression is that there were not, certainly in the earlier period, 1856-7. It cost in 1871-2, 88,000 *l.* to transport malt liquor alone; that was one item of the transport charges.

3838. Sir *G. Balfour.*] But since 1861-2, the whole charges on account of transport have appeared in the military accounts?—My impression is that the charges were treated similarly in 1861-2 and 1862-3, as in 1856-7. I think we have been more particular in charging accounts to particular services since 1864-5 generally; that is my impression.

3839. Mr. *J. B. Smith.*] Have any experiments been made to endeavour to produce beer in India, in order to save this enormous expense?—Yes; during the last two years the Government have afforded every encouragement to the local breweries; the Murree and Simla breweries have furnished beer to the Punjaub, and I believe the troops in the recent Camp of Exercise at Hussun Abdul expressed a preference for the Murree beer over the English beer.

3840. What is the difference in cost between them?—The cost price of the English beer is very much enhanced by the cost of transport, so that the cost of a hogshead of beer valued at, say, 3 *l.*, on arrival at Kurrachee would be valued at about 6 *l.* 10 *s.* or 7 *l.*, by the time it arrived at Peshawur. The Murree Brewers Company provide beer at a cost of 6 *l.* to 6 *l.* 10 *s.* per hogshead; so that there is not much difference between the two.

3841. *Chairman.*] Do you mean that that is

Col. *A. B. Johnson* and Mr. *G. W. Kellner.*

13 May 1873.

the supposed real cost of the beer there?—It is the price they put on it. An endeavour was made to reduce the rates; but it is the price which they get from the public.

3842. Have the Government made any experiments to ascertain the real price of producing beer in India?—No; the Murree Brewery Company is quite a new enterprise.

3843. Sir *T. Bazley* (to Colonel *Johnson*).] Do they import their malt and hops?—They make their own malt, and import their hops, I think.

3844. Mr. *Eastwick* (to Mr. *Kellner*).] Is it known what profit they make?—No; but I have understood that they make a very fair profit. We have not had much beer from them. I think not much more than 4,000 hogsheads in the year.

3845. Mr. *Denison.*] But then in this case you do not run the risk of wastage to the beer, which used to be very enormous?—It used to be very enormous; we do not run that risk with the beer produced in India.

3846. *Chairman.*] Do you think that it may be looked upon as an important economy to obtain the beer made in the northern part of India?—It is quite an experiment for the present. I may say, however, that in considering the question, the Government had statements before them to show that the cost of transport was enormous, especially from Kurrachee, and that the cost of the beer would be considerably reduced by adopting other means of transport, that is, by landing it at Bombay, and sending it to destination by rail or bullock train.

3847. To get it on the line of the Ganges Valley?—Yes. (Colonel *Johnson.*) Lord Mayo, I know, was under the impression that it would hereafter be a source of economy.

3848. Mr. *Denison.*] There was a very old established brewery at Mussourie; is that gone now?—Yes; they have other breweries now at Simla and Kussowlie, and they depend on them for a supply of beer.

3849. *Chairman* (to Colonel *Johnson*).] As regards the transport, what is your next point?—I was speaking of the assistance given to the natives proceeding to their homes on sick furlough. This was pressed on the Government by successive commanders in chief. It had been the practice in Bombay, and it was found inconvenient that their Sepoys born in the North Western Provinces should return with a free passage, while those of the same village belonging to the Bengal Army had to pay their own passage. There were other reasons, such as popularising the service, and sanitary persuasion, which induced the concession. The amount cannot be great, but I cannot say how much. Personally, I would not have made the concession; I think it is more sentimental than necessary. Then, as the next point, the increase in the amount of stores, the carriage of stores and machinery, has been considerable. Since 1864-5 this increase forms a considerable item in this charge. I have obtained from the Store Department of the India Office a Return which shows the value of the several classes of stores furnished from 1860-61 to 1867-8. In 1862-3 the cost was 258,196 *l.* In 1867-8 (for I could not obtain the figures from the office for a later date) it was 640,040 *l.*

3850. And those stores, for the most part, have to be distributed throughout India from the ports of landing, have they not?—To a great extent. I should say that the cost of 1867-8 includes malt liquor. If you take 1864, when the cost of the stores imported was 218,789 *l.*, as the year in which the stock in India was at its lowest since 1853-4, and 1868, when the reserve stock having been nearly replaced, the demand was not abnormal, you get this result, that the cost of stores from England in 1864 was 218,789 *l.*; in 1868 it had risen to 316,000 *l.*

3851. That is excluding the malt liquor?—Excluding the malt liquor. The increase being in machinery, ordnance, provisions, small arms, and so on. There is a further cause to be noted under this head, the institution of cholera camps, which are the practical outcome of the only discovery that the doctors have made in respect to cholera, that the only hope of avoiding it is to leave the cantonment.

3852. You mean, to leave the cholera behind?—Yes. As soon as cholera declares itself, the troops hold themselves in readiness to leave the cantonment by rail or by march, or by both.

3853. Sir *G. Balfour.*] Is that a new discovery, do you think?—I am not at all certain, but it has lately been brought anew into practice.

3854. I remember it in existence 45 years ago?—Were the orders then, that the troops were always to move, on cholera declaring itself?

3855. To break them up into small detachments?—It was not done in Bengal; whenever cholera is rife now the troops have to be moved, and as it is generally rife in some part of India or other, the amount of charge for this purpose is very considerable.

3856. *Chairman.*] Are the circumstances of the Bengal troops such that the troops cannot be hutted out without this general migration?—No; they did try the experiment of having standing cholera camps, but the medical officers (and I believe rightly) decided that it was no good; that you must move the men constantly.

3857. I meant separating the troops some little distance from the town or barrack where the cholera was?—They are broken up into detachments; the whole garrison does not move out in a body into another place; possibly only the women and children, or the inhabitants of one range of barracks are moved out to tents at a certain distance, sometimes at a considerable distance, sometimes close, as the judgment of the principal medical officer leads him to suggest.

3858. (To Mr. *Kellner.*) I should like to ask you, with reference to the comparatively small diminution of the commissariat expenditure from 2,321,000 *l.*, which you gave us as the average of the year 1862 to 1864, as compared with the actual expenditure of 1871-2 of 1,929,000 *l.*, showing only a diminution of 392,000 *l.*, whilst there had been such a very large reduction of the European and Native forces; are you able to explain to the Committee generally why the reduction has not been greater?—Because the reduction of the ordinary commissariat expenditure has been counteracted by increments in other directions; notably, in the land transport charges, in increased wages for labour, in compensation for dearness of provisions for the Native Army, in the higher prices of grain and forage throughout the country.

3859. Mr. *Denison.*] Are the accounts of the year brought to account within the year; for instance, in any year when there has been an expedition like this some time Looshai Expedition, those charges do not come into the account for some

some time, do they?—Charges of that kind, I am sorry to say, do sometimes drop out of the year's account; but the Indian accounts are framed on precisely the same principle as that on which the English accounts are framed, viz., that everything paid in the year is charged to the service of the year, and belongs to the account of the year. In the Looshai Expedition there were many payments made by the Civil departments, on account of transport of troops and supplies, which were not communicated to the Military department before the year closed; but that is quite exceptional; as a rule, everything paid in the year is charged, and belongs to the account of the year.

3860. *Chairman.*] You mean the payments made out by the chief accountant and the vouching of the sub-accountants goes on afterwards; the payment is treated as a payment within the year if it is paid to the chief accountant?—Yes; it may happen that the charge paid by a civil district officer on account of transport, or for the hire of labourers or coolies, may not be communicated or audited in sufficient time to be included in the military accounts for the year, and will therefore fall into the account for the next year, but that is quite the exception.

3861. Every payment that is vouched and accounted for within the time of finally adjusting the military accounts after the close of the year is brought within the year's accounts?—Yes.

3862. And if it is not vouched and complete at the time that the military accounts are closed, it is passed on to the next year?—Yes.

3863. Mr. *Denison.*] It is all lumped up as commissariat charges for the year; there is no head of Extraordinary Commissariat Charges in connection with special services?—No, but I have a statement which I mentioned before, showing what the charges are for each head.

3864. Sir *T. Bazley.*] The stores in reserve have been diminished by the rapid communication, have they not?—No doubt the effect of the quicker means of transport should be to reduce the reserve stock; this has occurred in many cases, and we are now reducing the established proportion of the stock in every department from two and a-half years to eighteen months, and in some cases one year's consumption; that matter is now under the consideration of the Government.

3865. Have you any idea of the extent of the diminution of stock?—No; the reduction is now being effected.

3866. Then that reduction in the reserve stock through the more rapid communication has diminished the apparent amount of expenditure within the year?—The arrangements for reducing the stock are only now in progress; they have been carried out to a certain extent, and, no doubt, with that result.

3867. Owing to more rapid communication you have less occasion to import stores during that period of diminution than previously?—That should be the effect, and it has occurred to a certain extent only.

3868. Then your expenditure has been greater within the year than you were aware, because you have been consuming stock in store, and not consuming stock previously purchased?—The reserve stock is utilised as far as possible, before incurring expense in purchasing new stock.

3869. You have had occasion to buy less by reason of the more rapid communication during the period that was required to absorb the additional quantity of stores thrown upon you by the more rapid delivery?—Yes.

3870. *Chairman.*] That has been only an apparent saving during the last two or three years?—Yes.

3871. The price of stores has diminished of late years?—Yes, in some articles, but there has been a distinct increase in others, such as grain and forage.

3872. Sir *T. Bazley.*] If the stock has been diminished by as much as 200,000 *l.*, for instance, of course the expenditure would have been greater by that amount?—Yes.

3873. *Chairman.*] And the normal expenditure will rise to that amount when you cease diminishing your stock?—With a diminished reserve stock, the loss by deterioration and wastage must also decrease; this, combined with economy in expenditure, must tend to a diminished annual outlay for replenishment of stock.

3874. Taking this and other matters into account, and the transfers to other services, it would seem that there ought to have been a much greater diminution in the Commissariat Department?—Yes, but for the counteracting causes to which I have already referred. I should like to illustrate it in this way: the Indian Commissariat is maintained chiefly for the British troops; I am merely using this as a test of the expenditure for three distinct periods, that is the year 1856-57, the year before the mutiny, the year 1863-64, when the expenditure was greatly reduced, and the year 1871-72, which is the last year for which the accounts have been completed. I say that the commissariat is maintained chiefly for the European troops; and the average strength, so far as I am able to gather it from the statements that have been given from time to time before Parliament (it is from a Parliamentary statement that I am quoting), has been as follows: The number of European troops without officers in 1856-57, was 39,352; the commissariat charges then amounted to 1,470,391 *l.*; that gives an average charge per head of 37·3 *l.* In 1863-64, the number of Europeans effective, according to my return, was 67,712, and the total of the commissariat charges amounted to 2,299,740 *l.*; that gives an average of 33·9 *l.* per head. In 1871-72, the strength of Europeans was 58,437, and the charges amounted to 1,929,370 *l.*; that gives an average per head of 33 *l.*; so that if you try it by that test, that is the strength of Europeans, you find that the average charge per head in 1856-57 was 37·3 *l.*; that in 1863-64 it was 33·9*l.*; and that in 1871-72 it was 33 *l.*, whilst, both in quality and quantity, the rations are superior to those issued to the troops during the earlier periods.

3875. Sir *G. Balfour.*] Have you added the malt liquor in each case?—No, because as I mentioned in the last examination, I think, whilst the commissariat grant of the present day has been relieved of two things, that is, the cost of the malt liquor, and the commissariat charges for the Hyderabad contingent, there are transport and new charges that have occurred, which more than counterbalance the reductions. That was my reason for omitting the malt liquor.

3876. Will you hand in another statement to show the malt liquor for those three years?—Yes.

3877. Have you got the amount of the malt liquor included in 1856-57?—Yes.

Col. *A. B. Johnson* and Mr. *G. W. Kellner.*

13 May 1873.

3878. And for 1861-62, and for 1862-63, and for 1863-64?—No, it is not included, I think, in 1863-64.

3879. Would you be good enough to give us the malt liquor for those years, in order to make the comparison exact?—Yes, that can be added.

3880. Is this strength of 39,000 men in 1856-57 made up of the same description of men as in the later years?—Yes.

3881. And will you be able to give us the strength in those years, so as to show the comparison?—Yes.

3882. *Chairman.*] Then is it your opinion on the whole, that the commissariat is now more economically administered than it was in that former period?—Yes, I think that the tendency has been distinctly to economy in the commissariat expenditure.

3883. Now will you give any explanation of that more in detail, by taking the leading items of commissariat expenditure, and first with regard to the establishments?—The establishments have decreased.

3884. Do you know what they were in 1856-57?—The number of officers has increased in recent years. In 1871-72 there is a decrease compared with 1861-62 and 1862-63; but with a larger European force we have had to increase the number of commissioned officers in the commissariat. They numbered 80 in 1856-57, and 101 in 1871-72. Then there has been not only an increase in numbers, but increase in military pay and allowances, owing to the higher military rank of the commissioned officers, and also higher staff salaries. In some cases the staff salaries have been reduced, and in others raised, but the increase in number, and the higher rank of the officers in the commissariat, have contributed to increase the charges.

3885. Can you give us the charges in 1856-57 of the establishment, and in 1862-63, and in 1871-72?—The cost of the commissariat officers was 49,840 *l.* in 1856-57, in Bengal alone, and it was 103,000 *l.* in 1871-72.

3886. Mr. *Denison.*] That includes military pay as well as staff pay?—I have not the details of 1862-63.

3887. Sir *G. Balfour.*] What was the establishment in that Blue Book (*handing a Blue Book to the Witness*)?—It was 49,840 *l.* in 1856-57 for commissioned officers in Bengal. In 1862-63 it was 159,654 *l.* for the executive establishment; in 1863-64 it was 109,582 *l.*; in 1871-72 it was 103,948 *l.*, and in 1872-73 it is estimated at 110,766 *l.*

3888. We had better finish it for the whole army; under the old *régime*, what was the executive establishment of the whole army?—I am sorry to say that we have no details of these charges in 1856-57 for Bombay; we have them for Bengal and Madras, and we have endeavoured to get them for Bombay, but they could not be made out.

3889. Sir *G. Balfour.*] But you could make them out from the Auditor General's statement in the India Office, could you not?—Yes; but I am afraid that they would not correspond with these accounts.

3890. *Chairman.*] What was the charge then in 1865-66 for the executive establishment?—For all India it was 194,035 *l.*

3891. And what is it for 1871-72?—Much the same, 194,186 *l.*

3892. Sir *G. Balfour.*] Then you include in that the contingencies, do you?—Yes.

3893. Then for the year 1872-73, have you made up the expense?—An estimate only.

3894. *Chairman.*] Have you not, in addition to that, all the subordinate establishments?—Yes.

3895. Can you give us a statement of the cost of those?—In 1865-66 the subordinate establishments amounted to 171,932 *l.*, and in 1871-72 to 157,384 *l.*; I may say that the subordinate establishments depend very much upon the military exigencies of the period; for instance, in 1865-66 the Bhootan campaign increased the charges.

3896. It would be very convenient if we could have these expenses in the minimum year of expenditure?—I will furnish them for 1856-57, 1862-63, and 1863-64, and the last three years; I have mentioned the Bhootan campaign as having increased the charges for 1865-66.

3897. Therefore, that was an exceptional charge, was it not?—Yes.

3898. Putting that aside, there would seem to have been no reduction in the cost of the subordinate establishments?—Very little, owing to higher rates of pay to the cattle establishments, and to doolie bearers in the Punjaub; to the scale of carriage for camp equipage being increased in consequence of the introduction of improved pattern tents, and to new charges being added by the location of British regiments at the new hill stations. Again, the charges under this Grant were increased by the pay of hospital purveyors, a grade substituted for that of hospital stewards whose pay was formerly included in the regimental grant.

3899. Then with regard to provisions, which would be one of the largest items, can you state whether there has been any economy effected in the provisions?—Yes; the total charge for provisioning Europeans in 1865-66, was 1,036,416 *l.*

3900. What was it in 1867-68?—£. 752,378.

3901. And what was it in the year 1871-72?—It was 626,048 *l.*

3902. Sir *G. Balfour.*] What do you include in these amounts; is that the total of the head in your estimate of "Supplies"?—It is the provisions for Europeans only. If you look under the head of "Commissariat Supplies" in the estimates you will find "Provisions for Europeans," "Ditto for Natives"; this is on account of the provisions for Europeans, and purchase of reserve stock, including the bread, and meat, rice, vegetables, and condiments, tea, coffee, and sugar.

3903. *Chairman.*] 1865-66 would seem to have been an exceptional year, for some reason or other?—Yes; it was owing to the famine in the Bengal and Madras Presidencies that the charges were unduly high, and the Bhootan campaign also had an effect on the charges.

3904. Then would the reduction in this head be proportionate to the reduction in the number of men in the subsequent years?—Yes, quite in proportion; in fact, the charges for provisioning Europeans have distinctly decreased in the last few years man by man.

3905. To what do you ascribe that?—I ascribe it to more economical commissariat arrangements for obtaining the bread and meat.

3906. That is a real economy?—It is a real economy.

3907. Sir *G. Balfour.*] And effected by good management?—By good management.

3908. Then has the fall in the price of provisions

sions for Europeans maintained itself in 1872-73, and 1873-74?—I think so.

3909. Is the estimate larger in 1872-73?—The estimate would be larger. The year 1871-72 was a year of very low prices, and in the estimate of 1872-73 provision was made for possibly higher prices; the actual charges for 1872-73 promised, however, to be very much of the same amount as those for 1871-72; but you know that the practice always is to allow a margin in a budget estimate of ways and means.

3910. And, as a rule, the commissariat charges have fallen within the estimate, have they?—I think so.

3911. Especially with regard to provisions?—Yes.

3912. *Chairman.*] Now we come to the next item, the item of compensation for the dearness of provisions to natives. Has that been an increasing or diminishing one?—It has been a very largely-increasing charge of late years, but for the last two years it has diminished.

3913. What was it in 1865-66?—I will read out a statement of it from 1861-62. The compensation for dearness of provisions in 1861-62 was 59,593 *l.* for all India (the actuals); in 1862-63 it was 72,755 *l.*; in 1863-64 it was 79,961 *l.*; in 1864-65 it was 152,194 *l.* In the next year, 1865-66, which was a year of famine in Madras and Bombay, and of scarcity in Bengal, the compensation for dearness of provisions to the troops, and for dearness of forage for the army cattle, amounted to 356,712 *l.* The forage compensation is for the irregular cavalry. In 1866-67 the charges amounted to 432,964 *l.* In 1867-68 they fell again, owing to the fall in prices consequent upon a more favourable season; the amount was 271,508 *l.* In 1868-69 they amounted to 297,602 *l.* In 1869-70 they amounted to 468,635 *l.*; in 1870-71 they amounted to 302,956 *l.*, and in 1871-72 they amounted to 194,256 *l.* That is, in 1871-72, the charges were lower than in any year since 1864-65.

3914. Sir *G. Balfour.*] Will you add the estimates for 1872-73 and 1873-74?—The estimate for 1872-73 was about 220,000 *l.*, but the actual expenditure was probably less.

3915. *Chairman.*] Do you know whether this may be regarded as now the average allowance that will continue, or would that expenditure get back to the previous allowance?—It will depend very much upon prices and the continuance of favourable seasons. The season of 1871-72 was a specially favourable season: and, no doubt, the effect of the irrigation works in progress throughout the country, combined with the increased attention that has been given to the examination of claims for compensation for dearness of provisions, will be to keep down this item of military expenditure in future.

3916. Do you mean that they are very generally recognised in time of famine without particular consideration?—Yes, I think the claims have not been very strictly scrutinized.

3917. Sir *G. Balfour.*] Was there any other cause besides that?—I am afraid that the local price currents were untrustworthy. They were in many cases, it is believed, purposely enhanced to favour the claims of the soldiery to compensation.

3918. And had the audit of the accounts of these claims fallen into arrears?—The audit accepted the price currents of the district officers implicitly, without further inquiry.

3919. Ten years ago there was some system established, was there not, by which they could ascertain the cost of provisions and rations?—Yes; the publication of the prices in the "Gazette," I think, at which the various commissariat articles were purchased.

3920. And that was carried on for some time?—I think it was discontinued in 1864-65.

3921. And since then we have had no such publication as that?—The local gazettes publish the prices in the civil department, but there is no publication of the commissariat purchases.

3922. That was one means by which this important item could be checked?—Yes.

3923. And it was then effectually done, as far as the outlay was concerned?—No doubt the publication of the rates had the effect of checking the purchases.

3924. And you were able to see what was the price of articles in one part of India compared with the prices in another?—Yes.

3925. Could you have exercised any control in Calcutta, and ascertained the proper prices of provisions and things of that kind?—Yes, I think so, by means of the price currents that were established in the Civil Department and published in the local civil gazettes.

3926. Would you say from that that the admission of these claims had not been duly looked to?—Well, I should be sorry to say that, although that is my impression, to a certain extent.

3927. In getting this total sum on account of the dearness of provisions, have you taken any expenditure in the Madras and Bombay Presidencies which comes under Grant 14?—Yes.

3928. Then the expenditure is partly in the Commissariat Department of Bengal, and partly in Grant 14 of Madras and Bombay?—Yes.

3929. Then in any correction we make we must see that the commissariat charges of the three Presidencies are prepared in a uniform manner?—Yes; this is a statement outside the regular accounts of the Military Department, merely with the view of illustrating the increase of charge under this head of compensation.

3930. *Chairman.*] Now let us get some accurate view of the charge for malt liquor which was transferred to the Home Accounts in 1867-68; what was the charge for malt liquor in the last year before the transfer; the charge for malt liquor, I mean in the commissariat accounts in India?—In 1865-66, the cost of malt liquor was 505,087 *l.*

3931. Then that was eliminated altogether in 1867-68?—Yes, it was transferred to the Home Accounts.

3932. From that time forward may we understand that there has been no charge in the Indian Accounts except for the Hill beer?—Yes.

3933. Can you give us a statement of what that has been?—I think the first payments were made in 1871-72, and amounted to about 15,000 *l.* I may say broadly that the quantity of Murree beer purchased was 3,000 hogsheads in 1871-72, and 4,000 or 5,000 in 1872-73. There is provision in the Budget for 1872-73 for the purchase in the coming year of rather an extra local supply to the extent of 20,000 *l.* And the Government have taken care that as the local contracts are extended, the indents for English beer are correspondingly diminished.

3934. In what year was the change made of issuing only one dram instead of two of rum and arrack?—In 1864-65.

Col. *A. B. Johnson* and Mr. *G. W. Kellner*.

13 May 1873.

3935. Can you state what the difference in the cost was?—I have a statement here showing the payments by the Commissariat Department for rum and arrack between 1865-66 and 1871-72. The payments for rum and arrack in Bengal amounted to the sums which I will give. In Bombay the rum and arrack are not purchased locally, but imported from England, and the charges appear in the Home Accounts, whilst the sale at the canteens and recoveries are all in the Indian Accounts. I find that in Bengal the payments for rum and arrack amounted to 23,061 *l.* in 1865-66; the amount was 28,141 *l.* in 1866-67; it was 24,769 *l.* in 1867-68; it was 23,498 *l.* in 1868-69; it was 21,002 *l.* in 1869-70; it was 26,754 *l.* in 1870-71; and it was 25,483 *l.* in 1871-72.

3936. Sir *G. Balfour.*] Will you give us the estimate for 1872-73?—Yes. The figures already stated give a total of 181,709 *l.* in the seven years which I have mentioned.

3937. But the expenditure in 1872-73 was increased by 50 per cent.?—It is estimated at 33,650 *l.*, the reserve stock having run low.

3938. *Chairman.*] Are you aware whether any arrangement has been made by which a man may draw the money instead of drinking the spirit?—No, I am not aware. The Commissariat sells the spirits to the canteens, and the canteens retail the spirits to the men.

3939. This is entirely canteen spirit?—Yes.

3940. It is issued to the canteen, and they buy it or not, as they please?—Yes, the soldier pays the canteen for the spirits he is permitted to buy. I may perhaps, in connection with this, mention the recoveries in Bengal, and you will see that it is more than the total of the payments for these seven years. The recoveries in Bengal in 1865-66 amounted to 63,942 *l.*; in 1866-67 to 60,735 *l.*; in 1867-68 to 64,204 *l.*; in 1868-69 to 62,659 *l.*; in 1869-70 to 63,857 *l.*; in 1870-71 to 58,063 *l.*; and in 1871-72 to 55,893 *l.*

3941. Do you not mean, by recoveries, receipts of the canteens?—Yes, the profit to the State by the sale of spirits.

3942. Sir *G. Balfour.*] But you have to deduct from that the cost of the transport connected with these spirits, have you not?—Yes.

3943. Therefore we have to diminish that amount?—Yes, to the extent of the transport.

3944. This receipt is an item which ought fairly to be credited to the Indian Accounts, in diminution of the expenditure?—Yes.

3945. But the recoveries on account of malt liquor stand in a different category now?—I think they also should go in aid of the military expenditure, instead of being paid into the Exchequer.

3946. But looking at the malt liquor charged for in the English Accounts, and the money realised by the sale of that malt liquor, it ought plainly to be credited in diminution of the home charges, less the sum which has been incurred on account of the transport in India; that is the mode in which these receipts should be shown, is it not?—I think it would be a preferable way to lump the English and Indian expenditure together, and deduct the receipts in India and England in aid of the military expenditure.

3947. (To Colonel *Johnson.*) Will you explain to the Committee the recommendation made to the Government in the recommendation of Sir Hugh Rose, connected with the diminution of spirits?—Sir Hugh Rose, giving two reasons, one, the health of the troops, and the other, a preference the soldier was beginning to show for malt over ardent spirits, recommended in 1864 the reduction of one dram out of the two drams that the British soldier was allowed to buy from the canteen, and he was thenceforward allowed to buy only one dram per day.

3948. And what recommendation was made in regard to the malt liquor?—In malt liquor he was allowed, I think, a quart per diem, instead of, as formerly, a pint.

3949. (To Mr. *Kellner.*) Do you remember the calculation very carefully made in regard to the consumption of malt liquor per head of the European soldiers?—Yes.

3950. It amounted to how much, according to the calculations made in former years; a pint a day, was it not?—Yes; I find here that during the year 1871-72 the consumption in Bengal was six gallons per month per man. The wastage was very considerable; it was 5,499 hogsheads in Bengal, in Madras it was 1,508, and in Bombay, 1,140.

3951. *Chairman.*] What do you mean by wastage?—The diminution of quantity, by evaporation and leakage. The hogsheads before being sold at the canteens are filled up, and the deficiency made good.

3952. Do you know whether all the hogsheads are carefully gauged on their arriving in India?—I believe so, by the commissariat authorities.

3953. Sir *T. Bazley.*] Is the evaporation considerable?—It is.

3954. *Chairman.*] Then this wastage includes every kind of loss from beer being spoiled and otherwise, I presume?—That is so, I believe.

3955. Everything, in fact, that is not brought to account as saleable beer at the ultimate destination as compared with the quantity dispatched from the port?—Yes.

3956. Sir *G. Balfour.*] Then you are calculating the quantity consumed by the European soldier as the actual quantity which the Government are concerned with. I was asking you rather the average consumption in former years of each soldier as compared with the consumption now of each soldier from the canteen; have you that calculation?—I have one for 1864-65; there I find that the average consumption per man per month was five gallons, one quart; it is now six gallons; that is in Bengal.

3957. (To Colonel *Johnson.*) Then, from that statement, it would seem that Sir Hugh Rose's proposed consumption of malt liquor by the diminution of the spirits, has not answered the end which he expected?—Apparently not to that extent.

3958. Then you have no information to induce you to say that the change in 1864-65 has been successful in that direction?—In the direction of the men drinking more beer, it has been little; but at the same time they drink less rum.

3959. That is to say, they buy less rum from the canteen?—Of course I cannot say what they do in the bazaars. (Mr. *Kellner.*) I see that in Madras the consumption was four gallons per man per month in 1864-65, and it is six in 1861-62.

3960. (To Mr. *Kellner.*) But you will look over the calculation in 1861-62, which was so carefully made, and see whether you can give us any information on the subject?—Yes; I shall put

put in a statement of the malt liquor and the rum and arrack consumed.

3961. *Chairman.*] Are we to attribute the increased consumption of those commodities in any way to the increased pay of the men, and their means of buying more?—No doubt.

3962. Then, let us pass on to the other item which you gave us as affecting the commissariat expenditure; the purchase of live stock, what have the charges for that been?—In 1865-66 the amount was 76,757 *l.*, in 1866-67 it was 77,408 *l.*, in 1867-68 it was 24,854 *l.*, in 1868-69 it was 53,966 *l.*, in 1869-70 it was 42,555 *l.*, in 1870-71 it was 27,529 *l.*, and in 1871-72 it was 6,958 *l.*

3963. Sir *G. Balfour.*] And has it decreased in 1872-73 and 1873-74?—No; I think that the estimate was for a larger amount of commissariat bullocks; it was estimated at 22,100 *l.* for 1872-73.

3964. Has the purchase of the reserve stock very considerably decreased of late also?—Yes, I think it has decreased.

3965. Have you got that for the three Presidencies?—Yes. In 1865-66 it was for all India 394,631 *l.*; it was 219,402 *l.* in 1866-67; it was 145,091 *l.* in 1867-68; it was 175,251 *l.* in 1868-69; it was 99,916 *l.* in 1869-70; and it was 102,505 *l.* in 1870-71.

3966. *Chairman.*] Will you explain the effect of the purchase of live stock upon the apparent diminution of expenditure?—These charges depend upon the necessities of the hour; mules, and ponies, and horses, and commissariat cattle, if they are wanted, are purchased, and the expenditure necessarily varies, according to the necessities of the army in ordinary times, and in time of war, pestilence, or famine.

3967. It is not what you may call an economy, but a diminution of demand arising from want of military operations?—Yes.

3968. Sir *G. Balfour.*] Taken for a series of years, that expenditure ought to approximate very near in one year to another, ought it not?—It depends upon whether there are military movements going on or not; for instance, the effect of a campaign, and even of camps of exercise, would be to induce the purchase of a larger number of horses, to replace casualties.

3969. But you have diminished them even in spite of these camps of exercise, have you not?—I think this year there will be a large increase. I think the purchase will be much higher.

3970. Your Budget estimate for 1872-73 shows a very much smaller outlay?—Yes, owing to contemplated reductions in the Government stud establishments, but that also will necessitate a larger amount of purchases in the market.

3971. Then will you add 1872-73 and 1873-74 to the figures to complete them?—Yes.

3972. Sir *T. Bazley.*] The accurate consumption is not to be ascertained unless you have the stock you begin with, and the stock you terminate with?—Yes.

3973. And that you do not seem to possess?—Yes; in the Ordnance and Clothing and other Departments, there is a ledger account of every article, the consumption is deducted from that, and the balance in hand at the end of a certain period is distinctly shown. That statement is used in checking the indents for a further supply of stores, either to be purchased locally, or to be imported from this country.

3974. But a short time ago you said that the expenditure in Europe was computed by the purchases of the year?—That is the system now in regard to all stock purchased during the year; the purchase-money is included as a final charge in the accounts of the year, though it is merely a conversion of money into money's worth. But a similar procedure is adopted in the Public Accounts of the United Kingdom.

3975. And not representing actual consumption?—Quite so.

3976. Sir *G. Balfour.*] But you are aware that we have had as much as 15 or 20 years' stock on hand of the commissariat in some articles, have we not?—Yes.

3977. And that was so in earlier years, in 1861-62 and 1862-63?—Yes.

3978. And you have gone on with the stock in hand?—They have been very carefully examined of late years with the indents, and very large reductions have been made in the indents in every department.

3979. So that you have been keeping down the stock in hand as much as possible?—As much as possible, considering the representations of the heads of departments.

3980. *Chairman.*] Has the apparent reduction of this item of expenditure in recent years been due at all to the economy of horse food, the reduction of the rates of the food for the horses?—No doubt.

3981. Can you state what that has been?—Yes, I find that in 1862-63 and 1863-64, there were 16,978 horses at an annual cost of 8 *l.* 18 *s.* a head. In 1870-71, the established complement of horses was 13,253, and they cost 12 *l.* 16 *s.* a head, but in 1871-72 the cost in Bengal was reduced to 7 *l.* 5 *s.* a head.

3982. Sir *G. Balfour.*] These horses were the European cavalry and the Artillery horses?—Yes.

3983. No other horses belonging to the Native cavalry?—No; these include all the horses of the army fed by the commissariat. The irregular cavalry horses are fed by the Native troopers themselves. In 1871-72 the established complement of horses in all three Presidencies was 13,253, and the average cost was 9 *l.* 8 *s.* per head.

3984. That included grain for the horses?—Yes.

3985. *Chairman.*] Does the cost of the feed in the different provinces vary very much?—Yes.

3986. Will you state what it is?—In 1871-72 the cost in Bengal was 7 *l.* 5 *s.*, in Madras it was 9 *l.*, and in Bombay it was 16 *l.* 8 *s.* per annum.

3987. I do not see, therefore, that the diminution of the cost of keeping horses has kept pace with the diminution of the allowance to native troops, in consequence of the cheapness of provisions; can you explain why it is that the cheapness of provisions has not affected the cost of the keep of horses in the same proportion from 1865-66, or rather 1866-67, when the provisions were so costly; in 1866-67 and about that period provisions were very much enhanced in price, in consequence of the general famine; do you know why it is that the cost of the keeping of horses has not fallen proportionately?—No.

3988. Because it would seem that according to your view in 1864 the cost was 8 *l.* 18 *s.*, and in 1870-71, when provisions were very much cheaper, as I understand it, the cost was 12 *l.* 16 *s.* per head?—Those are the earlier years, 1862, 1863,

Col. *A. B. Johnson* and Mr. *G. W. Kellner.*

13 May 1873.

1863, and 1864; there was an increase in 1864-65 and in 1865-66.

3989. On account of the scarcity of provisions?—Yes, but irrespective of years of drought and famine, there has been a general rise in prices throughout the country, and the rates are higher comparatively now than they were in 1862-63 and 1863-64.

3989.* But according to the allowances made to the native troops in consequence of the diminution of the cost of provisions, it would seem that there ought to be a diminution in the cost of keeping the horses, instead of which they rose to 12*l.* 16*s.* in cost?—I get that average of 8*l.* 18*s.* upon the whole.

3990. Sir *G. Balfour.*] It is difficult to understand how it is that the same number of horses for the Madras Presidency should have cost in 1862-63 exactly the same sum as in 1872-73; in 1872-73 they cost 3 lacs and 31,000 rupees, and in 1862-63 they cost 3 lacs and 31,440 rupees; 44*l.* difference only in the two periods; and yet, as the Chairman has remarked, these rates of compensation for dearness of provisions to natives are not in keeping?—No.

3991. The feed of horses put in contrast with the compensation paid to natives for dearness of provisions shows that there is a great disparity between the reduction in the one case, and that in the other?—Yes.

3992. Do you think that that is owing in any way to the slackness of looking into the price currents with regard to the rates of dearness of provisions for the natives; the commissariat look after the charges for the horses, and pay the market price, whereas the compensation is paid in a different manner?—I am afraid that would be one explanation.

3993. Have you ever looked in that particular point of view at the fact which the Chairman is putting to your notice?—No.

3994. Perhaps you would kindly do it by the next meeting?—I will endeavour to do so; I have a statement here which I shall present before the Committee, showing the average cost of feeding elephants, camels, bullocks, or mules.

3995. And would you contrast those figures with the statement which I prepared myself in 1861-62 and 1862-63?—Yes.

3996. Have you the number of camels and elephants and Government cattle maintained at the present time?—Yes; but this statement gives you the annual charge.

3997. Are you aware that the Estimates do not give any information, such as the Estimates in 1862-63 did, as to the numbers?—The Estimates prepared by the Government of India do not give these details, but they are given in the Estimates sent up from the local Controllers.

3998. *Chairman.*] I think we had better go on now to the next Grant, No. 5, for the Stud and Remount Establishments, Supplies, and Services; will you describe again what that Grant 5 is?—It includes all charges connected with the supply of horses to the army, whether through the Government breeding establishments, or by purchase in the open market.

3999. What was the expenditure under that head in 1856-57?—£. 202,212.

4000. And what in 1869-70?—In 1869-70 it was 253,415*l.*; in 1870-71 it was 196,796*l.*; in 1871-72 it was 180,732*l.*

4001. Have you got a statement of the establishment of the horses; I do not mean the strength of cavalry, but the allowed establishment of horses in India for these periods?—The complement of horses of the army would not be the measure of the cost of mounting the army. The expense of maintaining the studs, less the value of the stud remounts made over to the army, *plus* the cost of remounts purchased in the market, would fairly represent this branch of the military expenditure. I may mention that the established complement of army remounts is 13,253, showing a reduction of 3,725 horses from 1863-64.

4002. Will you give the figures in the several years, the year 1856-57, and the other years; will you state what has been the supply of horses to the army in each year during these particular years 1856-57 and 1863-64, and the three last years?—I will endeavour to do so.

4003. Can you give us some detailed explanation of the nature of this expenditure; and first, with regard to the establishment of the Government studs, separately from the purchase of horses, will you state what is the nature of this stud establishment?—There are several studs maintained in the Bengal Presidency; Koruntadhee and Buxar are the breeding circles; there is a depôt for colts at Ghazeepore, and a depôt for fillies at Poosah; then there are depôts at Haupper and Saharunpore, and the home stud at Kurnaul; there is also a cattle farm at Hissar. In Madras there is a remount depôt, where remounts purchased in the market are kept in reserve to meet army requirements, the depôt being in charge of a military officer. In Bombay there is no depôt, but the remounts purchased by committees in the local market are drafted to regiments as soon as possible.

4004. Then there would seem to be three systems in force, one an actual breeding of horses, the second the purchase of horses from natives in the circle of supply, and the third the purchase of horses imported in the market?—Yes.

4005. Is there a large establishment of officers kept up for this purpose?—Yes, there is a large establishment of officers; there are 15 commissioned officers.

4006. Has the number increased or diminished?—It has increased.

4007. Can you explain how far this expenditure has kept pace with the state of the complement of horses?—Yes. In 1862-63 and 1863-64 the purchases were comparatively trifling; the total in 1862-63 was 153,571 *l.*, and in 1863-64 it was 159,741*l.* It increased in 1864-65 and 1865-66; but I may mention that in 1862-63 and 1863-64, few remounts were purchased, as, owing to reductions in the army, the existing stock of horses sufficed to meet all the requirements, even after selling a very large number of army remounts.

4008. Would not those go to army receipts, not in diminution of this charge?—Yes.

4009. Sir *G. Balfour.*] I thought in 1862-63 we began to obtain supplies from the Stud Department?—Yes.

4010. All the horses of the time of the Mutiny had disappeared then?—There was a reduction in the mounted troops, and the reserve horses were sold off to other regiments.

4011. But were not all the reserve horses exhausted in 1861-62?—No; I say that few remounts were purchased in 1862-63 and 1863-64. In 1864-65 there was a considerable purchase of remounts in Madras.

4012. Then

4012. Then that was merely to supply the usual demand, was it not?—Yes, but that was one of the causes of increase over the previous years, when no purchases were made. In 1865–66, there was an increase of 19,000 *l.* over 1864–65; the increase arose chiefly in Bengal by the feed of cattle, no doubt from its being an unfavourable year, and there was also an increase in the miscellaneous charges, for road and cultivation expenses, by which I mean the cost of carrying the stud cattle from one depôt to another, and sending them to regiments, and also the cost of the management of the farms attached to the studs.

4013. *Chairman.*] Then in 1866-67, what is the result?—There was a considerable increase over the charge of the previous year; there was a purchase of army remounts amounting to 26,959 *l.* in that year, and an increase of 10,000 *l.* in the outlay for grain and forage in the Bengal Presidency.

4014. Did you also increase the establishment?—Yes, there were two veterinary surgeons added to the establishment. The pay of the veterinary surgeons was largely increased about this time, and that tended to increase the charges under the grant.

4015. In 1867–68, what occurred?—In 1867-68 the payments were 44,780 *l.* in excess of those of 1866-67.

4016. On what account?—The increase in Bengal was due to the additional road and cultivation expenses, the cost of feeding cattle and remounts, and the promotion of one of the veterinary surgeons to higher rank.

4017. In Madras what occurred?—In Madras there was a purchase of 734 remounts, at a cost of 36,492 *l.*; in the previous year the purchase for Madras amounted to only 13,000 *l.* The increase in Bombay was also due to the purchase of remounts, being 17,000 *l.* against 5,000 *l.* in the previous year.

4018. And what was the state of things in 1868–69?—An increase of 19,480 *l.* over 1867–68.

4019. How was that brought about?—Chiefly through Madras and Bombay. There was an increase in the Bengal Presidency, owing to the formation of the stud committee, but there was a saving in the charges connected with farms; it is supposed that the outlay on the farms was reduced owing to the uncertainty as to the effect of the stud committee's deliberations in contracting the operations of the studs. Then, there was a less purchase of remounts for the same reason, the cost was 14,000 *l.* against 23,000 *l.* in the previous year. Then there was an increase in Madras owing to the retention of a large number of remounts at the depôt; the feeding charges were also increased, and there was an additional charge for the establishment of a farm.

4020. In Bombay what occurred?—In Bombay there was the purchase of a large number of remounts; the Government sanctioned the purchase of a number of chargers, the property of officers who had been with the Abyssinian expeditionary force.

4021. Was that an advantage to the Government?—No; they paid the ordinary rates, and it was a convenience to the officers to get rid of them. (Colonel *Johnson.*) They were officers who had been specially employed on the staff in Abyssinia, and for whom chargers were not required on their return to India.

4022. *Chairman* (to Mr. *Kellner*).] In 1869–70 what was the amount?—There was a decrease of 15,830 *l.*

4023. How was that brought about?—Owing to the purchase of fewer remounts and the smaller number retained at the depôt.

4024. In 1870-71 what occurred?—A reduction owing to the same cause, a comparatively small purchase of remounts. As there had been a short purchase of remounts in Bengal in 1868–69 the charge on that account in 1869–70 exhibits an increase. In 1870–71 there was a decrease of 51,000 *l.* in Bengal alone.

4025. Will you explain the charges of 1871–72?—The Budget for 1871–72 provided for an expenditure of 216,724 *l.*

4026. But the actual expenditure would appear to be only 180,000 *l.*?—Yes, 180,000 *l.*; it was considerably less than the estimate.

4027. Sir *G. Balfour.*] And have you it for 1872–73?—£. 228,427.

4028. Then, will you compare it with 1862-63; the amount in 1862–63 appears to have been 133,000 *l.*?—The total in 1862-63 was 153,571 *l.*, and out of that 132,000 *l.* was in Bengal.

4029. Will you look at this Blue Book (*handing a Blue Book to the Witness*)?—It is here stated 132,525 *l.* in 1862–63 for all India. My statement shows 153,571 *l.* as the total, and 132,226 *l.* in Bengal alone. Then here the total for 1863–64 is 159,000 *l.*, and I have the same. It is a fact that the outlay for the purchase of horses was very much less in 1862–63 and 1863–64 than in any of the subsequent years.

4030. *Chairman.*] Are we to attribute that to the redundancy of horses belonging to the Government, or to the cheapness of horses in consequence of the large number of horses that had been disused after the military operations; or to what cause?—Partly to a redundancy of horses, and partly to the fact of every regiment and battery having, in fact, been remounted after the Mutiny.

4031. Sir *G. Balfour.*] But that reduction of the purchase of horses would apply to Madras and Bombay only, not to Bengal?—My impression is also to Bengal; that the amount of outlay for purchase of horses was less in Bengal in 1862-63 and in 1863-64 than in subsequent years; in fact, in Bengal, in Madras and Bombay generally.

4032. But it was not till 1866-67 that the Stud Department of Bengal was enabled to supply remounts for corps, and in that year there was a purchase of remounts for corps, so that five years elapsed before any purchases were made for remounts for corps by the Stud Department of Bengal?—I am not able to answer the question immediately.

4033. *Chairman.*] But to come to the material point, have you any comparative statement of the cost of supplying horses from the various stud departments, and from the purchases in the circles, and from purchases at the remount depôts, so as to show the relative charge for each?—A statement can be given in, showing the average cost of the horses purchased during a series of years.

4034. I mean under the three different systems which you have described, can you show what the average cost of the horses has been?—There have been the most conflicting statements as to the cost of the stud horse. For instance, a stud horse, fit to be passed into the army,

Col. *A. B. Johnson* and Mr. *G. W. Kellner*.

13 May 1873.

was valued by Sir Walter Gilbert at 100 *l.*; the valuation of the stud officers was something between 30 *l.* and 40 *l.* I made a calculation myself some years ago, and made it out about 45 *l.* to 50 *l.*; but according to more recent calculations, taking into account all the charges of the breeding establishments, the outlay for the farms, and every charge connected with the studs, the whole pay of officers and men, the rent of the buildings, roads, and land, the charge is something beyond Sir Walter Gilbert's figure; I think it is 111 *l.* or 120 *l.* a head.

4035. That is as to the stud establishments?—Yes; the stud establishments. That is one of the causes which have led to the formation of a committee for revising the whole subject of the Government stud establishments.

4036. Is that subject now under consideration?—Yes.

4037. In consequence of the Government not having been able to ascertain what they ought to regard as the average cost of a horse, and also with reference to the actual goodness of the horse?—(Colonel *Johnson*.) I think the principal ground was the expense of the horses sent out from the stud.

4038. (To Mr. *Kellner*.) Then have you got a statement of what the cost of horses is when purchased in what are called the circles?—Yes; they are purchased as yearlings for certain fixed amounts; say 10 *l.*, 11 *l.*, or 13 *l.*, according to quality.

4039. What do they cost by the time they are available?—That is just the matter that is in dispute; the purchase of the young stock is on a certain fixed scale, averaging from 8 *l.* to 13 *l.*

4040. Mr. *Denison*.] You mean colts?—And fillies as well.

4041. *Chairman*.] Then it is a disputed point how much the horse actually costs from the time he is bought?—Yes; and there are many casualties amongst the young stock, for which a corresponding charge has to be put upon the stock remaining to be made over to the army.

4042. Have you a statement of the average cost of the horses purchased at the remounts depôts in Bengal or generally in India?—Yes; I have a statement for a series of years.

4043. Mr. *Denison*.] In regard to the return that we have just now had, does it include all the outlay of the Public Works Department upon the buildings?—No, not in this grant.

4044. *Chairman*.] But you have made a statement for the purpose of ascertaining the real cost to the Government?—Yes.

4045. In the same way you can give us a statement of the cost of horses purchased for remounts?—Yes.

4046. And all the statements would be on the same basis; either the cost to the establishment of the Government, or the cost delivered to the regiment?—Yes; the remounts are purchased and made over to the regiments.

4047. If they were landed at Bombay, there would be the cost of forwarding them to the regiments?—That would be only in Madras and Bombay; in Madras they are kept for some time at the depôt, but in Bombay they are forwarded to the regiment for which they are intended as soon as possible, there being no depôt there. It would be a most difficult thing to make a statement with regard to the Bengal studs; however, we will endeavour to do it; I am afraid that I can hardly promise it; it has been attempted frequently with such varying results.

4048. Sir *G. Balfour*.] You were yourself employed to report on the studs?—Yes.

4049. Then the general result is this, that the expenditure on account of the stud department of Bengal has run up very considerably, although it is now somewhat on the decline?—Yes.

4050. *Chairman*.] So as to make the cost per horse very much greater than it was before?—Yes.

4051. Sir *G. Balfour*.] And although this is a considerably reduced establishment as compared with the establishment of horses a few years ago?—Yes; the established complement would be about 3,275 fewer than in 1863-64, as I mentioned in answer to a previous question.

4052. Sir *D. Wedderburn* (to Colonel *Johnson*).] In a return which I find at page 9 of the Return, No. 467 of 1871, the stud and remount establishments for the four years, from 1865 to 1869, are given for Bengal, and Madras, and Bombay respectively, and the cost per horse in each of these presidencies; now I find, speaking generally, that the cost per horse in Madras is just about double that in Bombay, and the cost in Bengal just about double that in Madras; I should like to know whether those differences are real or apparent, and if real, what are the causes?—There is scarcely any establishment at Bombay; the horses are bought by an officer who merely buys horses in the market at Bombay itself, and then they are at once sent off to the regiment; the establishment would only be the horse-keepers, and a little clerical assistance, and I fancy nothing more.

4053. Then in Madras it is just about double what it is in Bombay; how is that?—In Madras they have a regular establishment, and they keep the horses from one to two years before issuing them. It is a depôt, in fact, for the supply of horses to the Madras army generally; and they have an officer superintendent of the remount depôt, and a permanent establishment for looking after the horses while in the depôt; a charge which is wanting in Bombay.

4054. Then in Bengal the charge is double that of Madras; how is that?—There again you have a totally different system by having a breeding establishment with the zemindary system, the circle system, and a variety of expenses. I have not seen the report, but the committee that was appointed by Lord Mayo has recommended some considerable reductions of depôts and studs.

4055. Mr. *Grant Duff*.] Are you aware that that whole question of the studs forms the subject of a correspondence which is going on now between the Secretary of State in Council and the Viceroy?—I cannot say about the correspondence, but I know that the matter is under immediate consideration, and that steps are being taken for carrying out, to a certain extent, the main recommendations of the Committee. (Mr. *Kellner*.) I am aware of the fact of that correspondence.

4056. (To Mr. *Kellner*.) And these papers have been promised to be laid before Parliament as soon as they are completed?—Yes; I may add that the statement referred to by the honourable Member just now was prepared in the India Office, and probably I can obtain the details and see of what items it is composed.

4057. Sir *G. Balfour*.] Will you look at the last paragraph on page 137 of that Blue Book, 467 of 1871, and state what you read there as the

the result of the inquiry in consequence of the Secretary of State's Despatch of 1869, to which your attention has been directed?—"The remounts at Bombay do not cost above 500 rupees, or at Madras 729 rupees, whilst in Bengal the average is 1,485 rupees, or, allowing for increase of stock, 1,287 rupees each."

4058. Would you consider that now to be a fair calculation of the result of stud operations with regard to supplying remounts for corps?—I should think the average at Bombay is correct; it is between 500 and 550 rupees; at Madras it is a little over 700; perhaps between 700 and 750; but I should think that Bengal would be covered by 120 *l.* to 130 *l.* I see it is given here, 1,485 rupees, or, allowing for increase of stock, 1,287 rupees; 128 *l.*, I should think, would represent the average.

4059. That is nearly the same as one of your calculations for 1856, is it not?—No; I think the stud officers in 1856 maintained that the remounts cost about 30 *l.* a head.

4060. But you have never been able to agree with that?—No, never. I made it out, I think, between 45 *l.* and 50 *l.* then, and since then the increased figure of about 65*l.*, I think, in 1861.

4061. *Chairman.*] Would you consider that the only true criterion of the out-turn of these various operations would be the number of efficient horses delivered to the army?—Yes, dividing the expenditure by the out-turn.

4062. Year by year?—Approximately, that would be a fair way.

4063. And putting the whole expenditure in a series of years as current expenditure in the year, whether for buildings, or for any other service whatever?—Yes; and taking on the other hand the number of horses provided, as the result of that expenditure, to the army.

4064. Sir *G. Balfour.*] Then considering that to be General Broome's mode of calculating the operations of the stud in Bengal, you would say that that deduction would be a fair result to be obtained from the system which the Chairman has indicated to you?—Yes.

4065. *Chairman.*] Could you present to us, in the successive periods in that form, the different modes of providing horses in India?—I will endeavour to do so.

4066. Mr. *Denison* (to Colonel *Johnson.*).] Will you tell us whether the origin of these studs was not the impossibility of finding within the limits of India itself horses of sufficient bone and muscle for the heavy draught of artillery, and also for cavalry purposes?—Yes, a sufficiency of horses of such stamp. You could find some, for the Bombay Artillery was admirably horsed with Arabs, which they purchased in their own market. With the exception of the Gulf Arab, which was used for the Bombay Artillery, and a few colonial horses, you were obliged to breed in the country, to get remounts for the Bengal army.

4067. The Australian horses have not been largely used, except for artillery purposes, have they?—Now they are being largely imported.

4068. Sir *G. Balfour.*] You are aware that there has been no deficiency of horses imported into India for the ordinary supply of the Madras and Bombay armies?—No, I believe not.

4069. Both Presidencies have obtained Gulf horses, have they not?—I do not understand that the Madras remount depôt has been largely supplied with Gulf horses; they have imported largely from Australia.

4070. But for a number of years they partly depended upon the Gulf horses?—Possibly; but the Gulf, I think, would hardly supply the whole of India with a sufficiency of horses.

4071. Mr. *Denison.*] Is the latest opinion in India, to the effect that the army could be thoroughly supplied without the aid of studs?—That it could be supplied from abroad, I fancy there is no question.

4072. And at a lesser cost?—Certainly, at present rates at a lesser cost.

4073. Then the only question that would remain would be the improvement of the breed of horses throughout India?—Which is indirectly a distinctly military question, because with the large body of Native cavalry that mount themselves, it is important that there should be a local supply of horses good and sufficient for all purposes, and not over expensive, otherwise we should have to raise their pay in accordance with the rise in the price of horses.

4074. It is not necessary that there should be a nursery for colts and fillies as a part of that system, but you might still improve the breed of horses without having the great expense of the studs?—As is being done now in the Punjaub through the civil agency.

4075. What is found to be the result of that?—Nothing very satisfactory, yet; they hope to extend it considerably, and at the same time, by giving really valuable prizes for mares and produce at the head-quarters of the different breeding districts, to induce the zemindars to devote themselves to breeding.

4076. You know that unless great care is taken in the selection of mares, that system leads to no good result?—Yes, that is the case; but it is meant at first to encourage the men to bring almost any mare they will, and in time you may resort to selection and rejection.

4077. You are depreciating your stallions all the time, are you not, unless that care is taken?—Yes; meantime, when you have introduced a better system among the zemindars, you will be able to replace your stallions.

4078. *Chairman* (to Mr. *Kellner*).] Now, as to the clothing establishments, &c.; will you kindly give an account of what is the expenditure under Grant 6 of the clothing establishments supplies and services?—The expenditure in the clothing establishments in 1856-7, was 77,217 *l.*; in 1869-70, it was 110,428 *l.*; in 1870-71, it was 87,857; and in 1871-2, it was 119,134 *l.*

4079. Have there been any changes made in the system affecting this Grant, or does it depend entirely upon the number of men?—There has been a very considerable change since 1856-7.

4080. Will you explain what that is?—The principal change was that of manufacturing the clothing of the British troops in India, instead of getting their clothing out from this country.

4081. Has that been attended with any diminution of expenditure per man, or per suit?—Yes.

4082. Can you give any statement of what has occurred in reference to this expenditure passing on from the period of 1861-2?—Yes, the expenditure for the clothing establishments, supplies, and services in 1862-3, amounted to 152,279 *l.*

4083. You did not tell us when the new system was introduced of making up the clothes in India?—In 1862-3 or 1863-4.

4084. What effect had it upon the expenditure

Col *A. B. Johnson* and Mr. *G. W Kellner.*

13 May 1873.

of this year; will you give the expenditure, first, in 1861-2?—In 1861-2 it was 89,825; in 1862-3 the manufacture of clothing for the British troops in India was undertaken by the local agencies, and clothing was issued in advance, instead of at the termination, of each year.

4085. Had that the effect of increasing the expenditure for the year?—Yes; and there was a further increase by the charge for arrears of money compensation; that increased the expenditure to 152,279 *l.*

4086. In 1863-4 the new system would be in full operation?—Yes.

4087. What was the expenditure then?—£. 84,952.

4088. Then the material for the clothing was sent out wholesale, I suppose?—The material has always been sent, and is to this day. The cost of other material, that is, the cloth, garniture, laces, and other imported articles, are all charged off in the Home Accounts; it is the local manufacture and local supplies that come under this Grant in the Indian Accounts; also the money compensation, when clothing is not issued in kind.

4089. This does not include the material, then?—No, it does not include the material which is imported from England; it includes only the petty supplies purchased in India, and the cost of manufacturing the clothing.

4090. Sir *G. Balfour.*] But the cost of the clothing is included in the Indian Accounts for a portion of the last ten years, in the same way as the ordnance stores?—Yes; but I think this includes the cash expenditure only in India.

4091. *Chairman.*] What was the expenditure after 1863-4?—It rose in 1864-5, to 201,780 *l.*; that was also due to several causes.

4092. Will you explain how that arose?—It was due to the improved scale of clothing, and money compensation sanctioned for the British army in 1861, and to the payment of these claims in 1864-5, with retrospective effect. It was a settlement of a large amount of arrears under this general order.

4093. Sir *G. Balfour.*] But it also depended on the kind of articles issued during each year; it varied with the cloth or serge, did it not?—Yes.

4094. That is a cause of variation?—Yes, the charge of one year is different from that of the next. In one year it is an issue of serge clothing, which is cheaper than the cloth clothing issued in the alternate years.

4095. *Chairman.*] What was the charge in the following year, 1865-6?—The charges in 1865-6 were also increased exceptionally in the same way; they amount to 153,213 *l.*

4096. In the following year what were the charges?—In the year 1866-7 they amounted to 115,115 *l.*

4097. Was there any permanent increase of charges?—There was a slight increase of charges in that year by the Royal Warrant permitting the re-enlistment of the soldier after a shorter term of first service; he obtained a money compensation in lieu of clothing. In 1866-7, the total expenditure was 115,000 *l.*, as I have stated, and in 1867-8 it was 110,000 *l.*, and it has remained pretty well at those figures since, alternating as the year is one of serge or cloth issue.

4098. Will you explain how it happens that the army being reduced, the permanent expenditure under this head now is 100,000 *l.*, as compared with the expenditure of 1856, of 89,000 *l.*?—Because the effect of the reduction of strength has been counteracted by the grant of additional advantages to the soldier, whilst the cost of making up the clothing of the British troops in India did not occur in 1857, and forms a large item in the Indian expenditure of the present day.

4099. Additional clothing, do you mean?—Yes; the effect of that one General Order which I have quoted was, that it gave the soldier in the mounted artillery an additional pair of trousers and an additional pair of boots per man, and the same to the field and garrison artillery; and a pair of trousers, a pair of boots, and a pair of gloves to the cavalry, and a pair of trousers and a pair of boots to the infantry.

4100. Is that the only cause of the permanent increase of the charge?—It is in the quality, also, of the clothing of the soldier; the patterns of the great coats and tunics for instance, have been greatly improved, and that has caused additional charge for the manufacture of clothing. And then there is the general rise in prices and wages; we have been obliged all round, in the clothing manufactories in India, to increase the rates of pay for the tailors, the pay having kept pace with the general rise in wages throughout India.

4101. Was there any actual saving in the manufacture being undertaken by the local agencies as compared with buying things ready made or whatever the plan was, when you say that a change was made?—On the whole it was more favourable; the local manufacture resulted in an economy. It was shown that it would do so at the time when the arrangement was pressed by the Military Finance Department in India, and the result has proved it.

4102. Has any account been taken showing what the economy has been?—I think I have an account showing the cost of each garment for each arm of the Service, which I shall put in before the Committee.

4103. Is there any sale of Army stores to set off against this charge?—Yes; the rejected clothing is sold in the market, and the proceeds are credited as military receipts and paid into the Exchequer. They have steadily increased. They were 20,668 *l.* in 1862-3, and they amounted to 66,540 *l.* in 1871-2; that includes the necessaries and clothing made up and paid for by the troops also.

4104. Mr. *Cave.*] What is this compensation which you mentioned?—When the soldier under regulation is entitled, for instance, to a tunic, and he does not want it, and his commanding officer is satisfied that he does not want it, he claims its value in money and gets the money.

4105. That is, of course, subject to the veto of the commanding officer?—Yes. (Colonel *Johnson.*) He gets compensation too, for the issue of serge instead of cloth; so that he is enabled to buy white clothing, which he must provide himself.

4106. (To Mr. *Kellner.*) How is there a less charge in the year that serge is issued if that is the case?—The money compensation is greater.

4107. But there is no real difference between one year and another?—No, so far as the soldier is concerned; but the payment of money compensation increases *pro tanto* the cash charges in India. These charges do not occur when cloth clothing is issued. Thus the State allows, and the soldier receives, the clothing in kind or in money, and there is practically but little difference

ence between one year and another. But the payment of money compensation does make a considerable difference in the Indian charges of the years in which it occurs. The cost of the materials for the clothing, as already stated, is shown in the Home charges. Then again, differences also arise from the different methods of treating the charges in the accounts. In Madras and Bombay the serge years do not correspond with the serge years in Bengal.

4108. Still as a matter of fact, there is no real difference between the serge year and the other year, as I understand you?—Practically there is very little.

4109. Sir *G. Balfour.*] Is it not a fact that this is the only vote almost which shows a satisfactory result as compared with ten years ago?—I am not prepared to answer that question off-hand. I think you would find that there are others which show a similarly satisfactory result.

4110. It is less in 1870-71 and in the estimate for 1872-3?—Yes.

4111. And the strength for 1870-71 is about the same?—Yes.

4112. Therefore the expenditure for 1872-3 as estimated for man by man, as compared with 1862-3, is very favourable?—If compared with 1862-3, it was 152,279 *l.* in 1862-3, but in 1863-4 it was 84,000 *l.*

4113. That being a year of serge clothing, the year 1872-3 may be compared to that?—Yes.

4114. Then although the strength of the army has decreased since that, still the expenditure has not decreased?—No.

4115. Still the vote itself, on the whole, is the most satisfactory of all the 21 votes, is it not?—I have explained the causes of increase, the additional advantages to the soldier in clothing, boots, and gloves, &c. I mentioned that the reduction of strength was counteracted by the additional advantages to the soldier from the Royal Warrant; he gets more clothing, and of a better description, than he did before.

4116. Then that would justify the vote being considerably greater than it has been since?—Yes, the strength being the same.

4117. But it is satisfactory to find that it is what it is?—Yes; I must also mention that the manufacture of the clothing has been concentrated in one agency; that has been another source of saving.

4118. *Chairman.*] Do you mean one agency for all India?—No, one agency for the Bengal Presidency; there were two or three agencies before. The question of having one agency for all India, or of dividing the manufacture into two agencies for all India, is under consideration now.

4119. Sir *G. Balfour.*] And it is satisfactory to find that the pay of European officers under this head has decreased?—Yes, very considerably.

4120. And this is almost the only vote where that has occurred, is it not?—I am not prepared to say that.

4121. Mr. *Cave.*] Is it shown, on the face of the accounts, how much is spent in compensation, and how much in actual clothing?—Yes; it is shown on the face of the accounts.

4122. *Chairman* (to Colonel *Johnson*).] You did not give us any information about the transport system, with reference to the former and present mode of making allowances or paying for the passage of officers, the cost of the officers going and coming between England and India, whether the system that was in force formerly in 1866-7 still prevails for the whole of the British officers serving in India, or whether a new system has been established?—A new system has been established, which is laid down in the new Passage Warrant of 1865.

4123. What is the nature of that, as compared with the former system; were the officers in the Company's service formerly allowed anything by the Government for their passage to and from India?—Certain officers were allowed their passage from the Government, others from the funds to which the officers had to subscribe; the Military Fund (I am talking of Bengal), for instance.

4124. That was from their own fund?—Yes; but an officer going home sick who had a certain rank, a subaltern, received a passage allowance or a free passage home from the Government; but he received it coming back again from his own fund, or *vice versâ*; I am not quite certain which, and it does not signify.

4125. Under the present Warrant, what is the system?—The Indian officer is in the same position.

4126. With regard to officers who belonged to the Queen's service, and go to the staff corps, what is the rule?—They come under the Indian rules at once.

4127. And what is the state of things with reference to the Queen's officer?—I am not prepared to say at once what the difference is, except that now they get a free passage on more extended terms, but cease to draw the six months' Indian allowance while in England on sick leave. The exact ground or scope of the change, without looking at the Warrant again, I could not give.

4128. Formerly, you mean, they received their passage-money?—Yes; but I will look the question up.

4129. Sir *G. Balfour.*] Will you also show the number of officers that come home?—I am not sure that I could do that.

4130. Sir *D. Wedderburn* (to Mr. *Kellner*).] Can you say when the issuing, in alternate years, of serge and cloth began?—It was introduced in 1861, I think.

4131. (To Colonel *Johnson.*) What was the object of that change?—To give the troops a lighter, and at the same time a warmish suit of clothes for the rainy weather, when white clothing is not suitable, and when cloth clothing would be unbearable.

Tuesday, 20th May 1873.

MEMBERS PRESENT:

Mr. Ayrton.	Mr. Cross.
Sir George Balfour.	Mr. Beckett Denison.
Sir Thomas Bayley.	Mr. Dickinson.
Mr. Beach.	Mr. Grant Duff.
Mr. Birley.	Sir James Elphinstone.
Mr. Bourke.	Mr. Fawcett.
Mr. Campbell Bannerman.	Mr. Lyttelton.
Mr. Candlish.	Sir David Wedderburn.
Mr. Stephen Cave.	

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

Mr. THOMAS LAWRENCE SECCOMBE, C.B., called in; and Examined.

Mr. EDWARD FRANCIS HARRISON, re-called; and further Examined.

Mr. *Seccombe*, C.B., and Mr. *Harrison*.

20 May 1873.

4132. *Chairman*] (to Mr. *Harrison.*) HAS your attention been directed to the objections taken by Mr. Goodliffe before the Committee to the accounts kept in India?—Yes, it has.

4133. Will you explain your views with reference to his suggestion that there ought to be a separate account shown for each railway appended to the general accounts?—Provision has been made in the Accounts which have been laid before Parliament for the year 1871-2 for exhibiting these transactions separately for each railway as to the capital account, and for a separate statement as to the account of advances for guaranteed interest. This Account which I hold in my hand is in the hands of the printer of the House, and it shows all the particulars which it appears to me can be desired with regard to the railways guaranteed by the Government of India.

4134. Was not that recommended by the Committee on Public Accounts a few years ago?—It may be so; I am not aware.

4135. (To Mr. *Seccombe.*) Can you state what the fact is?—The question as to the completeness of the Accounts of the Government in connection with railways, was raised by the Committee on Public Accounts, in the year 1869, and a statement has been added to the Home Accounts for subsequent years, showing the transactions of the year with the several companies in respect of capital, revenue, and guaranteed interest.

4136. Then, with regard to the next objection that was made by Mr. Goodliffe, that there was no security by the mode in which you drew bills in this country on India, and kept the accounts of the remittances against the forgery of Secretary of State's bills, can you explain what security exists?—The answer to that is that the remittance books contain a record of advances in India on account of London, and of advances in London on account of India; those transactions being once entered on the books, the record remains there until an adjusting entry appears. And with regard to the statement that a forged bill might be drawn and paid in Calcutta, that is guarded against by the arrangement that when the officers of the Bank of England draw for the Secretary of State bills on the Indian Government, the first post that could possibly take out the bills, whether in original or duplicate, takes out the advice and the check margin of each bill. Therefore, by the time that the bill reaches India, the advice and check margin of the original and duplicate are in the hands of the authorities there, and the payment of a forged bill is hardly possible; but, if such a circumstance could occur, it would inevitably be detected in the accounts. This was proved in the case of a bill of the Mauritius Government that had been debited to London. The debit on the remittance books remaining open, the attention of the Secretary of State was drawn to it, and it was found that the bill had not been transmitted to this country. Another bill was thereupon obtained from the Mauritius Government by the Government of India, and it was sent home and paid.

4137. (To Mr. *Harrison.*) Do you know or have you reason to know that in India, when the accounts are audited, the Secretary of State's or the Bank of England's letters of advise form part of the vouchers for the audit?—That is the case. Every bill is paid after comparison with the advices received direct from the Bank of England.

4138. And that forms part of the voucher for the audit?—That is so.

4139. Therefore, if any bill were forged, even supposing it were an accurate duplicate, in anticipation of the original it could only pass as a forgery in the event of the original itself being withheld?—That is so. All these bills are issued in duplicate, and we receive the counterfoil or check margin of each bill, both the first and second of exchange, so that there is not only a comparison with the amount advised but there is also a comparison with the actual bill prepared in the Bank of England.

4140. The check margin may be perforated?—I do

—I do not myself attach very great importance to that check, but it is of some value certainly.

4141. Mr. *Birley*.] I suppose you follow the usual mercantile usage in regard to bills of exchange; you send the advances in the same way that other merchants do; you send details of the bills drawn?—That is so.

4142. And the bills are not accepted or paid without that advice having been received?—No.

4143. Have you had any cases of forgery?—I believe there has been none. I should explain that up to the time that I left India, as far as my recollection serves me, the practice of perforating the check margin was not adopted, but they were all cut in an indented line. As far as I know this is still the practice.

4144. *Chairman* (to Mr. *Seccombe*).] Can you explain to the Committee what is the precise object of separating the accounts of the remittances from the ordinary accounts kept by the Accountant and having separate accounts kept by the Secretary?—The remittance transactions are very complicated, and much correspondence arises with reference to the several charges. In the year 1834, when the most experienced officers of the East India Company considered the question, it was considered that it would be much more convenient to have a separate set of books of account, which should be confined to remittance transactions, than that they should be mixed up with the ordinary cash accounts of the Home Treasury, and the remittance books were opened accordingly.

4145. But are those separate accounts that are kept in the Secretary's office audited equally with the other accounts by the auditor of the India Office Accounts?—Hitherto the auditor of the India Office has confined himself to auditing the actual cash receipts and payments, and has not followed them to see how far they are adjusted in India. Whether the audit should be extended or not is a question which is under consideration, but the books in themselves constitute an efficient audit with reference to those transactions.

4146. What I meant was, does he audit the accounts as far as the cash produced by the remittances from India to this country is concerned?—He does.

4147. Then are the balances of the Secretary of State's accounts brought into the general ledger when the whole accounts are periodically adjusted?—There are certain balances that stand only on the remittance books, that is the transactions that are for adjustment. If a sum be required to be recovered in this country, it stands on the remittance books till it is recovered; the Home Accounts showing the actual amount of cash received.

4148. But in making up the General Account laid before Parliament, does the Secretary's office furnish the items in that account?—The Accounts as laid before Parliament, are the Accounts of the actual receipt and expenditure, as shown on the Home books.

4149. Do you mean that when the transactions for adjustment are adjusted, they are carried into the books kept by the Accountant General in the India Office?—They are in regard to all sums paid and received.

4150. (To Mr. *Harrison*.) Then an objection was taken by Mr. Goodliffe with reference to the differences between the amounts of debt shown in different parts of the Accounts; can you explain that?—At page 57 of the Accounts for the year 1869-70, which were referred to by Mr. Goodliffe, under the first item "Government of India," will be found "Interest on Loans," 2,865,063 *l*. At page 61 there will be observed "Interest on Funded and Unfunded Debt," 2,773,414 *l*. But it will be observed that the description is not identical, the one is termed "Interest on Loans," and the other is termed "Interest on Funded and Unfounded Debt," there being certain loans which are not considered as forming part of the funded and unfunded debt. This distinction is an inconvenient one, and it arises from the amount of a particular loan, not having been treated as part of the funded debt from the circumstance that it was not negociable; this was the capital stock, created for the benefit of the decendants of Tippoo Sultan. That distinction is not a convenient one, and it has been remedied in the form of the Accounts, which will hereafter be employed; and the account of the interest in the funded debt will be found to agree with that of the interest on loans, the interest on this particular loan having been put into the former category as interest on funded debt. The Accounts for 1871-72, now before Parliament, get rid of the difference, which, however, was a real one, from that distinction having been observed, of the non-negociable character of a portion of the debt.

4151. Is that a definition equally applying to registered and funded debt?—The distinction observed in India between registered debt and other debt was an inconvenient one from another cause, that it introduced into the account of registered debt certain debt which was never considered to be part of the permanent debt, and that consisted of the Treasury notes issued to the service funds. These were registered, separate acknowledgments were issued for each sum paid into the public Treasury, and the notes were registered in the same form as the general promissory notes representing the debt of India, and therefore were treated as part of the registered debt, though not as part of the public debt.

4152. Then in times gone by, all those contributions were not carried to the receipts in aid of the disbursements of the year, but were carried into the account of the public debt through the Treasury?—I should say that the amount for which these Treasury notes was issued to service funds, did go into the fund available for the service of the year, not as income, but as cash available for the expenditure.

4153. They would go to swell the balances in the Treasury?—That is so.

4154. But would they be taken credit for as part of the miscellaneous receipts for the year?—No; certainly not.

4155. Then if the balances for the year were in excess of the requirements of the Government, they were available to be applied in reduction of the debt?—Quite so; in other words, they formed an addition to the debt.

4156. They would remain as cash in the Treasury, unless the Government applied any part of the balances in the Treasury to the reduction of the debt?—That is so.

4157. If any part of the balances equal to those sums were so applied, then they would be in fact invested in the debt?—Yes; it would be a substitution.

4158. A substitution of the existing debt?—Yes.

Mr. *Seccombe*, C.B., and Mr. *Harrison*.

20 May 1873.

4159. Then, in the next place, an exception was taken by Mr. Goodliffe, that there was a want of detail under the heads of revenue; can you explain that?—It is quite true that this objection was one which could have been very well urged against the old form of the Accounts. The revenue was shown by provinces, as indeed was required by the Act of 1858; but there was no detail; the most important heads of revenue were shown in a single line; this was no doubt very inadequate for many purposes, and it has been remedied in the revised form of the Accounts. I would ask attention to page 14 in the new form, containing an "Abstract Account of Land Revenue," and in this the principal descriptions of land revenue common to the different provinces are stated in separate columns. So again with the Forest Revenue, at page 19.

4160. Then in this revised form of account details will be given?—More details of revenue will be given; and in each case it may be observed that the expenses in connection with the realisation of it are placed in close connection. I should perhaps state that these Accounts were framed by me, under the orders of the Secretary of State, in consequence of the remarks in the Report of this Committee in 1871. It was then reported to the House that these Accounts were not in sufficient detail, and I was directed to prepare forms of account which would give sufficient information. These have been prepared, and perhaps the principal features of the change in the form may be noticed. Not only is additional information in regard to the heads of the revenue now given, but further information not arising immediately from the cash transactions is given in connection with some of the Revenue Accounts. At page 30, in the Account of the Opium Revenue, we have introduced information showing not only the number of the chests of opium upon which the revenue has been derived, and the average rate at which it has been sold, and the character of the further receipts of this department, but we have added to it an account of the store and cost of production of the opium connected with the Accounts of the year; this account, in fact, containing the elements from which the profit and loss of this branch of revenue can be determined. Further information is given on many heads of expenditure. The expenditure on the Army and Public Works is very much more fully stated. The expenses of the extraordinary Public Works Expenditure is stated in detail of works, and accounts have been added illustrating the working of the currency; and in some other departments. These forms were prepared two years ago, and the complete Accounts for 1871–72, having been made up in this form, have been presented to Parliament; that is to say, they are now in the printer's hands.

4161. Now, with regard to the objection that was stated, that there was a want of sufficient detail in the extraordinary expenditure, and a want of adequate division and appropriation of the expenditure in England under the same heads as the expenditure in India, what remark have you to make?—First, as to the extraordinary expenditure; this was a deficiency which was fully known, and the objection has been quite anticipated in the present revised form of Accounts. The expenditure will be found stated at very considerable detail at page 9 of the Account. Then, as to the charges in England, particularly on account of pensions, and the objection that they were not divided between the presidencies, this is not done in the Accounts, nor in my opinion is the distribution, even if it were always possible, one which is to be desired. I think that Indian Finance must always be treated as a whole, and that the preferable plan is that the general principle which is now recognised should be followed of making the time and the place of payment determine generally the mode of charge, instead of attempting to distribute the charges wherever paid, which is the opposite principle by allocating them to the service or object for which they have been incurred.

4162. Would there be a difficulty in attempting to do that in consequence of the Government in London not being exactly aware at the time of the expenditure what is the ultimate destination of it?—The difficulty it seems to me is, that it involves a departure from the plain fact of a payment of particular pensions into a determination which must always be more or less a matter of opinion of the objects which have led to the original grant of such pensions. They are for services rendered to different departments and to different presidencies, and it would be, as I conceive, impossible to make such a distribution as seems to be desired.

4163. Apart from the question of pensions, do you know whether, under the more general system of administration in India now, stores are delivered at one port for service in a presidency beyond the port?—That is so; and I think it introduces a difficulty in attempting to distribute precisely to each presidency the stores which are issued. Take for example the stationery stores; they are sent to Calcutta in common for all the provinces, except Madras and Bombay; from a common stationery store in Calcutta is issued all the stationery required for the North West Provinces, the Punjaub, British Burmah, and the Central Provinces, and so forth; the Account now shows the actual outlay for those stores and their immediate destination. If it were attempted to break them up and distribute them according to their ultimate distribution, I think we should introduce facts which do not arise upon simple payments.

4164. Do you think then that apart from the immediate objection that was raised by Mr. Goodliffe, there would be any difficulty in the local administration exhibiting its whole charge by indicating not as an actual payment, but as a statement of fact, how much it had received in the way of assistance by stores from any source whatever?—That, I think, can be done, and if it is desirable, may be done; and I think that that is the preferable mode of treating these facts; this indeed is the principle which has been observed in the compilation of these Accounts under certain heads. I would instance, at pages 32 and 33, the Accounts of the Receipts and Charges on account of the Mint. Here are shown first of all the receipts of the Calcutta Mint, and then the charges arising from the Accounts of the Calcutta Mint. Added to that there are certain charges on account of the Mint falling under other heads of service which are here brought together. For instance, "Additions, Alterations, and Repairs of Building," and "Pensions and Gratuities to Mint Servants;" the latter been taken from the Account of Superannuation, and the former from the Public Works Expenditure. Then comes the "Value of Stationery supplied;" and fourthly, the "Value of Printing executed by Government Press."

Press." These are added to the other expenses in order to show the whole expense of the Mint.

4165. This is a statement not of the actual operations of the Mint but a statement of account drawn from the whole of the expenditure of the Government of India in order to exhibit the financial results?—Yes. Another instance which I might draw attention to, is that of "Receipts, Charges, and Profits of the Paper Currency Department," at page 139 of this revised form of Account. Here the charges are made up of sums taken from several parts of the Account. There are the "Salaries and Charges of the Offices" taken from "Administration;" then charges connected with buildings taken from the Accounts of the Public Works Department; the value of the stationery, the value of printing; and a certain amount for "House Lighting, Police, and Water Rates," taken from the Account of Miscellaneous Charges; and then there are charges in England for the cost of note forms and superannuations and charges taken from the Account for the Telegraph and Post Office Department, making up the entire expenses connected with this account culled from different parts of the Finance Accounts.

4166. In the same way then, and to the same extent, it would be possible for each local Government in making up its statement of account, to show on the face of the Account how much of the expenditure was made out of the various sources?—Quite so, and I think that is the proper way of dealing with the question.

4167. But the Accounts themselves you think ought to remain as they are?—I think so.

4168. A further question was raised by Mr. Goodliffe that the character of the payments in India for the military funds was not clear; will you explain that?—It was stated in evidence by Mr. Goodliffe that he was strongly inclined to think that considerable abatements are made on the payments in India, and the net amount stated in the account there. It is not the case that any abatements are made from the payments in India, and I have no means whatever of conjecturing what has given rise to the opinion or supposition.

4169. The answer, as I understand it, suggests that instead of the Government entering all the payments which they make there, they first deduct the receipts which they receive on account of these funds, and only state the surplus as payments?—The view is erroneous, and I cannot myself see any grounds in the figures contained in the Account for a contrary supposition.

4170. (To Mr. *Seccombe*.) Have you anything to add with reference to the management of the railway accounts in this country, and the mode in which they are kept by the India Office?—There is a full account kept in the India Office of the transactions of the several railways. The books show from the date of the guarantee of each company, the amounts received on account of the subscribed capital, the amounts withdrawn therefrom, both in England and India, and the balance remaining in the hands of Government applicable to each company. The books also show the sums issued to each company on account of guaranteed interest, and the net revenue for each half year, applicable thereto. Prior to the 31st of December 1870, the net revenue only was recorded in the books in this country, but since that date the gross revenue and the working expenses have been shown. A statement has been appended to each of the Home Accounts presented to Parliament for the last three years, showing in an abstract form the transactions of the several companies during the year, in respect of capital, interest, and revenue.

4171. (To Mr. *Harrison*.) Our attention was also directed by Mr. Goodliffe to the deficiences in the Post Office Accounts, in the statement of receipts and charges; have you anything to observe upon that?—I find the point to which the objection seems to refer, in the Accounts of the year 1868-9. The Director General of the Post Office states the amounts as follows: receipts, 686,072 *l.*, and charges, 537,020 *l.*; the Finance Accounts giving receipts, 707,792 *l.*, and the charges, 577,554 *l.*; the Finance Accounts showing the receipts about 20,000 *l.* more, and the charges about 40,000 *l.* more than the Post Office Accounts. The general cause of this I find to be, that the Director General has omitted the sum paid to the railway companies for conveyance of parcel mails; that his account in short is not complete, this being paid not directly through the agency of officers of his department; and also that he omitted (perhaps quite properly omitted from his point of view) charges connected with a temporary service, which was maintained between Jubbulpore and Nagpore, before the junction of the two railways at Jubbulpore, for the completion of the communication between Bengal and Bombay. It was placed for the sake of convenience under the administration of the Post Office, and consisted of a train of bullock carts maintained by stages, for the transport mainly of troops and military stores; this accounts for the difference.

4172. There was also a remark made with reference to the difference of 116,000 *l.* between the charge for Public Works in the Finance Accounts, and the Paper laid upon the Table of the House, called the Moral and Material Progress Report; what have you to say to that?—This objection was taken in error; there is, in fact, no difference at all. The Public Works ordinary charges for the North Western Provinces will be found at page 61 of the Finance Accounts to be 786,520 *l.*, and the same amount is given in the Moral and Material Progress Report; the figures being, Public Works, 775,066 *l.*; supervision and cost of land for railways, 11,301 *l.*; and for State railways, 153 *l.*; making up the sum total of 786,520 *l.* In the detailed accounts in a portion of the Finance Accounts, in order to state it more fully, the expenditure in the Native state of Rajpootana will be found to have been separately stated; and that was left out apparently in the remarks which were made before the Committee; there is no difference in the two accounts at all.

4173. There was another inconsistency between the Finance Accounts and the Moral and Material Progress Account noticed respecting the Public Works charges in Bombay; does that exist?—In the remarks that were made on this subject, in answer to Question 2862, a comparison was made between the sum of 903,124 *l.* given at page 81 of this Moral and Material Progress Report, as the total of the ordinary expenditure with the sum of 846,125 *l.*, which is found at page 79 of that Report. But these remarks are again made in error, for this sum of 846,125 *l.*, given at page 79, is only a portion of the expense for Public Works ordinary. It is followed by three other items which have been included with it;

Mr. *Seccombe*, C.B., and Mr. *Harrison*.

20 May 1873.

it; the next item being supervision and cost of land for railways, 31,920 *l.*; State railways, 3,831 *l.*; and loss by exchange, 89,539 *l.* It was represented that the amount given in the later part of this Report was more by something over 50,000 *l.* than was given two pages earlier. The fact, however, is, that it is not more; but it is less when compared with the proper figures; they are not identically the same, but it is less, not more; and this abstract which appear to have been given later in the Report is a partial one, and apparently was prepared for comparison with similar statements in previous years; at all events, for this purpose the compiler has neglected the loss by exchange on the railway transactions, which will be found in the corresponding part of the Finance Accounts, and has also omitted a special item against guaranteed railways under the extraordinary part of the account at page 60 of the Finance Accounts.

4174. And if those are brought together, will the items correspond?—I am not sure that they will precisely agree; but the difference that was pointed out to the Committee will no longer exist.

4175. The Statement of Moral and Material Progress is not prepared as a financial statement; it is prepared rather as a narrative of the proceedings, and in the figures, of course, there may creep in inaccuracy; but that is not the leading feature of that printed document, is it?—Of course it is not desirable that there should be any differences in statements regarding the same subject made by different departments of the Government; but I do think it is not difficult to understand how naturally some differences will arise, and how very difficult it may be to avoid them. The Provincial Administration Reports on which the General Moral and Material Progress Reports are by law required to be based (for it is required that this Moral and Material Progress Report shall be prepared from detailed reports, to be received from each presidency and administration), must necessarily be taken in hand immediately after the close of the year by a large number of departmental officers, in order that they may be ready at least as soon as the Finance Accounts which, by the Act, when laid before Parliament must be accompanied by the Statement of Moral and Material Progress. It is quite inevitable that statements of account, prepared for the purpose of illustrating the Administration Reports, must be in a great degree compiled while the Finance Accounts are still incomplete; and as they are prepared by officers who are independent of those charged with the duty of preparing the the Finance Accounts, and who are often at a very great distance from them, it is not surprising that the very same material should be compiled in a somewhat different way; and from the fact that the Finance Accounts are incomplete, it may be impossible to make any agreement between the two results before the Administration Reports are published.

4176. The person who is preparing the Statement of the Moral and Material Progress takes such items of the account as he thinks are proper to exhibit those facts?—Quite so.

4177. And the accountant, who has to examine the accounts as matters of receipt and expenditure, groups them together as he thinks proper to exhibit the accounts and balances of receipt and expenditure?—Yes.

4178. And therefore they may take a different view of the mode in which any particular item of receipt or expenditure should be regarded?—That is so. As far as possible, this difficulty should be met and overcome; and as regards this, I think I am justified in referring to the recent Administration Reports, which have been prepared with the greatest care. In the report of Mr. Campbell on the administration of Bengal, these figures will be found to correspond almost precisely, and I find in that report these observations: "In so great an administration, comprising so many and so weighty departments, it is impossible to send in a complete report at a very early date, if it is to comprise the various facts, figures, and observations supplied by the heads of departments and the commissioners of the principal local divisions. If the report is hurried, much that is interesting and important must be omitted; if it is kept back for all the information, which is duly digested in each department at the end of each year, it cannot be commenced until a good many months after the close of the year. On the whole, the best method will probably be that adopted on the present occasion, viz., to wait for the detailed figures and reports of the past year, but to include in the general report brief notice of anything remarkable or important that has occurred in the intervening period. In this view six months may be allowed to collect the reports and figures after the close of the official year on the 31st March, and the general report may be completed in October."

4179. With reference to the observation which was also made by Mr. Goodliffe, that the special fund charges are not satisfactorily adjusted, will you explain that matter?—This also rests on a misconception. It appears to have been assumed that there is a transfer of special fund charges between ordinary and extraordinary. There is no such transfer.

4180. But in connection with this I see that it is also objected that there is an inconsistency in the charges for Public Works in Bombay, shown in the Financial Accounts, and the charges shown in the Moral and Material Progress Report?—That, I think, I have already referred to in a former answer. This point as to the Bombay Special Fund seems to have been assumed to be the explanation of the difference that has been already referred to, but it is not the true explanation, and that has caused a misconception. There is no transfer made of special fund charges between the ordinary and extraordinary as is supposed.

4181. Then it is also said, by Mr. Goodliffe, that there is a want of proper classification of the Telegraph expenditure; can you explain that?—That statement is made with reference to an account prepared by Mr. Kellner, to which reference was made, and it was said that there was no classification of expenditure of 130,000 *l.* But on examining that account, I find that there is quite as much information given in regard to this particular sum of 130,000 *l.* as in regard to any other portion of the account which was under consideration. This is the detail given in the Account: Marine Department, for vessels and stores employed in laying the cable and for political objects in the Persian Gulf, 7 lacs 90,295 rupees; Military Department, for commissariat, medical, and other stores, 98,328 rupees; Public Works Department, for erecting buildings at the various stations, and for stores supplied, 418,852 rupees; making a total of 13 lacs 7,475 rupees,

rupees, or in sterling, 130,747 *l.* This is quite as much detail as is given in any other part of the Account of which it forms a part. As to the detail given generally in the Finance Accounts the objection had been foreseen, and a considerably great amount of detail has been recently laid before Parliament in the new Accounts.

4182. It is also observed that there is no mention in the Finance Accounts of the losses from the irrecoverable loans to municipalities; what have you to remark on that?—It is quite true that the snm of 22,500 *l.*, part of a loan made to the Port Canning Municipality, was in the Finance Accounts for 1869-70 written off without specific mention. It will be found at page 49, or rather, it is included at page 49 in the total sum of 41,492 *l.*, but is not specifically mentioned.

4183. Mr. *Birley.*] What is that sum described as there?—"Sundry Items," under the "General Abstract Account of Miscellaneons Charges."

4184. Mr. *Candlish.*] Would it not have been better to have had that 22,000 *l.* set out on the face of the Account?—I think it would.

4185. How do you account for that not being done?—It is a charge of an unusual character; it did not admit of being grouped with any other. The amount of it was certainly sufficient, I think, to have entitled it to separate notice in this Account of Miscellaneous Charges.

4186. *Chairman.*] What is the whole amount of Miscellaneous Charges in that year?—In India the whole amount was 754,000 *l.*, of which two pages of details are given. I think another line or two might have been given to this item from its amount and importance.

4187. Mr. *Candlish.*] It is quite impossible to discover the nature of it in that entry of 41,000 *l.*?—Yes, I think the criticism so far quite just and true that there is a loss, an admitted loss, written off without specific mention.

4188. *Chairman.*] Then there was an objection taken to the form of the accounts in general; have you any remarks to make upon that subject?—I think that almost the whole of the objection, all certainly of that part of the objection which appeared to me to be of importance, has been anticipated and met in the new form of Accounts, which it is proposed to submit to Parliament. There were some more general objections taken as to the absence of an Exchequer Account, and so forth, on which an opinion was expressed, in which I certainly do not agree.

4189. With regard to the way in which these Accounts are made out, are the Government Accounts made out and kept upon the principle of the Treasury Account in India?—That is so.

4190. In which they are their own bankers?—The Treasury Account may almost be said to form our Exchequer Account; the treasuries are the depositories of our public balances, which, from circumstances in India must be very much more widely distributed than is necessary or proper in this country.

4191. Therefore, it is necessary to bring into the Accounts all the operations upon the Government Treasury?—I think so.

4192. And to some extent, is not the Treasury also used as a banker for transactions which are not strictly those of the revenue and expenditure for the year?—That is so, to a very considerable extent.

4193. Then it would seem to be necessary, in order to exhibit the whole accounts, that you should introduce the Treasury Account with all its subsidiary operations?—I think so.

4194. Then it was also objected by Mr. Goodliffe, that from the way in which the accounts are stated it is impossible to ascertain the net charge for the Army as separate from the Civil expenditure; what have you to say on that matter?—The net cost of the Army is most readily obtainable from the Accounts. The whole of the Army receipts are brought to account, and the whole of the Army charges; the net cost is the difference. I am unable to see the difficulty that anyone could experience in discovering this.

4195. Are there no expenses on account of the Army charged in the Civil expenditure?—No; none. There is of late a small part of the superannuation in connection with the way in which the funds of the Army have been treated, in regard to which I have already given evidence before the Committee; unless that is considered an exception, I think there is none.

4196. Mr. *Fawcett.*] When you say that, are none of the Establishment charges put down as Civil?—It may be a matter of opinion, whether the secretariat of the Government of India ought or ought not to be considered a military charge; it is treated as a civil charge.

4197. There is a Military Secretary at the India Office, for instance; is not he put down under the Civil charges?—I should say that it may be a matter of opinion whether or not that is an Army charge.

4198. Still if there were no Army it would not be required; therefore, it is an Army charge, is it not?—I am not sure whether that argument is conclusive.

4199. *Chairman.*] Do you think that you would have to treat the question of Army charge like all other questions of charges; that if you want to ascertain the whole expenditure, you must go through the whole Estimates and ascertain whether there is anything in each of those items which may be considered as due to the fact that an Army is kept up?—I think that that would be the proper way of dealing with these charges.

4200. Anybody who made up that statement, must exercise his own judgment and discretion as to what is to be considered such an expenditure?—Precisely; there the question of opinion, I think, comes in.

4201. I suppose if we come to a close analysis of the matter, we should have to invite the Postmaster General to discover how many soldiers' letters went free or at reduced rates of postage, and so forth, and ascertain what charge was made on the Post Office in consequence of there being an Army?—And further, it may be a matter of opinion whether a portion of the charges of the Council, and the Governor General's salary, and expenses might not belong to the Army.

4202. Then all the stationery would have to be reassorted to ascertain how much was used for the Army, and all the printing in like manner?—Yes, quite so.

4203. Mr. *Fawcett.*] But in our own country, for instance the Military Secretary of the Horse Guards, being an official there, is not put down as a Civil charge, is he?—No.

4204. Take again the stationery; as to the stationery used at the Horse Guards and the War Office, it is well known that that is part of the military expenses. I want to know whether I can

Mr. *Seccombe*, C.B., and Mr. *Harrison*.

20 May 1873.

I can find out from the Accounts as presented to Parliament, in making a comparison between the Army expenditure for England and the Army expenditure for India, that for instance an officer performing duties like those of the Military Secretary at the India Office, would in England be included in the military charges, and would not be included in India in the military charges?—That, I think, is the case.

4205. How could I find that out from the Accounts laid before Parliament. It may be true that it does not make much difference; all I say is, that it ought to be stated, and if it is not, the Accounts do not give us the information which we ought to have?—The cost of the Military Secretariat in India is clearly stated on the face of the Finance Accounts at page 52 of the new Accounts, but in the old form the general charge for the secretaries' establishment was given, without division, into departments.

4206. But what I want to know is this; you now are objecting to this evidence given by Mr. Goodliffe; I want you to show me in any Account that has ever been laid before Parliament, where I could find out, or any one else could find out, whether the Military Secretary was a military charge or a civil charge?—That has not hitherto been separately stated in the Finance Accounts.

4207. Are there not a great many other things in that same position; are there not a great many other things, which in England for instance, are distinctly a military charge, and are not a military charge in India?—I think not.

4208. Take, for instance, the Ecclesiastical Establishment?—It is true that the Ecclesiastical Establishment is not shown at all as part of the Military expenditure.

4209. It seems to me so extraordinary that you go through one item after the other, and you find the same. It is stated broadly by you, that you can ascertain at once the net military expenses of India, and then in cross-examination, charge after charge we find out is included as a part of the military expenses in England, and is not included in India. How do you reconcile your general statement with these facts brought out in cross-examination?—I have not been accustomed to think of these charges to which you refer as military charges, and I think that it must be in a great degree still matter of opinion how far and to what extent they are Army charges.

4210. *Chairman.*] But what I understand that your observation applied to is, that those things which are considered military charges, are all shown together under the military accounts?—That is so.

4211. And those things, which in the method of keeping the accounts are treated as part of the civil expenditure, will all be found with the civil expenditure?—Yes, that is so.

4212. Mr. *Fawcett.*] We want to find out the net military expenditure for India. Of course if any one uses the expression "Net Military Expenditure" in Parliament, I should take it to mean what would describe for instance the net military expenditure of England; but I find that on taking the Indian Accounts and the English Accounts, the military expenditure for India, and the military expenditure for England, mean two entirely different things; that from the military expenditure for India various charges are omitted which are included in the military expenditure for England; that is the case, is it not?—That is the case.

4213. Does it appear from the Accounts that are laid before Parliament that the military chaplains are not included in the military expenditure?—It is shown negatively, I think.

4214. But I object to having anything shown negatively; we have volumes of accounts laid on the Table, and we want, not negative information, but very positive information; does it show it positively or not?—It does not; but I think that there is an inherent difficulty in doing so in the case of the Ecclesiastical Establishment or the establishment of chaplains; as from the constitution and administration of that department, it is impossible to say how much is for Army purposes and how much is not.

4215. But then the Account might state that fact not as an inference but positively, so that one would know the fact; when they gave the expense of the Ecclesiastical Establishment they could state what that expense meant, and then let anyone draw his own conclusion as to whether it ought to be a military or a civil charge?—The whole expenses upon that branch are set out in the Accounts; I am quite aware that it is not stated in the Army charges.

4216. *Chairman.*] That does not profess to be in the Army charges, does it?—No.

4217. There is no difference in point of principle between the mode of these accounts and the mode in which the public accounts are made out in England?—Not that I am aware of.

4218. Where a service is in itself a complete service it is charged for as a complete service, whether it is for the Army, Navy, or Civil Service. Precisely the same thing is done in all the English accounts. For example, let me put it to you thus: the Auditor General's Department in England is charged under that head in the Civil Service Estimate; and you no doubt are aware that a certain portion of the Auditor General's expenses is for the Civil Service, a certain portion for the Naval Service, and a certain portion for the Military Service; there is, however, no splitting up of the Comptroller and Auditor General's expenditure into the heads of Civil Service, Army, and Navy, but it is charged as one expenditure; and if anybody wants to have that matter found out, he must move for an account, and have it estimated by somebody how much is to be put for each of those heads. And the same thing is done with the Governor General's office in India, which involves the Governor General in Council and the secretaries for carrying on his business; the whole of that is charged to the Governor General in Council Establishment, and not split up; otherwise you would have to divide the Governor General into three parts, and call them the Civil Governor General, the Military Governor General, and the Naval Governor General; is that so?—It appears to me to be a fair parallel.

4219. Mr. *Fawcett.*] But I submit to you this; I am not supposing that as to the Governor General or the Secretary of State that we should attempt the impracticable task of saying how much of the time of the Secretary of State, for instance, is devoted to military duties, and if we find one-fifth is devoted to them we should put down one-fifth of the Secretary of State's income to military expenditure; but what I say is this, you have given an affirmative answer to this question which I put to you, that taking, for instance,

instance, the Military Secretary at the India Office, whose work is purely military, the salary of an officer or official doing work analogous to that at the Horse Guards is put down as military in England but it is put down as civil in India. That is the point which I want you to give me some explanation upon; not that the Governor General's or Secretary of State's salary should be split up, and an impracticable attempt made to allocate it?—But I have been accustomed to think that the Military Secretariat rather stands in the position of the employer of the Army than as being a portion of the expense directly connected with the organisation or administration of the Army; that it is not, therefore, military in its character.

4220. But I will take your own reply. You said to me, "that the salary of a person (and I believe it is notorious) that is doing the work of a military secretary in the Indian Office if he were doing the same work for the English Army would be undoubtedly put down to military charges?"—It appears that there is a real difference in the way in which this expenditure is considered and treated in the English and in the Indian Accounts.

4221. I think you did express the opinion which I have stated; and after all it can make no difference that the various departments of the Indian Office happen to be centred in on building: what we have to considered, are the duties discharged by a particular official; it cannot make any difference whether there is a separate building for the military work of the India Office and it is under a separate roof; but did you not admit that if the same kind of duties which are discharged by the Military Secretary at the India Office were discharged for the English Army the salary of such an official would be undoubtedly a Military charge in the English accounts?—What I understand to be the case is that the whole expenditure in this country of the War Office is considered to be a Military charge; and that what may be considered in some measure to correspond with that in India, the Military Department of the India Office and the Military Secretariat of the Governor General's Council is not so considered; but that this is a matter upon which different opinions may be entertained by different persons; that some may consider the Indian practice to be the more accurate view of the character of these establishments; that the duties of the Secretariat are not military in their character, but rather represent the point of view of the employer of the Army.

4222. But you admit that that is not stated (I am not saying which plan is the best) in the Accounts?—Quite so.

4223. *Chairman.*] I suppose you do not deny that the Account, which I mentioned before, namely, the account of the Governor General and his office, is shown as one expenditure?—It is shown as one expenditure; the whole expense of the different branches of the Secretariat being grouped together in the past Accounts; but in the future they will be separately stated for departments.

4224. That is it will be split up into different items?—Yes.

4225. But the total will still be exhibited as the expense of the Governor General, and under the same heading?—Yes.

4226. Mr. *Fawcett.*] If these Accounts were not defective, why are they going to be altered?—There is no essential difference in the distribution of the Accounts of Receipts or Expenditure, the change is in the direction of giving fuller detail and altering somewhat the arrangement in which they are presented.

4227. Sir *D. Wedderburn.*] We were told that the military chaplains appointed to Roman Catholic and Presbyterian regiments are borne upon the Military charges, whereas, in the case of those of the so-called Established Church, their expenses are included among the Civil charges; what is the reason of that?—The reason I conceive to be this, that the Roman Catholic clergy and the Presbyterian clergy, are attached either to particular regiments or to particular military stations, the connection with the Army in their case being immediate. The answer which I gave just now had reference to what is understood as the general Ecclesiastical Establishment of the Government of India, and I did not refer to the circumstance that the Presbyterian and Roman Catholic clergy were borne upon the Army Estimates, and the expense treated exclusively as a Military charge.

4228. That is to say, the Presbyterian and Roman Catholic chaplains are regarded as *quasi* military officers, whereas chaplains of the English Church are not so regarded?—They are treated as being in a separate department of the Government, maintained mainly for the service of the Army, but still without that close connection which is observed in the case of the others.

4229. But they are attached to particular regiments, are they not?—No, they are not.

4230. Not in any case?—In no case, so far as I know; they are attached to particular stations, not to regiments.

4231. But the Presbyterian clergy are attached to regiments, as I understand you?—Yes.

4232. *Chairman.*] May not a clergyman belonging to the Ecclesiastical Establishment be doing one day military duty and the next day civil?—Yes.

4233. He is put on the establishment of the Government without being distinctly employed for either military or civil duty; he may be sent to sea, or may join a marching regiment, or may be employed as a civil chaplain?—That may be the case; they are not, however, attached to marching regiments, but to military stations.

4234. Is it not competent to the Government to order them to do duty with a regiment marching?—Yes.

4235. Sir *G. Balfour.*] But they are essentially military chaplains?—They are considered to be military chaplains.

4236. And formerly their pay was borne on the Army expenditure?—Yes.

4237. Sir *D. Wedderburn.*] Is there any reason why they should be put in a different position from surgeons of a military station, for example, whose expenses, I imagine, are borne by the military charges?—No, I think not. As a matter of fact, the surgeons are either attached to regiments or stations. If to stations they are civil surgeons; there are certain exceptions as to garrison surgeons, but those are exceptions.

4238. Then the fact is that the chaplains are almost identically in the same position with the surgeons; that some of them are in charge of stations, and a few of them are in charge of regiments?—Yes.

4239. *Chairman.*] But are there not surgeons to all regiments?—Certainly, there are surgeons

Mr. *Seccombe*, C.B., and Mr. *Harrison*.

20 May 1873.

to all regiments; the parallel is not complete, therefore.

4240. Sir *D. Wedderburn.*] Are the surgeons in charge of civil stations borne upon the military charges?—No.

4241. But the surgeons in charge of regiments are?—That is so.

4242. *Chairman.*] Are not the surgeons in charge of regiments under martial law, under the Mutiny Act?—They are in a different position.

4243. And the clergymen are not under the Mutiny Act?—I am not aware.

4244. Clergymen have no commissions under the Articles of War, have they?—I have no authority to say; but I think not.

4245. Mr. *Candlish.*] Would it not be as fitting that the clergymen of a regiment should be a military charge, as that the surgeons of the regiment should be a military charge?—I have explained that, with the exception of the Presbyterian and Roman Catholic clergy, there are no clergymen of regiments, but merely of military stations.

4246. Sir *D. Wedderburn.*] All the surgeons in charge of civil stations are officers of the Army, are they not?—Yes.

4247. Then is no part of their salary or pay borne on the military charges?—No, not so long as they are civil surgeons.

4248. Can you state altogether what the amount of the charge for surgeons in charge of civil stations is?—I can state from the Accounts. In the Accounts for the year 1871-72, the consolidated salaries of medical officers and allowances of regimental medical officers in charge of civil stations amounted to 169,518 *l.* for all India.

4249. Mr. *Fawcett.*] That does not include the entire medical charge, does it?—No; that is the entire salary of all medical officers who are considered as civil surgeons, and besides an additional allowance which is in some cases given to regimental surgeons for taking charge of the local civil hospitals.

4250. But will you look into the Accounts and see what the entire medical charge for the whole of India is, which I remember is put down somewhere as a civil charge?—I have the account before me of the whole medical charges as they are now stated, and I have given the principal item, and to that is to be added only the expense of the Sanitary Commission, 5,289 *l.*, to arrive at the total, which is now treated as the medical charge for all India. But there has been a great change in dealing with the expenditure in this department, from the assignment of a great part of the medical expenditure to the Provincial Service Account.

4251. I want to get at the bottom of this: I should like just to find out considering the medical stores, regimental pay, medical instruments, and all what is the aggregate amount taken either from the Imperial or Local Revenues of India, for the medical charge; and will you take it for som years previous to the time when this provincial allocation was made?—I hardly think it would be necessary to go back any further. The entire expenses connected with the Medical Department, which is dealt with under the Provincial Services, including the Vaccine Establishment, Government Hospital, medical college and schools, lunatic asylums, chymical examiner department, grants made for medical purposes, Health Officers' Department and the Sanitary Commission treated under the general head of Provincial Services, amount to 327,224 *l.*

4252. Does that include the former sum that you gave?—No.

4253. It comes to over 500,000 *l.* together, does it not?—It is a trifle over 500,000 *l.*

4254. Now, would it be an exaggeration to say that four-fifths of that charge is really after all an Army charge; that, for instance, where a medical man, although put down to the civil charges, attends one civilian he attends four soldiers?—I should not have thought that that was at all the case.

4255. I mean those that he attended gratuitously?—No; I think in no respect. For direct services rendered to soldiers there are the regimental surgeons and the regimental officers. Thus, what I have just stated includes services rendered to Government establishments that are not military.

4256. For instance, take the military station at Cawnpore, we will say; all the medical service, as I understand, which is rendered there to the official, civil, and to the military population, is put down as a civil charge?—All except the Army medical officers is put down as a civil charge; but then it is for civil duties; it is for the gaol, the police, and so on.

4257. But from your evidence, I understood you, that what services these medical persons render to the military population at the station was included in this item?—But I think that such services must be very trifling, if there are any, for the military population has its own medical officers.

4258. But then, if you look back at your evidence, I think you will find that you say that these are put down as a civil charge at this station?—Not the regimental officers.

4259. What is the medical charge put down in the Army accounts?—In the Army accounts there is a total for all expenses connected with the medical department, including the veterinary establishment, which is very trifling, of 421,500 *l.*

4260. But then, considering how small, comparatively speaking, the official civil population is in regard to the Army, it surely must happen that a very considerable portion of that 500,000 *l.* of which you have spoken must be really for services rendered to the Army?—There is the police and there are the gaols.

4261. Will you make an estimate of that, and say how much of that 500,000 *l.* is service rendered to the Army. If it is not as I say, then it indicates, comparing the two figures, that an enormous amount is spent upon the civil officials and the police as compared with what is spent for the Army?—I think that the whole of this must be considered as it is represented in the Accounts as charges for Civil Services.

4262. Sir *G. Balfour.*] The charges for the medical department are represented by 327,224 *l.*, and there is no portion of that whatever for duties done for military service in any form or shape?—No; I imagine no military service whatever, except so far as the Government General Hospitals afford aid to the soldiers. I apprehend that this includes the whole cost of what is known as the General Hospital in Calcutta, which affords aid to the garrison.

4263. But surely you are aware that in the military charges there are charges for general hospitals for their own soldiers, entirely distinct and

and separate?—Well, there has been a change in that respect. In the detailed accounts of the Army, at page 72, you will find that the general hospitals are only mentioned under Bombay.

4264. Then you have been transferring some portion of the medical charge, which was previously a military charge, to the civil charges, have you?—That, I think, has been done.

4265. Then, with regard to the 174,917 *l.* for salaries, at page 55, that is for civil charges for surgeons?—That is so.

4266. The police are under the civil surgeons, are they not?—That is so.

4267. And they are more numerous far than the Army?—Yes.

4268. There are upwards of 200,000 men in the police now, are there not?—I cannot speak to-day to the total number of the police, but they are more numerous than the Army.

4269. And the prisoners are almost more numerous than the Army?—Nor can I state the total number of prisoners under detention in our civil gaols, but they are extremely numerous.

4270. The medicines supplied to the civil surgeons are charged for in the Military expenditure, are they not?—They are in the first instance.

4271. Perhaps you would be able to show us an instance of medical stores of any kind charged for in these civil charges?—I have a difficulty in speaking to this to-day, but my impression is that it will be found that a considerable part of the sum shown at page 67 of the Army Receipts, under "Sale of Medical Stores," represents supplies to dispensaries.

4272. Perhaps you will examine your evidence, and verify that fact amongst the Military receipts, and see whether that is borne out by the facts. Now, the 421,500 *l.* which you gave as the medical charge, on account of the Army, is not the whole charge on account of the Army for the medical department, seeing that the surgeons and assistant surgeons and the hospital establishments are charged for under another grant, are they not?—That is a matter with which I am not acquainted.

4273. *Chairman.*] There was a suggestion made that it was impossible or difficult to determine how much of the Public Works Expenditure had been met from revenue, and how much from borrowed money. Do you concur in the view that the accounts ought to be made out in that form?—No; I admit the difficulty; but it appears to me that the difficulty is one not so much of accounts as of the policy of the Government in regard to this question. There would be no difficulty in presenting the account in this shape if it were at once decided that works were to be constructed from borrowed money, wholly irrespective of the result of the Revenue Account of the year. But that is not precisely the position which the Government has taken in regard to extraordinary works. The Government has paid out of revenue, as far as possible, the cost of all public works, meeting by means of loans such part of the cost of works of a particular character as they have recognised as proper objects for the expenditure of borrowed money; it in this view it is not considered necessary to row money to the full amount of works of this acter that have been executed, but merely to w such funds as are required after using the ces available to the Government; and e our accounts are quite consistent with y; they show the additions made to the public debt in the course of the year; they show the charge in the year on works of a character which makes them, in the view of the Government, proper objects for the expenditure of borrowed money; and they show the total expenditure, including extraordinary works, compared with the revenue; thus showing what part of the extraordinary expenditure, if any, is in excess of the capacity of the revenue to meet it, and must be otherwise provided for.

4274. Mr. *Fawcett.*] What accounts are you referring to?—To the Finance Accounts laid before Parliament.

4275. The revised ones?—Yes, the revised ones. My view is that all the facts are presented; but how much of the actual expenditure on extraordinary works has been met from borrowed money can only be determined on a review of the account afterwards.

4276. *Chairman.*] Do you mean that in the administration of the public works all the works are blended together and carried on by the officers in the district under one general system, and that the accounts therefore exhibit those transactions as the transactions of the Works Department?—That is not precisely so, though it is partly the case. The works that are recognised as extraordinary works are of two characters, Works of Irrigation and State Railways (I speak of what is recognised at the present time). For both these purposes there are separate branches of the General Department of Public Works. The whole of the expenditure, with a very small exception, on State railways is considered as an extraordinary expenditure, and there are separate offices charged with the duty of executing and superintending this expenditure; and therefore, so far it might be separated off at once. But what I mean is this, that at the commencement of the year the Government may determine to devote a certain amount for expenditure on extraordinary works, being prepared at the same time to borrow the funds, if necessary, to meet that.

4277. To make good any deficiency that they may create in the annual expenditure?—Quite so; but at the end of the year it may be that the revenue has proved sufficient to meet it without borrowing, therefore that connection of the loans and the outlay cannot, as I think, be advantageously preserved through all the stages, from the estimate to the result.

4278. But the result can be arrived at by saying what was the money borrowed in the course of the year, and what was the sum spent in the course of the year on works, and described as special?—That is my view.

4279. And if, therefore, the sum so spent is more than the amount borrowed, it is evident that the whole loan has been applied in aid of public works extraordinary?—Yes.

4280. Then there was another question raised by Mr. Goodliffe, namely, that money is applied to the expenditure on account of the telegraphs, out of the income of the telegraphs, without its appearing in the Estimates as an item of expenditure; is that statement correct?—I can only say, in regard to this point, that the accounts afford no ground for the inference; all expenditure on telegraphs is on estimate, and funds are issued against the annual estimate of the department; all receipts are paid to the Revenue Account in the public Treasury; and to show that receipts cannot be applied in the way imagined, I may refer to the form in which at the present

Mr. *Seccombe*, C.B., and Mr. *Harrison*.

20 May 1873.

time all telegraph revenue is realised, and that is by means of stamps, which are sold practically independently of the department, so that the funds are not at the disposal of the officers of that department.

4281. And the accounts are made out on the same basis, exhibiting all the receipts and all the expenditure?—That is so.

4282. Attention has been directed to the necessity that exists of separating the revenue and the service accounts; what do you say to that?—It appears to me that they are separate. Throughout India revenue is paid to the general treasury accounts, and kept apart from any accounts of money issued for expenditure of any sort.

4283. Are the deductions which are now made in aid of the pensions (which I presume represent now the service account) brought in as extra receipts, or are they deducted in diminution of the expenditure?—Yes; that applies to the Army and Medical Departments.

4284 And to the Civil Department also, does it not?—Not as yet; the Act has not yet passed giving effect to that arrangement; but so far as the change has taken effect, the deductions are brought to account as receipts in aid of the superannuations.

4285. Is there any longer any service account kept as regards the Army, to show the working of the superannuation of the Army, or is it treated as an annual receipt and an annual payment?—The balances of those service funds are shown upon the face of the new accounts.

4286. They are kept up?—Yes.

4287. But are the accounts kept up as separate and distinct accounts?—I am not fully acquainted with that, but the accounts are kept up with individual officers to prove the realisation from them of all dues; but I do not know the details sufficiently to reply to the question on all points.

4288. Are there no Civil Service funds now in the hands of the Government?—They are in a transition state; the arrangements have been practically completed for making them over, but awaiting the necessary Act for the purpose, complete effect has not been given to the transfer, and I cannot speak as to how far the intended changes have been carried out or are still in abeyance.

4289. Do you know if the funds are abolished by the Government taking them over, whether the funds will still be kept up as separate accounts or will they be shown as part of the general receipts and expenditure?—They will pass into the general receipts, and not be kept up separately.

4290. That is to say, the Government will make deductions and put them into the miscellaneous receipts, and the pensions will appear in the pension account?—Yes.

4291. And where will the capital appear?—That is under consideration, as to the precise way in which it will be proper to deal with that.

4292. Mr. *Dickinson*.] Does the capital exist in a separate form?—It is in the form of a liability of the Government, and the extent of it is now stated in that form.

4293. It does not exist in the form of any investment in its own favour?—No.

4294. Mr. *Fawcett*.] I understand that your evidence to-day is to correct what you conceive to be misconception in Mr. Goodliffe's evidence, and I gather from your evidence that in saying that some of his criticisms are wrong as to the accounts, they are simply wrong when you compare his remarks with the revised accounts, which are going to be presented, and which neither he nor any of us have ever yet seen?—This form of account which has been adopted was prepared by me, while Mr. Goodliffe was still at the India Office; Mr. Goodliffe was acquainted with the change.

4295. But he came here to give evidence on accounts which have been presented to Parliament; he took those public documents, and your criticisms upon his misconceptions are founded on a revised system of accounts, which have never yet been laid before Parliament?—I hardly think that I am in a position to say what a gentleman came to give evidence upon.

4296. But taking his evidence taken as a fact, he took up certain documents, and he said, "Here are Finance Accounts, Administrative Accounts, and reports on the Moral and Material Progress of India; these accounts show certain things, and do not show certain things which they ought to show." You have corrected his statements, as I understand your evidence, by referring to accounts which have never been laid before Parliament; his criticisms could not be answered in that way, could they?—I think that the criticism as to the general form of the account may be met with the reply that these objections on the face of the accounts have been anticipated; and further, that the gentleman who commented on them had the advantage of knowing what deficiencies had been felt by others who had examined them.

4297. I do not know what Mr. Goodliffe's information was, but his criticisms were on accounts which were laid before Parliament; and you say that those objections will be obviated in accounts which have never yet been laid before Parliament. Whether Mr. Goodliffe knew the new form that the accounts were going to assume, of course it is not for me to express an opinion upon; but it is the case, is it not, that his criticisms were directed to the accounts laid before Parliament?—It is the case that these objections have been felt, no doubt, by Mr. Goodliffe, in common with others, though how far he may have followed the changes I have no means whatever of knowing; but they have been anticipated.

4298. They have been, in your opinion; but it remains for us to judge whether we consider that they have been anticipated; we have never seen the accounts?—Certainly.

4299. Now, with regard to these funds which have been taken over by the Government, I am correct in stating, am I not, from your former evidence, that no account is in existence to show what has been done with those funds. The Government has taken over so much capital which involves a future charge on the revenues of India. That capital, if it had been kept intact, would have served to meet that charge, and no account shows what has been done with that capital, or do any accounts show that?—They do; they show how much has been spent, and how much is in existence.

4300. Do they show in what form, and in what investments?—As uninvested; it is a general liability of the Government.

4301. You cannot suppose that a fund exis[ts] can you, when you simply state that it [is] liability?—That is the only form in which it [can] exist.

4302. But is there no difference between [the] Suppose I refer to any particular fund

stance the Police Superannuation Fund; I say that fund consists of, so much: that that fund represents really a liability. I want to know what remains; where it exists, has it been spent, or has it been invested?—It has been spent.

4303. I want to know where do the accounts state that?—I have already explained in evidence to-day that the amount of these funds has been a practical addition to the debt or else a substitution for existing debt in another form; that is it has gone into the ordinary cash account of the year, and the funds have been available.

4304. They have been spent in fact?—Yes.

4305. But then as you cannot refer me to any statement in the old accounts, I want you to refer me to a statement in the new accounts, which will bring clearly home to the public this fact which I submit is a very extraordinary one, that these funds which ought to have been kept, which represent really a future charge on the Government of India have actually been spent as ordinary income; in fact that India has been spending as ordinary income what she ought to have kept as capital?—That is by no means the case; they have not been treated as part of income at all, ordinary or otherwise; they have merely gone to supply the means of expenditure.

4306. Do you not remember in your former evidence in one year there was a serious item of Miscellaneous Receipts, revenue 2,000,000 *l.*, and that when we looked into that matter we found out that a portion of it was not revenue at all, but was simply the spending of this capital fund?—That refers to a matter rather apart from what I am speaking of just now, which is the ordinary way of dealing with the income of these funds. The other question was as to the action taken when the capital of the funds was assumed by the Government.

4307. Would you read me out then the paragraph in your proposed new accounts, which will state distinctly to the public that when the Government took over the capital of these funds, they did not invest it, but spent it; I want to know whether that fact in the first place will be stated to the public, and if so, in what form it will be stated in the revised accounts?—It will be stated in the revised form of the account, as contained in the Account No. 23, at page 48. It shows the balances due on existing funds on which the Government pays interest.

4308. Will you state them?—To take them fully would be somewhat lengthy. There are Treasury notes in favour of service funds; the balance is stated at the beginning and the end of the year. The amount at the 31st of March 1872, was 617,266 *l.*, at 4 per cent. The Civil Service Superannuation Fund (I am speaking of Bengal now) is 1,939,295 *l.*, interest at 6 per cent.

4309. But, when you say interest at 6 per cent., what do you mean by that?—I mean that interest is calculated at that rate half-yearly, and is credited to the account of the trustees of this fund.

4310. Yes; but what I want to know is, whether the public is going to be informed of where that 1,939,295 *l.* is. Where is the paragraph in the accounts to explain where it is?—It is non-existent.

4311. Has the public been told that. Is it further stated in these Accounts that this capital fund was handed to the Government of India, and that they have spent it; that hitherto in the accounts it has been represented as a fund, whereas it is really a liability?—Of course there is no statement of that character to be found on the face of the accounts, but the nature of the obligation is, I think, clearly indicated in that account; and as to those accounts of which the capital has been taken over, they will be found in another part.

4312. I just want to see in what form it is stated?—At page 124 will be found the capital of those funds which have been taken over by the Government. As to Bengal, they are described in Account 53, Military Fund Deposits, not bearing interest; the balance at the end of the year, 249,852 *l.*; Military Orphan Fund deposited, not bearing interest, 425,764 *l.*; Medical Retiring Fund, deposits not bearing interest, 232,439 *l.* Then, under "Madras," Military Fund, deposits not bearing interest, 746,029 *l.*; Medical Retiring Fund, deposits not bearing interest, 557,150 *l.* And under "Bombay," Military Fund, deposits not bearing interest, 466,483 *l.*; Medical Retiring Fund, deposits not bearing interest, 105,122 *l.*

4313. But why are those funds stated as not bearing interest?—Because in connection with the arrangements for taking over the obligations of the funds by the Government, the body, the corpus, of these funds has been taken over, and no interest can accrue.

4314. But then, if on taking them over, the Government instead of spending them had invested them, they would have had an income from these funds?—They would have had to have created debt, to have borrowed, for the purpose; it would have been as broad as it was long.

4315. They took over the funds; the capital existed?—The capital existed in the form of a liability from the Government to the trustees. The trustees discharged the Government of that liability.

4316 I should like to examine you afterwards on these accounts, when I have had an opportunity of examining them. But your opinion is, that the public will be able to understand from these accounts, that these funds which have been taken over by the Goverment have been spent, and that these funds now simply represent a liability; is that so?—I think that the public will be able to understand that they form an obligation of the Government.

4317. *Chairman.*] The public will not understand anything that does not exist. In the first place, in order to make the matter clear, at the time when the whole system was put an end to the Government had certain obligations for these funds, either in the form of funded or unfunded debt, had they not?—That is so.

4318. There was no such thing as a fund in the sense of a pocketful of money, was there, to represent those?—No, there was no investment.

4319. In the first inception of these transactions between the Government on the one hand, and the public service on the other, the Government made itself accountable to receive the reductions made from the pay of the officers, and they agreed to allow a certain sum to keep that in deposit at interest?—That is so.

4320. And therefore from year to year the money actually received went into the annual receipts of the Treasury, and was exhibited in the form of an obligation on the other side of the account?—Yes.

4321. Therefore it was a mere matter of account, and there was nothing in existence at the time.

Mr. *Seccombe*, C.B., and Mr. *Harrison*.

20 May 1873.

It seems to have been a mere matter of account between the Government on the one hand, and the body of officers on the other?—That is the case.

4322. When the Government had no body of officers to account to, keeping up this account was merely a form of exhibiting the financial results of the obligation?—That is so.

4323. Mr. *Denison*.] Supposing that at any time previous to the late transactions, the managers of those funds had made a requisition to the Government to invest this large sum of deposit, the Government, I apprehend, would not have had the power to refuse complying with the instructions of the managers upon that point?—Well, of course from the relative position of the Government to their services, that of employers and employed, they had necessarily a great deal to say as to the way in which the services should be allowed to deal with these funds; but still the whole of these funds were dealt with by bodies of trustees, who stood between the services and the Government, and I apprehend that the services at any time, if it could have been conceived to have been for their interest, could have interposed to break the connection, which was a voluntary one, but an advantageous one to the services.

4324. *Chairman*.] Is it quite clear that they could break the connection; were not the obligations such on the part of the Government that they really could not break the connection; did not the Government undertake, for instance, the duty of collecting the subscriptions?—That was an advantage, certainly, to the services.

4325. Was it possible for the trustees to assume any independent action in the matter?—I think it may very well be doubted whether their position really admitted of it.

4326. As regards the Civil Service Fund, were they not allowed 6 per cent.?—They were. They could not have realised that independently of the Government.

4327. Nor could they have collected or managed their fund independently of the Government?—Not without difficulty.

4328. Sir. *G. Balfour*.] But was it not strictly enforced with reference to the military fund, that the whole monetary capital was in the hands of the Government, and that no dabbling with the fund in any form or shape was permitted to the directors of that fund?—That is so. But to show that there was a certain liberty of action I can refer, though I have not a perfect recollection of the details, to an occasion on which it was brought out, I think that the trustees or directors of one of the military funds, I think the Madras Military Fund, did invest a large amount, I think it was 25 lacs of rupees, in a certain loan of the Government. This action was disallowed.

4329. *Chairman*.] Was it not in truth from beginning to end a contract between the Government and the body of officers, that certain arrangements should be carried out by the Government. Did not the Government assume the function of compulsorily deducting from officers' pay, whether they liked it or not, the money necessary to keep up the fund?—I think that the very existence of these funds depended upon the approval and action of the Government in this way, that the Government forced every officer in their service to become a member, and to contribute to these funds; and without that condition in the original contract, it would have been impossible to maintain them on the footing on which they stood.

4330. Mr. *Fawcett*.] To bring out the point I will put a parallel to you. Was not what took place this: Suppose an Act of Parliament was passed to say that every civil servant employed in England should have 5 per cent. of his salary deducted, and that that should be invested in the Post Office Savings Bank, and that that should be called The Civil Service Fund, and that annually an account should be laid before Parliament of what that Civil Service Fund amounted to; at last we find that owing to there not having been a great demand in the earlier years from pensions coming in, that fund amounts to 500,000 *l*.; it comes out, that instead of the Government keeping that fund and investing it, for instance, with the Commissioners of the National Debt, as the savings banks' deposits generally are invested, the fund has been spent, and does not exist, that it is simply a liability, in fact. That is what has taken place in India, is it not?—That has been the result.

4331. It is exactly the same as if the Government now instead of investing the Post Office Savings Bank deposits with the Commissioners of the National Debt were to say, year after year, "There is a certain Post Office Savings Bank Fund, but we will not invest it," and then we suddenly found that all the time that we thought that fund was accumulating, it was in fact simply a liability?—I know nothing of the facts to which you refer. Here there has been no departure from the original intention or the original contract.

4332. That is really what has taken place, is it not?—Exactly; what has taken place is, that this sum has been absorbed into the general liabilities of the Government; that is strictly accurate.

4333. *Chairman*.] There never was an engagement on the part of the Government to do anything more than recognise an obligation to pay these monies?—Nothing.

4334. There was no contract of any kind to invest these monies in stock or securities?—In regard to a great part of them, there were promissory notes issued by the officers of the Government to the trustees of these funds for every rupee subscribed; the realisations were made through the action of the Treasury. The trustees claimed a certain amount to have been their income for the period, the month or the quarter, and for this they received a Treasury note, which was a promissory note, to pay on the part of the Governor General in Council to the trustees on demand the sum represented.

4335. Mr. *Denison*.] Those promissory notes bore interest, I suppose, the same as all other promissory notes?—Yes.

4336. And *pro tanto*, they were a direct addition to the public debt of India?—Yes.

4337. Mr. *Dickinson*.] In the account of the expenditure in the pay of Civil Service, was the whole pay charged against the year's expenditure, or the pay, minus the reduction?—The whole pay.

4338. I mean in the time when the accounts were in action, was the deduction made from all the different services included in the expenditure for salaries and otherwise of the services?—Yes, it was.

4339. Then was there any charge in addition to that of the interest on the capital at the time being existing?—There was.

4340. And

4340. And in what form was that stated in the accounts?—In the Interest on Service Funds.

4341. I understand that the gross annual salaries were debited as an annual payment?—Yes; that is so.

4342. Including the contribution to the funds?—Yes.

4343. Therefore, there was a payment shown of so much more by the Government than they actually did pay?—Yes.

4344. *Chairman.*] What was done with the annual deductions on behalf of the Military Fund? Was a separate account kept of those annual deductions, and were the annual charges on the Military Fund in the shape of donations, gratuities, and so on, entered against them in the account of the fund?—In the annual Finance Accounts will be found the amount due on account of these funds. I have before me the Accounts for the year 1869-70, at page 57 of which there is this: Civil, Annuity, &c., Funds, 2,400,000 *l.*

4345. Mr. *Fawcett.*] Is that stated as a debt?—That is stated as a debt.

4346. *Chairman.*] Then what was asked was this: after you had deducted the annual charges against the officers on account of the Military Fund, what was done with that money; was it taken to a separate account for the purpose of being administered as part of the fund, whether in the Government books, or in a separate account kept by the Military Accountant for the trustees of the fund?—The trustees had their own accountant, and as far as the accounts of the Government are concerned, it appears as an increase of their debt.

4347. We want to trace it a little earlier than that. There would be so much deducted annually from the pay of the Army for the Military Fund?—That is so.

4348. Then the Government would account for that deduction in gross, supposing it was 50,000 *l.* or 100,000 *l.*, to the trustees of the fund?—Quite so.

4349. That would appear to their credit at the end of the year?—That is so.

4350. Out of that, what did the trustees do; did they pay out of that the annual charges in the shape of pensions and gratuities to the officers?—They did so; they made demands upon the Treasury.

4351. Out of that fund they paid the annual charges of the fund?—That is so.

4352. At the end of the year there would be a balance either of saving or loss?—Yes.

4353. And if there was a balance of saving, did they hand it to the Government to be carried to the Capital Account, as balance bearing interest after a certain amount; was it so treated?—Yes.

4354. As those balances accumulated so the obligation of Government to pay those balances with interest would increase?—Yes.

4355. And is that the operation which has been going on ever since the fund began?—Yes.

4356. And at the end of the time there was an obligation of that sort of some very large amount?—Yes.

4357. Mr. *Fawcett.*] But as this balance accrued from year to year, it was spent?—It went into the Treasury.

4358. *Chairman.*] It remained; it would appear as a sum remaining in the Treasury, would it not; and the Treasury therefore would have that money in the Treasury, in general Treasury balances, with an obligation to pay it whenever it was required to be paid; and it would be a charge against the Treasury balances, would it not?—That is so.

4359. And if it were what is called invested, it would be merely converting what would be Treasury obligation against the Treasury balance into part of the Funded Debt?—It would be so; it would be little more than nominal.

4360. Making it part of the Funded Debt instead of making it a charge upon the floating balances of the Treasury?—That is so.

4361. Mr. *Denison.*] The capital of this fund, both in the military and in the civil fund, was divided into appropriated and unappropriated, was it not?—Yes, that is a matter of detail.

4362. The question follows upon that, whether the appropriated balance was not part of the fund which was supposed to be invested. You say it was a nominal transaction?—I do not think that there was any change in that respect between the appropriated and the unappropriated, The appropriated liability was simply liability on current annuities; the unappropriated liability was the remainder of the fund which represented the interest of existing subscribers. I do not think that that makes any difference as to the relation between the funds and the Government.

4363. *Chairman.*] The effect of it would be this in the end, would it not, that this money accumulating there would go to swell the Treasury balances, and it would render it unnecessary for the Government to borrow money, if those balances would be otherwise too small?—It would be so; it acted exactly as an addition to the debt.

4364. Mr. *Fawcett.*] But the point is this: If the money is in the Treasury balances, the expenditure of the Government is not controlled by the necessities of the case, but it is controlled by the amount which they have to spend; that is perfectly notorious, and we have had it in evidence again and again; therefore, if there was more money in the Treasury balances than there would have been, supposing the money was invested, for example, in the name of the Trustees, the Government thinking that they had more money to spend, would spend more; and it comes to exactly the same as I have tried to insist upon throughout, that really a great future charge has been thrown upon the revenues of India by these sums being spent, and not invested. What is your answer to that?—I cannot think that the facility for borrowing, which is what it appears to me to come to, means want of control over expenditure.

4365. It is not facility to borrow, but taking money as revenue; if you have got more money, you are more likely to spend it, are you not?—We have not taken this as revenue; it is simply as it appears to me, a facility for borrowing.

4366. It would form a part of the cash balances, would it not?—It is impossible to say what the cash balances are composed of.

4367. Are you certain that the balance, for instance, of the receipts for the Military Fund over the expenditure was not in any one year paid into the cash balances?—I am sure that it was.

4368. Are you perfectly sure, then, that the cash balances are never spent as ordinary income?—I think there is no relation between the two ideas.

4369. *Chairman.*] With regard to the income in the sense in which the honourable Member is

Mr. *Seccombe*, C.B., and Mr. *Harrison*.

20 May 1873.

putting it to you, the answer would be this: that the credits, or receipts rather, or deductions for the Military Fund were never taken into account as extra receipts?—No, never.

4370. Mr. *Fawcett.*] Can you prove that?—I can assert it.

4371. *Chairman.*] There is a difficulty in these Indian matters on account of there being no banker; the Government is its own banker; the true test of it is this: were any deductions for the benefit of the Military Fund ever brought to account as extra military receipts or extra civil receipts?—Never, until the recent change.

4372. Therefore there would always have been operations with the Treasury as apart from the income of the year in connection with the revenue resources of the year?—Yes.

4373. Therefore they were operations on the Treasury balances, and through them on the public debt, but never through the income and expenditure of the year in the sense in which we understand that expression?—That is so.

4374. The cash balances of the income and expenditure for the year form part of the Treasury balances; but there are many operations which go on in the Treasury which form no part of the cash balances?—Yes.

4375. Mr. *Fawcett.*] From the Accounts as published, could you prove to me that no portion of these funds has been paid into the cash balances, and having been since got there, how is it impossible that they have been spent as ordinary income?—I hardly know that I understand your expression "cash balances."

4376. *Chairman.*] The difficulty is with this question of the Treasury balance; if you use "cash balance" as meaning the balance of income and expenditure, that cash balance is part of the general Treasury balance; the general Treasury balance represents all the operations of the Government as its own banker in dealing with funds of different characters, which are all blended together in the Treasury; but in the Treasury itself there are separate accounts kept of each of these matters?—Certainly.

4377. And the whole of those brought together show the balance of money in the Treasury, and its obligations?—Yes.

4378. The difficulty arises from the peculiarity of this Treasury system in India, which we have no knowledge of here, and nothing like it, namely, the Government being its own banker, and having a Treasury on which it operates, and allows other persons to operate, and in regard to which it keeps separate accounts and separate funds. The true test of what the honourable Member would wish to make out is whether any of the deductions for the benefit of any of the funds, civil or military, were ever brought into the Finance Accounts as an extra receipt, or as part of the revenue for the year to be spent as part of the revenue for the year?—That is easily answered; they never were.

4379. Mr. *Fawcett.*] But they have been lately?—That is part of the recent changes.

4380. Referring to the Public Works, you seemed to think that these new Accounts were sufficiently clear; will those Accounts show that no part of the money borrowed for the Public Works is devoted to what is called Ordinary Public Works?—I think I have already stated, in answer to that, all that the Accounts will show; they will merely show the amount that has been borrowed, and they will show what has been spent on the two descriptions of works; they will not draw the conclusion to which you point.

4381. But then we shall not know from these Accounts whether that classification on which so much stress has been laid, about Ordinary Public Works being constructed out of revenue, and Extraordinary Public Works either wholly or partly constructed out of borrowed money, is not entirely fictitious?—I think you will know this, and I think not more; you will know how much has been expended upon works which are admitted or considered to be of the character of Extraordinary Works.

4382. But still we shall not know whether borrowed money has not been spent on Ordinary Public Works?—The account will state the general relation between the ordinary expenditure in all departments, including the ordinary expenditure in the Public Works Department and the income of the year; and that it appears to me supplies the comparison that is required.

4383. How does it?—It will show whether the income of the year has been sufficient or not to meet the whole ordinary expenditure of the Government.

4384. Yes, but then suppose that some of the ordinary revenues have been devoted to Public Works Extraordinary; it does not at all follow from what you state that a portion of the borrowed money may not have been devoted to Ordinary Public Works?—I should say that if the income was sufficient to cover the whole expenditure, including the whole of the Ordinary Public Works expenditure, that in itself shows sufficiently that no borrowed money has been applied to Ordinary Public Works.

4385. What seems to me to throw a difficulty over it is that you cannot say, can you, that the whole of the Extraordinary Public Works are done by borrowed money?—No I think not. Taking the Accounts of the year before me I find that the income was 50,109,000 *l.*; the ordinary expenditure is 46,985,000 *l.*, leaving a surplus of income over ordinary expenditure of 3,124,000 *l.* When the extraordinary expenditure is added to this, there is still a surplus of income over the whole expenditure of very nearly a million and a half, namely 1,496,000 *l.* Therefore in this case the whole of the extraordinary expenditure has been met from ordinary income.

4386. But the Accounts will not show, will they, how much in any one year of Public Works Extraordinary is paid for out of borrowed money, and how much out of ordinary income?—Yes, there are the same materials in each year for comparing the expenditure, both including and excluding the extraordinary expenditure with the whole of the income.

4387. *Chairman.*] That is by taking the deficit, if there be deficit, on the other side, and taking the amount spent in the same year for special Public Works or Public Works Extraordinary on the other side, if they are more than the deficit or equal to it, it shows that that is the result of the Public Works as separate from the rest of the expenditure, does it not?—Yes.

4388. Mr. *Denison.*] There is an exception to be made to that in the case of Madras Irrigation Works is there not, in which it is pointed out that it is quite impossible to give that detailed return, owing to the income being mixed up with the Land Revenue; I gather from Sir Richard Temple's exposition of the loan?—There may be a difficulty

a difficulty in stating the return from works of that character.

4389. Sir *G. Balfour.*] You have made every effort in the new accounts to make them clear and give as many details as possible, but I suppose you have found some difficulty, like most persons who have had to do with accounts, in satisfying everybody?—No doubt there are great difficulties to overcome.

4390. Now, about the police; you have given the details of police charges in an Appendix, and they amount altogether to 2,507,438 *l.* Do you think that, considering that that expenditure is nearly one-fifth of the whole Military expenditure, that is given in sufficient detail?—In regard to this portion of the accounts, that which contains the provincial services and local funds Expenses, I think there is a great deal yet to be done to present it in the most convenient form.

4391. I have been anxious to see an account of the police, because you are aware that in Lord Canning's Government the Police and Military charges were then taken together, and the expenditure for these two services was then supposed to be under 15 millions sterling. I will call your attention now to the fact that, including the English expenditure, the Police and Military charges of India have sprung up from 17,034,020 *l.* to 18,185,550 *l.* Would be able therefore to make your accounts so clear as to allow of an exact comparison between the Police expenditure of the present day, and the Police expenditure of 1862-63, we will say?—I think that the changes in the organisation of the police had been going on so actively in the early years succeeding the first period, which you have mentioned, that probably it would be difficult to make a comparative account, which should be perfectly clear. With regard to the comparison that you make of the general expenditure, I think that in 1862-63 it was estimated that the Police expenditure should not exceed two millions; that that should be the measure of the Police expenditure, and the present total of the charges exceeds this by about 400,000 *l.*; but this, I think, includes some important amounts that perhaps were not included in that estimate of 2,000,000 *l.*

4392. But you are aware that my calculations, by Lord Canning's desire, made up the estimate of the whole police force of India to be not more than 1,800,000 *l.*?—It was at one time, I know, put lower than two millions, namely, in 1861-62.

4393. In the year 1862-63, I observe that the Post Office revenue amounted to 425,528 *l.*, and that in 1869-70 it amounted to 711,698 *l.* Will you kindly tell us how that increase has taken place?—The major part of that increase is due, no doubt, to the change in the mode of dealing with official postage.

4394. What is the sum in the Account just before you of the charge for official postage, at page 34?—In the Account for 1871-72, the receipts for official postage are stated at 287,521 *l.*

4395. Will you kindly tell us from what year you began to charge the services with official postage?—I think it must have been in 1868-69.

4396. Can you account for the fact that you began to charge the services with official postage at the very time that the Post Office here ceased to charge that money?—That may be so; but I think that this is a proper consequence of the Indian Post Office Act of 1854, which it appears to me was never perhaps fully acted upon until this was done.

4397. Mr. *Candlish.*] Fourteen years after it passed, in fact?—This is a matter of personal opinion.

4398. Sir *G. Balfour.*] You have distributed the official postage over the different services in these new accounts of yours?—Yes.

4399. Do you think it is possible for anyone to make up from the entries in these accounts the sum of 287,521 *l.*?—That is a point which I am hardly prepared to answer, because the charge for official postage may in some cases be separately stated, and in others not.

4400. Do you not think that it is a defect in your Statement of Accounts, that in some instances you distribute this important charge among the services, and in others leave it out?—No; I think that if it is necessary that this should be shown distributed by departments, the proper place for doing so would be in the Accounts of the Receipts of the Post Office, and not in the charges of the departments; for when it goes into the charges of any department, it becomes an ordinary expense of the department, not generally entitled by its amount to separate notice. If it should be detailed, I think it should be detailed in the Accounts of the Post Office Receipts.

4401. When I mention to you that in the military charges it is impossible to ascertain the actual sum charged on account of official postage, I am sure that you will see that there is some defect somewhere?—From the system in force that is obtainable from the Accounts of the Post Office Department, in such an important department of the Service as the Army charges I think it should bear a separate place. My previous answer referred rather to the multitudinous departments in which this forms a very small and unimportant charge.

4402. I mentioned that, to show you that where the expenditure is shown in the Military charges, it is impossible to know how much was actually charged off during the year on that head, perhaps you will see to that part of the account being corrected. Now I will ask you with reference to the cash balances again; I suppose the same care is taken to ascertain what are the amounts in the 450 treasuries in India, and that the whole of the money in these places is very carefully brought to account in India?—Unquestionably; and in order to throw somewhat more light upon this subject, by describing the character of the balances, we have in the revised form of account, introduced an account which distributes the total cash balance, this account will be found at page 126. With the exception of what is in the mints it is a balance of actual cash, actual silver or notes payable on demand, which represent silver, and are equivalent to it.

4403. And the same minute care, I suppose, has been taken since Mr. Laing laid down the regulations, to see that the whole of the money in the different treasuries is actually accounted for?—I do not think that any new precautions have been taken; the precautions have always been extremely particular and efficient.

4404. (To Mr. *Seccombe.*) I would ask you with reference to the accounts of military charges with reference to India and England, whether they have been uniformly shown, subject to such changes as from necessity arose?—They have.

4405. That, for instance, after 1856-57, a

Mr. *Seccombe*, C.B., and Mr. *Harrison*.

20 May 1873.

change took place in calculating the rupee at 2*s.* instead of 1*s.* 10½*d.*?—In the Parliamentary Accounts.

4406. And that is shown upon the face of the accounts?—It is.

4407. And that the stores were charged in the Home Accounts up to 1856-7, and then were charged in the Indian Account after that date until 1866-7?—Yes.

4408. And from 1866-7 they have been charged in the Home Accounts?—Yes, including 1866-7.

4409. And that is shown in the accounts?—Clearly shown on the face of the accounts.

4410. (To Mr. *Harrison*.) With regard to yourself the transfers that have been taking place from the English Accounts to the Indian Accounts, and from the Indian to the English Accounts these transfers could be very easily ascertained and brought forward in a statement?—That is so.

4411. Do you think you could make up a statement of the transfers which have taken place between India and England, and England and India?—That is, I presume, of all the transactions in the course of the year affecting the revenue and expenditure which have been incurred in England, but they are all accounted for in the Home Accounts of the Government of India, which are presented to Parliament.

4412. Do you think that you could make up, for a series of years, a statement of the transfers from England to India, and from India to England; or would it be difficult to do so?—I am not sure that I apprehend what you describe as "transfers."

4413. (To Mr. *Seccombe*.) For instance, with reference to the pay of officers on furlough, a change took place with the officers coming home and receiving pay at home, that being a charge which had been previously charged in the Indian Accounts prior to 1868-9?—We can, of course, show the increase in the furlough charges.

4414. And that would give us the diminution in the Indian charges on account of that head?—No, not quite so; I am afraid that that could hardly be taken as a relief of Indian charge to the same amount.

4415. But still the Home charges would show the difference between that which in former years was charged off in the accounts, and that which was latterly charged off in the accounts, and the difference would show the diminution in the Indian charge?—It was undoubtedly a relief to the Indian charge.

4416. You have had a very important account connected with the transactions between India and England; I think it is called the Account Current?—Yes.

4417. Would you describe to the Committee the nature of that account, and the measures you have taken to render it as perfect as possible?—I have already described the nature of the account. The measures that have been taken have been the appointment, in the year 1861, of a gentleman, who from his experience of of Indian accounts was specially qualified to take charge of that account; he continues in charge of it to the present time, and he has made great strides towards the bringing it into a proper state; there is still some arrear, but by about Christmas next it is believed that the whole arrear will be done away with.

4418. And you have been able, by means of the care and attention you have given to that matter, to bring the miscellaneous transactions under your control in a manner more complete than they were formerly?—We have.

4419. And you are very sanguine that that important account will now be made complete and perfect, so as to enable you to check every transaction which requires to be dealt with in this country?—I am.

Tuesday, 10*th June* 1873.

MEMBERS PRESENT:

Mr. Ayrton.
Sir George Balfour.
Mr. Beach.
Mr. Bourke.
Mr. Candlish.
Mr. Stephen Cave.
Mr. Cross.
Mr. Charles Dalrymple.
Mr. Grant Duff.
Mr. Eastwick.
Mr. Fawcett.
Lord Edmond Fitzmaurice.
Mr. Robert Fowler.
Mr. Hermon.
Mr. Lyttelton.
Sir Stafford Northcote.
Mr. John Benjamin Smith.
Sir David Wedderburn.
Sir Charles Wingfield.

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

The Right Honourable JOHN LAIRD MAIR LORD LAWRENCE, attending by special permission of the House of Lords; Examined.

Lord *Lawrence.*

10 June 1873.

4420. *Chairman.*] WILL you kindly state what offices you have held in India of recent years?—I was actually in India 32 years; I began at the bottom of the Civil Service as a young assistant magistrate and collector, and I ended by being Governor General of India. I came home in the beginning of 1869. I was also five years in the Council of India. When I came home from the Punjaub after having been Lieutenant Governor, I was made a Councillor by Lord Stanley, the present Lord Derby, and after being five years in the Council, Lord Halifax sent me out as Governor General.

4421. In what year?—At the end of 1863, and I returned in the beginning of 1869.

4422. Was your attention directed to the permanent settlement in the Bengal Provinces very much when you were in India?—Yes, it was.

4423. Will you be good enough to state what your view is or was of that settlement, and its effect upon the Bengal Provinces and upon the revenue?—The permanent settlement of the land revenue in India is at present limited to Bengal Proper, Behar, Benares, Jeonpoor in the North West Provinces, and to certain tracts in Madras. Speaking more particularly of the permanent settlement in Bengal and Behar it is generally admitted to have been made on very imperfect data, at a time when neither the resources of the country nor the nature of the landed tenures were understood. The settlement was made when large portions of the country were waste and unreclaimed, and it was accompanied by no real investigation into the rights and interests of the different classes who were connected with the soil. The settlement was in many instances made with the wrong parties, while the rights of those who had the strongest claims to consideration were set aside or not recorded. On the other hand, the effect of the permanent settlement was to confer a safe and secure tenure in the land, subject to the payment of the revenue then fixed, thereby giving a great impetus to the cultivation and improvement of the land, and eventually leading to the creation of a comparatively wealthy class having a strong interest in the maintenance of order, and the security of British rule. A permanent settlement, such as that conditionally authorised by the Secretary of State in Council in 1862 was free in my judgment from all these defects, while it possessed all its advantage, because the landowners whom it affected, great or small, are for the most part the flower of the population, representing much more warlike races than those of Bengal. The improved system of settlement introduced into the North West Provinces in Lord William Bentinck's time, about the years 1833-34, for a term of 30 years, during which the assessments on the land were not to be raised, was an immense boon to the country, and produced important results, social and political. It was accompanied by a careful inquiry, and record of all the landed interests in the soil, village by village. From the time of this settlement the prosperity of the North West Provinces may be dated. These settlements were high; somewhat too high, as a rule, and had, in various places, to be summarily reduced; still, as a whole, with certain marked exceptions, they were probably lower, all things being considered, than the previous settlements; and the length of the leases, and the extent of the waste comprised in village areas, gave a margin for improvement, which enabled the people gradually to lighten the incidence of their taxation. The exceptional districts, which gave a large increase on previous settlements, were Goruckpoor, Azinghur, and parts of Benares, but more particularly Goruckpoor, where the area of cultivation was still small, though in 20 years the revenue of these districts had doubled. In the North West Provinces, during this settlement, not only has a great deal of the jungle land within village boundaries been broken up, but many wells have been sunk, and superior crops have been introduced. The construction of the Ganges Canal, and

Lord *Lawrence.*

10 June 1873.

and the introduction of railways, and the extension of roads, have enhanced the general prosperity. Such being the general result of the 30 years' settlement, it may be asked, "Where is there any valid ground for a permanent settlement of the land revenue? There can be no sufficient argument for more than a settlement for a similar term of years as before, while a permanent settlement must lead to a prospective sacrifice of revenue, which the necessities of the State can ill afford." To this I would urge, in reply, that, though a settlement of the land revenue for so long a period as 30 years is a good arrangement for those connected with the land, a permanent settlement would prove a still better measure; and that it is of high importance for the general benefit of the country that such a boon should be granted. The productive powers of the land, as at present developed, are, on the whole, still very limited. It is very desirable that every inducement which we can fairly grant for the improvement of the quantity and quality of the crops should be offered. But as things now stand, the case is otherwise. As a 30 years' settlement approaches its termination, the minds of the proprietors become unsettled in their anxiety to obtain good terms; there is a strong temptation to throw land out of cultivation; to neglect to repair wells, and to diminish the quality of the crops which are raised. And though it is quite true that the settlement officers will understand and meet such artifices, nevertheless, to the extent to which they are employed, they impoverish the landholders, and are a source of weakness to the body politic. The expenses also of one kind or the other to which the owners or occupiers of the land are put are often very considerable during the period that settlement operations go on, which of course operate, to a certain extent, as so much more taxation. In this way it is no exaggeration to say that the landowners are harrassed for probably five years on an average in every cycle of 30 years under the present system. Then it may further be urged, that one of the chief causes for the enhanced revenue, which has flowed from the periodical re-assessments of the land, is due to the gradual extension of cultivation which has taken place in these intervals. But in the North West Provinces, which so far as the Bengal Presidency is concerned, is the part of India to which I more particularly refer, though my remarks equally apply to every province in a similar condition, there no longer exists within the areas of villages much culturable land still uncultivated. As settlement has followed settlement, the culturable area has diminished, and what is now left is scarcely worth breaking up, unless abundance of water at a moderate cost be available, and perhaps not even then. Again, we ought to bear in mind that for the future, much of the improved condition of the cultivation will depend on irrigation of one kind or the other. If canal irrigation be largely introduced, the State will obtain a large revenue in the shape of water rent, and it seems to me to be nearly certain that this mode of irrigation will supersede other systems of irrigation. I admit that one important cause of the increase of the land revenue has been due to the general rise of prices which of late years has prevailed; and that if this goes on, the State in consenting to a permanent settlement would, no doubt, forego some revenue in future years. But it appears to me that the probability is, that prices will not go on increasing in the same rapid manner as hitherto; and even if it be otherwise, that the State will be in other ways remunerated. Against the revenue to be derived from the rise of prices, must be put the increased cost of cultivating the land by the occupiers, and the saving to the Government of the expenditure arising from these periodical settlements, which is very large. Moreover, it must never be forgotten, that though the present settlements are fixed on a moderate scale, when compared with those of former times, these settlements, in point of fact, do absorb a large proportion of the estimated rental of land. The public demand in one shape or the other, represents 60 per cent. of the rent, to which should be added some extraordinary expenses to which the occupiers of the land are constantly put. Then we should recollect that they have to bear the accidents of seasons and the oscillations of prices, which also vary a good deal, to their disadvantage, between harvest time and the days when the land revenue falls due. Lastly, when we reflect that probably two-thirds of the whole population depend for their subsistence in one shape or the other on the cultivation of the land, and that the population has largely increased of late years, and is going on increasing, it seems to me, that if the proportion of the produce which the Government demand represents, could be reduced, it would prove a vast relief to them, and that this reduction could not better be brought about for the public interests, than by the introduction of a permanent settlement under proper restrictions, which would gradually lead to an increase of the general wealth of the country. It may be convenient that I inform the Committee that when the question of the permanent settlement was under the consideration of the Secretary of State for India and his Council in 1862, we had then before us a despatch from the Governor General, proposing that a general redemption of the land revenue in India to the extent of ten per cent., should be authorised. Such a measure would have involved either a serious sacrifice of future revenue, or the previous introduction of a permanent settlement. The Secretary of State and the Council almost unanimously objected to a redemption of any important portion of the land revenue, but were willing to grant some indulgence to the owners and occupiers of the land, provided it could be done without any undue sacrifice for the future. It was at this time that we had also to deal with the reports of the late Colonel Baird Smith, on the famine which had prevailed in the North West Provinces in the previous year. After much consideration, it was at last decided to allow the introduction of a permanent settlement under conditions, at that time deemed sufficient, but which were subsequently made still more stringent. I adhere to the conclusions which at that time I came to on the subject.

4424. In your first explanation of the settlement, you observed that it was made in many cases no doubt with the wrong parties; but was it not made generally with the holders of several villages or large estates?—It was made with what were called the zemindars who in Bengal are in contra-distinction to the village communities.

4425. But they themselves were not in any way cultivators of land, were they?—No. They may have had individually home farms; among thousands

thousands and tens of thousands of acres, they may have had a few hundred acres in the villages adjoining their residences for their home purposes.

4426. Were they not, in fact, the mere collectors of rent out of which they were to pay a certain sum to the Government taking the risk of the collection?—I would not say that they had always been in that category. I should say that had there been a careful investigation, it might have turned out that many villages were really their private property; but in a great number of villages, probably in the larger number, that they were only the collectors of revenue.

4427. In what way did the permanent settlement assist to promote the cultivation of the land by the occupants with whom no settlement was made?—Though the proprietors of land in India, especially large proprietors, do not treat the occupiers of the land, that is the cultivators, in the same way that they do in England or in other highly civilised countries, still the fact of the demand being limited, no doubt gave an impetus to cultivation in various ways, direct and indirect.

4428. But do you know whether it led to any considerable extent to their making permanent settlements with the persons under them, or had they any power to do so?—In many cases they did make settlements and permanent settlements with parties under them. For instance, take the case of the Rajah of Burdwan, his estates represent something like the land in two whole districts (I am talking generally); but he and his successors of that day alienated lands to such an extent, that his rental is not now more than, as it were, a quit-rent.

4429. But in that case, was not the alienation what may be called an alienation in chief, part of his holding which the Government itself recognised as a separate permanent settlement with the assignee?—I think the parties in whose favour the alienations were made pay the revenue, but only that portion which represents their quota.

4430. Was there not some arrangement made by which, where the assignment was made of a certain extent and character, that is to say whole villages, they might themselves become holders in chief from the Government?—I fancy that there was, but upon that detail I would speak with diffidence; because I never served as an executive officer in Bengal, and though I have studied the general system and the effect of it, I am not very conversant with the minute details.

4431. That has an important bearing on the conclusion, because if those were alienations to persons in the nature of the original zemindars, they would not touch those who are really responsible for improving the cultivation of the land, which is the point which I want to get to?—They are not certainly in the majority of cases the parties who cultivate the land, and who were the representatives of the old village communities; still I should say that from the fact of the limitation of the Governmment revenue, these men did more or less stimulate the cultivation of the land, and made advances, and helped the people in various ways to extend their cultivation.

4432. Do you know, as a general proposition, whether the large alienations which took place in the permanent settlement, have not been in favour of bankers who have become creditors by making advances to the zemindars as mere property?—I believe, in point of fact, that in Bengal proper a great part of the original persons with whom the settlement was made were swept away from various causes, and others have stepped into their room, and among other persons bankers.

4433. A general cause of such a state of things would be that of indebtedness or default on the part of the zemindars to pay the revenue, from want of funds?—I think that went on to a great extent for the first few years after the permanent settlement; but that has operated all along to this day, at any rate to a very late date. I have met native gentlemen in Bengal, holding large zemindaries, who have purchased them all within their own lives.

4434. But are you aware as to the extent to which the holders under the zemindars have been complainants against the zemindars, of the treatment which they have received?—As I understand the history of Bengal from the time of the permanent settlement, it has been a continued struggle between those representing what is called the zemindaree interest, that is the large proprietary interest, and the occupiers of the land. Of course those again would be divided into two classes; some would represent the descendants of the old village proprietors, and others would represent the ancient tenants, and so forth; but there has been a great struggle between the two parties.

4435. In fact, under the zemindars there has been the same nature of tenure as was found in the direct settlements from the Government with occupants, when the zemindaree system did not prevail?—Yes, with this exception, that in many cases, as a zemindar became stronger in his position, he worked to destroy the rights more or less of these under occupiers, these holders of the under tenures.

4436. The Government in Bengal, therefore, have never performed the duties to the occupant that they have in the 30 years' settlement, of ascertaining and registering the rights and interests of all persons in actual possession of the land?—Never to that extent, or even to an appreciable extent. What the Government of India, *quâ* Bengal, have done, is this: they have from time to time passed regulations, Acts of the Legislature, sometimes rather in favour of the one party, sometimes in favour of the other; but the last legislation, which was in 1859, the well-known Regulation 10 of 1859, did define to a considerable extent the rights of tenants holding on beneficial interests of one kind or the other; but still it is nothing at all equal to what has been done in other parts of India, particularly in the North West Provinces, and that particular tenure, namely, of the village landed proprietors, has been entirely swept away in Bengal and Behar; at the best, they have only retained what you may call a slight beneficial interest.

4437. That Act, in a general way, tried to define rights without providing any machinery for the ascertainment of particular rights, did it not?—Yes.

4438. Therefore, as a comparison between the permanently settled land in Bengal and the 30 years settled land in the North West Provinces, it would seem that the occupants and cultivators of the land in the latter case had guaranteed to them a much greater amount of beneficial interest

Lord *Lawrence.*

10 June 1873.

and security than they had under the permanent settlement?—No doubt they had; but in the North West Provinces, and in all settlements which have been made after that pattern, we have, practically, registration of every holding in the settlement, and whenever a question comes to a collector's court or judge's court, we have only to turn up that registry and see what had been settled at the time of the settlement.

4439. Had you not more than that, namely, a legal definition and limitation of the claim of any superior to rent or service out of the land?—The settlement was made with those who were decided to have the first interest in the land. They got a formal acknowledgment from the Government, saying from that time they were the proprietors, and then all rights were defined and recorded from the highest to the lowest class in the village papers. The tenants-at-will, having no rights, however were simply recorded as tenants-at-will.

4440. Those were persons who were merely lessees for the year, or whatever it might be for?—Yes; very often they had been for long periods in the village, but still were tenants from year to year.

4441. It was understood that they were merely tenants-at-will under some person who might be called the freeholder?—Yes.

4442. Do you think that the increased prosperity of Bengal and the increased productiveness in the permanently settled provinces is due so much to the settlement system, as to the fact that English enterprise was brought to bear both upon the productiveness of the soil and its peculiar capacity for producing exportable products by the English who came there, instead of being left merely to the zemindars and cultivators and the persons under the zemindars?—I think it was more due to the natives connected with the soil, whether proprietors or otherwise, than to the English who settled in the country, such as indigo planters and mulberry planters, and so forth. But of course there are exceptions the other way. I should say that the great improvement had arisen partly from the peace and security of our rule, and that a great deal was owing to the limitation of the Government demand, and I think also to the industry of the cultivators themselves; they are very docile and very laborious.

4443. Do you consider that the great impulse which was given to the cultivation of the valuable exportable products, adding so much to the wealth of Bengal, arose from any action of the natives themselves, or from the action of enterprising Europeans?—Of course the cultivation of indigo and silk, and of exceptional produce, was due entirely, I should say, to the English capitalists; but, on the other hand, the great extension of the cultivation of jute, for instance (I speak under reservation, not having been in those districts), I should think was all due to the natives themselves.

4444. But do not you think that the stimulus to the cultivation has arisen from the enterprise of the English merchants in making arrangements for the export of jute to foreign countries?—Of course there is a great market in Calcutta for the produce, and there are facilities given for bringing it down there; and I daresay in many cases capitalists go into the districts where it is produced, and buy it up; and in that way the producers get a better price than they would under other circumstances have got; and all this has indirectly stimulated, no doubt, the production of better crops. But I think that anybody well acquainted with any part of India would say this, that, give the people a good tenure, and give them peace and security, and limit the amount of the taxation, they will exert themselves immensely to improve the land, and to develope the prosperity of the country. No sooner is a settlement made than they all turn to cultivating better crops. Before the settlement is made you see nothing but the cereals. Go into the villages two or three years afterwards, and you see sugar-cane and tobacco, and all kinds of crops.

4445. There was also, I presume, a very large element of increase of wealth in the great development of the population of Bengal, and the very great quantity of land which was uncultivated at the time that we took possession of it, in consequence of the horrible misrule it had been subject to before we took possession of it?—Yes.

4446. A great part of it had been devastated almost, had it not?—Yes, there had been a great famine in 1773 or thereabouts, which was only about 10 years before the settlement. I have no doubt the country had not recovered from that.

4447. That famine, then, would have attacked the cultivators and the working people only, but would not have affected the zemindars, who were bankers and people of means?—No, it would not of course to the same extent have affected the upper classes; but even under the natural state of things the country wanted population, and a great per-centage of the population no doubt had died during that famine, and of course a new population had not grown up when the settlement was made.

4448. Therefore the increase of wealth in Bengal, considering the extreme fertility and goodness of the land generally, except the hill parts, may be ascribed to that circumstance very largely?—I think so.

4449. What I am anxious to do is to get clearly before us how much we are to ascribe of any improvement in Bengal to the permanent settlement with the zemindar and how much is to be ascribed to the other peculiar circumstances which have all tended in one direction to promote the wealth of Bengal?—It is quite true that many circumstances have tended to the development of that wealth, but I should say that no circumstances have tended in the aggregate to the extension of cultivation, and the development of wealth so much as the permanent settlement; if you had not had the permanent settlement in Bengal you would not have had a 30 years' in early days or even a 10 years' settlement; the chances are that in those times you would have had a three years' settlement or a five years' settlement even perhaps, or one from year to year.

4450. But we do not know what settlement the cultivators of the soil had during all that period, and whether they did not have, in fact, merely an annual settlement?—I think they had practically a bad settlement, but still I think they were better off under the zemindars with a permanent settlement than they would have been with a shorter settlement, for this reason, that however exacting the proprietor may be, still in some degree, he regulates his demands by reference to the demands made on himself.

4451. Then, taking the axiom of some revenue officers

officers of the Government, if their capacity had been measured by the quantity of revenue which they collected (which has been said of some other provinces), you think that it might have been more harrassing to them?—I have no doubt that was one of the considerations which influenced Lord Cornwallis, namely, that the cultivators would be better off under the people, whom we supposed to be the great landed aristocracy or gentry, than they would be under the revenue collectors, the great bulk of whom were natives on very wretched pay, miserable pay in those days.

4452. Then are we to understand that the distinctive feature of the proposition of 1862, as compared with what is known as the permanent settlement is, that it would have been a settlement with the freeholders and occupiers of the soil as contra-distinguished merely from the intermediate agents with whom the permanent settlement was made?—You know that, in point of fact, the settlements in some cases in the North West Provinces have been made with a similar class to that of the zemindars in Bengal, namely, the talookdars. One of the great questions which arose in those days, and which led to an inquiry, to my mind a very proper and suitable inquiry, with a suitable result, but a result which has been challenged very often by others, was whether we did wrong in the North West Provinces, in not making the settlements with the talookdars wherever they existed. What happened was this, that previous to the 30 years' settlement, there was an inquiry on the spot by men, generally picked men, I will say; mostly men chosen from the very best of the service; these men under the name of settlement officers, began by supervising the demarcation of boundaries, and the measurements of the lands; there was going on at the same time a scientific survey under professional officers of these lands, but contemporaneously with that, there was a measurement made by these settlement officers; and when that was completed, or while it was going on, they went into question of the tenures, the relative claims of those who came forward claiming the land. In many cases the lands were held by what we call talookdars. In a great many cases these men's claims were set aside, but in consequence of a prescription which they had acquired for various reasons, they were allowed a certain per-centage, which varied from 10 per cent. to 20, generally 15 or 18 per cent.; and the settlements were made in those cases with what were considered the old village proprietors, or their descendants; but where these village proprietors were extinct, or partially extinct, or had sold their lands to the talookdars, or so forth, then, in that case, the settlement was made with the talookdar, and then the village proprietors were only recorded as having certain rights of occupancy and the attendent advantages thereof.

4453. But still the rights of all the sub-tenures under the talookdars, whatever they were, were scheduled as part of the talook?—They were so, village by village.

4454. And wherever the talookdar was merely in the capacity of what may be called the grantee, that grant to the extent of his interest was recognised, but he was not allowed to be the proprietor of the freehold of the soil so as to turn anybody out?—No, in cases where he got this per-centage it was in lieu of all claims, and he had nothing to do with the village community; they held under the Government, and it was clearly defined that they were proprietors; they were called biswardars, that is to say, owners of the land; it was their inheritance; they could buy or sell or transfer it, or it might descend to their children, and so forth; and the settlement was made with them, and the direct engagements taken from their representatives. Where the talookdar was held to be proprietor, the settlements were made with him, and the cultivators of every class held under him.

4455. Do you conceive that any difficulty would arise in permanently settled districts in introducing a large system of irrigation upon a great scale beyond the mere limits of the particular talook or zemindary?—I do not think there would, but, of course, you should carry the zemindars, or the village proprietors, with you; that is to say, if they thought that canal irrigation was useful and desired its introduction, then there would be no difficulty whatever about it; but, of course, if they did not wish for it, if they thought that the province did not require it, then they would remonstrate at the time, and even if they did not remonstrate, they would probably be always more or less dissatisfied at its introduction, and be indisposed to the use of the water, and the payment of the water rate.

4456. Has the effect of the permanent settlement been to convey to those with whom it is made a notion that there is a distinct obligation on the part of the Government not to put any charge upon the land without their consent?—I think that is the universal opinion.

4457. That being so, you could not put any kind of water rate upon them in consequence of an irrigation scheme, unless they individually accepted it?—No, you could not, unless they individually accepted it. One of the principles which we always maintained in the introduction of canal irrigation, as regards, say, the Ganges Canal in the North West, or the Bari Doab Canal in the Punjaub, or on the East and West Jumna Canals, was this, that the people should have the option of refusing to take the water; if they took it they paid for it; if they did not take it, they did not pay for it. The consequence was that Government lost a little revenue, but on the other hand, they carried the people with them, and though the people are naturally parsimonious and economical, and disinclined to spend money if they can help it, yet in course of time, year after year, they saw the enormous advantages of the irrigation; and when a drought year came, then the impetus given to the sale of the water was immense, and the consequence was that in the course of 20 years or so, the water was fully taken as a general rule.

4458. You think that apart from any question of that kind, it is better and right that the Government should accept the risk of making large irrigation canals, and the parties be left to take the water or not at their option?—Decidedly; I would almost rather not make a canal at all, however much I desired to do so, rather than make it obligatory on them to take the water.

4459. Or obliging them to pay anything for it?—Of course, if they pay they take the water, because it is better for them to have something for their money; but you refer, I suppose, to putting a small tax on them to make up any deficit in collecting an adequate return for the capital laid out, exclusive of the receipts from water rent.

4460. We are familiar in this country with the proposition of making large works of drainage

Lord *Lawrence.*

10 June 1873.

(which is the reverse operation of irrigation), and without the consent of the individual proprietors making a rate on the district according to the acreage, which in the estimate of Parliament is likely to be benefited; is that applicable to irrigation in India?—That was suggested as regards some of the canals in the north of India that are now under construction, and I think the very general feeling was dead against it among all classes; of course, the owners of the land were against it, and I think that the great body of the administrators were against it; there were a small party the other way; I have a strong feeling against it myself, and when it was proposed, when I was Governor General, I would not agree to it.

4461. Assuming that there is a peculiarity in the question of canal irrigation as mixed up with cultivation, let us come to the other question of roads; and assuming that a good road which can be traversed at all times of the year is one of the greatest improvements to the value of property, what would be the effect of such a project as that if it were proposed to be carried out, and a rate to be put on the land after a permanent settlement has been made; do you consider that the Government would be entitled to make such a rate on the permanently settled land in Bengal?—I am in favour of that arrangement in Bengal exceptionally for this reason; when the settlement was made in Bengal there was no idea in those days of any cesses of any kind or description, of making roads, or doing anything, but just making the best of the circumstances which we were in; and secondly, when the settlement was made, it was evident to my mind, as it is to the minds of others, that Lord Cornwallis's intention was this: that as regards the increase arising from extension of cultivation, or rise of prices, Government should make no demads beyond the permanent settlement. You must understand that in India it has been from ancient times always considered that the governing power has a right to take a share of whatever is the produce; if it was little, the ruler would take less; if more, that he would take more; the effect of that was, that year by year there was a constant inquisition into the condition of the cultivation; this, of course, was very injurious to the people in every way; and when Lord Cornwallis made his settlement, the idea evidently in his mind was, that *qua* those things, namely, extension of cultivation, and improvement of the quality of cultivation, and rise of prices and so forth the Government had fixed a demand, and could not raise it; but I think there was no intention then to determine that in after years no cess could be levied.

4462. Your view is, that it was a mere substitution of a fixed demand for that which Governments in their despotic power in India generally had made discretionary upon their own view?—Just so. I admit that the general feeling of the proprietors is against the view; but, nevertheless, I think, on fairly looking at the correspondence, and the law which was made in those days, the view that I have taken is a reasonable and fair one.

4463. And, therefore, in point of fact, the permanent settlement has no effect upon questions of making special rates for particular objects irrespective of the land revenue itself?—I think not; but on the other hand, while I say that, I must guard myself by adding that you must be very careful in putting on cesses. You should never put on a cess for Imperial purposes; never put on a cess which is not in the highest degree beneficial to those who pay it, although they may not in some cases recognise the benefit. For instance, I would never think of putting on a cess merely because I thought that we ought to have a great high road to connect one province with another; but in making what we call district roads, in developing the internal communication of the country, in the question of education, which is of vast importance to the people, and in things of that kind, I would be for putting on a cess; but carefully guarding that it was a moderate one. However good the object in contemplation, I would not put a high cess on them.

4464. Then, is it your opinion that with that qualification, still it would be desirable to make the 30 years' settlements all permanent settlements throughout India?—No, only on the conditions laid down in the Secretary of State's Despatch in 1862, and subsequent Despatches. There were certain instructions that there should be 80 per cent. of the land cultivated; that the lands were not likely to be improved by irrigation; and one or two other things of that kind; but those were the main points.

4465. Now, with regard to the qualifications which Sir Charles Wood then proposed, as to the 80 per cent. of cultivation, upon what principle would it be just to the inhabitants of India generally, that one-fifth of the land revenue should be given to a particular village in perpetuity, as compared with other parts of the country?—My view would be, that you were not giving it to them free of revenue. When the settlements are made the settlement officer consider the general assets, you may say, of the village area. If there was a certain amount of waste land, he would make a calculation to some extent as to its value; it would be a moderate one compared to that estimate which he would make of the cultivated area; still he would take it into consideration; but in point of fact a village cannot exist, cannot prosper, unless it has an area of uncultivated land; you might just as well suppose that in Hertfordshire you could get on with all the land under crops and none under grass, as you could suppose that the people of a village can prosper in India without some grazing lands. What is really wanted in India is not that all the land should be broken up, but that the land which they reserve for grazing purposes should be improved in something like the way that we improve it in England, and make it to bear abundantly, and bear irrespective of seasons. In one year you will have the waste lands of the village producing abundance of grass, so that the village cattle can be fairly and properly fed; but if a bad year, a drought comes, all that is gone, it is all desolation, and all the cattle die, or else have to be driven hundreds of miles away to get forage. So that, in point of fact, it is absolutely necessary that they should have a certain amount of pasture, and, in the case of any villages which have lands so good, or of such peculiar soil that it is better for them to have no waste land, but to cultivate it all, they have to rent lands of other villages, in order to feed their cattle.

4466. But is it clear that in the Despatch of the Secretary of State he was speaking of what I may call unarable land, that is to say, those parts of the village which are left in grass because they do not think it wise to till them; or was he speaking generally of land capable of cultivation

and

and not cultivated, land more than 80 per cent. of which was so capable?—I have no doubt what he meant was that if there was not more than 20 per cent. of the culturable land (I mean by that land fit for cultivation) uncultivated, then that village would be entitled, assuming that they accepted a proper settlement, to a permanent settlement.

4467. They were to pay no rent for the fifth part, or 20 per cent. of it?—Yes.

4468. But did he not raise the question whether the land was land that the village would require to be in grass, which, in point of fact, is cultivated land for that particular purpose; was he not drawing a distinction between villages not fully occupied, if I may use the phrase, for all purposes of cultivation, taking both grass and tillage, as compared with villages that were fully occupied. If they were paying revenue only to the extent of 80 per cent. there might be a permanent settlement, without reference to the other 20 per cent. which was to be given in. If it were so, would that be a just arrangement as regards the community?—It seems to me that it would be. I think a margin of 20 per cent. would be a very fair one to allow for village purposes, for the grazing of the cattle. I think that if I was making a settlement, and a village had no grazing lands, or scarcely any, I should be disposed, in fixing the assessment of that village, to make a small deduction in consequence of this circumstance; I should feel that there was more uncertainty in the means of that village to fulfil its engagements without any grazing lands, than if it had some. All over the North West Provinces, and in the Punjaub, and, I believe, in other provinces, it has always been recognised that the Government revenue, what is technically called the Jumma, that is the money that they are to pay annually, should be put on the cultivated land, and that little or nothing should be put on the waste land.

4469. On the natural growth of grass-land nothing is put, you mean?—No, or a very small sum only.

4470. But, then, has it not been found in practice that, in those villages that are not permanently settled, year by year, as the population increases, the area of the tillage lands on which the settlement is made has been gradually increasing during the 30 years?—No doubt it does increase, but the villagers will always try to keep a certain margin for their cattle.

4471. But within that margin has it not been found on re-settlement that, with the natural growth of population, the tillage land has increased where it was not all tilled at the time of the last settlement?—Yes; but in that case the villagers have to cast about for grazing lands for their cattle.

4472. Still the general revenue of the country has been largely increased by that fact, has it not?—It has been largely increased where there has been an abundance of land, but where it comes to a small margin, then I think it would not have been increased; you would have to make deductions on account of the small margin. A good settlement officer wishes to make such a settlement, as that the village will flourish under his settlement.

4473. Then your view of the Secretary of State's Despatch is that a permanent settlement was merely to be confined to villages that might be said to be fully cultivated so far as agricultural requirements permitted?—Yes.

4474. There is another point which you have noticed, namely, the alteration of prices; do you think that the alteration of prices in India has arisen from several causes, such as the facility of moving produce, in consequence of the construction of railways, from improved navigation, and also from any alteration in the exchange value of gold and silver in India?—I think that the prices have risen to some extent in consequence of those causes; but my own idea is that the main cause of the rise of prices is the facility that the great bulk of the people, who have not lands and do not cultivate lands, or only cultivate lands as a partial means of subsistence, possess in getting an abundant demand for their labour. In former days, previous to the commencement of large works in India, it was very different; and even now, where they have not been commenced, I believe that the price of labour is very much lower than it is in the other parts, and is not very much advanced over the old normal prices that prevailed 20 years ago; but where great works have been commenced, and within a certain area which would furnish the labour to those works, the rate of labour, the price which the people get for their labour is so considerable that they are now enabled to support themselves better than they used to before.

4475. That would be a rise of prices from the import, if I may use the phrase, of capital largely expended among the people of that district, would it not?—Exactly so; I should say that near the railways, say within 20 or 30 miles, and also within that distance of the canals, the price of labour has risen enormously. If you went into far distant parts of the country, you would find that there had not been anything like that increase of prices. I recollect a gentleman who had been 30 years in Behar, employed in bringing industrial operations into an adjoining province to Bengal (a railway goes right up through that province); and he told me not very long ago that the price of labour had not, to his knowledge, risen more than to a very trifling extent during late years.

4476. With regard to the effect of the railway on prices of produce, do you think that, owing to the facilities which have been given for removing surplus agricultural produce and finding a market for it, the prices generally have risen in many of the districts in the interior?—Of course, where the produce has left a part of the country, that has raised prices; but that circumstance has also diminished them, of course, in the districts to which the produce has been conveyed. It has had the general effect of raising prices to some extent perhaps, but the general effect has rather been to render prices more equable than formerly.

4477. Has there not been under the protection of British rule a great growth of some of the large cities, to which the produce is taken, which has rather tended to keep up prices?—No doubt there has; but in many of the large cities of India the urban population is wretchedly poor. In former days great numbers of people were supported by the different courts of the different chiefs, great or small, in the country, who had an enormous number of followers as a retinue; they used to keep up large bodies of troops in a very irregular and loose system; all these were fed out of the revenues of the chief; but now a great many of these chiefs no longer exist, and the people are often in very destitute circumstances, and for a long time there was no labour,

Lord *Lawrence.*

10 June 1873.

owing to their habits and circumstances, to which they could easily turn; and even then they would have earned a bare existence; now many of these men would earn a very considerable wage under these improved circumstances.

4478. If we take now the leading Government stations as a standard, has there been, do you think, a considerable rise in the prices of produce?—I think in the military and civil stations prices have considerably risen.

4479. Then in all these cases if this rise is maintained as it has been going on for the last few years, and continues, would not the effect of the permanent settlement be in India very much what that of the permanent settlement of the land tax, and other charges on land, has been in this country?—I think to some extent that would be the case; but on thinking over the matter carefully my impression is, that prices will not rise in anything like the ratio in which they have risen in the last 10 or 12 years; on the contrary, I am inclined to think that the tendency will be rather for prices to fall, at any rate for some years, because I anticipate that the increase of irrigation will increase the produce of the country enormously. Then, too, there are many parts of the country where there has been such a stimulus given to cultivation from various circumstances that all that produce coming into the market, will have a tendency to decrease prices.

4480. Supposing that the peace of India is preserved, do not you think that the population will increase as fast as the produce?—No doubt that will have an important effect; but my position is, that admitting that there would be more demands on the Government, consequent on the rise of prices, nevertheless, with a permanent settlement, you would then be in a position to economise your expenditure to some extent; and on the other hand, you would be justified in raising your money in other ways, provided that it be to a moderate extent.

4481. I want first to get a clear view from you of what the effect would be: now has your attention been directed, in regard to any fixed land revenue, to the great changes which have taken place in India in the altered circumstances of districts, the rapid decline or growth of certain cities and their varying states in particular parts of the country, some being in one age wealthy in every respect, and in the next almost in a state of decay; would not the effect of the permanent settlement be that those parts of India which flourished would be paying a very small relative taxation, whilst those that were decaying would be oppressed with a very heavy taxation?—I do not think that any of those changes which took place in the last two or three hundred years in India are likely to take place under our rule. Cities grew up at the caprice of the rulers of the day, and cities decayed in consequence of their change of view; devastation came over certain provinces; the country was laid waste, the wells were destroyed, and the population died or emigrated; and districts, from being rich, became poor, and so on. But, under our rule, I think that those changes which were likely to occur have, for the most part, already occurred; and that, under our rule, with peace, and order, and security, the tendency will be progressively to improve in all parts of the country, and that there will not be any great changes.

4482. Bearing in mind the distance that must necessarily exist now between the great trunk railways, and which probably will continue to exist, will there not be a great variation in the price of produce and in everything that tends to fix prices between what may be called the railway districts and the non-railway districts?—I should hope that, in the course of time, if we got an economical system of making railways, we should make them gradually over all India.

4483. Still, the non-railway districts would be many miles from the railway districts, even when we had done our best, would they not?—They would.

4484. Then should we not have the injustice of the railway districts half taxed, and the non-railway districts doubly taxed?—I do not think that, in practice, you would find much difference in the land revenue for such reasons. While works are under construction, there is an enormous difference in prices; but when works are completed, and the artisans and labourers have been displaced or moved off into other parts, prices fall.

4485. But does not the railway afford great facilities for the cultivation of, not merely ordinary agricultural produce, but of what may be called exportable produce?—It does, in some degree; but, in a great measure, of the kind that the permanent settlement is, I think, those considerations would not influence me in rejecting what I consider would be an enormous boon to the country and the people, and would do more to consolidate our power, and to reconcile the people to the Government, than anything else that we could devise.

4486. You were about to observe that, supposing difficulties arose from the depreciation of the exchangeable value of the precious metals and other causes, you think it would be possible to make up the deficiency in the revenue by some other means?—I think you could. I think, when the mass of the people became rich, which they would do, generally speaking, under the permanent settlement, you would have a greater consumption of importable goods, and so forth; and that in that way they would be better able to bear taxation than they could do now. The mass of the people in India are so miserably poor, that they have barely the means of subsistence; it is as much as a man can do to feed his family, or half feed them, let alone spending money on what you would call luxuries or conveniences.

4487. But can that poverty be avoided so long as they increase the population with the rapidity with which they are disposed to do it, and do not find other means of living than the land?—No doubt there is great difficulty as regards the population; still you do see that where people are well off, they do spend money in conveniences and luxuries. Wherever there is a light assessment, and they have had it for any time, you see before long that the people clothe themselves, and their wives, and children, under the one state of things, in a very much better manner than under the other. I think such improvement will go on generally speaking.

4488. But what particular mode would you suggest to make good any deficiency in the revenue, which would be very serious, assuming the population to increase largely, and the assessment on land to remain stationary, and prices to rise nominally?—I think that you would get much more customs and more excise than you do now. Perhaps it is not a very good thing that you

you should increase your excise income, but your customs would most certainly increase as the people became better off. And if you come to that point, I am looking to what would occur 20, or 30, or 40 years hence; and I think it would be for the administrators of that day if there was a deficiency, to settle how they would make it up, rather than to cast about now-a-days to do it; because I would say generally speaking that when the people became comfortable and wealthy in various ways, your income would increase.

4489. Still if we now tie our hands in regard to the land revenue, ought we not to satisfy ourselves before we do it, that we have the means of meeting any deficit, and ought we not to have regard to the fact, that when we have had slight deficits, the administrators of finance in India have declared that the only mode of meeting them is an income tax, which they say is the most objectionable thing that can be done?—I would not admit that it is objectionable, but assuming that an income tax was an inconvenient tax, and unsuitable to the people of the country under present circumstances, I think that when the people have become under a permanent settlement very much better off than they now are, you could bear any little unpopularity, which would arise from having an income tax. What I mean to say is, that I would rather see a permanent settlement with an income tax, than I would see a settlement for a limited term of years without one.

4490. Would you look to an income tax, or to the excise, or to the customs, as a mode of making up the serious deficit?—I would look to the increased wealth of the country as resulting in a larger income, on the present basis; I would say that you would then get more revenue, and that you would probably have less expenditure.

4491. But is not the excise levied on articles which, if the Hindoos remain good Hindoos and the Mahometans good Mahometans, are not capable of yielding any increase to the revenue?—I must say that, from moral considerations, I would rather that they did not use the excise articles, but I am quite sure in my own mind that they will use them, and that the use of them to a great extent is limited by the means of using them. I believe that, although in certain classes in India, as is well known, the use of ardent spirits and intoxicating drugs has increased, on the other hand, it is quite notorious that in old days both Mahometans and Hindoos did use these things.

4492. Still always as prohibited articles of consumption against their conscience and religion?—They were prohibited things; nevertheless they were used to a considerable extent; I recollect when the Affghan army was pitched before the station of Peshawur, every man that went into Peshawur used to pass my camp. I used to see that on their return from the city a large number of them could hardly sit their horses, they were so inebriated, and that was under the native system, and with people who were by way of being strict Mahometans.

4493. You are aware that great difficulties were met with in increasing the customs revenue in India when steps were taken by successive Governments to increase it; were they not compelled to retrace their steps?—The tariff was largely raised in Mr. Wilson's time in 1860 and 1861, and we subsequently reduced it. My point is, that I do not look to an increase of the customs from an increase of the tariff, but from an increased consumption of dutiable articles. For instance, take the piece goods, which yield a certain amount of revenue in the shape of customs: I think, under a system where the people were very much richer, as they would be, under the permanent settlement, the quantity of piece goods which would be used by the people would be doubled, trebled, and quadrupled. I observed myself in the Punjaub that not long after the first settlement, the people who were very scantily and badly clothed before, in many instances, in the course of three or four years, were comparatively well clothed; you would hardly have known many of the agriculturists in this respect at the end of the time.

4494 To pass to the other resource, which has been found necessary to increase the revenue, the income tax: do you consider that a mode that ean be seriously resorted to for making good any deficiency in the revenue?—I think it should be. I myself regret to see the income tax given up. I think that, limiting the rate, and giving a fair minimum, below which you would not extend the tax, the tax was not a bad one at all.

4495. Your view is that the difficulties of the income tax arose from its extending to too poor a class?—It came too far down among the masses of the people; and then, I think, also, it was rather high; and then, besides, I think that the sudden increase made in the middle of the year 1869, and then, again, in the next year, though it was done under the best motive, under the motive of supposed emergency, yet that these changes were unwise, and added very much to the feeling against the income tax.

4496. Do you think that if the minimum of the income tax is sufficiently high, the persons who would be charged to the income tax are a class who would be sufficiently under the observation of the superior revenue authorities in India, to prevent extortion?—I do, indeed; I think you might just as well say that you could not prevent extortion as regards your customs or salt, or land tax; I think that, to some extent, all taxation renders the people liable to extortion, but if you pay the natives whom you employ, in assessing the income tax properly, and select them carefully, and supervise them properly, I do not think that any great abuses would arise.

4497. Do you think that if the limit, for example, were 100 rupees a month, persons of that class, and above them, would be persons who would on the whole protect themselves from extortion?—Yes, they would go and complain; you see people in India doing that wherever our officers are accessible, and do their duty properly, which the bulk of them do. A man will come to you and tell you that he has been ill-treated, very readily, and you go into the matter and remedy the grievance; and when that is seen, people perceive that it is dangerous to abuse authority.

4498. Do you think that the number of such persons would be so great that the collector, or the superior revenue officer, could not see them personally or examine into their cases?—I do not think that there would be any real practical difficulty now; in the case of the old income tax, which was in augurated by Mr. Wilson, I do not say that there was no complaint for the five years until it ended in July 1865, but this I say, that there

Lord *Lawrence*

10 June 1873.

was very little complaint. I was there 18 months as Governor General before it was done away with, and it never attracted my attention that there had been any important complaints as regards the working of the old income tax; but what induced complaint was this: first of all you gave it up; it expired by efflux of time; then unfortunately you did not renew it; you tried a license tax; then the English in Calcutta and elsewhere kicked against the license tax; they said, "we do not object to be taxed, but we like to be taxed on proper principles;" the meaning of that, as I understand, was, "tax us as you tax people in England; tax people under an income tax;" then we tried the certificate tax, which was only an enlargement of the license tax; they said, "On the same principle and the same grounds, we do not like this;" all this pointed to an income tax. Then the authorities at home said, "We agree with this; we do not think it fair to put a license tax or a certificate tax on certain classes, and not on others, who are equally well off." Eventually it was finally decided to renew the income tax. Then when the income tax was renewed you did not fix it for a term of years or indefinitely, but for one year only; and every year you had a discussion, and every year there was a hope of getting rid of it; so that the inducements to try to do so were very large, and I think all that had a pernicious influence.

4499. Much of the advantage of the income tax would depend upon its being permanent in your view?—I would like to see it permanent; in common honesty I would say, that with proper limitations, such as have been indicated, it was a very good tax; it touched men who were touched in no other way. Whether you take our own countrymen or natives, the bankers, merchants, and traders in many cases are the classes, you may say, that have benefited more by our rule than any others, and yet, beyond a limited sum in the shape of customs, they do not pay anything worth talking of; while under the native system, these classes would have paid something like the income tax, under one form or other; whether in succession duty, or in what they would call nusseranas, and native taxes of that kind, they would at different times, and in different circumstances, have paid much more than our income tax. Some of the taxes which we have done away with, in former days, such as the moturfa, and taxes of that kind, were practically license taxes.

4500. Is there not a tendency, under our rule, for the town population rather to increase and to accumulate wealth?—Only a certain class of it; I think the mass of the people in the towns are excessively poor, and have great difficulty in earning their livelihood; but with regard to the upper classes, particularly among the Hindoos, their tendency seems to be to accumulate considerable wealth, and some of them are very rich.

4501. And those persons practically escape all taxation except what you have mentioned?—Yes, for this reason; that whereas here people as they grow rich spend a great deal more than formerly, they build better houses, have better equipages, and their whole *personnel* is superior to what it was; with the great mass of the natives they do not increase their expenditure in that way. I have known in Delhi and other places, men worth lacs and lacs of rupees, and really, if I had not known them personally, I could have supposed from their dress and equipage, and so forth, that they were just barely above want, bearing in mind the particular class to which they belonged.

4502. You cannot distinguish by the appearance the master from his clerk at a few rupees a month?—Just so. I knew a man with a banking-house in Delhi; I have known him come to call upon me in a little cart, drawn by a pair of bullocks, the whole concern not worth 150 rupees. It is very difficult to get revenue out of that kind of man in any way. And what is it that you get out of him by the income tax? A mere nothing; but in the aggregate it makes a considerable sum.

4503. As regards one of the sources of indirect taxation that is capable of increase, I did not direct your attention to the salt tax; was your attention much directed to the discussion that took place about the uniform adjustment of the salt tax in India?—Yes; I went into the subject most carefully and most minutely; and I may say that I ought to know something about it, for I have seen the working of it for the last 40 years. My attention was first directed to the salt tax when I was a magistrate and collector in the south of Delhi. That district adjoins the salt works; in fact, in that district there are some of our salt works, and further west, not far from it, are the great salt works of the Sambhur Lake in Jeypore. Not many years before that time we had maintained a great deal of the old system of transit and town duties, which Sir Charles Trevelyan described so fully when he was examined. That system was greatly modified; the greater part of the transit duties were swept away, and the town duties remained. But the town duties were, mainly through Sir Charles Trevelyan's influence with Lord William Bentinck, afterwards abolished; but in order to make up for our loss of revenue in those ways the salt tax was very much increased, and a strong frontier line was drawn between our country and those salt-producing countries, and bodies of excisemen were put also on the little lakes, and places where the salt was made in our own territories. I was then a magistrate; many men accused of smuggling were brought before me, and I had to try them and punish them under the Customs law. I thought it was a very hard and very severe system; but in those days I do not think, the duty was more than 1 rupee 8 annas a maund; I know that it was less than it was afterwards. Well, in course of time it came to be two rupees a maund; from two rupees a maund it has now come to be three rupees a maund. The Bengal duty is 3 rupees 4 annas a maund, and our rate for the salt, to which I have referred, is three rupees. Then, coming again to the Punjaub, there are mountains of salt between the Jhelun and the Indus; there is perhaps 100 miles of salt, the salt range, as it is called; that extends beyond the Indus again into the countries above Kohat. Under the Sikhs the revenue was 1 rupee 8 annas a maund; we made it two rupees a maund, and made very stringent arrangements, that is to say, we had strong bodies of excise officers scattered about, and prevented a great deal of smuggling, and the consequence is that we got a very large revenue from that source. Now we have increased the salt duty to three rupees the maund in the Punjaub. The salt in Rajpootana and the salt in the Punjaub are obtainable by the Government,

Government, for quite a nominal sum. You sell that salt; by your excise you raise it to an excessive price; here are the people in our country paying this excessive price for the salt, and the people beyond the border, in Rajpootana, are getting it for a mere trifle; and across the Indus the Pathans are eating it at a few annas a maund, while the Cis-Indus inhabitants are eating it at an enormous price. It is not human nature that they should not feel that; they are as intelligent people in their way as we are, and understand what is good for them and what costs them money; and I am persuaded that they feel it very much. There is no doubt that they do not complain, but I do not see how they can complain. They must say to themselves "The Government do this, and what then is the use of going to the Government officers and asking them about this? The Government officers will say, 'This is the law, and you must pay, and if you do not like to pay you need not eat the salt'"; but when they can, they do show their disinclination to the tax, and show it in a very marked way. Attempt to raise the duty in the Trans-Indus districts, and you would see what a commotion you would raise; one of the worst wars that we had on the border arose from that very circumstance; our collector of customs unadvisedly, for he had no authority from the Government of the Punjaub, closed some of the mines with the intention of recommending that the rates should be raised. He had the whole country up, and we had a good deal of trouble to put them down, and we had some severe fighting, and lost a good many men. I will give another instance. This very collector, a conscientious man and a good man in his way, but rather over zealous, got into his head the idea that a great deal of the Trans-Indus salt used to go along the Indus on the right bank, go up into Cashmere, and so get into our territory; and he went up there to see about it, and to devise a remedy; the people there found this out, and some of the Trans-Indus Pathans crossed the river, and murdered him and his assistant; they were two excellent men. In my mind it had a great deal to do with the salt business, and from that time we took the greatest care never to raise the salt duty beyond the Indus. If the people there showed that feeling I think that the people this side would show it too if they could; they are not so wild or predatory as those across the Indus; but still I have no doubt that in their minds they consider the salt tax a great grievance.

4504. Is it it your view that the present rate of the salt duty is quite the maximum?—I think it is an enormous rate; I would not under present circumstances throw away any revenue that I could possibly retain, but whenever I had a margin I would rejoice to see the salt tax reduced; I would not repeal it; I think in moderation it is a very fair tax, and it acts as a kind of poll tax, and by it you get a contribution to the revenue out of men, you could not get it from otherwise; but I think it is a great deal too high, myself.

4505. Do you think that practically it bears seriously upon the consumption of salt in the families, in what may be called the mass of the people?—I would speak with reservation on that subject, because there has been a great deal of discussion on it; and men, in whose judgment one has considerable confidence, take different views; but my own view is that it does limit the consumption very considerably; I am persuaded that it does; and not only does it limit the consumption as regards human beings, but I think it limits the consumption very much as regards cattle; and I believe myself, that a great deal of the loss of cattle from murrain in India, has arisen from the want of salt. But many men deny that. I have a very strong opinion on the subject; I know that every gentleman in India who looks after his horses, or his cows, or his sheep, if he has them, takes care to give them salt. We all give our horses in England salt; and I think that it is just as necessary, perhaps more necessary, in a hot climate, than in this country; at any rate, I think it of great importance that salt should be moderately cheap.

4506. I did not gather from you distinctly the rates prevailing when the disturbance took place to which you have referred?—Trans-Indus, it was two annas, and four annas at the different mines; in some only two, and in the others only four. At that time our rate was only two rupees on the Cis-Indus salt, on the salt taken from the salt range; and now it is three rupees; while Trans-Indus those two annas and four annas remain the same.

4507. That would be a very serious increase of taxation upon the people?—I think it is. I must say that the salt revenue keeps up wonderfully; it has risen immensely. I do not think that the Sihks got more than four lacs of rupees out of the salt revenue, and out of that they had to pay the cost of management; and I should think we get between 40 and 50 lacs; we get well above 40 lacs.

4508. You look upon it, I suppose, that the revenue from salt would be an increasing revenue with the population and wealth of the country?—I think so.

4509. Do you think that notwithstanding that it may be oppressive it can be maintained at the three rupees?—I thi[illegible]

4510. You are a[illegible]est of India the rate is not an[illegible]?—No, it is a great deal less; it [illegible]been less in Western India; but of la[illegible]he policy has been to try and raise the salt tax in Bombay and Madras up towards two rupees; and the policy which I advocated was to reduce the salt tax in Northern India and in Bengal, gradually downwards, as we saw our way, so as to have a uniform tax of something like two rupees, which would have saved us some money, in the shape of the customs line in Central India.

4511. That is a very serious item of expenditure, I suppose?—It is a considerable item; not large compared with the great revenue derived from salt in the aggregate, but still it is a considerable sum.

4512. I did not call your attention to the question of the opium revenue; but it might be convenient at this point just to ask you if you have at all considered the character of the opium revenue. You are aware of the two systems in force, the Malwa system and the Bengal system; do you think that it would be possible or desirable to change the Bengal system to the Malwa system of levying the duty?—I have not that local knowledge regarding the opium, either with regard to the Malwa opium or the Bengal opium, that I have of the salt question and others; but I have studied the question as Governor General, for it was under consideration at different times to introduce

Lord *Lawrence.*

10 June 1873.

introduce the excise system, which is the Malwa system, and to do away with the Bengal system, which is the system of giving advances to the cultivators, and getting the opium grown, and in fact taking possession of the whole of the opium grown at a given price. I think it would be a very good thing if we could get rid of the Bengal system, and introduce the other; but I would not like to undertake it. I have no doubt in my own mind that you would lose a large amount of revenue by the change; although I think it would be well if we could do it. I think we cannot spare the revenue.

4513. Do you think that there would be great practical difficulties in supervising it by way of excise?—Very considerable. It is easy to see how you would lose revenue by it; you now get all that the excise revenue would give you, plus a great deal of the profit of the cultivation, just as the capitalist would get it. If you made it an excise system, that profit must go. I incline to think that you would lose a million and a half, to two millions of money.

4514. Would there be any corresponding benefit from the adoption of the excise system?—I do not see any, except that one would rather not be concerned in growing the opium. It is a question to a certain extent which I think influences many good and earnest men; and if it was a question of a moderate loss, or a loss even that we could afford, I would not hesitate to undertake it; but I think it is quite hopeless to expect that you could get the same revenue.

4515. But as it is not proposed in any change to diminish the cultivation, that would be purely a sentimental idea, would it not?—Assuming that it was not reduced, that you had the same average quantity of opium brought down to the seaboard and exported, and that you got an excise on it equal to what you get from the Malwa opium, you would lose a great deal of money by it; you would lose what I call the trader's profit. You [illegible]nce what you would lose. Malw[illegible] rupees a chest, and Bengal opiu[illegible]0 up to 1,200 and 1,300 rupees [illegible]nk by the last accounts from India it [illegible]ing between 1,200 and 1,300 rupees. Take it at 1,200 as the average that it has been for the last three or four years, you would lose one-half.

4516. Would it not be the difference between 600 and 800 rupees, assuming 400 rupees out of the 1,200 for the contract price of cultivation and manufacture; you would lose that difference?—Yes, my impression is that you would, at any rate, lose a great deal more than you can afford.

4517. Have you any reason to suppose that, in the contracts made by the Government for the cultivation, any oppression is used towards the cultivator, or that he gets as good a price and as much remuneration as he could do by any other means?—I think he gets a better price generally for his cultivation than he would for another crop; I do not think that there is any oppression. Some ten or twelve years ago it was said that there was some oppression; and the Government had close inquires made both by officials and also by independent means, and it turned out, I believe, that there was more.

4518. You think that the cultivator is in no way injured, but on the contrary is rather benefited by the present contract system?—I think that the cultivator is in better circumstances under the Government than he would be under the trader. I think that the trader would not deal with him so liberally, or considerately, as the Government do.

4519. Then, as a contractor, he is rather protected as against the zemindar or superior holder?—I think he would be. In this way, he would benefit very much. First, of all, a trader who made him advances, I think, would be more severe on him if he failed at any time; when a storm or excessive rain comes on, and sweeps over a district, a great deal of the opium is destroyed; in that case, the Government would either suspend the realisation of the advances they made, or they would in some cases give them up altogether; you could not expect a private trader to act in that way, at least very few would.

4520. Do you think, having regard to the class of people that the Government have to deal with, there would be great difficulty in maintaining the supervision of the excise, so as to prevent fraudulent cultivation in Bengal?—I think there might be more difficulty in Bengal than there is in Malwa, owing to the particular lines which the opium comes down from Malwa, which are easily controlable compared to our side.

4521. They cannot get out of Malwa without great difficulty, you mean?—There are certain obligatory points by which the opium comes.

4522. Does it occur to you that any other source of taxation could be found in India beyond those that now exist, and the income tax, in case the Government found it necessary to increase the revenue?—I am not prepared to mention any sources of revenue which I think it would be politic to make use of. Succession duties and the tobacco tax, and so forth, have been constantly talked of, but we went into the subject very carefully, and came to the conclusion almost unanimously, that it was unwise to introduce such taxes. A tobacco tax would really be an additional tax on the land.

4523. If it were on the growth of tobacco?—And if it were an excise, it would be very difficult to collect, and it would come upon the poor man; and his tobacco next to his salt is the great thing he requires. I think you would find that it did not answer.

4524. We will now ask you to give us your opinion, if you please, upon the question of the system of decentralisation of taxation and the substitution of the scheme of local taxation, which was proposed by the Government of India two or three years ago; have you directed your attention to that subject?—Yes; this matter was considered in India, when I was Governor General.

4525. Do you consider that the mode in which the arrangement was made for shifting the taxation, or the duties of taxation, from the Government of India to the local governments was a desirable one as it was carried out?—It was suggested towards the end of my time as Governor General; I was averse to it. The system which was subsequently introduced was put before me, and I carefully considered it, and I did not think it advisable to introduce it. I thought that what was wanted really in India, was to keep the local governments in order, to make them be careful in preparing estimates, and in not exceeding their estimates; in fact, that what was wanted, was a restriction over them in matters of large works; and with regard to that partial system of decentralisation, though I did not think it important

in

in itself not to introduce the proposed change, I thought it was important not to do it, as it would be in the nature of an undue encouragement to those who had hitherto required to be kept more, or less, in order.

4526. You objected to the idea that the local government was to be at liberty to increase its expenditure provided only that it got the means of paying it from local taxation?—Just so.

4527. That local taxation coming in contact with Imperial taxation?—Yes; I did not think it was expedient. People say that the effect of it is good in this way, that it saves constant collision with the local governments, and that it induces economy. Well, as regards collision with these governments, of course if they are economical and careful, the Government of India would not come into collision with them; on the contrary, the Government of India would encourage such a policy were these Governments not economical; but on the contrary were more or less wasteful, then it is the duty of the Government to risk unpopularity and collision, and to restrain them. Therefore I did not think much of that argument. And then as regards making men more economical; it does not seem to me that men are economical because of a little power more or less. Practically the local governments have very great power in every respect, and even in their expenditure, and it more depends on the idiosyncrasy, the character of the individual ruler, than upon any relaxation of rules, whether he is careful and frugal, or the reverse. Some men, no matter what the rule was, would be careful, and make public money go as far as they could; and as regards other men, no matter what power they had, it would not induce them to be careful.

4528. Has your attention been directed to the consequences of this policy in the nature of the taxes that the local governments have been levying to make good the deficits that there have been in their local finances?—My attention has been directed to that. My own impression was that when the Government allotted so many sources of revenue for local purposes, they made a reduction in the sum which those sources of revenue produced, or which had been hitherto given for those objects.

4529. Perhaps it would be more correct, would it not, to say that the Government assigned to each of the local governments an amount of expenditure without assigning the full income that was necessary to meet it?—Yes. I suppose the idea was, that partly by increased taxation, and partly by economy, they would make up the difference. I will not say that some of them did not do it, but the general effect seems to me to have been that there was in point of fact additional taxation.

4530. Unless the Government secured for itself a budget of economy, the result was that it was an order to each of the local governments to levy local taxes?—It came very much to that. Some of the taxes which have been raised, I understand, would have been raised, or had been arranged to be raised, it is said, irrespective of that budget; but others again, there is no doubt, were raised in consequence of that arrangement. I do not wish now to argue that what was done should be undone; I think that would be ungracious and, perhaps, impolitic to do so; but I do not see that there was any real advantage in that arrangement.

4531. But have you looked at the precise character of the taxes that have been levied on the people under this system?—Yes. In Bombay they had a tax upon the non-agricultural community; I understand that has been given up.

4532. Was not that almost of the nature of a capitation tax?—Yes; I think it was an excessively bad tax. Then they had two taxes which they introduced into Madras; I forget exactly what they were; one, I believe, was an house tax; I do not know whether those had not been determined on before, but my impression is that they were not good taxes. Then in the Punjaub, instead of raising a local cess they added a certain per-centage to the land revenue, as I understood. I think that was not a good plan; it was loading the land, and that just after the settlement had been made.

4533. Do you think it was desirable for a very small increase to raise the question of what was the nature of the 30 years' settlement?—I think the effect of it was to make the people doubt the validity of that settlement. In all these settlements there is a formal agreement given to the people on the part of the Government, and a similar acknowledgment taken from them, and these documents are very carefully worded, and carefully limit the demands of the Government. There is so much put down in each case for the land revenue, so much for roads, so much for education, so much for police, and so forth. I think the plain understanding of such a document is that so much will be taken, and no more.

4534. Then do you think it would have been better for the Government of India to have continued the income tax, and raised the money in that form of taxation, instead of throwing this petty taxation broadcast all over India?—I think it would have been far better myself. I think it would have been a more consistent and judicious arrangement, and that it would have been better, for this reason, that the income tax was bearing upon those who could well pay it, whereas these cesses come upon those who cannot afford to pay them, by comparison.

4535. Do you think it desirable that there should be two taxing powers in India, the Supreme Government and the local governments going in different grooves of taxation?—I should say as a rule it was not. The people do not distinguish between one local government and the Imperial Government in that way. Every official who is connected with the Government, particularly the higher officials, are all looked upon as part and parcel of the same system; and whether I, as Collector, or Commissioner, or Lieutenant Governor, or we will say as Governor General, initiate and carry out a particular policy, it is all considered as belonging to the one government, and the one system.

4536. Now have you considered the proposition or suggestion of Sir Charles Trevelyan, that instead of this arrangement the local government should manage the finance under the taxation prescribed by the Supreme Government, and that it should undertake the whole of the expenditure in its locality, paying only such a sum in gross to the central government as it might prescribe as necessary for the general charges of India?—I am sorry to say that I am very much against that system; I think it would be reversing the order of things. You must have some control over the local governments; there must be some central

Lord *Lawrence.*

10 June 1873.

authority which is to look after the local governments, and constrain them, and control them, and direct them. You can only either have a central government in India, or practically do away with that central government, and have the central government in England. As it is now, you have the Government of India controlling the local governments, and being controlled itself by the Secretary of State in Council. That seems to me an infinitely better system than anything of the kind which Sir Charles Trevelyan suggests. I think that that system would be found, I should say, nearly unworkable, and that if workable, it would create complications and difficulties very much greater than the present condition of things.

4537. Supposing the whole power were given to the local governor to carry on his administration with the utmost economy and efficiency, accounting for so much of the revenue to the Supreme Government, do you think that that would induce him to exert himself more than he now does, and to rely less upon what may be called the action of the Supreme Government?—I do not think that it would make the slightest difference really and truly in that respect. I think that the economical governor would be economical, and the extravagant governor would be extravagant under the one system as under the other. The wasteful man does not admit that he is wasteful; he thinks that he is doing what is right and proper. Therefore, I do not see why he should naturally become more economical because everything was put into his own power.

4538. Would it not, then, be a necessary economy on his part to keep within his income if he had no other resources?—If he could not resort to taxation, or borrow money, or insist that he had not all that he ought to have, and that some other province had something that he ought to have, of course then, having no means of laying his hand upon money to spend, he would not spend it; but I think that, practically, it would not be so good a system as the present system. I think that one of the first things which would involve a difficulty would be this, to ascertain what was the revenue of each province, and what should belong to it.

4539. But then Sir Charles Trevelyan's proposal assumes that that would be clearly defined; that they would draw the whole revenue from certain sources of revenue which were within the administration of the provinces, and the assignment which would be made in favour of the Supreme Government would of course be regulated by the nature of that revenue as compared with the general resources of India; that is to say, supposing that the Government of Bombay managed the Indore opium business, and collected the money, that of course would involve the Government of Bombay's accounting for so many millions more, or contributing so many millions more to the Supreme Government in aid of the general expenditure?—I do not mean to say that it could not be made out; but I think there would be complications and difficulties. Then again, I think there is another point which would arise. Supposing a sudden war arose, which was carried on under the instructions of the Governor General in Council; when it came to be paid for, where is this money to come from, or how is an arrangement to be made by which this money would be gradually liquidated? Each governor would say, "I have anticipated my revenue, and arranged to spend it all; I cannot give you any more." Then another question would arise; in point of fact, the surplus of some provinces makes up for a deficit in other provinces; it is very convenient; it does not lead to any extravagance or waste that that system should be maintained; but if you come to divide them off by a straight and fast line, then I think that very considerable difficulties would arise. At one time, it is important to stimulate the improvements in one province; at other times, it is desirable to encourage them in another. For instance, if it has been decided to make a great work like the Ganges Canal, it is true economy to push on that work, as quickly as is consistent with having the work properly done; you have a large establishment to supervise and control it; you have to make advances of various kind to contractors and so forth, and to collect material; if you do not furnish money as fully as the work can be properly carried on, there is a certain waste; it would be far better, therefore, that for one series of years until you had finished your Ganges Canal, you should divert some of the revenue from one province, and give it to another province until that work was completed, than that you should allow each province to expend its surplus revenue systematically Supposing it were of great consequence to make a railway for political reasons along the frontier, or to build forts along the frontier, if your frontier was threatened, it would be a most absurd thing to say that the Government of India should not be able to get a portion of the surplus revenue of the other provinces, and to devote it to this work, which was of vital importance, not only to that province, but to all India. It seems to me, that in practice, many difficulties would arise; and I do not see, myself, really any advantage on the other side.

4540. Do you think that there would be a difficulty in regulating from year to year the requisition on the local government as to its contribution when circumstances might arise in the middle of the year, rendering it necessary to change it?—Very considerable difficulty. In my time, we had a miserable little war with Bootan, which was brought on by local circumstances, but the object was to bring that war to an end with the greatest promptitude and vigour possible. How embarrassed would the Government of India have been if they had been obliged to throw all the cost on Bengal, because it happened that the frontier was in Bengal Again, you had the other day the expedition against the Looshais, in Assam. Would it not have been absurd to say, that the necessary funds must be borrowed or taken out of the Assam revenue, when we could take it out of the cash balances, if they were large enough, or out of the general revenues of India? It seems to me that in all those things you would be only building up difficulties for yourself, and have really no counterbalancing advantages.

4541. To pass on to the question of the relations of the Secretary of State and the Governor General, do you consider that those relations admit of an efficient control by the Secretary of State in Council over the expenditure by the Governor General?—I do. I think that under present circumstances the Secretary of State in Council can exercise, in practice, a very proper control

control over the Governor General in Council in India.

4542. Are the whole of the communications carried on between the Secretary of the Governor General of India in Council and the Secretary of State, or are personal relations maintained between the Governor General in Council and the Secretary of State on matters of finance?—There are semi-official communications going on between the Secretary of State and the Governor General of the day, but those communications are only in the way of preparing and smoothing the way for any particular arrangement.

4543. They are an exchange of opinions, in fact?—Yes; an exchange of opinions, and ascertaining what are the views on different questions between the two; but every single thing connected with the administration of India, whether finance or otherwise, is carried on officially, and irrespective of those semi-official communications. If I, as Governor General, wished to enter on a new field, or had some very difficult matter coming before me which I might or might not take up, it would very much influence my line of action, whether I was pretty certain that the Secretary of State would approve of it. I would write to him semi-officially, and ascertain his views; if I saw from the tenor of his answer that he was inclined to my view, then that would be an encouragement to me to undertake the matter; but if he seemed to be adverse to it, then I should probably let it alone.

4544. Do you know whether any change has taken place in recent years in the extent of the information that was communicated by the Governor General of India in Council to the Secretary of State, as compared with what was formerly communicated to the Court of Directors?—I read Sir Charles Trevelyan's evidence, and I would say this, that if you come to minutiæ, there was not the same minute and detailed communication between the Government of India and the Secretary of State in Council that there was formerly; but in all essentials, I believe that the communications are even more intimate and more valuable now than they were in the old days.

4545. In what respect do you consider that they are more valuable?—I think, in every respect, that I have pointed out. For instance, to take a case, if that question of the permanent settlement had arisen in my time, there was not an absolute necessity for taking it up, but if I had a strong feeling, as I have, of the advantages of it, I should have written to the Secretary of State and asked him what he thought of it, and given him a general outline of my views on the subject; and if he had responded, I should then have undertaken to bring it before my Council and worked it out, and should have had despatches prepared showing the whole bearing of the subject; but if I found that he was disinclined to it I should let it alone, and then I should save a great deal both of my time and his time, and the time of the different officials in India. In the old times, as described by Sir Charles Trevelyan, most elaborate detailed accounts of every kind of thing that was done in India, and every anna spent in India, were prepared and sent home; but they were no real practical use that I can see; I believe that they were in most instances put into the archives, and never looked at.

4546. Mr. *Fowler.*] Was that the case before the year 1834, when the change was made in the commercial character of the Company?—I would not put it down to anyparticular time. I alluded to the system described by Sir C. Trevelyan as having existed in the mercantile days of the Company, and which naturally enough, appear to have been carried on for years after the mercantile system had ceased. That, I think, is quite a natural view of the case. But I mean to say that I think the communications now, as far as public advantage goes, are as minute and as sufficient as they could well be, and that where there is anything that goes wrong, it does not arise from want of communication, but arises from accidental causes.

4547. *Chairman.*] But do you consider that the Government of India has forwarded in recent times such a complete and continuous statement of the growth of expenditure, and the diminution of expenditure, and the causes of it, as would enable the Secretary of State for India in Council to form a really intelligent judgment of his own upon the questions of expenditure as they went on?—I think so. I do not think that there was any single thing in my time, or in my predecessor's time, or in my successor's time, in which the matter was not fully laid before the Secretary of State at home. Of course, there are some cases of trivial or very moderate expenditure that would be sanctioned by the Governor General in Council, in the anticipation that the thing would be approved of at home. But, in point of fact, in my time I recollect Sir Charles Wood, now Lord Halifax, laying down that the Government of India should not sanction any permanent establishment where the allowances for any individual would be more than 300*l.* a-year. I think it was, or something of that kind, which was fixed. There had been some cases in which appointments had been created of which he was doubtful, and so he laid this rule down. We obeyed it, and acted accordingly. The only difference was that there was a little delay.

4548. Mr. *Candlish.*] Is that rule in force now?—I do not think that there has been any change.

4549. *Chairman.*] But was there any peremptory arrangement by which every increase of expenditure should be reported home, and the reasons of it?—I should say that they were reported home practically doubly. First of all they went home systematically in the Accounts, but the correspondence connected with this expenditure was especially eliminated from the mass of unimporant papers, and sent home to the Secretary of State, with a covering letter, succinctly giving an account of the reasons for which the thing had been done. I think the Secretary of State had ample and more than ample opportunity, both semi-officially and officially of knowing everything that was going on, and that in point of fact he did know. I cannot myself recall any case of any importance which was otherwise dealt with, than as I have stated, in my time.

4550. Then if the records were well kept in the India Office, they are in a position to give full explanation of any increased expenditure from those records without referring to India?—I should think so. In every department of the Government of India, the correspondence not only goes home, but it goes home in print, made up in monthly blue books; so that besides the manuscript correspondence which has gone home

Lord *Lawrence.*

10 June 1873.

in each case, there is the whole monthly correspondence in each department, the political, the financial, the public works, and so on; all these are printed and made up into monthly books, and sent home to the Secretary of State, and they are never more than two or three months late, while the manuscript correspondence has gone home systematically. I can only say that that was the case in my time, and I did not create it, but found it in existence.

4551. With regard to the revenue and questions affecting the receipts, were all the changes that were contemplated submitted for consideration in England before they were given effect to in India, or only afterwards?—All of importance were submitted before, where it was an increased expenditure; but where it was a change of some system; for instance, where some additional allowances, we will say to the police, were proposed, and this was to be met by some reductions in the same department; then in that case you would not consult the Secretary of State, even though it was a large question, because he would see that it was all paid from the existing establishment; but you would still send it all home to him, and he would give you his own opinion on it of approval, or doubt, or so forth.

4552. My question had reference to any charge which would affect the receipts or amount of the revenues. Was that first brought under discussion with the Secretary of State? —If the revenue had been affected by any changes of the local governments or of the Imperial Government, then if they were of importance he would be consulted on the subject; but otherwise, as a rule, they would be carried out by the local governments in communication with the Central Government, and then go home, as a matter of course. For instance, when in the North Western Provinces this permanent settlement was in contemplation, it was reported home; nothing was done before that. When it was proposed to raise the excise on salt from two rupees to three rupees, no doubt it was not carried out first, and then reported, but the Secretary of State was consulted on the subject first, and so on. As regards the land revenue, it would not be the case, for an obvious reason; when the re-assessments of the land are to be made, they come on at various periods, as the terms of settlement expire. As a matter of course, all this is done by the local governments; the work is taken up by the local governments, but it is known by the Supreme Government for this reason, if for no other, that extra establishments for that particular purpose would be required, and these would be formally approved, and sanctioned by the Governor General in Council, and therefore he would know what was about to be done; but as to what were to be the assessments of these lands, that would pertain to the local governments, and, under them to the local officers, because there are rules and regulations laid down for these things which have been perfected in a long course of time. In fact, in the Bengal Presidency, from the time of the settlement in 1833 and 1834, the broad principles of those instructions were, that you assess the villages with reference to their means, taking especial care not to over assess them; whether it came to be a profit, or whether it came to be a loss, that the Government could not help; but in point of fact, since that time, all the revised settlements of provinces not under settlement, has always shown, more or less, an increase of revenue.

4553. With regard to the proceedings of the Secretary of State in Council in England, when the papers come home, do you consider that the Council exercise any serious authority in controlling the expenditure?—I think they exercise a very great control.

4554. In what way is that authority exercised? —The Council, as you are aware, have not the initiative in any work; it is all carried on in the name and under the responsibility of the Secretary of State; but the work comes to the different departments, and is divided among them, and there are committees who look after the correspondence in these departments; the papers are examined by the secretaries of those departments, are considered and reported upon, and these reports, with the papers, come before these committees, and every member of the committee reads, or is supposed to read, these papers, and to make himself master of them, and then the committee meet and consult, and come to a conclusion as to the answer that should be sent. If it was a routine or ordinary subject (I am talking of my own time) it was treated by the secretary; if it was a difficult subject, he heard all that the committee had said; and if he agreed with the committee, and there was no doubt as to the disposal of the case, he drafted a letter; but if he had for any reason a doubt on the matter, he had the power to go to the Secretary of State himself, and talk over the matter privately; the Secretary of State, as a rule, would generally send for the chairman of the committee, and sometimes for one or more of the members; sometimes on an important question he would send for them all, and have it out in his own room with them, and discuss it generally, and he would come to a conclusion, and the draft would be approved, or re-written, or modified, as circumstances might demand; and then, after having been formally passed by the committee, it would come before the Council the following week, and every Councillor would have an opportunity, if he liked, of reading these papers and discussing the merits of them in the Council; so that in my time I should say that everything was most fully reported, where it was a matter of any importance, and very fully considered; and if any mistakes or errors arose, they arose from other circumstances; they did not arise from any want of opportunity of giving your opinion, or maintaining that opinion to the last.

4555. Was there any system adopted of considering the financial bearings of every proposal or proceeding as it went on, as affecting expenditure?—I think to a great extent they were considered, but I think, perhaps, it was not altogether carried out as completely as was advisable in some cases, that is to say, at times expenditure, we will say of a political character, or expenditure of a military character, might be considered, and might be authorised in that particular department, and not have been, as it ought always to have been, referred after the department had considered it, to the financial department, to take the financial view of the question. I believe, that of late, a change of that kind has been made. In my days, this practice was not always followed.

4556. Your view would be that there should be

be some committee or special authority that would bring the whole system of finance into one focus?—Yes; to a great extent it is done, and there is a separate finance committee, and they do their work as a committee very well. Still, I think that in isolated cases, I have known the matter not come before the financial committee, until practically the thing has been decided, which I think was a mistake.

4557. All the time that you were in the Council, do you recollect whether there were any serious discussions on any question of finance in the whole Council, and any decision arrived at on purely questions of expenditure or upon grounds of expenditure; I mean apart from general policy?—For instance, the question of the Godavery Canal was very much considered in Council, and there were great discussions on it, and great differences of opinion. On that very question (which is a great question really of finance as well as of policy) of the permanent settlement, we had discussions and debates, I think, for about two or three months, and there was a special committee composed of every man in the Council, who was supposed to have a special knowledge of the subject; and my recollection is, that Sir Charles Wood himself acted as chairman of that committee.

4558. The returns which we have received from the India Office show that upon very few occasions indeed has there been anything like a difference of opinion in the committee of finance?—You mean in the way of recording dissents? Dissents are not often recorded, for reasons which must be obvious to any gentleman who has had much to do with public business.

4559. We have had a statement supplied to us extending from 1858 to the present time, from which it would seem that taking 1858 to 1864, in the intermediate period there was only a dissent from some members with reference to the additional grant to the Mysore Princes, establishments for India of British regiments of cavalry and infantry, salaries and pensions of civilian judges, and expenses of Queen's cadets while at Sandhurst?—My answer to that would be this, that it would be extremely unfair to measure the value of the Council by the number of dissents they placed on record; it was only in a very extreme case, where an individual member was strongly opposed to a particular line of policy, that he would wish to place on record a dissent from the views of what would be the policy of the Secretary of State, and the majority of the Council. A member of Council in my mind, who really was desirous of being in the utmost degree useful, would forbear from writing dissents in such cases, whenever he could possibly avoid it; for this simple reason, that he did not increase his influence with the Secretary of State by doing it, but probably decreased it; and any dissent that he wrote would be useless for any practical purpose, because by the time it saw the light, it would probably be of no value; and even if it had been of value, probably nobody would read it, or even hear of it. But where the Councillor was of real value to the Secretary of State was in this, that in the commencement, before he decided what he would do, the Councillor went to him, had an interview with him, talked the matter over, and got him to send for other members, and there they sat in the Secretary of State's room, three, or four, or five of them; and there he heard the whole matter; and I recollect many cases where the Secretary of State did that. I will take a particular case in the time of Sir Charles Wood, which is now in my mind, and I recollect six of us sitting there with him, and he not only heard what every man had to say, but put the one against the other, and in that way he was able to form as complete a view of the matter as any man of ability could have done, who did not know the subject himself intimately. In that way of acting consisted, I think, the real value of a Councillor; then any member who dissented from what was settled had his say in the Council, and if he could not persuade either the Secretary of State or the majority of his colleagues that he was in the right, I think it perhaps may be assumed that he was not.

4560. Your view then is, that the value of the Council was rather in assisting to form opinion than in formal acts restraining the proceedings of the Secretary of State after a decision had been made?—Yes. The Council could only absolutely restrain the proceedings of the Secretary of State in one way, and that was in the matter of finance, where there was a majority of the Council against the Secretary of State. They are very rare cases of any kind indeed, in which the Secretary of State overruled the majority of the Council, and sent out a despatch in opposition to their view. I think I saw a work when I was in India, in which it was said that Sir Charles Wood had only overruled the Council in three or four cases. I do not know whether that was correct or not, but that was the general principle of conducting business, and I do not see how you could improve on it.

4561. Mr. *R. Fowler.*] Were those financial matters that you refer to?—Sometimes on one subject and sometimes on another. The Secretary of State heard the Councillors on any matter where they wished to give their opinion; but he was bound to hear them and to listen to them if there were a majority against him as regards finance matters.

4562. *Chairman.*] It has been found impossible, I believe, for the Council to prevent the Secretary of State from proceeding upon matters which are matters of policy, though they may lead to expenditure at the same time?—But, in point of fact, where any important expenditure was involved, it came before the Council, and they would have voted upon it, and they would have practically prevented the expenditure taking place, if the majority were against it. For instance, take such a case as this. Supposing the Governor General had written home that he should like to subsidise the Ameer of Cabul, as a system; that would be really an important question of policy; but the Secretary of State would consult the Council not only on the policy of it, but because it involved a considerable expenditure; and I have no doubt in my mind that if the majority of the Council had been against that expenditure, the Secretary of State would have given up the proposed policy altogether.

4563. That however would have been a case of a direct engagement to pay money, would it not?—Nearly every case involves expenditure of money. If you come to look at administration, it is very difficult to select any important cases that do not involve expenditure of money.

4564. Still, has not the Secretary of State the power to over-rule his Council on a question of policy which may lead to a great expenditure, though

Lord *Lawrence*, 10 June 1873.

though in the policy itself the expenditure does not appear?—That seems to me a moot question; I know it was raised in the House of Lords on one occasion; but it struck me that the Secretary of State ought to be guided by the Council in such a case.

4565. I will put this to you, to follow up your illustration: if the Governor General wrote a despatch to say that he proposed to make an alliance offensive and defensive with the Ameer of Cabul, the Secretary of State would have the power to sanction that without the control of his Council, would he not?—Yes, not adding that he was going to subsidise him; he could do that, but I think it would be the last thing that any Secretary of State, that I ever saw, would have done.

4566. And then he must leave the question of the expenditure, whenever it arises in connection with that treaty, to take care of itself?—He could do that; but I think that the Councillors who were worth their salt, if he did not consult them, which I am sure he would have done, would have gone to him and said, "This is within your competence nominally, but, practically, it will lead to great mischief if you do not consider the finance part of it, and, therefore, we hope that you will so consider it."

4567. Still he would have the legal power, would he not, to sanction the treaty, and bind the Government to the treaty?—I suppose he would; but I do not think he would do that, because, if the matter were attacked in Parliament, and it came out that the Council had not been consulted, or that being consulted, the majority were against it, it would weaken him very much; and understanding that, he would not do it, even if good feeling did not prevent him.

4568. Supposing that it were thought desirable to carry out the policy of setting up a separate government in the North West, instead of the present system of a Lieutenant Governor, would it not be competent to the Secretary of State to sanction that policy, and that arrangement, leaving the question of any expenditure when the Governor General made the arrangements to carry it out, to be contested by the Council as they might think fit?—I suppose it would be a question to be decided by the lawyers whether the Act covered that or not; but I think it would be very unwise, if the Secretary of State did anything of the kind.

4569. Has he not power by law to do it now if he thinks fit?—Perhaps he has that power by the Act, but I should say that that was opposed to the spirit of the Act, because in that way, by dividing the policy from the finance, or the administrative arrangements, from the finance, he might practically get the case into such a condition, that the subsequent opposition of the Council on financial grounds was vain; and, therefore, it would be in my mind against the spirit of the Act; and I have never in my recollection known a case of that kind.

4570. Do you think that the Council whilst you were a member of it applied themselves actively and continuously to the examination of all the steps and proceedings of the Government of India for the purpose of revising them?—I think the great majority did; but, of course, a great deal must depend upon the Secretary of State himself; I mean as to the way in which he consults his Council, and the facility that he gives to hear what they have to say.

4571. Of that mode of proceeding there would be no official record in the India Office?—There would be no record whatever, but the Council would have every opportunity of knowing all about the thing.

4572. Is any record kept of the proceedings of Committees, or are they oral?—There is a record kept in the shape of the original draft letter, that has been prepared by the secretary of that department, and there will be the suggested emendations of the committee sometimes concurred in by them all, sometimes some concurring, and some dissenting; there would be this on the margin to show; but there would be nothing in the shape of the arguments, reduced into the shape of a *précis*, or anything of that kind.

4573. Do the members of the Council of that Committee put their initials to the draft?—Yes.

4574. Mr. *R. Fowler.*] Each committee has a separate secretary attached to it, I suppose?—Not to the committee, but to the department, and then the departments are divided among committees; each Councillor in my time was on two committees; for instance, I was on the military and the political committees.

4575. You Lordship, of course, is a man of great experience, but those Councillors might be men who knew less of India?—The Secretary of State, as far as he could, so distributed the members of the Council as to put them on committees for which they had a speciality; and where one member had not been in India, or was not supposed to know so much of particular matters as another, the Secretary of State put him on a committee where there were men who had special knowledge of the subject; and in that way he distributed them, so as to make their services of the greatest value.

4576. *Chairman.*] The record then of the practical working of the committee system, would be the initialing of the draft letters by the different members?—And any emendations that they might have suggested; these of course were not published, but on any discussion on any question, as to who supported such and such a measure, you could at once ascertain that; for instance, the other day I wanted to see who had been on the committee regarding the permanent settlement; I was doubtful of one or two names; I had forgotten them; and I went to the secretary and asked him to let me see the draft, and I saw at once who they were.

4577. Is it your opinion that on the whole the Council is effective for the purpose of controlling the expenditure in India?—I think they are effective; it comes really to this, it seems to me, whether the expenditure which is proposed, is really a politic one or not; if the council consider it impolitic, they have ample means of opposing the expenditure; but in point of fact, in many questions there are great differences of opinion, not only at the time, but between one time and the other time; Councillors are swayed naturally enough by out-door influences in this way; if Parliament were very strong on any given line of policy, that would have a great influence on the Council as regards the line they would adopt. In the same way, if there were a strong feeling in India in favour of undertaking a particular work, or the reverse, it would have an influence in this Council; and in one cycle of years the public are in favour, and Parliament are sometimes in favour of one line of policy, and at another time they are in favour of another view.

I recollect

I recollect that there was a general idea that for years and years before I went to India, and I may say generally, during the time of the old Court of Directors, that India was starved in various ways as regards public works of all kinds and descriptions; and that one of the tests of a liberal, enlightened, and zealous administration, was, as far as possible, to, what was called, develope the resources of the country, to make roads, and canals, and railways, and give good barracks to the English troops, and to expend money in different ways; I believe not one of those things was bad. I would go so far as to say that everyone of them was good; but every one of them involved a considerable expenditure, and those who opposed that kind of thing were considered mean, and parsimonious, and were covered with all kinds of epithets of this kind; in fact they were scarcely listened to. At times the Council were doubtful in such matters, and individuals shook their heads; but when it turned out that the Secretary of State was in favour of the measure, and a number of the members were in favour of it, and very likely public opinion supported it also, it was very difficult in that way to resist it; and practically if you did resist it, I do not know that it came to any good in the end.

4578. Was there any system in force by which the committee, if they did not agree with the Secretary of State finally as to the despatch or the course to be pursued, brought the matter under the consideration of the whole Council; or what was the arrangement?—Each case was got up with all the papers that bore upon it, in what were called the "collections"; these were laid on the Council table, and there was a paper sent round to every member of the Council formally showing the particular cases that were coming on the next Council day. A Councillor knew all about the questions which came before his own committee, and those of other committees he would take up or not, as he might think proper; and with regard to those subjects in which he was interested, or of which he had heard from any other Councillor, that there was a difficulty, he would send for and read the papers. For instance, if I was interested in a subject in which I had been in a minority in my own department, I would step over to the room of my colleague A, B, or C, who I knew was well acquainted with these matters, and would have a talk with him, and send for the papers and read them over; so that by the time I came to the Council I had only to get up and say what I thought on the subject; and if I had a majority on my side, or even an influential minority on my side, the Secretary of State would think over the matter; very often he would take it back, and say, "There is more in this, than I first thought; I shall reconsider the thing." There is every opportunity for all the members of the Councilwho like working, to do their work in that way.

4579. Were there practically a great number of cases which came before the Council leading, though not to a formal dissent, yet to a reconsideration of the matter by the Council?—A great many; but in those cases in their nature it was often extremely difficult to be certain who was right and who was wrong, more particularly for the Secretary of State. Suppose that he had seven Councillors on one side and eight on the other, or if he had five or six of the men who were supposed best to understand the particular subject on his side, and seven or eight of the others against him, it was at times a very difficult matter for him to decide on an intricate question.

4580. Do you think that the view of the Council with regard to economy in expenditure was much influenced by the circumstance that the Council was in your time, I think, almost entirely drawn from members of the public service, and that there were not in it persons who had been trained up in another position in life?—In my time time there were three or four Councillors who had not been what you ordinarily call officials. There was the late Sir Charles Mills, the well-known banker, and Sir James Hogg, who had not been an official; he is a barrister, and had held appointments in India; I think, in fact, every man except Sir Charles Mills had been in India; but does your question refer solely to whether they had been officials?

4581. Sir James Hogg was an official, in the sense of holding office in India?—It was an office under the Supreme Court; it did not necessarily imbue him with what might be called the prejudices of the services. In point of fact, they were all men who had been in India, except Sir Charles Mills.

4582. Were they not all men who, in India, had had an official career, rather than what may be called a private career?—Yes; either civilians, or military men, or barristers, who had had official appointments, or something of that kind, or judges; for instance, there was Sir Erskine Perry, who had been a judge in Bombay.

4583. I used the words "official career in India" in contradistinction to what may be called a private career, in any occupation or profession apart from any official life. Do you think that that state of circumstances in the Council exercised no influence in dealing with questions of economy and expenditure, or that it would have been desirable to have had some man in the Council whose career had been otherwise than official?—I do not think it had much practical influence one way or the other. I think, myself, as far as regards the Council, it would be desirable to have on the Council any eminent man who was willing to serve in it, and who had a turn for that kind of work. But, on the other hand, I think that many non-official members high in public estimation, are so wealthy, that it would not be worth their while to be on the Council. I recollect hearing, I think it was Sir Charles Wood, say that he had offered appointments in the Council, on more than one occasion, to men who had never been in official service, and that they were declined.

4584. Do you think that, in controlling expenditure, for instance, connected with railways and other matters of that kind, it would be desirable to have in the Council some one who has acquired experience in dealing with subjects of that character.

4585. Such as a civil engineer, or a merchant, do you mean?——

4585*. Or a man of business brought up in business of any kind?—I do not think that that such a man would help to control expenditure. On the contrary, I am rather inclined to think that he would go in for more expenditure; such is my experience. I do not mean that he would go in for expenditure for expenditure's sake, but that often he would say, "Let us have plenty of railways, let us have plenty of canals, let us

Lord *Lawrence.*

10 June 1873.

have all kinds of improvents;" he would be disposed to think that whatever was good in England, would be good in India.

4586. But do you think that he would bring to bear what may be called the economic methods of spending money which are practised in commercial enterprise and private business, and, perhaps, not so much practised in Government enterprise and Government business?—I may be wrong; but I have great doubts whether you would get any advantage from that kind of thing. I will illustrate it by one case. In Lord Salisbury's time, when Secretary of State, he very much advocated our surveying for a railway the line of country between Rangoon and the borders of China. Whom was he instigated by? Why, by the merchants of Manchester; and I have no doubt that if I had been a merchant of Manchester I should very likely have gone in for the same policy; but as a Governor General of India, or as an official tolerably well acquainted with the circumstances, and wants of India, I thought it a most monstrous thing to do anything of the kind; first of all, because it would have cost an enormous sum to make a railway through that country; and, secondly, because when you made that railway, you would have had the greatest trouble to take care of it, and it would have ended in the air; you would have wanted an army to take care of it there, and to guard it all along. Those things do not often strike the merchant of Manchester, but they do strike the official who has been in India, and given his attention to its condition.

4587. The merchant of Manchester, if he had the official information that you have glanced at in the Council, would still be able to take the commercial view of the question, would he not?—I think he would; but he would, as a rule, take the purely mercantile view of it; and it is very difficult to get a man, especially of standing and position, to change his views; he naturally takes the views in which he has been trained; just as I would take the Indian view, so he would take, what I may call, the English view.

4588. Take another illustration; the commercial view of employing a person would be to pay him for his services, and when he ceased to render them, to cease to pay him, which is the principle upon which all people carry on business in this country; but the official view is never to pay a person fully for the services which he renders, but to construct some elaborate system of paying him, when he does not render any service for the rest of his life. Those are two antagonistic principles. Do you think that it would be desirable in the administration of Indian affairs, to have some individual in the Council to represent what may be called the commercial view of employing people, both as regards efficiency and as regards economy?—I personally do not object to a merchant in the Council, at the same time I do not think myself that he would turn out to be of that advantage which at first sight it might appear that he would be. In the first place, in the particular illustration that you have given, it seems to me that the one practice is very suited to private arrangements, and that the other practice in moderation, is suited to official arrangements.

4589. But to take a further illustration as a consequence of railway companies making railways in India being guided to some extent by what may be called the commercial view, have they not succeeded in carrying on their undertakings expending nearly one hundred millions of money upon that commercial principle of paying people for their services, and giving no pensions; whilst the Government of India, proceeding upon the official view, in order to carry on works involving only some tenth part of that expenditure, constructed an elaborate corps of engineers, with all the attributes of the Government service?—My answer to that would be twofold. In the first place I would remark, that I do not think that in point of fact the arrangements connected with these railways which have cost us one hundred millions, have been made in an economical way. On the contrary, I believe that they have been made in a more or less extravagant way; so that if the work had to be done over again, it would be done for two-thirds of the money. I think it is notorious in India among almost every class that ever heard talk on the subject, that the railways have been extravagantly made; that they have cost a great deal more than they are worth, and ought to have cost. I have heard natives of the highest rank and of the lowest rank say so, and I have heard Englishmen in the service, and out of the service, say so. Moreover, I have heard some of their own engineers say so. Then, as regards your employing men on a particular duty and paying them well, and then, when the work is over, getting rid of them, that seems to be an obvious course when you undertake a given work, and when that work being over, the necessity for having these men ceases; but in a Government, when one work is done, another work is commenced. The whole country of India, more especially, is of such a character, and has been from various causes so much denuded of works of all kinds that you want, that even if you go on for 100 years undertaking great works of various kinds and descriptions, more especially if you can construct them at such a moderate cost that they will be fairly, either directly or indirectly, productive, it will be our interest to do so, and for such purposes you have a large body of engineers, whom you do not pay by comparison as well as civil engineers of equal ability and experience in private life are paid, but you help out their comparatively limited emoluments by retaining them in your service, and in their old age pensioning them. It seems to me that, barring this one point, that every now and then you may get a man that you would rather not have (which in the nature of things you cannot help), the Government system really is more economical than the other one. But whether it is economical or not, I submit that you cannot get on in India without something of the kind. Here in England you have hundreds of engineers working independently for themselves, a number of them very eminent men, men of great ability and experience, and a company, or an individual of wealth can always lay their hands on any one of them whom they want; but you have not a body of men of the kind in India. Where are you to get such engineers as you may require them? You have a great difficulty in getting hold of them, and in some cases you fail altogether. But even under the system that the Government follow, they can, whenever they want, step out of their service, and obtain the services of an eminent man in England, and if he is willing, send him out to India; but I would submit that no

no man of very considerable mark in England would go out to India and work for the Government for a limited period, under a very much larger salary than an equally able man in their own service would expect.

4590. Do you not think that the illustration of the expenditure of the railways, is altogether an illustration of the want of benefit from having a more commercial element in the India Office, if it be correct that the main basis of the great expenditure of the India railways was the result of the action of the Government itself in prescribing in the first instance a very costly system of railways to be carried out by all the railway companies, without any discretion on their part in the shape of broad gauge lines and other appurtenances to the railway?—I think that the double system was a bad system; I think that in a double system the responsibility is not properly fixed, and defined, and that it is not conducive to economy. And then I think that when the engineers for the railways went out from England, many of them, perhaps it is true of all of them, were not acquainted with India and its circumstances, and therefore, though they were many of them very able and eminent men, still they did not quite appreciate the physical difficulties and circumstances of the country, as they would in countries, where they had been habitually employed.

4591. But the Government reserved to itself in its contracts with the companies, the absolute control over the whole expenditure, did they not?—Well, I believe they did; but it seems to me that there was no real control.

4592. Did they not appoint the engineer officers of the Government to superinted the works, and to sanction and approve all the works before they were executed?—They did; but I think that in the nature of things they could not control the expenditure; they could not control the engineers; I do not think that any man appointed by Government could properly control the engineers of the railway; but the best chance of controlling them would have been for Government to have selected men like the engineers attached to the railways, and got them out there to look after the work which was being done by the companies; I think the military engineers in the first instance, neither had the knowledge nor the experience to enable them to do it, and that if they had been ever so able, and had attempted to do it, there would have been an uproar at once created, and public opinion would have gone against the Government and the Government officials, and they would have found that it was a thankless business. That strikes me as being the state of things.

4593. Do you not think that if there had been men of business, if I may use the phrase, that is, men of the habits of private business, in the Council, some of these difficulties might have been foreseen and dealt with in a more business-like way than they appear to have been?—I hardly think so, really. I do not wish to be unjust in the slightest degree to any class, but I confess that for myself I think the merchants would have gone in for heavy expenditure, more or less, irrespective of financial considerations.

4594. We will pass now to the position of the Governor General himself in India and his relations to his own Council there; can you explain to the Committee in what manner when you were Governor General of India you exercised a control over the expenditure, and in what manner your Council assisted in exercising that control?—It seems to me that the Governor General in Council had a very effective control over the expenditure. What is called the Finance Minister, that is to say, the Member of Council who was specially charged with the financial concerns of the empire, worked his department, so far as details went, himself; but in every question when any expenditure was to be incurred, except it was of a very trifling nature, he, when he had got the papers complete, sent them to the Governor General; or if there was any particular member of the Council who was very *au fait* on the subject, or where the finance bore upon that department, then he would send it to the member of Council, especially in charge of that department previous to going to the Governor General. If those two agreed it was then laid before the Council if it was an ordinary matter; but if it was an important measure it was sent to the Governor General; or even if it was specially important, the Financial Member would come to the Governor General and talk it over, after the Governor General had read the papers. In that way the subject was fully sifted, and carefully considered. Then, again, it came before the whole Council when they met, and if any Councillor had any objection to raise, he asked for the matter to be delayed, and he read the papers over and they were brought before the next Council. If not, the expenditure was passed, that is to say, was passed as regards the Government in India; but had to go home, and then, of course, the Governor General and the Financial Member had to consider, not only what they thought was right and expedient, but what would be acceptable to the Secretary of State at home. So that in one way or the other, the matter was certain to have a full investigation; and I do not perceive how any expenditure, in any serious way, could have passed without such a challenge. If the Financial Member of Council did not bring it before the member of the department with which it was connected, or before the Governor General, or before both, he did not do his duty, and I should say as a rule, that he did do so.

4595. One would suppose that any increase of expenditure would not arise in the Department of Finance itself, but would arise in the Department of Administration connected with the subject. Take for example, an improved system of administering justice in the provinces, the leading idea would be an improved system of justice?—If that came from one of the local governments it would come to the Financial Department; but probably it would first be referred to the department to which it pertained.

4596. Would it go to the Judicial Department first?—In that particular case it would have gone in India to the Home Department, one of whose duties was to look after all questions connected with judicial matters. If it came to the member in charge of that department first, he would look at it in all its bearings, and he would very likely consult some other Councillor, but whether or not he did that, he would eventually, with his opinions, send it to the Financial Department, and the Financial Department would consider it themselves, and if it was a very difficult or important matter, perhaps they would ask the Councillor of the other department to discuss it with them, and after they had done this, they would then come to a conclusion, and bring it before the Governor General.

Lord *Lawrence.*
10 June 1873.

4597. Do you consider that before any action was taken, it was the bounden duty of what was called the Financial Member of Council, to examine every proposition connected with administration which might result in expenditure, or a possible increase of expenditure?—It was his duty to do that, and as a rule he did it.

4598. And supposing that the Member of Council connected with the Administration and the Financial Member concurred in the project, were they competent to give a practical sanction to it, or was the Governor General consulted in every case?—The Governor General would be consulted in every case, if it were of any serious importance. I have known instances where I was not consulted; but whenever I did know of it, I used to notice it, not only to the member, but to the secretary of the department, and I said, "This matter ought to have come before me, and it ought not to have passed without my knowledge; I should not first see it in Council; I should see it before it came to the Council;" and, in point of fact, they were very rare instances, and in comparatively unimportant cases, where it had slipped through.

4599. And do you consider that the Governor General accepted a real responsibility for considering all those cases in their financial results, or that he gave what may be called a mere sanction to the proceedings of the two members of Council?—I do not know what other Governor Generals have done; I can honestly say that I never passed anything of importance without not only looking into it myself, but almost always having considerable discussion on the subject. My bias was adverse to increasing the expenditure, and I did all that I could to keep it down; but there were a great many things to be done in India of various kinds, which it was absolutely necessary to do, and many, in which practically, though you could nominally object, you really were obliged to consent. For instance, if things connected with the English troops in India were allowed in England, or were recommended from England, you could not object, as a rule, to allow them in India; and so forth.

4600. Such, for example, as adding the 2*d.* a day?—Just so; or when they sent out to say that there was to be a separate arrangement for training men to rifle shooting, which must of course involve expense. Everything that followed in that way from a particular line of policy you were obliged to introduce, however much you might regret it; and every one of these things added, more or less, to the expenditure. Now, in India, of course you would exercise a much wider discretion than you would in matters that came from England; but, at the same time, when it came from a great authority, and it was notorious that improvements such as were suggested ought to be carried out, although you might grudge the money, you could not help doing it. Supposing that the High Court in Calcutta said that the native judges in India (as they did say long before my time) were exceedingly ill-paid, and that they could not expect that justice would be properly administered under such a system. When I knew this, I took it up, and had it gone into thoroughly and completely, and though it entailed a considerable increase of expenditure, I got the Council to agree; in fact the Council were quite willing to agree, because they saw it in the same way that I did. We sent the papers home, and the Secretary of State sanctioned it. That was a case in which I think every member of the Council, perhaps with the exception of the military member, and I do not know that he even had not looked at it; but certainly, with that exception, every one of them looked at it on all its sides, and considered whether all that was asked for was necessary, and finally we came to a decision. And in that way every important matter came before the Council.

4601. It is your view that the Governor General does not consider his responsibility in any way diminished by casting the questions of finance upon the Finance Minister?—No, I really do not think so; and I think moreover that the work is better done by in the first instance having it consigned to this particular councillor, who is charged with the finances; because the responsibility, as it were, in the first instance rests with him, and if it was not made over to his particular responsibility, the chances are that some waste might occur. If he is a good Financial Member, he is more or less enthusiastic about the subject, and takes a great deal of pains, and does his work well, and if he does not know all about any subject he refers to some of the Councillors, who can give him the necessary information.

4602. It has been suggested that the Finance Minister being only one of the members of the Council, and being quite on an equality with the others, is placed in a very invidious position in endeavouring to check the action of the other members of the Council on the ground of expense, and that morally he is not in a position, therefore, to perform the functions that he is expected to perform; do you concur in that view?—I dare say there have been cases in which a Councillor half in fun and half in earnest, has said to the Financial Member, "I do not see why you should be so hard upon my department." But that really would have no practical influence upon the matter; the very Councillor who said that, knew very well that the Financial Member's duty was to do this, and whatever may have been the view of the objecting councillor, the Financial Member would carry out his views, and bring them before the Governor General and before the Council. I think myself that if you had got a thoroughly good Financial Member of Council, he would have very great influence with the whole Council, and that they would not attempt to resist him unless they had very strong feeling that he was not acting reasonably in any particular case.

4603. Then it has been said that when the Governor General himself assumed the direct responsibility of doing that which the Councillor now does, he was enabled to perform the duty with so much superior weight of authority and position that that moral difficulty did not really arise, and that he at once overbore all other reasons if he took an economic view?—I think the Financial Member would look to the Governor General to support him, and he would either convince the Governor General, or the Governor General would convince him; but of course, if they both stood out, the Financial Member would have to subscribe to the Governor General's view; but at the same time, he could put on record his objections, which objections would go home to England, and attract the attention of the Secretary of State.

4604. Still, if on the other hand he did not like the extremely disagreeable position in which he might be placed in putting himself in antagonism to all the Council all round, on grounds of finance, is there not a danger of his not acting with that energy and decision that a Financial Governor

General

General would have practised who had to consider the probable effect of what was proposed, in increasing the taxation of the people, and upon the general character of the Government?—My view is this, that the Governor General has so much to do, that he could not properly look after all the other departments and work his own department, and in addition work the Financial Department, without having a Member of the Government especially in charge of it. With regard to the Governor General in my day, my especial work was the Foreign Department, in which embraces a great deal outside of India, and a great deal in India, that is all the Native States in India. If the military member wanted a second opinion, or was doubtful on any point, he came to me, or sent his work to me; then if the Financial Member and the Member of the Home Department did not agree upon details of expenditure, or the matter was of importance, the Financial Member would bring his work to me; so that while the Governor General was working his own department he had as it were, to give a second opinion, on many subjects in other departments. Now I think that if you attempted to make him work the Financial Department also, you would overload him, and the work would not be so well done as is desirable.

4605. But under the former system, had he not a great amount of administrative assistance in the shape of his official secretary as well as his private secretary?—He had, no doubt, but there is immense difference between the way we will say, in which a Governor General might work the business of the Government and the way in which he ought to work it. A man might work every department himself nominally, and really the work would all be done by the secretaries; but if he attempted really to grapple with all the cases in each department he would be overwhelmed. Lord Dalhousie nominally did work all the departments, and really did an immense deal in the way of working them; but he could not do all; he broke down under the attempt; and it was he that devised that system of departmental arrangement, which has hitherto existed.

4606. But did he not work with the secretary of the department, ?—Yes, but then he had to trust very much more to that secretary than he would have trusted if the work had been divided among the Councillors.

4607. On the other hand, was it not the result that whilst he got all of what may be called the work of investigation thoroughly done with a highly efficient secretary, he dealt with the question as regards the policy and the decision of the subject, with all the weight and authority at once of the Governor General in checking and repressing expenditure without being placed in the invidious position that a Finance Minister is, who is only on an equality with, and perhaps junior in point of rank to, the other members of the Council, being the youngest member?—Well, I have a very high opinion of Lord Dalhousie's capacity, and of his business habits, but I do not think that it would derogate from his merits if I said honestly that it was impossible that he could have worked the whole concern as he worked parts of it. And as regards this question of the Financial Member being junior or not, I think that has not the slightest influence in the Council; I think it will be the ablest man in the Council that will have the most influence, whether he is the senior, or the junior member.

4608. To make the subject quite clear, may I ask you, do you transact the business with the secretary of each department all round, or with the Councillor of each department?—In the first instance the papers were sent to you in a box by the secretary; his duty is to do that. The member puts on that, "Governor General," or "So-and-so," and it goes to them in the way that the Councillor of the department has noted. If it comes to the Governor General, it comes without the secretary at all. He reads the paper over, and if he arrives at the conclusion that the proposal is right, he puts a docket on it, "I agree in these views; Council." If he does not agree, he takes one of two courses; he either writes a memorandum to that effect, or writes a private note to the Councillor, telling him that he would like him to come and have a talk over the particular subject next morning, or as soon as possible; and he talks it all over, and comes to a conclusion; or he sends for the secretary. In another case, when the Governor General desires to see the secretary of a department, he writes on it "to Mr. Lushington," or "So-and-so," "Come to me to-morrow morning at such an hour;" and then he talks it over with him; and then, after hearing him, he sends for the Councillor, or he takes up the matter, and writes a memorandum, and sends it back to the Councillor, the pith of which is, "Reconsider the matter."

4609. Do I rightly understand you that in your time the system of what may be called dividing the business among the Councillors was completely carried out?—It was completely carried out. It was the system that Lord Dalhousie had initiated, and it was going on at my time, and I left it in the same way.

4610. To what extent then were the papers circulated to the whole Council?—They were only circulated to the Council when the member of the department or the Governor General desired it; but then the matter would come up before the Council. When the Council met, each secretary attended in order, and he took out paper after paper, collections after collections, and said, "Police for such a place;" "Foreign Department arrangements connected with such and such a part of the frontier," and gave a brief account of what was about to be done. Then if the Governor General or the Departmental Councillor had something to say on the subject, he said it; if not, the thing passed. If any of the Councillors said, "Well, that seems to me rather a delicate subject, I should like to see that;" if it was not a matter of emergency, the Governor General said, "Of course; put it aside." In that way the Council went through the whole of the work which was brought forward. If it were a matter of emergency, they went into it at once, they went through the whole of the papers, the secretary read them out, and they came to a conclusion. But otherwise it was put aside, and sometimes the Governor General said, "I wish the whole Council to see it."

Friday, 13*th June* 1873.

MEMBERS PRESENT:

Mr. Ayrton.	Mr. Grant Duff.
Sir George Balfour.	Mr. Eastwick.
Sir Thomas Bazley.	Sir James Elphinstone.
Mr. Beach.	Mr. Fawcett.
Mr. Birley.	Lord Edmond Fitzmaurice.
Mr. Bourke.	Mr. Robert Fowler.
Mr. Candlish.	Mr. Hermon.
Mr. Stephen Cave.	Mr. Lyttelton.
Mr. Baillie Cochrane.	Sir Stafford Northcote.
Mr. Cross.	Mr. John Benjamin Smith.
Mr. Charles Dalrymple.	Sir Charles Wingfield.

THE RIGHT HONOURABLE ACTON SMEE AYRTON, IN THE CHAIR.

The Right Honourable JOHN LAIRD MAIR, Lord LAWRENCE (attending by special permission of the House of Lords); further Examined.

Lord *Lawrence.*

13 June 1873.

4611. *Chairman.*] I WANT to take you back to a point that we omitted to consider connected with the Land Revenue, namely, the sale of land or the grants of land free from revenue; do you recollect that there were proposals made some time ago that the Government should largely sell uncultivated lands, and that it should take such a sum for them that they might be free in future of all claims?—Yes, I recollect it. In fact, that is the rule which now exists in all parts of India, except Madras, and there they fix a quit-rent, I think it is one rupee an acre, and put the land up to auction; but with that exception, in all the other parts of India it is as you have described.

4612. Do you consider that that is an expedient policy, having regard to the fact that the land revenue is the basis of Indian finance?—Well, taking it in the abstract, I should say it was not expedient; but, in point of fact, a great deal of good has arisen from allowing that as an exceptional arrangement. As a rule, none of the English capitalists will take land and spend a good deal of money on it, in making tea plantations and coffee plantations, and the like (what they call garden cultivation), unless with what they consider a fee simple; and that being the case, it has gradually grown up for many years, that the Government allowed them to buy the waste land.

4613. But does not that afterwards place them in the position of having cultivated land untaxed, by the side of the Native community who have to pay the regular tax to the Government for their land?—Well, there is no doubt that that is the case; but still to a very considerable extent the English capitalists go in for land in exceptional parts of the country. For instance, in Assam; for tea cultivation in the slopes of the high lands in Madras, where to a great extent there is not much cultivation by Natives.

4614. But what is the objection to this land, which is cultivated for these purposes, being placed on the same principles of assessment as the other land, namely, not with regard to the capital spent upon the special cultivation, but upon what is called the comparative intrinsic value of the land for ordinary cultivation?—Well, I think, if you made a permanent settlement of the land with them, that is to say, estimated in the first instance what was its intrinsic value, and put a revenue on it, and then gave them the land, or sold the land in that way, then I think you would meet the two points, namely of giving a fair stimulus to the cultivation which they undertake, and also caring for the public interests in the shape of the land revenue; and there would not be the objection (which is their main objection) of that continual inquisition into the state of things which there is when a settlement from time to time takes place.

4615. But supposing that they were guaranteed that any re-settlement after the 30 years should be upon the same principle for them as for the other inhabitants, namely, on the ordinary cultivation of the land, what objection would they have?—The only thing you can say is, that they would have an objection; and that was tried and urged on those interested in the matter, but there was a strong feeling in India and England too, among the English, that their wishes were only reasonable, and that they ought to have the land on their own conditions.

4616. But is not the result of this, that if the Government causes roads or railways to be made out of the general revenues of India, and of the taxation of the whole district, they will immediately receive all that improved value without being liable to be called upon to contribute to the general revenue by which these estates have been improved?—As regards district roads, when they had bought out the Government right, they would still be liable for cesses, road-cess, or education cess, or so forth, but not liable for any Imperial demand; of course on the same principle

that

that we say in any of the provinces that we ought not to make the people liable for a great road or a great railway, so the purchasers of land would not be liable to further demands except as above stated.

4617. But the rest of the community would be liable to contribute to it out of the land revenue, and these people would not?—In point of fact, in India, you do not settle the land revenue with reference to those considerations; as I said the other day, in making your re-assessments, you fix them really with reference to what you consider the condition of the country at that time.

4618. Do you think that this feeling would have the effect of impressing the Natives with a sense of injustice, that the English who came into the country as the race of the governing power are holding their lands free from revenue, whilst the Natives, who have lived in the country from all time, are called upon to pay a heavy land revenue?—I think they would feel that consideration; but in some degree, of late years, that objection has been remedied, by allowing natives under similar circumstances to buy also, free of revenue; nor did the instructions that went out in 1862 from Sir Charles Wood, limit the purchase of land rent free to Englishmen.

4619. Considering that all the Natives are in the habit of buying and selling land, and for a considerable number of years' purchase, subject to the ordinary revenue law, do you think that it was necessary to modify the law to meet the feelings of the Natives?—It was so far modified; the Government having resolved to maintain the system of allowing Englishmen to purchase up the Government rights, it followed, I think, as a matter of justice, that they should allow it to extend to the Natives.

4620. Has your attention been called to the very small sum that is paid for the purchase of these lands free from land revenue, as compared with what the land revenue would be at the ordinary rate, not making any special tax upon the peculiar cultivation?—I think that the price fixed on which land could be purchased was in many cases too small; if I recollect right, there were only two rates, one 2 rupees and 8 annas an acre, that is 5*s.*; and the other 5 rupees an acre, that is 10*s.* Now I think, myself, it would have been a far better principle to lay down in each province, and even in different parts of each province where necessary, a different rate, a rate which would fairly represent the value of the land; some land in India is not worth 4 annas an acre in rental, while other lands are worth treble and quadruple that sum.

4621. You probably know the principle of the commutation of land tax in England, that an amount of public debt is exchanged that would produce the amount of land revenue redeemed; do you think that it is a more equitable principle which might be applied with propriety to India, that, at least, such persons should pay an amount in the public debt of which the interest would at least equal the annual produce of the land revenue?—Where there was a land revenue, that principle would apply properly; but where there was no land revenue, but the land was waste, you must fix it on different principles.

4622. Has not all the experience of the permanent and 30 years' settlement shown that the land called waste and not cultivated has come in course of cultivation as the agricultural population has increased, and that it was merely a question of there being no cultivators at the moment?—To a great extent that is the case; but take Assam, for instance; a hundred years hence there would still be abundance of waste land there; and so in Central India. Of course, in the populous provinces, waste land would come comparatively rapidly under cultivation.

4623. Judging the past from the present, the same objection would probably have been made when all the waste lands of other parts of India were given for almost nothing, and which have now been taken up by the population?—Of course the lands will be taken up as population increases where they are worth cultivation.

4624. It is your view that there ought to be such a sale price as would have some relation to the permanent land revenue?—I think if you did not allow the sale of land, the change would be extremely unpopular, and be considered ungracious. I think you might so arrange with a moderate amount of care, that practically the State would lose nothing, or next to nothing.

4625. I will pass from that to the next point, to that at which we left off at the last meeting; can you explain to the Committee, if you please, what you consider the exact relations between the Governor General in Council and the Legislative Council as regards finance and expenditure?—Unless a law is brought into the Legislative Council, which is to influence finance in some way, that is to say, unless you wish to introduce a law whereby you were going to have a new source of taxation, the question would not come before a Legislative Council at all.

4626. But supposing that any proposition is made for levying a tax, what then do you consider are the functions of the Legislative Council in relation to the Executive?—The Governor General in Council would consider the thing at first in all its bearings, and very probably consult the Secretary of State at home, though he is not bound to do it; but should he and the Council determine that a tax was necessary and expedient, then a law would be draughted and brought into the Legislative Council, just as the Government here at home would decide the policy of having a tax or not, and then bring in a law; and then it would be debated, and discussed in the Legislative Council.

4627. The Parliament in this country also considers itself entitled to inquire whether it is necessary at all to levy the tax?—Of course, the authority of the Legislative Council is very much more limited than that of Parliament; but I meant that when it was decided that you should have a tax, it would be brought into the House of Commons, and there would be debated; and in the same way, it would come before the Legislative Council.

4628. But do you consider that the Legislative Council is bound to accept the statement of the representatives in the Legislative Council of the Governor General, that it is necessary to raise a certain sum of money by a tax, or a particular tax?—I do not think that the independent members of the Legislative Council are bound to accept anything; but of course, there is a disposition in a country like India, where so much depends upon the prestige and influence of the Government, and the position which they should occupy in the eyes of everybody, more especially their own countrymen, to consider favourably any proposition of the kind that the Government has brought forward.

Lord *Lawrence.*

13 June 1873.

4629. As a matter of experience, has it always been the practice of the Legislative Council to accept the statements of the Government of India, with respect to the income and expenditure, as positive facts upon which they are to act; or have they ever proposed to themselves to enter into any consideration of the income and expenditure, to see whether a tax is required for financial exigencies?—I think, to a limited extent, they would discuss whether really such a tax was necessary or not; they would accept the facts put before them by the Government, but nevertheless they might say, and would say very likely, especially if it were a tax that they were disinclined to accept, and if they doubted whether it was absolutely necessary to have this tax, that although there was a deficit, they might tide it over, and wait a year or two till things came round. They would not hesitate to go to a certain extent into the merits of the case; but they would not challenge the *data* put before them, and say that it was an untrue account, and that this, that, and the other ought to be taken into consideration. For instance, very often in my time, they complained lustily of the home expenditure, and so forth; and in that way they would exercise their judgment, and act very independently. And not only would that be the case with the non-official members, but the members who were not part of the Executive Government, would also act pretty much in the same way. I remember cases where the member from Madras, and from Bombay, disputed the policy and the necessity for taxation. I recollect, for instance, that the member from Bombay, on one occasion, was very adverse to the increase of the stamp duty in my time, and entered very fully into the details.

4630. But that is merely expressing an opinion upon the merits of a particular proposal which the Government of India has submitted?—Not only on that, but also on the general question whether it was politic to increase the taxation on stamps at all.

4631. To impose the tax at all?—Either to impose the tax, or in that particular case which I mentioned of the Stamp Tax it was to increase the tax; that the incidence should fall over more things than those upon which it had hitherto fallen, and also that in some cases the tax should be raised.

4632. Has the Legislative Council at any time assumed to itself an inquiry as to the expenditure, with the view of considering whether taxation is necessary, or have they taken the expenditure for granted always?—I think to a great extent they would take the expenditure for granted, but at the same time they would raise objections in a certain degree to expenditure. For instance, they would say, "Why cannot you reduce the military expenditure; why cannot you reduce the cost of the police; why do you spend so much money on stores, and so forth?" In that way they criticise the expenditure.

4633. Has the criticism ever gone the length of any substantive proposition being made by a member of the Legislative Council to your knowledge?—I think in some cases (I am not at this moment prepared to give the precise instances) they have proposed a formal motion that a Government proposal should not be agreed to; in fact, I think I recollect one case in Calcutta in my time, in which they brought forward such a proposition; but subsequently, at the end of the discussion, they did not put it to the vote, because they saw that the feeling was against them, and they gave in.

4634. But, to put the point further, is any information laid before the Legislative Council on which they could act in the nature of statements of the proposed expenditure for the year in detail, or anything more than the verbal representation of the financial member to them in his budget speech, as it is called?—I do not think that there was any detailed statement put before them in former years; but of late years, since Lord Mayo went out (I think it was just after my time), he published quarterly an account of the receipts and expenditure.

4635. I mean a statement of the expenditure, such as our estimates, on which they could form an opinion of the propriety of the expenditure?—Not in detail. The difficulty would be that the government would not have those estimates in time to put them before the Legislative Council, but I think that arrangements might be made by which, to a certain extent, they might be put before them.

4636. Do you think it is desirable that they should have any power of entering into these questions in face of the Executive Government in India?—I think it would be satisfactory to the country; it would do no harm if an abstract statement were furnished to them; I do not think that it would be of any use to put a minute detailed account before the Legislative Council; I do not think if you did, that they would look at it; not one man in 100 would look at it, or if he did, would be much the wiser afterwards; and it would cause an immense amount of trouble.

4637. Have you considered whether it would be expedient to add to or diminish the Executive Council of the Governor-General?—I should say not. I think in a country like India, the influence of the Executive Government ought to predominate.

4638. You think they are a sufficient element to investigate all the detail of finance, the income and expenditure?—I think so. I think if you increased the outside element you would find that very great complications and difficulties would arise.

4639. Is the Executive Council of the Governor-General to be regarded in any light as a representative Council, or merely as a collection of gentlemen possessed of information from different parts of the country?—The Executive Council in no wise is a Representative Council. In selecting men for the Council, the Governor-General, where he made propositions to the Secretary of State, or the Secretary of State himself, in making selections, would bear in mind who were in the Executive Council, and what kind of knowledge or ability was especially desirable in making up the vacancies, and that would always be borne in mind; but after all, the great point would be to select those who were considered the ablest men of the day.

4640. The principle is the knowledge and ability of the men to assist the Governor-General, and not any representative character in reference to any particular part of India?—I think so.

4641. With regard to the Legislative Council, do you think that it would be desirable to increase its numbers with regard to a more efficient supervision over the finances of the country?—I do not think so myself.

4642. Do you think that any benefit would result from introducing more representative members of a different character?—It is a benefit in itself, but you must consider whether the benefit is so great that it is not counterbalanced by disadvantages more serious. It would be popular, of course, but I do not think that it would work well.

4643. But when you say "popular," do you mean that it would contribute to good government in the opinion of the Natives in the interior?—I do not think that it would influence the people generally at all. I think that the mass of the people dislike taxation of any kind or description, and anything which added to it they would not like; but beyond that, I do not think they would have any feeling; but of course with regard to highly educated Natives, especially Natives educated in our schools and colleges, who have western ideas, it would be very popular with them.

4644. Do you think that the persons who are representative, by what is called selection, proceed with any serious sense that they have a representative duty to perform as if they were elected?—I think that they have a very great sense of duty indeed; I think their feeling is so strong in that way, that nothing would induce them to consent to anything which they did not think absolutely necessary under the circumstances.

4645. If that be so, would it be desirable that there should be a larger area of representation, that is, members representing each sub-government?—I think if you collected a large body of gentlemen together, you would have a great deal of trouble, and the work would not go on with the same expedition that it is necessary it should do. There is an enormous amount of work to be done in India; the executive work is immense; and if the legislative duties from any circumstances become heavy, it would take so much time from what is now devoted to the executive.

4646. Have the representatives who come from different parts of India anything to do but to look after the legislation whilst they are at the place of the meetings of the council?—The members that represent the different parts of India, are men who have all got heavy duties of their own, and although, when they come to Calcutta, their executive duty is suspended, nevertheless it would be very inconvenient to the different governments if a number of their best officers were deputed on legislative duties; it would cause a deterioration in the administration, and I do not think it would have any adequate compensation; as regards legislative councillors, though they are not actually representatives of portions of the country, yet in making the selection you do consider whether this large province or that large province is represented, or otherwise, in the Executive Council; for instance, if there is a member in the Executive Council, who has great knowledge of the North Western Provinces or the Punjaub, you would take care that when you made a selection for the Legislative Council, it would not be from one of those provinces; being in the Executive Council, he would also be *ex officio* a member of the Legislative Council; the object would be to get as large an amount of information collected in the Executive and the Legislative councils as possible.

4647. When you were Governor General what was the extent of your authority, and the relations which existed between the Governor General in Council and the local governments; that is to say, the Madras and Bombay Governments, as distinguished from the sub-governments?—Theoretically the Governor General could interfere in the government of Madras and Bombay as much as he could in the Lieutenant Governorships or the Chief Commissionerships, but he never did do so, and it would have been very unreasonable if he had done so. In all questions of general administration, the Governments of Madras and Bombay carried on the administration exactly as they thought proper; but whenever there was any point of great difficulty, or which involved questions which applied equally to other provinces, or to adjacent provinces more particularly, or where it was a matter which, in the nature of things, would have to come under the notice of the Supreme Government, say financially or politically, in that case this Government would make reference to the Government of India, and the correspondence would go eventually to the Secretary of State through the Governor General. On the other hand, if those Governments had not made this reference to the Government of India, where the Government saw from the précis of work which came up to them monthly, that a question of great importance was under consideration, or had been disposed of, the Government would send for a copy of the papers, and if they thought it was all right they would say nothing; and if they thought it was a matter which required explanation or modification, they would consider it in the Council, and if necessary, then write and express an opinion.

4648. But, with regard to expenditure, were there any formal rules in force, which compelled the subordinate Government, before it committed itself in any way to expenditure, to submit its proposals to the Government of India?—Yes, there was a formal rule, that every question which involved new permanent expenditure must come to the Government of India.

4649. Do you mean by "permanent," continuous?—Yes; for instance, a new establishment; if they wanted to subsidize any chief; if they wished to increase their fiscal establishments; all these things must come to the Government of India.

4650. Or if they increased the standard of salary for any appointments?—Absolutely so. But anything which was temporarily required for four, five, or six months, they would sanction themselves; but it would be distinctly necessary, if it was a permanent charge, or even likely to become a permanent charge, that they should make a reference about it.

4651. And was the proposal accompanied with the papers necessary for the Governor General to form an opinion on the subject?—As a rule it would be. Sometimes all the papers were not sent, and then you would have to write, and require further papers or explanations.

4652. In giving a decision on these proposals, did you consider that the Governor General and his Council accepted the whole responsibility of the increased expenditure?—The Governor General and his Council would accept it if they thought it was right; they might say, "We agree in your views, and will support your proposals, but there is some doubt as to the view

Lord *Lawrence*.

13 June 1873.

which the Secretary of State may take." In other cases, we might express a doubt as to the expediency of a recommendation, and call for further information. Where we agreed with the local government on the whole, though there might be doubts on the subject, we would support by our influence and argument, what the local government had asked.

4653. As a rule, were all the proposals submitted with a decided expression of the opinion on the part of the local governments?—Almost invariably with a very distinct opinion, and there was usually very strong pressure put upon us to agree to what they asked for; and where we did not agree the local government would often come up again, and sometimes three, four, and five times they would reiterate their recommendations.

4654. Did you consider that the local government had a right to refer a matter to the Secretary of State direct?—I think they had not a right to do that, and ought not to do it. Now and then Governments did it, but not very often.

4655. But in any of these cases did the Secretary of State express an opinion, or did he again refer it to the Governor General?—As a rule, he referred it to the Governor General, but sometimes he would refer it in a kind of way which would lead you to see that he wished it to be done; but I think that was exceptional.

4656. Did you consider that amongst these three powers that might be acting for the purpose of expenditure, there was any definite responsibility upon anybody?—I think that there is all the responsibility which in the nature of things there could be. The only point is, that when things go wrong, where a governor, or a lieutenant governor, does a thing which he ought certainly not to do, then the Government of India can only say to the party whom they consider to blame, "You have done quite wrong; you ought not to have done this," and say the same to the Secretary of State. Of course, as a general rule, the Secretary of State is disposed to support the Government of India, but in some cases he would take a different view, and would either let down the party who was considered to be blameable very easily, or else, in some cases, he would support the Governor.

4657. In cases of public emergency, has the rule been relaxed and the discretion left entirely in the hands of the local governors?—I think always so, I should say; and there would be a very liberal consideration in that case.

4658. Take the case of the preparations for the Abyssinian Expedition; would the discretion be largely left in the hands of the local governor?—In that particular case, the Secretary of State had ordered that, virtually, everything should be left to the Bombay Government, and therefore there was no option in the matter; but even if that had not been the case, we would have allowed a large discretion to the Bombay Government.

4659. All you, as the Government of India, had to do, was to provide the funds?—Yes; we did not consider anything but that the expedition should be fitted out in the very best way possible, and all the funds that were necessary were immediately put at the disposal of the Bombay Government.

4660. Your evidence on this point has been hitherto rather confined to the question of what is called establishments; but now, with regard to other expenditure, such as works or particular transactions, not being temporary increases of salaries, and so forth, what was the discretion of the local governments as compared with that of the Governor General?—The Governments of Madras and Bombay were allowed to undertake any works within the limits of the money that had been put at their disposal without formal and separate reference to the Government of India up to one lac, or 10,000 *l.*; but subsequently in my time, that was increased at the suggestion of the Government of India, and with the approval of the Secretary of State, to two lacs, or 20,000 *l.*

4661. Do you mean two lacs in each work, or in each year?—Two lacs for every separate work; but then, of course, it was intended, or understood, that whatever sum had been put at the disposal of the Governor for that year, he did not exceed that. We will say, that the Bombay Government had a credit for 50 lacs of rupees in the year; any works within the limit of 20,000 *l.* he could undertake, provided he arranged for its being paid out of that 50 lacs.

4662. If the work was not completed within the year, what then?—If it was not completed, it was his duty to show in the next year's accounts, that he had got the balance of the money in hand.

4663. Did you find, in practice, that governments did not commit themselves or the Government of India to undertakings of greater value than 20,000 *l.*?—I think that the body of Governors and Lieutenant Governors did not; but now and then a Governor did. If I might be allowed to say it, the great error which was committed, the most constant error which was committed, was this: a Governor, or Lieutenant Governor, or a Chief Commissioner, sent up an estimate for a large work, supposing it to be one of that kind of works for which he was bound to send up an estimate in detail, say for a work which was to cost 50,000 *l.* But the estimate was so badly constructed, or circumstances arose which were unforeseen at the time, so that it become apparent that the estimate would be largely exceeded; in that case, it was his clear duty, the moment that he saw that the estimate would certainly be exceeded by a considerable sum, immediately to have a revised estimate made and sent up. But instead of doing that, every now and then you found a governor or lieutenant governor neglecting this; nothing was said; the money was spent, and when it came up for the formal sanction of the Government, it turned out that the cost had been double or treble the estimate, and sometimes more; and cases of this kind were a source of trouble and vexation between the Government of India and the Local Government.

4664. To what do you attribute this imperfectness in the first estimate?—I think in many cases they were not properly prepared.

4665. You mean the project not thoroughly examined?—Not thoroughly sifted in all its bearings; then, in some instances, the prices had risen in the interim; the work had been delayed; four, five, or six years had perhaps elapsed between the time the work had been commenced and the time when the great part of it was executed, and of course, in those cases, where the prices had risen very much, it made a great difference; but in all such cases the local government ought to have sent up a revised estimate. In this way

continued

continued friction and collision used to arise between the Government of India and the local governments.

4666. Did you find, in dealing with these questions of finance, that the local governments, as compared with the Supreme Government, took more power into their hands than they ought to have done?—I think one did, not the other.

4667. Which was the one?—I think the Bombay Government did, but not the Madras Government; the Madras Government used to be very careful; we very seldom had any collision with them.

4668. Then is it your opinion that if the rules prescribed for the local governments were adequately carried out, there is an efficient check upon their expenditure by the Supreme Government?—I think as good a check as there need be, or ought to be.

4669. In the cases that have occurred, where the check has proved insufficient, were any serious steps taken to resent the errors or neglects that had been committed?—Well, the Government of India would animadvert very strongly on the subject, and would, on sending home the Papers, call the attention of the Secretary of State to the matter; and the Secretary of State, on his part, would almost always, as a rule, respond in a similar way.

4670. Do you think that their councils in the local governments, their small councils, tend to check the expenditure on their part, or to sustain it?—It would be difficult for me to say what was really their precise influence; but I should gather in a general way that they would try to influence a governor in a proper way; but if it came to a collision between the local governor and the Governor General in Council, I think then the bias of the local council would be rather to support their own governor.

4671. Do you think that any advantage would result from enlarging these councils?—No, I do not; I think, myself, that the smaller they are, consistently with having sufficient knowledge and ability in the council, the better it is for the administration.

4672. To pass to a comparison between the local governments and the sub-governments, do you consider that the system of the local governments is better for the administration of the province than the other system of the sub-governments?—The lieutenant governors have no councils, and the governorships have councils. The difference really is this, in my mind: the governors are nearly always, or very often, men of, however considerable their ability, not much knowledge of India, and many of them of no such knowledge. I think it would be impossible, however great their ability was, and however great their application, that such men could properly conduct the administration of the governorships without the help of councils. But, on the other hand, in all the lieutenant governorships, it is invariably a man selected from the services, whose life has been spent in the country, and therefore, in the ordinary state of things, he does not want a council; if he wants such aid, he is not fit to be a lieutenant governor; but when exceptional cases occur, then, as a matter of course, he refers to men in high position about him who are willing to give him advice, and help him; and in that way he has the advantages of a council without the troubles connected with one.

4673. Do you think that the introduction of governors such as you have described, tends to what may be called a new consideration of the finance of the government which is advantageous to the administration, or that the system of having a lieutenant governor is a better system?—I would never make the lieutenant governors into governors; but I would not, on the other hand, reduce the governors to lieutenant governors. I think that the fact of Madras and Bombay having been so long separate presidencies, and so long governed under the present system, would be a great argument against a change. I am myself always against changes, unless I see palpable advantages in them.

4674. You think that the political considerations affecting the establishments of those two governments in different parts of India outweigh the expense, such as it is, incurred for maintaining them?—I think, on the whole, it is so; but then I say that, with this condition, that as you have a Governor General in Council, those governors ought to be really and truly subordinate to him, and ought to obey him. If they think they are ill-treated, and have not had fair play in any particular case, then the decision of the Government of India might be suspended for a time, and the question might be referred at once to the Secretary of State; that might be quite right and proper, but with that limitation I think that the system should be such that the local governments should obey the Governor General in Council.

4675. Do you think that the system of having lieutenant governors without any council tends to any more free dealings with the finances and expenditure?—No, I do not; on the contrary, I almost think that the lieutenant governors are more careful, feeling that they have not so much backing, that their sole voice has to sustain their action, and I think that, excepting in great emergencies, they would be particular, and are particular; in fact, I almost think that at times they would be over careful.

4676. In their desire to conform to the wishes of the Governor General to maintain economy, you think that they might be too economical?—In an emergency I think they might.

4677. Have you considered whether it would be expedient to give any particular military character to the frontier governments?—There is only one real frontier government, which is the Punjaub Government, and I would not give it any military character more than it has now. It is essentially in every respect now a civil government; but while it is a civil government, it has a frontier force under its orders and control, and that system I would maintain, but with that exception I would make no difference whatever. I think it would be an immense evil to convert a civil government, say that of the Punjaub, into a military government; I think that the people as one man would be against it.

4678. You think, on the whole, that it is a very desirable thing to maintain a clear distinction between a civil government and a military power?—Of immense importance, I think.

4679. Now we will pass, if you please, to the question of the Army; have you ever formed any opinion as to whether any principle can be laid down to define what ought to be the strength of the armies in India, European and Native, or their relations to each other in point of strength?—I do not think that you can lay down

Lord *Lawrence.*

13 June 1873.

an absolute cut-and-dried line; you cannot say that 50,000 men are sufficient, and that 48,000 would not do, or that it is a vital question to have 52,000; but in a general way you can form a very good estimate. Of course different men, and different able experienced men, will differ; it would be difficult exactly to define why it is; but men of great ability and great knowledge, and I may say of great public spirit, do differ very much as to the amount of troops, English or Native, which you should have in India.

4680. Do you recollect what was the force, after the new system was determined upon, of Europeans that was thought to be necessary?—At that time it was supposed that 75,000 would be absolutely necessary. The whole of Upper India was turned, if I may say so, topsy-turvey; it was a perfect *bouleversement;* every predatory race, every race that had been kept down for 50 years, were plundering and laying waste the country, and every kind of disorganisation had been created. Owing to that, and owing to the general feeling that a Native army, however essential for the administration of the country, could not be thoroughly trusted; that, in fact, you must always have a large counterbalancing element of our own countrymen, in the shape of an English force, the general feeling was that 75,000 was almost a minimum.

4681. Is it your impression that that feeling was an Indian opinion created in India, and not an English opinion forced upon India?—No, I should say that it was an Indian opinion; I do not think that people considered the opinion at home, but that which prevailed in India.

4682. Was that the general view from which the Indian forces were increased?—They were increased to a great extent to beat down opposition, and to recover the country. At one time there were more than 90,000 English soldiers in the country, but such was the pressure on the finances in consequence, that every one felt that it was desirable to reduce the English forces as far as it was safe to do so, and every one concurred in their being reduced down to about 70,000 or 75,000 men.

4683. Is it your view that the arrangements then made for the supposed permanent strength of the British Army were to give effect to that opinion?—Yes, I think so, decidedly.

4684. And you recollect that after that, the view was somewhat modified?—Yes, a great deal.

4685. What was the next view?—With a general concurrence of opinion, they came down rapidly to something like 65,000, 66,000, or 67,000. When I went out I think there were about 67,000 men.

4686. What do you consider now to be the necessary European strength?—I should think, in general terms, that 60,000 would be about the mark; I do not think it would be safe to bring down the European army below 60,000 men.

4687. And in view of that European force, what has been considered to be the strength of the Native army that ought to be maintained?—You know that, in estimating what was the proper force of English troops, you would make your estimate in one way, and as regards the Native troops you would make it in another way. In respect to the Native troops, all the rough work of the country is done by them. The English Troops in India, I would say, were like the Guards to the English army; the English troops are the reserve, and for various reasons you would never employ them where you could do the work with the Native troops. It is cheaper; it saves life, and there are many advantages in that policy. That being the case, you must have a considerable Native army. If you do not have a considerable Native army, you overwork the army that you have, you render it discontented, and it deteriorates. Therefore, you ought to have a sufficient Native army; but you ought not to have more than a sufficient Native army. I would say, with regard to the Native army, from looking at the subject before I came here, and seeiug the Returns, that you have now got something like 130,000 Native troops for all India.

4688. That would be regular troops, I suppose?—Regular and irregular; they are all under one footing now, both as regards their name and as regards really their organisation. I am not of course taking into consideration any troops belonging to Native chiefs or soverigns.

4689. Or the subsidiary forces?—I take the Contingent; the Hyderhabad contingent is included by me, and everything which is to be paid out of our Treasury. That is the way I take it, and I find that there are 130,000 men in round numbers. I say you might reduce them 10,000 men if it is absolutely necessary; but I believe myself, that in what we call Bengal (not Lower Bengal, but the Bengal Presidency, which embraces the Punjaub, Oude, the North West Provinces, the Central Provinces, and so forth), you cannot spare a man. When we were sending the troops to Abyssinia and had to furnish some brigades of Native troops, we were so hard pressed that we were obliged for the nonce to raise some men; they were not many, still we had to reinforce our frontier Native regiments, the work was so severe. I do not know the Bombay Presidency, of course, as I do my own; but still I should say that the Bombay Presidency had not anything of importance that they could spare. I should say that the Native troops there were hardly worked, but I think that the Madras Presidency could spare a very considerable part of the Native army. I consider that the Native army there, for various reasons, has become much too large for the work that they have to do, and that if you want to reduce, you might reduce that. But there is this to be said for the Madras army: in my time I had, with the consent of the Secretary of State, made considerable reductions in the Madras army; I did not go on with those reductions, though they were pressed by some parties, because the Madras army afforded the only reserve that we had in India of Native troops; and although they were not troops that I would myself have preferentially employed in any foreign expedition, still it was the same thing, because if you sent troops from Bombay or Bengal, you would then push up the Madras troops to occupy their place; at that time it was in contemplation to reduce perhaps five or six thousand men, and it struck me that if we could manage to pay our way without making further reduction it was better to do it; that the troops might be wanted, and that further reductions would create a good deal of discontent in the Madras Army, in the officers and men, particularly in the officers. The Madras army had been greatly reduced since the time of the mutiny.

4690. Do you think that it is expedient to keep

keep any separate force, like the frontier force, or that the whole of the Native forces of each Presidency should be welded into one general force?—No, I would keep them quite separate as they are now. I look upon it that there would be no real advantage in amalgamating them, and that there are very considerable disadvantages. In the first place, I would only point to the Mutiny. I say that if then they had been all one force, very likely they would have all gone the same way.

4691. Now you are extending your observation to the three Presidencies?—Yes.

4692. But I speak of a frontier force?—I am generally in favour of the present system. That force has stood the test of 20 years, and of a trial which hardly any other force has had; certainly no force in India has ever had a greater trial. It has not only borne the burden and heat of the day on that frontier; it has always been, as it were, in front of the enemy, constantly in camp, and notwithstanding all that work (I should say that the men of that force, without any exaggeration, had double the work to do during that time that the regular troops had), their organisation, their discipline, their tone, their spirit, were pre-eminently excellent; and when the Mutiny broke out, we took nearly half that ferce from the frontier, substituting in their place a few levies to help the remainder of the brigade, and sent them down to help to reconquer India.

4693. Is the maintenance of that force accompanied with any special increased expenditure?—No, not a rupee more; and, by comparison with the old system, it does not cost anything like what a force of equal numbers under that system used to entail.

4694. Will you explain your opinion on the suggestion made, of amalgamating the several armies into one; would there be any benefit in that, in your view?—Not the slightest. The only argument in favour of it is a financial one, and my opinion is that every sixpence that you can save by amalgamating them, you can save without amalgamating them. Whenever your staff is too large, reduce it; whenever the pay of the commanders is two large for the work that they have to do, reduce the pay prospectively; but I do not see how one rupee is to be saved by amalgamation.

4695. You think the political considerations are very great in favour of retaining them as they are?—They are very considerable; I think that it was a good thing for us that there was not one army when the Mutiny broke out. Secondly, I think that if you amalgamated all the Native troops, you would have to bring them under one military chief with the Central Government. This would unduly weaken those civil governments, and I think it would unduly increase the power of the central military authority. The Governors of Madras and Bombay would be greatly weakened in emergencies and difficulties, if there were no commanders who had the power under their control of acting; and I think the Government of India and the Governor General would be quite overshadowed by the military chief, who directed all the military power, and wielded so much patronage as he would do.

4696. There would be the embarrassment of a civil governor with a military authority deriving power from some one superior to the civil governor?—Yes; supposing the Governor of Bombay or Madras, in any emergency, wanted his Lieutenant General commanding the *corps d'armée* to do something that he did not particularly like; after discussing the matter, the Lieutenant General might say, "I must refer this to my chief; this is very serious, and this is my idea," and he would be disposed to shelter himself under his chief's authority, and neglect the wishes of the Governor.

4697. At present the Civil Governor has the power of removing a divisional general, has he not?—Practically, he has not the power, and would not do it, and would not be supported if he did it, unless the man had done something monstrous, which of course he would not do. But it is well known that at present the military chief is subordinate to the civil authority, and therefore, after remonstrance, he would attend to what the governor said.

4698. Have you considered whether any advantage could result from pursuing a policy of trying to localise European troops, or Europeans in the hills, to serve as a basis of the English Power?—No; I think it is a perfect delusion. If you were to take your English troops as they were pensioned off and discharged, when they leave their regiments they could not support themselves; unless you gave them such means of living as would enable them to maintain themselves, otherwise they would starve and die in the hills.

4699. You are not in favour of endeavouring to force an English race in the hills in that way?—First of all, I think it would be a very poor race, compared with the English race. That, moreover, is not my great objection; my broad reason is this: that I do not think they could sustain themselves without having practically, nearly as much as they get as soldiers from the Government; and then, I am afraid that they would get into collision with the Natives in the hills. You could not put them in distant places on waste lands, and with no means and appliances of living beyond their own industry; and to put them among the Natives would lead to great oppression; I do not think there would be anything that the Natives would be more distressed and vexed at, than plantations of those discharged soldiers in the hills, in juxta position with Native villages.

4700. Have you directed your attention to the changes that have taken place in the organisation of the local army since the disturbances in India, in officering and organising the local army?—Yes; I may say that I had some voice in the change.

4701. Will you explain to the Committee what you think of that proceeding, and the mode in which it has been carried out?—I presume you allude to the mode of officering the regiments from the staff corps.

4702. Yes, and officering them simply by the introduction of officers from the European regiments as a special service?—Well, taking it as a whole, I am entirely in favour of the present system. I think it is a far better system than the old one.

4703. Do you think it is also better, as a question of finance, supposing it were economically carried out?—I think, in a financial point of view, it is superior. You know that the apparent effect of the establishment of these staff corps has been a very large increased expenditure; but a great deal of that has nothing whatever to do with the present system; you had, if I may say so, to get

Lord *Lawrence.*

13 June 1873.

rid of, or at least to do something or other with, a great number of officers, who, from various circumstances, were thrown on your hands; you could not force these officers out of the service; you could not discharge them; you had to do something or other with them, and you had to arrange to mitigate the discontent and dissatisfaction which followed the different changes after the Mutiny, such as the abolition of the local European army, and so forth; you had to do a great deal for the officers. When the matter was debated in Parliament, there was a clause, well known as the Henley clause, introduced into the Act, by which the rights of the officers were to be respected; well, that has been construed by the officers and by the public very favourably to the officers, and the consequence is, that going from one step to the other, you have done various things which have enormously added to your expenditure; and until these officers die out, or leave the service, your expenditure goes on increasing as those officers are promoted; but when you come to the turn where the number of officers of high rank begin to fall off, you will find that on the whole, the financial effect will be an advantageous effect, but in the interim it is very disadvantageous; but all that is no essential part of the system, namely, the erection of staff corps, or the taking young officers from the royal regiments for the staff corps.

4704. Do you think that the system and the practice of making them a local corps, under the name of the Staff Corps, is one in itself both efficient and economical?—I think that, irrespective of these circumstances which surround the system now, it would be economical, and I think it is efficient.

4705. Are you aware whether before the Act to which you have referred, the old Court, or the extinct Court of Directors, claimed for themselves absolute control to alter the arrangements of the Army as they thought necessary for the public interest?—I should think, if it was put before them as an abstract question, they would have claimed that, and in times of very special circumstances they did make changes; but as a rule almost all the changes which were made from time to time in those days, were really to the advantage of the officers; the number of officers was always increasing. I do not consider myself, as a good system in itself, the old system of officering the Native army; I am presumptuous enough to say, that I think it was a bad system.

4706. Mr. *Bourke.*] The system that you say is economical and efficient was the old regular system, and not the old irregular system, I presume?—I mean the old irregular system, which is now the regular system.

4707. Sir *Stafford Northcote.*] Your commendations are applied to the present system of the staff corps?—The present system, which is based on the old irregular system.

4708. *Chairman.*] That being the selection of a few officers considered fully qualified, who were to be always present with their regiments?—Yes, that was the only difference; their training, arming, organisation, and discipline were identical in both systems, but in the one system you had many English officers, and in the other few; and I say that the one with the few was the right one.

4709. And the few were officers of selection, were they not?—They were nominally of selection, and no doubt many were selected, but I should say that many also were not selected, that is to say, that they had gained their appointments by patronage, and not by selection, in the true sense of the term; but the beauty of that system, if I may use that phrase was, that if there was anything in a man to make him a good officer, it did make him one; it drew out all his good qualities, his zeal and energy, and spirit, whereas the regular system did not do that; and when an officer in the regular system was a good officer, and there were many of that class, it was in spite of that system that he was so.

4710. And further, in the old irregular system, the officers were fully attached to their regiment, and looked to that, whereas in the other system they were looking out for some other appointments?—Yes, and in the regular system they had little to do, whereas in the irregular system they had a great deal to do.

4711. There were no more officers than were necessary, you mean, in the irregular system?—Yes.

4712. Have you considered the effect that the scale of promotion in the Staff Corps will have upon the expenditure in India?—Yes, I have, in a general way.

4713. Do you think that that scale and principle is one that might be in any way retrenched in future, having regard of course to present vested interests?—I think it ought to be, and I understand that the Secretary of State has initiated a change; that he has laid down that the rules which are now so advantageous as regards the officers shall only apply to the officers of the old army, and that all the officers who have come in within a certain time shall come under a different category. For instance, formerly there was one colonel to 25 officers; subsequently they were allowed an unlimited number of colonels provided that they had served so many years; that has been modified, I understand, and it will make a prodigious change in the course of time; but in the interim the cost is very great.

4714. Were there not also the same number of majors and captains relatively to one another in the old system?—I do not think that this is unreasonable; for instance, there was only one colonel, one major, and so many captains, and so many lieutenants.

4715. Then the three other grades at present are unlimited, are they not, provided only that they have served in each of those ranks a certain number of years?—Yes; it is in that that the waste of expenditure consists.

4716. Do we rightly understand that that was an arrangement that arose rather out of a feeling of concession to the existing officers than with a view to the creation of a corps?—I think, myself, that it entirely arose from that.

4717. Will the new arrangements to which you refer apply to the three ranks, or only to one rank, do you know?—The great expenditure applies to the one rank, namely, full colonel.

4718. That is to say, not entitling them to the equivalent of the off-reckonings?—Yes. There is also a great deal of expense in consequence of the enlarged character of the system of pensions generally. For instance, officers could only retire in former days on pensions of 400 *l.* a year, unless they remained long enough to get the equivalent of the off-reckonings. Now there are intermediate stages, where they may get increased pensions, and that of course has added very largely to the expenses of the Army. But I would

would not lead you to suppose that I think we ought to do away with those intermediate grades, because, on the whole, I consider that the pension system was not a sufficiently liberal one in former days, and a great deal is to be said in favour of its modification; but I think all that would be met by keeping down the number of officers; when once you had got rid of the old officers, not allowing the number of officers, in staff corps, to get beyond what you absolutely require.

4719. You would have the appointments and duties regulate the number of officers, and not the number of officers regulated by any mere general rule?—Yes, you can only be very liberal without any waste, if you keep down your numbers; but if you let them increase unduly, even if you are comparatively economical otherwise, or desire to be economical, the cost becomes very large.

4720. Do you think that these questions would be better dealt with if the staff corps were in no way a matter of patronage in India, but were based upon some selection by merit?—Well, the Staff Corps will practically be filled by a system of selection. For instance, when you want a young officer you go to the colonel of a regiment; you ask him for a young officer of such and such a description, and you require him pretty strictly to give you an opinion of his merits, and qualifications, and character; and then you take him on probation only for a year, and, if he does not suit you, without in any way degrading him, or disgracing him, you say, "You will not suit," and send him back to his regiment.

4721. But apart from the administration of any particular Governor General or Governor, is not the selection for the Staff Corps entirely, as far as any binding rule is concerned, a selection of patronage?—Of course I could not deny that it is to a certain extent; but in getting the young officer first, I should say that, as a rule, it was not abused.

4722. Do you think that to any great extent officers have been selected by patronage, of course with the understanding that they must qualify themselves by any special acquirements after they have been nominated, as compared with officers who had qualified themselves, and might have been nominated if they had been selected by merit?—You see that there is a great difficulty on that subject, which is this: it is an advantage to an officer himself, and it is a point which is very much pressed by the authorities in England, that he should be passed through an English regiment; the impression is that that gives him tone, and discipline, and that it is valuable that he should possess the elementary knowledge of his profession; in order to get that stamp, so to say, upon the metal which military authorities require, you must put all candidates for Staff Corps through an English regiment in the first instance.

4723. But I speak of taking him out of his regiment; have not cases occurred which have caused great question and animadversion in which officers have been taken out of regiments and appointed to staff corps appointments, leaving them afterwards to qualify, if they can, for those appointments?—I think that is a very great abuse of the system, and ought to be put down with a very strong hand.

4724. Have there not, at the very same time, been officers who had qualified themselves to take staff corps appointments, and remaining waiting for appointments?—I do not know many cases in my own knowledge, but there have been cases where I would not have selected the man, judging from what I subsequently heard of him; but I should not think that they were frequent instances, and it is difficult practically to avoid abuses of that kind creeping in.

4725. Do you think that with a view to creating efficiency and economy in the Staff Corps, it would be desirable to divest it of that element of patronage, by requiring some qualifications in officers in the Queen's regiments as a preliminary condition which they should fulfil before being appointed to the Staff Corps?—I think many would say that there were such conditions, and the point is how you could strengthen them; and I think one precaution would be, never to let an officer leave his regiment for the Staff Corps after a certain age; he ought to be a young man, so that he should have that elasticity of character which would enable him to adapt himself to new circumstances; and the effect of limiting selection in this way very strictly, would be to cut away the danger of abuses of that kind.

4726. If I understand rightly, there are qualifications laid down which must be fulfilled to enable any one permanently to hold a Staff Corps appointment?—Yes.

4727. Ought there to be a general rule that those qualifications should be satisfied before a nomination; or ought the system to be continued by which a person without any qualifications can be nominated, leaving him a certain time to qualify afterwards?—I think that qualification before the nomination should be required. The practical difficulty in the matter is this, that very often young officers are not willing to leave their regiment; whether it is from a want of enterprise, or of that kind of spirit that would lead them to endeavour to improve their condition, I cannot say, but in my time, I used to hear it often said, that it was very difficult to get an officer to leave his regiment. I recollect it was said that the young officers of an English regiment having paid the 300*l.*, or whatever it is, for their commission, that they would lose that 300*l.* if they volunteered for the Staff Corps; they did not reflect, that in the course of years they would get the loss recouped to them tenfold; but the immediate loss of this sum prevented their coming forward for a Staff Corps appointment; and the consequence was, that we were obliged at last to pay the 300*l.* out of the revenue of India, which was a very hard case.

4728. That is an element which has now departed, however?—Yes; I only gave that as an instance to show what little things operate in the matter. If you make the condition of entering a Staff Corps very stringent for young officers, often you will not get them to go into it. If they are to obtain civil or political employment, where the prestige and advantage is very apparent, they will accept the staff no doubt, but where it is to go into appointments like the inferior commissariat appointments, or to native regiments, you would not be sure of getting candidates.

4729. Do you think there is any danger of the system of the Staff Corps failing from want of young officers?—When I was out in India at one time there was that danger.

4730. Now is there any such danger, in your view?—I should hardly think there would be, because really the advantages are very great. A wealthy man would not go into it; others would, and the great bulk of the officers are poor, and will be poor under the new system.

4731. I think the consideration of the expen-

Lord *Lawrence.*

13 June 1873.

diture on military works was entered into at great length when you were Governor General, was it not?—Yes.

4732. Do you think that the expenditure on military works is properly supervised and checked?—Well, I thought it was when I was in India. Of course now and then cases occurred in which mismanagement had taken place; but in my time, I do not recollect any gross instance of such a case; and, as a body, I am of opinion that both the military and civil engineers were zealous and able men, and did their work, as a rule, very well. But of late years, since I came home, there have been several bad cases, which have thrown great disgrace and discredit on the Public Works Department.

4733. What do you understand to have been what I will call the civil check upon military expenditure; what member of the Council had an effectual control over the military expenditure in its civil and financial aspect?—The Civil Government can absolutely and entirely control the military expenditure if they think proper to do so; but with that statement it must always be borne in mind that the military influence is great, more especially from England itself; that is to say, that it is of the greatest importance in the eyes of the military authorities in India and in England that the troops should be well housed; that every appliance and means which modern experience suggests should be afforded to the troops. Well, you cannot do all this without a large expenditure; that is the real state of the case.

4734. But who do you consider to have been the particular person or authority that undertook to perform the functions, if I may use the phrase, of a civil check upon military expenditure; that is to say, a financial check as a matter of finance and expenditure?—When the budget of expenditure for all matters connected with the Military Department has been prepared, it goes to the Financial Department, and is very carefully considered in that department in all its details, both as a whole and in all its parts. Such modifications as may be considered necessary, and which may reasonably be carried out, are then proposed; these would be suggested to the military member of the Council; he then would look over the budget a second time, and consider it with his military knowledge and military views; and having done that, then the papers would be sent to the Governor General, and the Governor General would go over them all. If difficulties arose, he would ask the Commander in Chief and the military member, perhaps, to come and talk over the subject, so as if practicable to reconcile differences of opinion. In that way the military budget would be sifted over and over again, and then it would be brought before the whole Council.

4735. Did you consider that the military member of the Council was bound to consider the financial view, or only the military view of the matter?—In a secondary degree he would consider the financial view. Of course some men are more willing to incur considerable expenditure than others; but, as a rule, he would consider it in its financial bearings; and he would be obliged to do it, because, if necessary, that view would be pressed upon him, not only by the financial member, but by the Governor General.

4736. Was there not always a great difficulty in the financial member taking up any military questions of finance, in consequence of what I may call relations of equality existing between the different members of the Council?—I should say not. I think that the military man, whether he was the military member or commander-in-chief, who was in the Council, on discussions on military expenditure, would, more or less, particularly the commander-in-chief, stand out for what he thought was necessary for the improved comfort and convenience of the troops; in fact, to carry out military objects.

4737. To promote military efficiency and expediency would be his view of the matter?—Yes; but then I think the other members would combat what they might think was not a right view of the case; they would however always be a great deal influenced as to the British troops by what was done in England and the Colonies, and by what they thought were the wishes of the authorities at home; and they could not help doing that, for if they did not do it, the Secretary of State would not support their suggestions.

4738. Do you consider that this mode of carrying on military expenditure has led to a large and expensive scheme of housing the troops in barracks of a costly character?—No, I do not think it did; there has been a feeling in India on the subject ever since I was in India, say, for the last 40 years, to improve the accommodation and other arrangements connected with the British troops in that country. Originally, to a certain extent, the feeling was that the troops were ill-treated, not half as well treated as they ought to be, badly used, and badly cared for in many ways. This was continually pressed upon the authorities, and time after time, where new barracks were to be built, or new stations formed, improvements of various kinds were introduced. I think every cycle of years there was an improvement in the barracks and the general arrangements. Just before I went out to India as Governor General, in Lord Elgin's time, there was a great deal of excitement in England in consequence of statements put forward by the Royal Sanitary Commission. I recollect, and I think every gentleman in this room will probably recollect, one report in particular, in which it was said that 70 men per 1,000 died annually from various causes, many of which might be remedied. That created, I recollect, very great sensation in England, for at the time I was there. I recollect a long article in the "Times" on the subject; and altogether there was a general feeling that a great deal which ought to have been done with the view of saving life had not been done. When I arrived in India as Governor General, I found that Lord Elgin had taken up this matter, and had appointed a specially selected officer to look into the whole business; and it was a very appropriate time to do it, for this reason, that a great deal of the general arrangements connected with the permanent housing of English troops which ought to have been carried out, had been deferred since the mutiny, and a great many were in the temporary or half-temporary barracks, the temporary ones being intended to endure for three or four or five years, and the half-temporary ones for eight or ten years; and all these barracks were in a more or less dilapidated condition, in consequence of the knowledge that they would be superseded by better buildings, the repairs which would have kept them in order having been neglected, the cost of them being to some

some extent very large. All this led Lord Elgin's Government to take up the question very carefully, and Colonel Crommelin, who had considerable knowledge of the subject, having been employed in the Public Works Department, both as an executive and as a supervising officer, and having built barracks at various places, was consulted. Lord Elgin died, and when I arrived very shortly afterwards, the question came before me. Colonel Crommelin put before the Government a general scheme, showing what was wanted in the country generally speaking, and how it might be made good. He also prepared models of what he considered the different kinds of barracks which we might adopt. One great point in this question was whether in particular parts of India we should have upper-storied barracks, or single-storied barracks. Everybody, of course, would say that in damp climates we ought to have double-storied barracks; but it was a question whether we ought to have them in drier parts, such as the Upper Provinces and Central India, and so forth. When this came before me I looked at the matter very carefully in all its bearings, and had several consultations with Colonel Crommelin on the subject; and I came to the conclusion that even in the Upper Provinces it would, on the whole, be better to have upper-storied barracks, for the difference of expenditure, although considerable, would not be so large as to induce one to put them aside, and simply have single-storied barracks. I consulted several medical men in whom I had confidence, and who I knew had studied sanitary questions, and they all advised me to have upper-storied barracks. Accordingly, I said I decided, so far as my opinion went, to have them. Then the papers went to the military member of Council, and the Commander in Chief, and they agreed with me. The financial member also agreed with me; Sir Charles Trevelyan was then the man filling that position, and he wrote a minute to that effect. And so when it came before the Council, there was not a dissentient opinion on the subject. The only question which arose was whether in these barracks more or less space should be given to the soldiers. On that point there were three scales of accommodation, and I recollect myself being generally of opinion that the lowest scale, the lowest amount of space for each soldier, would be sufficient. But the Commander in Chief thought that the highest was the right one, and after great discussions on the subject, I said that I would agree to the mean, and the mean was agreed to, and sent home and approved. Subsequently there was some modification suggested by the present Lord Sandhurst, who had succeeded Lord Strathnairn; he was inclined to make some further modification, and as I agreed with him, we made a reference home, but the authorities at home preferred having the scale of accommodation which had been previously settled; so that the bias to something like economy in the matter was not approved of. I only mention this to show how much may be said on all these questions. Everybody was generally in favour of doing all that appeared necessary to keep the soldiers in good health. The only question was, what was the most moderate amount of accommodation which ought to be given consistently with that object.

4739. Your opinion is that the expenditure on barrack accommodation was fully considered, as fully as it could be, in opposition to the sanitary and other considerations?—It may always be affirmed that the decision which is arrived at in a difficult matter, was not the right one; but if you bear in mind who they were who decided this question, and how anxious they were to come to a proper decision on it, it is not unreasonable to conclude that they came to a proper conclusion. I myself do not think that any case was ever considered better than that case. Bearing on that subject I would mention one matter, and that is this, that in one of the criticisms by the authorities in England, I think the Sanitary Commission, they suggested that barracks in no case should be constructed without being built on arches. We, after considering this, thought it was not necessary to adopt this precaution in the Upper Provinces. I only mention that to show how carefully everything was considered, and how ready we were, when we could safely do so, to limit expenditure.

4740. I think the barrack accommodation has been since very much diminished in expenditure, has it not?—I do not know to what extent, but I heard that it had to some degree been limited in expenditure.

4741. But you are still of opinion that at that time, and having regard to the views that were then current, the economical expenditure was fully considered?—I am, indeed. That question of upper-storied barracks is a very difficult question. At Fort William, in Bengal, formerly the English soldiers were extremely unhealthy. In Lord Dalhousie's time they built three-storied barracks there. If I had been asked whether that was a good arrangement, I should have said it was not, because it was putting one whole regiment under one roof; I should have said that that was like putting a great many men in a big ship, and that the chances of accidents and casualties were increased in the ratio of their size. But what was the result? Throughout Bengal it became the place of all others, where the English soldier was the most healthy. I thought it would certainly be a bad arrangement to have so many soldiers accumulated under one roof; but there it turned out that the soldiers were, in fact, most healthy.

4742. There you have got into a wet district with malaria?—Yes; but, on the other hand, you had got into three-stories instead of two. Talking of that upper-storied barrack, there is a *primâ facie* argument in favour of it. When you had the one story, the different rooms were so connected one with the other, that the effluvia of the food was never out of the barracks; the men slept; they dined; they walked; they read in the same polluted atmosphere; they were all the time in the same rooms; but when they had the upper-storied barracks, the idea was that one set of rooms would be purified, while they were using the other, and that was considered by the medical men a very great advantage.

4743. Do you recollect that when the railways were under consideration, it was always considered as a probable source of economy that the troops would be carried by railway?—Yes.

4744. Have you observed that since the railways were made, the expenditure on transport instead of being diminished has been considerably increased?—It has; I was looking over Mr. Kelner's notes on the subject the other day; I never supposed that we should get any reduction

Lord *Lawrence.*

13 June 1873.

of expenditure on account of the introduction of railways; but that was one of the views that the public had got hold of, and like many of the kind, it was very difficult to alter them. I never believed that it would increase the expenditure so much as it has done; but when you look at the details, it is quite obvious how it happens. First of all, you move the Native troops a great deal more now than formerly, because you have reduced their number; then you send the English troops out to Bombay, and from thence spread them all over the country. Formerly you sent them to Bengal, Madras, and Bombay, divided into three sections, and from these ports they spread out over a much more limited area. You begin now with Bombay, and work back to Bombay with each regiment; all that adds very much to the amount of movement. Then as to the native troops, having less of them, and many parts of the country being insalubrious, and unpopular with them, you have continually to move them to balance the advantages of one place with the defects of another. For instance, the present native army of Bengal is largely composed of northern men, such as Punjaubees, men from beyond the frontier, and the like. To these men it is most disagreeable, and I would say, to some of them most hateful to be sent down to Assam or Bengal, or even to the Central Provinces; in the course of things you must continually give them change, and hence there is a very considerable expenditure. It is not merely a matter of what is disagreeable to the Native troops, but the regiments become deteriorated if they are not moved about; the best of the men go away; that is one of the great arguments in my mind in favour of the Punjaub Frontier force; there are many of the men in those regiments, I would say the flower of them, who would leave their regiments if you change them from that part of the country.

4745. Do you think it is necessary to maintain on military grounds of efficiency the large establishments of commissariat and transport animals that now exist?—You must bear in mind that in former days you could readily supply the cattle for an army taking the field, but in these days, so extensively have the wastes and jungles disappeared, from the increase of cultivation, that now, where formerly you collected a thousand camels or a thousand oxen to carry camp equipage and stores, you would not collect perhaps a tenth of that number. In former days, in the time of the Duke of Wellington's campaigns in the Deccan and Central India, and so forth, the baggage was all carried on trains of bullocks; you read, in the despatches of the Duke of Wellington, of 10,000, 30,000, or 50,000 bullocks being available. I have heard Colonel Skinner, who was in Lord Lake's wars, say that one of the great things in those days was to have such influence with the owners of these animals that you could collect large numbers of them in a very short time; now-a-days they are disappearing. During the Mutiny, I am sure I supplied 10,000 camels to the troops that went down to the siege of Delhi, but I think that my successor would have a difficulty in finding a thousand.

4746. Were these contract or purchase?—All contracted for. In Lord Dalhousie's time he very largely reduced the number of cattle that the Government kept up; there was a great outcry against it, but I think he was quite right in doing it, because it saved a great deal of money and men; and that when war came, which is an abnormal state of things, it was far better to pay a good deal for your cattle than to keep it up year after year; in fact, it was an economy. But, now that wastes are disappearing and railways are extending, there would be great difficulty in collecting cattle, and you must keep up a certain amount, perhaps more than ever. In my time it was generally considered that a thousand elephants for establishment was about the mark; they had fallen in those days, I think, to 850, and such was the high price of elephants that we were obliged to set to work in outlying countries to catch elephants ourselves. Where you are pretty certain to obtain animals for transport in time of war, then it is best to trust to that system, but otherwise a certain amount must be kept up.

4747. Your opinion is, that circumstances not taken into consideration have tended rather to increase the establishment of animals necessary, instead of enabling the Government to rely on railways?—Yes. Another thing is this: I recollect that the soldiers formerly, whenever they went on leave, walked the whole way; that took half their furlough time, and very often brought them back to the service in a very poor emaciated condition; partly from those reasons, and partly to content them (and of course it is a very great thing to have the soldier contented), facilities have been given to them to travel by rail. Hitherto that has not cost Government much, because we have had to pay the five per cent. guarantee; it did not matter whether the loss of income was made good one way or the other. These things were done to enable the soldier to go home and back with expedition and comfort; and it had a good effect, but swells the expenditure.

4748. Do you think it is desirable that the Governor General should take so great a part as he does in managing the Bengal Army, or that he should stand more aloof from it?—In point of fact, he does not take so large a part in the management of it. All the details of the Bengal Army, all the matters connected with the discipline, are carried on by the Commander in Chief; the Governor General does not look at them at all. Appointments are gazetted in the name of the Governor General in Council; all come up to the Government, but as a matter of routine they are all past, except something occurs which calls attention to any particular point on which trouble or difficulty may arise. When you come to talk of the administration of the army, it is really all administered by the Commander in Chief; but it is administered subject to the control of the Governor General.

4749. Do you think it more desirable that there should be anyone connected with the Governor General who should perform functions like those of the Secretary of State for War in relation to the army, or that those functions should be undertaken by the Governor General himself?—I think things are better as they are; I think the effect of what has been suggested, whether as a War Minister or Secretary of War, or whatever designation is selected, would be this, that it would practically bring everything under the entire administration of the military chief, and would set aside the civil government. Now, I think that it is of the utmost importance in every view of the case, whether it is military or political, or financial, or with reference to the bearing of the question, also as regards the natives

of

of the country, that the army should be under the Governor General in Council, that he can put his hand at any one moment on anything and arrest it, and say, "That must be considered; that is not right; that is not judicious; that is working badly." The effect of his having that power is, that he very seldom has to use it, but take from him that power, and you will find things get into that way that serious complications may arise which would be difficult to solve. This at any rate is my own view of the case.

4750. You do not see a necessity for any new arrangement of that nature to secure a more efficient control over the military expenditure in India?—I think it would add to the military expenditure, and not help you to keep it down. I think the general result would be that the more the military authority became the master, the greater would be the bias in most military men (I do not say all of them) to increase the military expenditure.

4751. Do you think that the Governor General requires any civil assistance to enable him more efficiently to control the military expenditure?—No, I do not think he does; I think when he is willing to economise and look after things, he has all the means at his disposal to do it. The point is not that really; the point is, can the Governor General influence public opinion; can he influence the authorities at home in thinking that certain economies which he may suggest are expedient or not. Because, after all, if he fails in that, it is no use urging a given economy; he is only wasting his time, and he had better apply that time to other matters; in discharging his duties he must consider the general view of his superiors at home.

4752. Do you think that the Governor General has found himself under pressure from the authorities at home, involving expenditure that he would otherwise have avoided?—I would not say that the authorities at home initiated the expenditure so much; but on the other hand I would say, that in my time, the Governor General of India had great difficulty in getting the authorities at home to consent to reductions of military expenditure; they taking a more military view of questions than he did, and from various other reasons which I need not enter into, there was a disinclination to reduce the expenditure connected with the English troops, that is to say, there was unwillingness to reduce the number of English troops. They were reduced in the five years that I was Governor General something like 7,000, all at the instance of the Government of India. But we had great difficulty in carrying out these reductions, and they were spread over nearly the whole time that I was in India; whereas they might have been carried out in a year or 18 months. But the feeling at home was a mixed feeling, partly that the authorities were not quite sure it was safe to make these reductions, and partly that they did not know what to do with the troops when they got them home, as they would come on the English estimates. As a rule, we had to prove the case over and over again, when we wanted to make reductions in the English troops in India.

4753. Your predecessor had to prove to remove the case that they ought to be there, I suppose?—Yes.

4754. And the difficulty was, in taking them back again after once they were raised?—I used to say to them, "I have always been in favour of a sufficient number of English troops being maintained in India, and therefore, when I advocate a reduction, I think you might trust me;" that is the kind of line which sometimes I took.

4755. But there was a difficulty of course in suddenly shifting troops from India to England that had been raised on purpose to serve in India?—I do not deny that for a moment; but as Governor General of India, my business was to look to the Indian interests; and of course the people at home thought their duty was to look to the interests of England. Now, I will give an instance, the artillery is a very costly service, and of course it is a very important service; but we had a great many too many artillery. I pressed them very much to reduce the artillery; I had great difficulties in the matter; first of all, some of the Council were against that course; their opinions were used in England against my view, and the view of the majority of the Council; and there was this difficulty, which they always pressed on us, that it took a long time to make artillerymen; whereas cavalry, and more particularly infantry, could be raised very easily; it was difficult to train and render a man a good artilleryman in a short time; and therefore that it was very important not to reduce the artillery; but by dint of continued pressure, we got the artillery very much reduced. Since I came away, Lord Mayo got it reduced still further.

4756. Is there a real difficulty arising from the fact that in India you always bear in mind that you could get troops from England in an emergency, whereas in England there would be an indisposition to keep ready-made regiments here merely because they might be required in India?—I will not deny that that feeling may exist, but that feeling did not influence me in the least degree; because I felt convinced that with the number I wished to retain, nothing could happen in India, humanly speaking, which that force was not able to meet. I would have thought that I did wrong if I had desired to reduce the British force with the view of saddling England with it. Of course India must look for help to England in desperate circumstances, such as a great invasion.

4757. Or a great insurrection?—But I do not think myself there ever would be an insurrection if you kept 60,000 English soldiers, well officered, in India; I do not think a dog would bark against us, let alone an insurrection take place; but if such a thing did occur, I think it would be put down before it spread at all. I bore in mind what the wants of India were, and wished to reduce the number to that extent.

4758. To pass to another subject; have you considered the expediency of Government embarking in large industrial works for the purpose of promoting the productions of India; to begin, for example, with canals?—I have considered that subject; it is one of those subjects which have been contested very much of late. It is said by some that we have done a great deal more than we ought to have done; while others have thought that we have been negligent in this respect. It seems to me that, like the pendulum of the clock, first, public opinion you swing to one extreme, and then to the other. For 30 years there has been one iteration, namely, the advantages of irrigation generally; and in the Orissa misfortunes, one of the accusations brought against the Government of India was, that they had neglected, in particular, in respect to supplying irrigation in that province. I believe that for

Lord *Lawrence.*

13 June 1873.

the last 25 years, the Government of India have done an immense deal in that way, generally speaking, but I think they might have done even more, and it would have been better if they had done more, but still they are certainly not open to censure, as having done too much. Having said this, I will read some observations which I have written on the subject with a view to giving evidence before this Committee. I am glad to be able to say a word in favour of irrigation generally in India, and more particularly in favour of canal irrigation, as it seems to me that from various circumstances this fruitful source of wealth and prosperity is in danger of being greatly disparaged. So far from thinking that any serious mistakes have been made of late years in the construction of canals on a large scale, I am quite in favour of the policy which has prevailed; and though it is possible that some mistakes in details have occurred, I feel satisfied, that looking at the matter in a broad and comprehensive spirit, great benefits have been conferred on the country from the construction of these works; benefits which, as time progresses, will become more patent than hitherto. Such canals as those which have been constructed under the guidance of Sir Arthur Cotton in Madras, and the Ganges Canal in the North West Provinces by the late Sir Proby Cantley, and the Baree Doab Canal in the Punjaub, constructed by the late Colonel Dyas and Colonel Crofton, are works of great size and enormous importance, with which any works of irrigation constructed in former times by the native rulers of India seem to me to dwindle into insignificance. As regards these canals in the Madras Presidency, though it may be difficult to ascertain what has been the actual profit which has been devised from their construction, owing to the circumstance that the revenue from the land, and the revenue from irrigation have not been kept in separate accounts, yet there can be no reasonable doubt but that the annual return due to the canals has been very large. Sir Richard Temple, in his financial statement for 1873-74, page 54, makes the following observations: "As regards the Madras irrigation works, however, I can affirm, having had the advantage of studying the subject on the spot, in company with the best informed authorities, that they are eminently successful and abundantly remunerative in the highest sense, both to the State and to the people." In respect to the Ganges Canal, it was constructed under certain disadvantages; it was commenced when practical knowledge in hydraulic engineering was confined to few officers in India; money was not always forthcoming for the work as promptly as was always desirable, and in the first instance, the importance of making the canal remunerative was not sufficiently considered. The idea at that time was rather that the work was to save the country through which it would run, from drought and its attendant miseries, as well as from loss of land revenue, rather than with the view of obtaining an adequate rent, from the sale of the water, from those who used it. For the first few years after the canal was opened, proper means were not adopted to secure this object; since the rates, however, were raised, in 1865-66, the canal revenue has considerably increased; but it will take sometime before the cultivators will use the water extensively as they might do; this class are for the most part poor and parsimonious, and dislike making any outlay until experience has fully convinced them that they are certain to gain by such expenditure. But though the direct returns from the Ganges Canal have not been as large as might reasonably have been anticipated, the work has not been a bad financial speculation up to this time; thus in 1860-61 the North West Provinces were afflicted with drought and famine. In that year the Ganges Canal irrigated an area of half a million of acres, and supplied food-grains to the extent of 5,000,000 of maunds, equal to 120,000 tons, and since then the irrigation has considerably increased. Colonel Baird Smith, in his report of the 14th August 1861, tells us that since 1733 Northern India has been afflicted with 13 droughts, of which seven (those of 1803, 1813, 1819, 1826, 1833, 1837, and 1861) have occurred since 1803, about the time when we obtained possession of the North-West Provinces, which is on the average nearly one drought for every eight years. The droughts of 1837 and of 1861 prevailed, for the most part, in the same districts of these provinces, comprising the Delhi territory and the present divisions of Agra and Allahabad. Colonel Baird Smith states that in 1837 the loss of land revenue in the Agra division consequent on the famine was estimated at 1,328,500 *l.*, and that its effects were visible after 22 years, and that the loss of agricultural property was estimated at from 8 to 10½ millions of money. In like manner, the same authority tells us, that the revenue of the Allahabad division suffered to the extent of upwards of 1,000,000 of money, and in the loss of agricultural capital valued at from eight to 10 millions. The drought of 1861 extended over very much the same districts as that of 1837-38, and embraced an area of from 20,000 to 25,000 square miles. Now, assuming that the drought of 1861 was of even one-fourth the severity only of that in 1837-38, which I believe to be within the mark, what is the loss of a few years' interest on the capital expended on the construction of the Ganges Canal, when compared with what was saved to the State and to the people by its waters in 1861? In such years canal irrigation operates as an assurance against calamity. I was an eye-witness of the two droughts of 1833 and of 1837, and I can testify to the distress and misery of those years. In the famine of 1837, in particular, the loss of human life from hunger and exposure was very considerable, and the cattle died by thousands. Such times as these, however, are a source of wealth to the cultivators and proprietors on canals. Then every acre of land is brought under cultivation; much of it perhaps will be twice cropped during such a year; and both forage and grain will be at famine prices. Thus, it must be admitted that the direct revenue obtained from canal irrigation by the State, is no adequate representation of its intrinsic value, though, of course, it is very desirable that such works should give an early and an adequate return for the capital expended on them. All the irrigation which can be supplied to lands subject to periodical droughts is of inestimable value, but the value of irrigation from wells, and even from tanks, cannot be compared with that derived from large and well-constructed canals, the former often failing at the very time when their waters are much required. The Baree Doab Canal, in the Punjaub, which has been constructed by the British Government, is next in magnitude in Upper India to the Ganges Canal, and will, in course of time, pay well for all the outlay on it.

Waste

Waste lands south of Unritsur and Lahore, which without irrigation could never have been brought under cultivation, will now be reclaimed, as the waters of this canal penetrate to them. This is a source of profit to the State, in addition to the direct revenue derived from the use of the irrigation. In like manner, the canals under construction, such as those from the Soane in Behar, from the Sutledge in the Punjaub, from the Jumna near Agra, will, I anticipate, yield an adequate return, and prove a blessing to the people. There is, however, no reason why the utmost care should not be taken before a decision is arrived at as to the commencement of new works. In provinces where the soil is very sandy, or where it consists of hard clay alone, or of clay mixed with sand, where the rainfall is slight and uncertain, and where water is distant from the surface, the very existence of cultivation depends on irrigation. On the other hand, there are districts, and even provinces, where no such extensive irrigation works are necessary; but, as a rule, it may fairly be asserted that irrigation of some kind or the other is beneficial in most parts of India, and greatly increases the yield of the crops, and in many parts that the produce would be scanty and uncertain without irrigation, and the country subject under such circumstances to be desolated at intervals by drought and famine. That is my statement in favour of canals, and I do not think that there is a word in it which is exaggerated.

4759. Do you think it is desirable that the Government should undertake works of this kind, or that any attempt should be made to encourage their being carried on by the enterprise of individuals or companies?—I think they ought to be done by Government, and solely by Government. I am in favour of the Government in India, generally speaking, carrying on all large works, but pre-eminently that they should carry on the canal works independent of the circumstance that the companies in India who have undertaken works of irrigation, have more or less failed. I would say that the land revenue is so mixed up with the irrigational question, that no arrangements can be come to which would be satisfactory to both parties, that is to say, to the State and to the shareholders of a company. In a general way, of course, you may say that in the long run their interests are identical; of course they are identical in the sense that land revenue should exist, and that the shareholders of a company constructing a canal should prosper, whether they are paying the one revenue or the other. But, in point of fact, their immediate interests are not identical. The immediate interest of the shareholders is to get as quick a return for their money as possible, and that is not the immediate interest of the State. If, in the long run, the canal pays, it is not an immediate concern to the State whether it pays early or not; but if it would save the land revenue, and save the people from the effects of drought and famine, it is a great gain. The State can wait awhile for the water rent, but the shareholders say, "We must have our returns, or the value of our undertaking is gone." Hence, those persons are continually pressing the Government to do that which is often prejudicial to the Government interests, or to the interests of the people, and sometimes to both. Therefore, I say it is a vain thing to suppose that you can combine the interests of the two. Now, what is the result where the companies undertake a work? I do not mean to say one word against the companies, in the sense that they do not do their duty. If I was one of the shareholders, I should probably advocate what they do; but, looking at it in a broad statesman-like way, I say you should not entrust any of these works to companies. First, they have not the money; secondly, they want a rapid return; and, thirdly, they want to encroach more or less upon Government interests and the Government officers. The Government resist this; hence, a great amount of obloquy is poured down upon the Government, and all those connected with it; and hence the natural desire of the Government is, dealing fairly between all the parties, to get rid of a company.

Lord *Lawrence.*
13 June 1873.

4760. Would your observation apply equally, whether the company has any guarantee or does the work entirely itself?—What I have said applies equally in both cases; but there is a greater evil when you come to a guarantee, because then the care and prudence, and economy which would otherwise be exercised in their work, are in great danger of not being used. When they have a guarantee, they say, as I have heard a gentleman say, "Come what will, I get my 5 per cent.; why should I worry myself about the arrangements?"

4761. Do you think that the difficulties that seem to attend the collection of any water rate, or the assessment of it, are so great that they apply to any irrigation works, great or small, or only to the great works?—Mainly to the great works. I have not the smallest objection to the occupiers of land combining and making a canal for themselves, if they please; all they will have to do then will be to pay the Government land revenue, and the profit and advantage of the irrigation works are their own. I know many cases where, preceding our rule, and subsequent to it, the landowners on the frontier of the Punjaub have made canals; and I believe they have made them in Scinde, though I do not know so much about that subject. There was no difficulty or trouble about the construction of these works; a canal may not be so well made, and, scientifically, so well laid out, as it would have been by a good engineer; but still it answered the purpose, and it paid the people; and it was a great advantage to the Government, because it secured the Government revenue. In cases it would be a good thing if canals were constantly constructed, and wherever the proprietors of land are desirous of undertaking such schemes in suitable localities, I would very gradually subvent their means; but when a company of strangers come in, of course the main object is to make money, a very legitimate object no doubt, but still I say that it embarrasses the Government beyond measure, and that such a thing ought never to be allowed.

4762. But are there not, through India, a great number of comparatively small tracts of country lying at the foot of the hill ranges, where the hill ranges bring down a great deal of rain, and where the rain in small works of irrigation can be bunded up in the hills so as to irrigate those districts; and would it be desirable that if companies or individuals wished to embark in the transaction of bunding up the water and making a canal, they should be allowed to embark in that enterprise if the villages are not possessed of the capital; or would you compel them all to wait for the Government to do it?—In point of fact, the facilities for irrigation in the way which you describe rather pertain to districts like the

Lord *Lawrence.*

13 June 1873.

districts in Madras, in the deltas of rivers where works may be constructed at a moderate cost, and with moderate engineering skill; but where you come under the great ranges of mountains, such as the Himalayas, the fall is so rapid, and the volume of water that comes down is so great, that I should say anything like near the hills, it would be very difficult to construct works at a moderate cost. Perhaps in Rohilcund there are works of that kind which have been constructed; but from talking the thing over with the engineers, I think that these works have so far failed, or been so little developed, that the people have practically given them up; and we have had to take them up and help to carry them out. But where there was any work that the owners of the land were desirous of undertaking, and would undertake, after a general view of the question by an officer deputed to the spot, if he approved, I would advance the money out of the Government Treasury, and lend them the money.

4763. You think that would be preferable to introducing a company or an individual with the capital to do it themselves?—I do indeed; very much preferable. All over the Upper Provinces, I believe, in Oude, the Punjab, and the North Western Provinces, and everywhere, there has been from the commencement of our rule a system of advances, under the name of what is known as "tuccavee," and it is a system which no doubt more or less prevailed under the native governments, where they had good governments. That system has, with certain modifications, been maintained and enlarged by us, and wherever, either the proprietor of a single bit of land in the village, or the whole village community, or a zemindar with large means, came forward and said, "Lend me money to make one well, or five wells, or ten wells," we always advanced the money, and then he gradually repaid it in a given time; and in that way a great deal of irrigation was carried on. But I have seen that system abused. When I was a collector, I recollect large sums of these advances which had not been looked after for years, and I think some of it had been spent for other things than in making the wells. Sometimes a man came forward and asked for money to make a well when he wanted it to marry a daughter!

4764. You approve of the policy of the Government in repurchasing the canals after they had made a grant to the company?—Yes, I think that the Government did a good deed for themselves, and the people, and the company.

4765. Were you conversant with the terms of the purchase of the Orissa Company?—Yes; before they were put before the Council, the terms were settled by Colonel Strachey, then the Secretary of the Public Works Department, and myself; and he and we worked them out.
